The Future of Small Business

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address on the subject of the future of small business, delivered by me before the Tennessee Wholesale Grocers' Association, at Nashville, Tenn., on September 12, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

Today we are joined in a battle which will determine the future of small business in America. On the outcome of this battle depends the type of economic society we are to have in the future—whether it is to be a free society of independent competitive enterprise or a collectivistic society of giant monopolies and trusts.

The battle revolves around the fate of the Robinson-Patman Act. Will this act be retained as an effective protection of small business against vicious discriminatory practices, or will it be thrown into the junk heap?

In the fight to preserve the Robinson-Patman Act against the sinister influences who seek to destroy it, the wholesale grocers have been in the vanguard. I wish to pay special tribute to the very able vice president and secretary of the United States Wholesale Grocers Association, Mr. R. H. Rowe, who has spearheaded the fight against the monopolistic forces who are seeking to destroy small business. I also wish to thank Mr. Charles S. Ragland, of Nashville, and Mr. E. H. Harrison, of Clarksville, Tenn., for their splendid testimony before the Senate Small Business Committee in opposition to the latest effort, S. 719, to destroy the Robinson-Patman Act.

What the monopolies, including the big chain stores, are seeking in this fight is the right to go back to the old, vicious discriminatory practices which prevailed before the Robinson-Patman Act was passed in 1936.

What were the practices which the Robinson-Patman Act was designed to halt? Your national secretary, Mr. Rowe, recently described them in very vivid terms before the Senate Small Business Committee. He stated: "In the years prior to 1935, complaints and protests against price and other discriminations granted by food and grocery manufacturers to big mass-buying organizations had reached vast proportions—in effect,

amounted to a national trade scandal. The investigation of large-scale buying and selling methods disclosed that the Great Atlantic & Pacific Tea Co. alone was receiving annually from its manufacturer suppliers \$6,000,000 in advertising allowances and off-the-invoice quantity discounts and \$2,000,000 as brokerage fees, making a total of \$8,000,000 in concessions that either were not available to the individual food distributor or available in very much less amounts."

The representative of another trade association in the food field, Mr. Watson Rogers of the National Food Brokers Association, described the discriminatory practices prevailing before the passage of the Robinson-Patman Act in much the same terms. In testifying before the committee, Mr. Rogers stated: "People who were active in the food industry before 1936 can well attest to the serious threat to fair competition that existed. It is a well-known fact that coercive, monopolistic buying power was exercised by certain buyers. Unfair price discriminations, such as false, unearned quantity discounts, secret rebates, allowances, preferential treatment, were rampant. Manufacturers, wholesalers, retailers, all were subject to discriminatory tactics, threats, and coercive measures which were used to obtain concessions. There was great unrest on the part of small and independent business as well as many of the large concerns."

Because of this great unrest, the Congress, by Senate Resolution 224, Seventieth Congress, first session, directed the Federal Trade Commission to undertake a comprehensive investigation of chain stores and to report to the Congress on the practices leading to their growth.

The investigation undertaken by the Federal Trade Commission more than proved the justice of the complaints by small business. In its final report the Commission found that it had been the persistent practice of the chain stores to seek out and demand special and unwarranted price concessions on the goods they bought. The Commission also found that the chains frequently discriminated in the resale of merchandise by maintaining higher prices in localities where competition was absent or weak, and cutting prices aggressively in those localities where competition was encountered.

As all members of this group know, there was on the statute books in those days a law against price discrimination—section 2 of the old Clayton Act. But I am sure everyone here will also remember that the old law had a fatal loophole. Although the law prohibited price discriminations which injured competition, the old section 2 contained this clause: "Nothing herein shall prevent discriminations in price in the same or different communities made in good faith to meet competition." This clause, known as the good-faith defense, rendered the sec-

tion practically null and void as an effective instrument against price discrimination.

In its investigation the Federal Trade Commission pointed out that because of this good-faith defense it was powerless to prevent price discriminations, regardless of their effect on competition, because those making the discriminations could excuse themselves on the grounds that they were merely meeting competition in good faith. Here is what the Commission said: "The Commission has no evidence which would establish that price discriminations by chain stores have not been in good faith to meet competition and there is good cause to conclude that in many cases it has been for that purpose."

It was largely because of this loophole that the Robinson-Patman Act, amending and strengthening the Clayton Act, was passed. Under the Robinson-Patman Act the status of the good faith defense was changed. No longer was it to be a complete defense to a charge of price discrimination; it was to be only a procedural defense.

Without going into all of the legal intricacies involved, the effect of this change was to transform the law against price discrimination into an effective, far-reaching instrument. No longer would the excuse that he was merely meeting competition in good faith permit a manufacturer to give large concessions to a chain store. Under the new act the question of whether or not discriminations were made in good faith was just one of the elements to be considered, not a complete justification.

It has always been a mystery to me that there could be so much misunderstanding and confusion on this simple point. Both of the sponsors of the Robinson-Patman Act have stated that one of the principal purposes of that law was to transform the good faith defense from a complete defense into a procedural defense. Congressman WRIGHT PATMAN, of Texas, who has long been a mighty champion of small business, has made repeated statements to that effect. Similarly, Senator Joe Robinson, who sponsored the bill on the Senate side, stated during a discussion of this very issue "I think the latitude would be too broad if it were merely said that 'nothing herein contained shall prevent discrimination in price in the same or different communities made in good faith to meet competition.' The authority thus granted might be employed notwithstanding there was an effort to meet competition in ways that would be questionable."

In order to remove any doubts on the question, the manager of the Robinson-Patman Act on the House side, Congressman Utterback, made a clear and forceful statement on the floor of the House. Referring to the good-faith defense as contained in this new act, Congressman Utterback stated: "It is to be noted, however, that this (the good-faith defense) does not set up the meeting of competition as an absolute bar to a charge

of discrimination under the bill. It merely permits it to be shown in evidence. This provision is entirely procedural. It does not determine substantive rights, liabilities, and duties."

At this point I wish to digress for a moment and recognize the possibility that, as a lawyer, my legal discussion may strike a group of practical businessmen as nothing more than a lot of trivial legal technicalities. But they are certainly not trivial. In fact they will have a direct bearing on the future welfare, indeed the very existence of every small business in the United States. And as for being technical, I am doing my best to make the issues as clear and understandable as possible. On an understanding of these issues depends the future of the Robinson-Patman Act.

As an indication of the importance of the Robinson-Patman Act to small business I would like to call your attention to some figures on the share of the Nation's distribution business held by the 100 largest chain, department, and mail-order stores during the years of the act's existence. As we all know, the big distributors made rapid gains during the late twenties and the early thirties. But what progress have they made since the Robinson-Patman Act was passed? In 1938 the 100 largest retail trade corporations according to the National City Bank, accounted for around 15 percent of the Nation's total volume of retail sales. Ten years later, they still held only 15 percent. There can be little doubt but that this arresting of the increase in concentration was due in no small part to the Robinson-Patman Act.

Now the question of whether or not the Robinson-Patman Act will continue, in the future as it has in the past, to be an effective form of protection to small business will be determined very largely by the outcome of this present fight on the good-faith issue. If good faith again becomes a complete defense to a charge of price discrimination, the Robinson-Patman Act will have been effectively repealed and survival will be determined, not by efficiency, by low costs, or by sound business organization, but by greater size and power and the ability of the large firms to destroy their smaller rivals through price discrimination.

Although certain big-business interests have for many years carried on a relentless propaganda campaign against the Robinson-Patman Act, no attempt was made in the halls of Congress to repeal it until 2 years ago, June 1, 1949, to be exact. That date marks the beginning of the battle in which we are still engaged. By way of background, I should point out that in the spring of 1948 the Supreme Court had handed down a decision holding that the basing-point system, as practiced in the cement industry, was illegal. The steel and cement industries immediately set in motion a great propaganda campaign to clarify the law with regard to the right of individual sellers to absorb freight. Lengthy hearings were held by a subcommittee of the Senate Interstate and Foreign Commerce Committee. A high-price public-relations firm was employed to stir up agitation against the Supreme Court decision. Skilled lobbyists were hired to haunt the halls of Congress. But in all this furor, there was no hint whatever that the big interests behind the drive wished to accomplish anything other than a change in the law regarding freight absorption.

Now the question of whether or not freight absorption should be permitted, and if so to what extent and in what manner, is an exceedingly complex question. It is, however, a question of concern only to firms which either sell or purchase commodities, such as steel or cement, in which freight is a large element in the delivered price. Obviously, to the grocer, the drugstore owner, the tire dealer, or the service-station operator, the question of freight absorption is of

only academic interest, having little if any effect upon his business.

Therefore, when the hearings on this freight-absorption question had been concluded, there was no indication whatever that the bill to be introduced to clarify the matter would in any way affect the protection which the Robinson-Patman Act gives to the small distributor. Thus, those of us who believe in the Robinson-Patman Act were literally astonished when on June 1, 1949, there was introduced on the Senate floor a bill, S. 1008, which would not only have granted producers the right to absorb freight but also would have effectively repealed the Robinson-Patman Act. This bill contained a section which related not only to the price discriminations inherent in freight absorption, but to all other forms of price discrimination as well. Section 3 of S. 1008 provided that a seller may justify a discrimination by showing that his lower price " * * * was made in good faith to meet an equally low price of a competitor. There it was, appearing without warning—the good-faith defense of the old Clayton Act. Our feelings were aptly described in the words of Mr. George Frates, of the National Association of Retail Druggists, who said: "The basing point may or may not be of vital importance to our industry, but when an attempt to settle a squabble belonging to the cement, steel, and gasoline giants takes place and the result weakens protective legislation for the small retailer, then we feel like innocent bystanders on whom there has been dumped an avalanche of steel and cement and gasoline."

On the Senate floor I hastily wrote out an amendment which would have protected the Robinson-Patman Act. This amendment would have permitted discriminations to be made in good faith to meet competition except where the discriminations injured competition. This amendment was adopted by the Senate and also by the House of Representatives. Then something extraordinary happened. Although the amendment, which by that time had become known as the Kefauver amendment, was contained in both the House and Senate versions, it was completely omitted in the final bill as reported out by the conferees. Although I protested this action, my protest was overruled, and S. 1008, devoid of any protection to the small-business man, was passed by the Senate.

Fortunately for small business, the bill was vetoed by the President. His record on monopoly legislation all the way through has been good.

But the fight was not over. It had only begun. With the convening of a new Congress, the battle has started all over again. This time our opponents have a new peg to hang their hats on. It is the majority decision of the Supreme Court in the Standard Oil of Indiana case. During the time that S. 1008 was being debated, the Federal Trade Commission was trying to get a decision which would make it clear, for once and for all, that the good-faith defense in the Robinson-Patman Act was only a procedural and not a complete defense.

The facts in the Standard Oil of Indiana case were these: Standard Oil of Indiana sold its gasoline to four large firms at a price 2 cents lower than to their other service station customers in the Detroit area. Since the retail margin on gasoline is relatively small, this 2-cent discount represented a very sizable price discrimination. Because of this concession these four outlets were able to sell gasoline at a relatively low price and attract business into their stations, to the injury of Standard's other retail customers. In the source of the trial, these two facts were clearly established: First, that the discriminations did have the effect of injuring competition; and, second, that they were not based upon any increased efficiency or savings in costs, which, of

course, would have constituted a complete defense under the Robinson-Patman Act.

In defense of its action, Standard Oil of Indiana took the simple position that the "good faith" defense had the same force and effect under the Robinson-Patman Act as under the old Clayton Act—i. e., that it was still a complete defense. It seems that there was a small refiner of unbranded gasoline which had either sold, or offered to sell its product, to these four outlets at 2 cents below Standard's regular price. Standard said, in effect, that by granting this discrimination it was merely meeting in "good faith" the equally low price of a competitor, and, moreover, that under the law this was all it needed to show in order to defend its action. The issue went up to the Supreme Court which decided, by a 5-to-3 vote, in favor of Standard Oil of Indiana—good faith was a complete defense regardless of the effect on competition. Incidentally, had Justice Minton, who abstained from voting because he wrote the decision in the lower court, participated in the decision, it would have been by a 5-to-4 vote.

This majority decision is, to put it mildly, remarkable. In a recent minority report, Senator MAGNUSON, Senator LANGER, and myself took issue with this decision, raising the question as to why, if good faith remained a complete defense, the Seventy-fourth Congress bothered to pass the Robinson-Patman Act at all. "If the court's interpretation of the good-faith defense in the Standard Oil decision is correct, all that was accomplished in enacting that law, aside from adding a number of minor provisions, was to change the term 'meeting competition' to 'meeting the equally low price of a competitor'." If this is all that was accomplished, the Seventy-fourth Congress labored and brought forth a mouse. "The chain-store investigation and other reports of the Federal Trade Commission, the extensive hearings and committee reports, the legislative debates, and the acts themselves have all gone for naught. We are now back where we started 38 years ago."

In arriving at their decision the members of the majority did not go back to the legislative record in order to try to ascertain the intent of Congress, they overlooked the opinions of the act's two sponsors, which I have cited above, and they overlooked the statement by the manager of the bill in the House of Representatives, which I have also cited. Instead of restricting themselves to their proper function of interpreting the law from the point of view of congressional intent and purpose, they were engaged in "judicial legislation," imposing upon the country their own concepts of what constitutes desirable economics.

As authority for their decision they cited three persons, none of whom had anything to do with the passage of the Robinson-Patman Act—the first, now deceased, was an associate general counsel of the Federal Trade Commission, who incidentally was quoted out of context; the second was an attorney from the Federal Trade Commission, whose field of work is completely outside the Robinson-Patman Act, and the third was a former Assistant Attorney General of the United States in charge of the Antitrust Division, who while occupying that position vigorously supported the enactment of S. 1008, who held that "good faith" should constitute a complete defense for Standard Oil of Indiana's price discriminations.

After the decision was handed down, it did not take long for the opponents of small business to realize that it constituted a very slender reed on which to depend. For one thing, it was, in effect, a 5 to 4 decision, a change in the position by just one of the Justices in any future case would reverse the decision. Moreover, it was abundantly clear that in arriving at its decision the Supreme Court had simply made a mistake in interpreting the law—a mistake which it could be expected to correct in the future.

With these considerations in mind, the strategists for the opposition decided that steps must immediately be taken to prevent the Supreme Court from reconsidering its action. They arrived at a very simple solution—a bill which would freeze the decision of the Supreme Court into statutory law. Once the opinion of the Supreme Court was placed on the statute books, the monopolies would no longer need to worry about any possible reversal. Such a bill, S. 719, was shortly introduced, and an effort was made to rush it through Congress without hearings.

Let us pause for a moment to examine this striking paradox. Less than 3 years ago, following the Supreme Court decision in the Cement case, the present sponsors of S. 719, who now urge us to freeze a decision of the Supreme Court into statutory law were denouncing the Supreme Court to the high heavens, contending that the Supreme Court had usurped the purpose, duties, and responsibilities of the legislators. But now that the Supreme Court has handed them a favorable decision, these same individuals are filled with awe and reverence for that august body. Now the criticisms of 3 years ago are forgotten. We hear nothing but paeans of praise for the highest Court of the land. The wisdom of the Court is extolled to the skies, and we are informed that since the Court has shown the way, it is the duty of the legislators to follow—a most unique statement of the division of powers contained in the Constitution. The formula is clear: When the Court hands down a decision against monopoly, get the Congress to change the law. When the Court hands down a decision in favor of monopoly, get the Congress to freeze the decision into statutory law. As Senator DOUGLAS has said, it is a case of "Heads the monopolists win, and tails the public loses."

During the course of the debate on August 1 and 2 of this year I again introduced the so-called Kefauver amendment, under which good faith would be a complete defense to a charge of price discrimination except where the discrimination may substantially lessen competition or tend to create a monopoly. This, it proved, was a very difficult amendment to vote against. A Senator voting against it was placing himself on record as being in favor of a practice, even though it resulted in injury to competition and the growth of monopoly. The vote on my amendment which, of course, would have reversed the Supreme Court decision and restored the Robinson-Patman Act as an effective instrument against monopoly, was 38 against and 37 for. I am glad to say we lost only three southern votes. If we had had the vote of just one other Senator, we would have carried the day. Monopoly would have received its greatest setback in nearly half a century.

The fight, however, is by no means over. The companion bill in the House, H. R. 2820, has not as yet been reported out by the House Judiciary Committee. If it is approved by the committee, there is still a good chance that when the measure comes to the House floor, this protecting amendment will be introduced and carried by the full House.

My statement that there is a good chance is based upon my assumption that the small business organizations, including the wholesale grocers, the retail druggists, the independent tire dealers, the food brokers, the petroleum retailers, and others, will continue their fine work of opposing this monopoly legislation. Let me warn you that many thousands of dollars are being spent by the big interests in order to get this legislation passed. Hardly a day goes by but that Senators and Congressmen are contacted by high-priced lobbyists working on behalf of this legislation. But all of their pressure and influence will avail them nothing if you and other small-business men make known your feelings to your own Senators and Congressmen.

The experience we have had in resisting these monopoly bills makes it abundantly clear that when small business organizes itself and focuses its energies on a given issue, it can move mountains. Frankly, the great tragedy of small business in the past has been its lack of organization and its lack of interest in congressional matters. Now, however, I think that most small-business men are beginning to realize that what takes place in Congress has a direct bearing on their own pocketbooks. They are beginning to realize that if monopoly bills are enacted, their very existence is in gravest jeopardy.

It is my profound hope that small business will continue, and in fact intensify, its opposition to measures which would destroy it. Upon this activity rests not only the future welfare of small business but the future of free competitive enterprise as well.

Remember, "The righteous wrath of an honest man avaleth much."

United States Defense Bonds

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement by Governor J. Bracken Lee, of Utah, and letter from Sheldon Olds, chairman of the Iron County Defense Bond Committee, of Cedar City, Utah.

The actions of the committee and Governor Lee in pushing bond sales in Utah are most commendable, and I take pleasure in offering this record of them for printing in the CONGRESSIONAL RECORD, in the hope that what they have done will prove an inspiration to other citizens throughout the country.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

OFFICIAL STATEMENT OF J BRACKEN LEE,
GOVERNOR OF UTAH

From September 3 to October 27 this year, the volunteer United States Savings Bond committees in each State, county, and city of the Nation will conduct a bond campaign with the theme: Defense is our job, too; and the slogan. Make today your D-day—buy United States Defense Bonds.

During the drive, from September 17-22, a simultaneous patriotic effort will be made by 68 Utah communities to achieve for their towns honor designation as United States flag cities for meritorious accomplishment in making the United States Defense Bond payroll savings plan available to employees in their communities. This drive, to be known as Operation Flag City, has the added objective of trying to win for Utah more flag city honors than have been won in the rest of the United States.

Regular saving is a self-reliant way toward attaining a measure of personal security, opportunity to better ourselves, and financial independence. The purchase of savings bonds is one of the finest forms of savings we have. In addition to providing the purchaser with the safest investment in the world today, it gives him a stockholder's share in his government, together with a stockholder's responsibilities.

The Federal Government has its responsibilities too, as the directors of the business in which bond purchasers hold stock.

But when this Government continues its unsound policies of deficit financing, reckless spending, waste, and inefficiency, its stockholders should demand an immediate change in management to protect their investment. The refusal to buy bonds is the ineffective way to voice such a demand, since the Government can obtain money in many different ways to finance its operations. Demands for a change should be made with Congress, which is the appropriating body of government, and with the Executive.

Every citizen has a stake in his government. If we permit the continued growth of government, increased deficit spending, waste, and inefficiency, we will be a party to the inflation, bankruptcy, and ruin which are sure to follow. By purchasing bonds, taking a consistent stand on Government economy (even though it sometimes hurts), and demanding from Congress the necessary governmental reforms, we can insure our country against the disaster that an economic collapse would bring.

I, therefore, call upon all organizations dedicated to community service, and all citizens who are able, to volunteer to help the local committee reach every possible bond buyer. I call upon employers and employees to expand further the payroll-savings plan for the regular purchase of bonds on partial payments. I call upon all others with income to buy savings bonds as regularly as possible at their banks, savings and loan associations, or post offices.

Above all, I call upon everyone, young and old, to exert every effort in demanding that the Federal Government reduce its expenditures, eliminate waste and extravagance, dispense with deficit financing, balance the budget, and pay off the colossal national debt that has been accumulated. The independence that bond purchasers are asked to save for will not be fully realized unless such steps are followed.

J BRACKEN LEE,
Governor of Utah.

AUGUST 23, 1951.

DEAR GOVERNOR LEE: In an effort to bring before the people of Cedar City and Iron County the full story of our country's defense effort, and the great need for a broader and fuller understanding of what democracy means to all of us, the wives, mothers, and sweethearts of all servicemen now serving in the Armed Forces from Iron County have united and volunteered to conduct the 1951 defense bond campaign in our county.

They have done this wholeheartedly and are grateful for the splendid opportunity for the following reasons:

1 They feel that while their men are fighting on the war fronts in Korea they should and could do a little more to help their loved ones in this great battle for freedom of mankind.

2 They hope that by their example and actions they can stimulate the habit of thrift among the people so that they will actively participate in the fight against inflation and all the chaos and misery that will accompany this breakdown of our economic way of life. They recognize that inflation is as dangerous an enemy to us as is communism itself.

3 They hope through this campaign that they might also call attention to the magnificent record that has been made by the men of the Two Hundred and Thirtieth Armored Field Battalion, of which some 140 men are from Iron County. I am sure, once we review this splendid record that we can forgive this feeling of pride that these women have in the achievements of their men.

4. They hope, through this campaign, to encourage the people of Iron County to reaffirm their determination to fight and work for the God-given rights and privileges enjoyed by freemen, to shake off the cloak of complacency and self-satisfaction that

seems so prevalent among the people of America today.

They hope to accomplish this by conducting the following campaign:

1. All wives, mothers, and sweethearts of servicemen will meet together on the morning of Monday, September 3, at the local bank, where, in a shining example of patriotism and loyalty, they plan to each purchase a defense bond.

2. By sending delegations to every civic group, club, school, church and organized group in Iron County to tell their story of the need for greater self control and appreciation that is now needed if our country is to survive.

3. By making a house-by-house canvass of every home in the county so that they might bring their story to every housewife, to encourage her to start saving for the future the bond-a-month way or through the payroll-savings plan.

4. By conducting a complete and widespread publicity campaign to bring the story before everyone.

I am calling this campaign to your attention for I feel that you would like to know of the actions of this patriotic and loyal group of American women who are willing to not only give their men to the fight for world freedom, but stand solidly behind their efforts.

It is hoped that such unselfish actions might serve as a shining example of patriotism for other women throughout the country so that they might be inspired to join in the common fight. We solicit your support in bringing this inspiring story before the people through the good offices of the Governor of Utah, in which you have so distinguished yourself.

Sincerely yours,

SHeldon Olds,
Chairman, Iron County Defense Bond Committee, Cedar City, Utah.

OFFICE OF THE GOVERNOR,

STATE CAPITOL,

Salt Lake City, Utah, September 10, 1951.

SHeldon Olds,

Chairman, Iron County Defense Bond Committee, Cedar City, Utah.

DEAR Mr. Olds: I have been delayed in replying to your recent letter concerning the bond drive in Iron County because of the fact that I carried this letter to Cedar City and read it in conjunction with your community's program the night of August 31.

As I stated then, I feel that you and your committee have done much in promoting the sale of bonds and certainly have set a shining example of real American patriotism. I certainly extend my sincere congratulations and commendation for this worthwhile effort. Other communities might well emulate your program.

I am making a copy of your letter and sending it to Senator ARTHUR V. WATKINS with the request that he have it read into the CONGRESSIONAL RECORD in the hope that it will stimulate official Washington to set a better example for the people.

Sincerely yours,

J. FRANKLIN LEE

A Black Spot on Our Record

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. POULSON. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following editorial from the Los Angeles Times of August 31, 1951:

A BLACK SPOT ON OUR RECORD

The contrast between our national policy of astronomical expenditures for assistance to foreign nations and of inadequate appropriations for the rehabilitation of destitute American Indian tribes has never been a credit to Congress.

It has become a humiliating and degrading thing to the American people.

Representative NORRIS POULSON, of California, speaks for a growing number of the Members of Congress and for all of the American people when he says with respect to this shameful situation:

"The extravagant gifts to Europe and penny for our Indians make . . . a black spot on our record."

Mr. POULSON's specific reference was to the Navajo rehabilitation program for which Congress has made a niggardly appropriation of only slightly more than \$6,000,000, while voting billions for foreign aid.

The most dramatic and shocking illustration of our contrasting policies in the two fields of rehabilitation has been offered by Representative FRANK T. BOW, of Ohio.

The most desperate situation of the Navajo Tribe, as Mr. Bow remarks, is that of water shortage which is so grave that many Navajo families are on the meager rations of water imposed by the necessity of carrying drinking water many miles.

The flocks of the Navajo tribesmen, utterly indispensable to their livelihood, are dying of thirst.

In the face of these dire facts, the Indian Bureau allotment for the development of new water supplies on the Navajo project is reported by Mr. Bow to be the pathetically insufficient sum of \$15,000.

Apparently, he acutely suggests:

"Navajo Indians would have a far better chance of getting water and the health facilities they need if they moved to Timbuctoo."

In justification of that remark, Mr. Bow offers the following facts:

That American expenditures on projects in the Belgian Congo this year, including waterways, are in excess of \$15,000,000.

That \$11,000,000 will be spent by the United States for projects in Great Britain's colonies.

That France is getting more than \$27,000,000 for her territories, including livestock watering projects.

Irrigation projects, water systems, and similar programs for Algeria, Morocco, the French Sudan, and numerous other foreign beneficiaries of American largess get top rating on the schedule of American expenditure, while our own Indian tribes are deplorable.

It is surely a black spot on the American record, as Representative POULSON says, that politicians so free-handed with our national resources in the remote parts of the world are willing to let our own people thirst and die.

Where Must the Tax Load Rest?

REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. MASON. Mr. Speaker, in spite of the misstatements and the misrepresentations that Drew Pearson makes about our tax laws being written by millionaires, and that of course you can expect them to write laws "that will spare the

rich and soak the poor"; and in spite of the tax theory expounded by Walter Reuther in his tax treatise entitled "A Proposal for a Progressive Spending Tax To Cut the Wealthy's Standard of Luxury Before Cutting the American Standard of Living", the facts and figures of the Treasury Department prove beyond the shadow of a doubt that the major part of our tax load must be borne by people in the lower income-tax brackets, because if we confiscated in taxes the total income of all persons receiving \$10,000 per year or over it would only increase the present Treasury take about \$5,500,000,000, only enough to operate the National Government for 1 month at its present rate of spending.

The following facts and figures, based upon Treasury reports and Government statistics, prove that our total tax load must rest heavily upon people in the lower tax brackets.

Mr. Speaker, today all persons with yearly incomes of \$10,000 or over receive 12.8 percent of the total personal incomes of the Nation, but under our tax laws are required to pay 42.8 percent of the total personal income taxes collected.

All persons with yearly incomes of under \$10,000—who are subject to the personal income tax—receive 55 percent of the total personal incomes of the Nation, and pay 57.2 percent of the total personal income taxes collected.

All persons not subject to the personal income tax—those who are in the very low brackets or are tax exempt—receive 30 percent of the total personal incomes of the Nation, but pay no personal income tax whatever. They do, however, pay heavily through hidden taxes and excise taxes.

It is easy to see from these facts that the people with yearly incomes of \$10,000 or over pay more than a proportionate share of the personal income tax burden; that people with yearly incomes of less than \$10,000—who pay personal income taxes—pay a little more than their proportionate share; and that persons who receive 30 percent of the personal incomes of the Nation carry none of the personal income tax load.

IMPOSSIBLE TO BALANCE BUDGET BY SOAKING THE RICH

Mr. Speaker, if the Federal Government should confiscate all yearly incomes of \$100,000 or over by imposing a 100-percent tax rate upon the same, the Treasury would receive only \$218,000,000 more than it now receives from this group of taxpayers. That extra amount would operate our Federal Government for only 1 day under the proposed 1951-52 budget. If the Federal Government should confiscate all yearly incomes over \$50,000, the Treasury would receive only \$722,000,000 more than it now receives. That extra amount would operate our Federal Government for only 4 days. If the Federal Government should confiscate all yearly incomes over \$25,000, the amount of additional "take" would be a little over \$2,000,000,000. That extra amount would operate the Federal Government for only 10 days. If the Federal Government should confiscate all yearly incomes over \$10,000 per year, the amount of additional "take" would be about \$5,500,000,000. That amount would operate

our Federal Government for less than 1 month at the present rate of spending.

Of course, if such confiscatory taxes were levied, our entire national economy would become paralyzed, and the amount of taxes that could be collected the following year would shrink to almost nothing.

These figures, based upon Government reports, are presented to illustrate the fallacy of the generally accepted propaganda that the Government can balance its budget by a "soak the rich" policy. Even the most lowly in our country, whether he knows it or not, is contributing heavily to the Federal Treasury from which the Congress of the United States votes appropriations for our Federal Government and for all the international adventures in various parts of the world.

THE PROPOSED 25-PERCENT TAX CEILING

Mr. Speaker, what would a tax ceiling of 25 percent do to the yearly receipts of the Federal Treasury if the tax limitation amendment to the Constitution were adopted? This is a very pertinent question. I have secured an answer to this question from the staff experts of the Ways and Means Committee. The answer, in three parts, is as follows:

(a) The Treasury now has a yearly tax take of about \$24,000,000,000 from the personal income tax. A 25-percent tax ceiling would reduce this take only \$2,500,000,000, leaving \$21,500,000,000 still to come in from this source.

(b) The Treasury now has a yearly tax take also of \$24,000,000,000 from the corporation income tax. A 25-percent tax ceiling would cut this tax take in half, leaving only \$12,000,000,000 to come in from this source.

(c) The Treasury now has a yearly tax take of \$800,000,000 from Federal estate and gift taxes. A 25-percent tax ceiling would cut this tax take to \$200,000,000, leaving \$600,000,000 to come in from this source.

The total tax reduction under a 25-percent tax ceiling under present conditions, therefore, would reduce Treasury receipts about \$15,000,000,000, leaving some \$45,000,000,000 Treasury receipts to operate the Government each year.

And so, Mr. Speaker, in spite of the statements of such men as Drew Pearson and Walter Reuther, the major part of our tax load must be borne by the so-called poor people.

Arizona Bank President's Report Contradicts Claims of Arizona Project Supporters in Congress

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. POULSON. Mr. Speaker, there seems to be a great difference of opinion among Arizona leaders regarding the condition of that State's economy and

the relative importance of the proposed central Arizona project.

Arizona Senators and Representatives, as well as witnesses called by them, have claimed repeatedly that unless their State was awarded the multi-billion-dollar central Arizona project it would face an economic collapse. Without this costly rescue project, they declared, Arizona's banks would fail, business houses would close, farms would blow away in dust, and the roads out of Arizona would be filled with migrating people in worse condition than the displaced persons of Europe.

I have before me a document issued by a most prominent Arizonan which says that this is not the case. In view of previous pleas and testimony made before Congress, his statements are somewhat amazing, and I shall include them here for the consideration of my colleagues.

Let me cite a typical example of the stirring appeals made by Arizona spokesmen for the Arizona project. On May 28, 1951, a distinguished Member of the Senate, who ranks high in his party, told his colleagues—page 5867 of the CONGRESSIONAL RECORD:

It was testified by witnesses that from 150,000 to 200,000 people would have to seek new homes if the economy of the State is not saved by this project. Banking institutions, stores, and other businesses now both serving and depending upon these people would be seriously affected by these lands going out of productivity, which would result in the loss of homes and work for this large number of people.

A little later on the same day, the same distinguished Senator told on the Senate floor of the dire results which would occur if Arizona's water supply is not supplemented by the proposed project—page 5869 CONGRESSIONAL RECORD. He said:

It would mean that thousands of people would lose their homes, and this would affect the bankers and businessmen and break down the whole economy of the State of Arizona. But that is not all. It would mean that all these people, farmers and businessmen, would lose their buying power. They could not continue to purchase manufactured articles and supplies from other sections of the United States, and perhaps most significant of all, it would mean that the present sum of bank dollars paid annually in income taxes to the United States Government would dwindle to practically nothing. The mines and other industries of the State would be saddled with all the bonded indebtedness of the State and its subdivisions, and the added burden of all the costs of State Government, including the support of the schools. Thus, the whole economy of Arizona would be seriously affected. It has been estimated, as I have previously stated, that a quarter of a million people would actually have to leave the State. These people would be displaced persons. Where would they go, under ordinary circumstances?

There can be no question that Arizona needs this water to maintain her economy.

Walter R. Bimson is a distinguished Arizona business leader and economist. He is president of Arizona's largest financial house, The Valley National Bank of Phoenix. His bank loans millions of dollars each year to businessmen and farmers. Therefore, it may be assumed that Mr. Bimson keeps in

close touch with the condition of Arizona's economy.

In August, Mr. Bimson issued a report on farm and range conditions in Arizona. This report was widely distributed throughout the United States to bankers, investment houses, and business firms.

I quote from Mr. Bimson's report:

Let us now give you a brief appraisal of our present situation. Last year was a very dry year, quite comparable to this one. Yet we produced last year the largest volume of crops ever grown in Arizona. This year, we shall again produce a record crop. Our dollar volume should be as great, or greater, than last year.

Our bank makes each year many millions of dollars of crop-production loans. Our field men who constantly inspect the crops we finance, have just reported to me that they do not know of a single borrowing customer who will not be able to liquidate his loans entirely this year because of lack of water. We do not have a single farm mortgage on our books that is delinquent, and we do not anticipate any delinquencies as a result of water shortages.

I continue to quote from Mr. Bimson's report:

Our largest single crop is cotton. It is estimated that the cotton crop in Arizona this year will exceed 800,000 bales and, according to a Government report published as of the first of August, there is sufficient water for the fruition of this crop. Government estimates an average yield per acre this year of about one and one-half bales, as against the national average of close to one-half bale per acre.

It is our best judgment that the present water shortage will not this year adversely affect the total production of crops in Arizona. One reason for this is that farmers know in advance how much water they have available under our controlled system of irrigation and plant only as much land as they can adequately water. Furthermore, by more intensive and careful cultivation of the remaining land, they sometimes actually produce as much on this smaller acreage as they do when they farm their entire acreage. For this year, at least, our water shortage, while a matter of real concern, will not result in any critical crop failures or material reductions in total farm productions.

It would seem to me that the Senator previously quoted was slightly confused when he addressed the Senate.

But what of the future?

Asks Mr. Bimson in his report.

Of course, there is no way of predicting next winter's snowfall in our mountain areas. But it is hardly conceivable that there would be no snowfall and, therefore, no run-off into our reservoirs next spring. In the driest winter we have had in 50 years, which was 1902, the runoff amounted to 332,000 acre-feet. Even with an equally low runoff next spring, we would not have a critical situation because our underground water supply, supplementing our stored water, would still permit us to continue a volume of agricultural production higher than normal 5 years ago. A 10-percent decline in the price of farm products would reduce our farm income more than any shortage of water that is likely to occur.

I wonder if the Senator quoted above could have been talking about some other project in some other State, instead of the Arizona project?

The proponents of the central Arizona project have said that Arizona cities desperately need water. The records of hearings on the Arizona bill are replete with statements to this effect.

Mr. Bimson says in his report:

There need be no fear about the shortage of water, either currently or in the future, affecting adversely the growth of our cities. It is quite possible that long-continued drought might reduce our cultivated farm acreage, but drought, no matter how long continued, could not reduce to a critical point, the supply of water for further development and growth of our cities.

The Arizona project plan contains a provision for supplying municipal water.

Regarding income in Arizona, Mr. Bimson states:

The total income of individuals in this State is a little under \$1,000,000,000 a year * * * agriculture and livestock together produce about \$250,000,000, or one-fourth of this total amount. While a curtailment of farm production would adversely affect our general economy to some extent, our sources of wealth and income are so well diversified that we cannot foresee any conditions relating to present or future water shortages that would materially curtail our continued progress.

This last paragraph rather effectively refutes the statements of the important Senator quoted previously and other Arizona leaders who have so tearfully predicted the State's complete ruin.

In other sections of his report Mr. Bimson shows in other ways that Arizona's economy is not in the desperate condition that some proponents of the central Arizona project would have us believe.

I quote from the report:

Our agricultural production in this area is not dependent upon rainfall, but upon the water stored in our reservoirs, caught in the spring when the streams are filled with water from melting snow in the high mountain areas and released during the crop-growing season for the use of our farmers in the valleys.

When we have a heavy snowfall in the mountains our reservoirs are filled to overflowing. Then we have enough water for current needs and sometimes a surplus that will insure an adequate supply for several years.

When the snowfall is light the runoff is light. Our reservoirs are not filled, and we do not have an adequate reserve supply of water. Then we supplement the stored water by a pumping system that draws water from underground sources.

For several years now we have been in a dry cycle. As a result, our storage water is low, and we have been drawing heavily upon our underground water supply. In some areas heavy pumping has lowered the underground water level, necessitating deepening wells and using more powerful pumps. The cost of pumping has increased, but not yet to a prohibitive figure.

We have had many other dry periods in our recent history, and some of them have been just as serious as our present situation. For example, since 1910, when our present water-storage system was started, there have been 11 years out of the 41 years when we have started the crop season with less than 500,000 acre-feet of water in our reservoirs. In two of these years, 1910 and 1940, we started the season with less water than we had this year. As far as storage water is concerned, our shortage this year is not as bad as it has been in other years.

Arizona Members of Congress and other supporters of the proposed central Arizona project have repeatedly stated that thousands of acres of Arizona farm land which are dependent upon underground water must go out of production

if the project is not quickly built. Some irrigation districts, they said, may now water only a small part of their lands because of a water shortage.

In view of these statements it is interesting to note what Mr. Bimson says regarding underground water in his report. I quote:

The effect of pumping on our underground water level is a matter that has been given much study during this dry spell. I have explained how we supplement our surface-water supply by drawing upon our underground supply.

In addition to the pumping that goes on in areas served by the storage reservoirs, there are many farms outside the districts served by reservoirs which are dependent upon underground water for their entire water supply. Nearly one-half of our farm land in Arizona is thus dependent upon underground water. These lands have generally had an adequate supply of water throughout the recent dry period.

That last sentence, to say the least, is slightly in conflict with the statements made to Congress by Arizona witnesses and officials.

Mr. Bimson's report continued:

In some areas, however, the withdrawal of water from the ground has lowered the underground water level very materially, necessitating the deepening of wells. In other areas there has been very little change in the water level.

While it is impossible to obtain accurate figures on all of the wells in the State, we do have accurate figures on all of the wells in the Salt River Valley water users project, which comprises a quarter-million acres of land in the Phoenix area.

In 1910 the underground water level averaged 30 feet. In the following 10 years when there was very little pumping, but constant application of surface water to the land, the water level rose to an average height of 15 feet from the surface. This steadily rising level was a matter of concern because if the level got much nearer the surface it would ruin the crops. Wells and pumps were then installed for the express purpose of lowering this water level to a safer depth.

In the following 15 years the water level was restored to a 39-foot level which was about normal for this area before irrigation began.

From 1935 to 1940 the runoff from the mountain snows was in low volume (except for one good year in 1937) and the pumps were used steadily during that period. This reduced the water level from 39 to 50 feet. The 1941-45 period was a period of good runoff and pumping declined. The underground water level remained constant at 50 feet. Since 1945, however, we have used the pumps more heavily to supplement our meager surface supply of water, and the underground water level has, in this period, dropped sharply to an average of 89 feet, where it stands today.

This situation is probably paralleled throughout the State. It is this rapidly falling water level combined with below-average runoffs of surface water that has resulted in the current discussion of our water problem. The Governor of the State has called several conferences for the purpose of agreeing upon a program of controlling the use of underground water. *Life* magazine picked up this item of news, featured it in a recent issue and many of our eastern friends have been alarmed about their investments in Arizona.

Our concern and the Governor's concern is not with the outcome of our current crops, but rather with the development of a constructive long-range control program.

Arizona is recognized as the most efficient cotton-producing area in the world. It is,

therefore, attractive to out-of-State people who wish to come here to develop new cotton lands. In an effort to conserve existing investments and to prevent overuse of our limited water supply, the Governor has wisely reorganized the need for some reasonable control of the underground water supply.

The pictures painted by the Arizona proponents of a State devastated by economic ruin, and of ranchers and their families trudging wearily out of the State, homeless and helpless, fades a little more under the penetrating light of Mr. Bimson's concluding paragraph regarding cattle ranges.

Mr. Bimson says:

There have been good summer rains in many of the cattle-range areas, although in some other areas the ranges are admittedly very dry. However, this year fewer cattle have had to be moved to better ranges than in many past years. In fact, many out-of-State cattle herds are coming into this State in order to utilize our surplus feed.

Newsprint Shortage Caused by NPA Order M-69 Should Be Stopped

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. McDONOUGH. Mr. Speaker, I rise to call the attention of the House to another example of the incredible bureaucratic confusion in our Government, and to the serious damage it is inflicting on both our economy and our liberty.

The administration has committed the United States to a "globaloney" sulfur export plan that will seriously curtail the already critical newsprint supply and may eventually cause one small newspaper after another to go out of business in this country. The State Department, through ECA, has set up what is known as the International Materials Conference. The Conference has set up a "sulfur" committee with representatives from 13 countries to consider the problem of how to distribute sulfur, principally produced in the United States, to the rest of the world. This superannuated, superelite, superimposed international agency of a nebulous world government which presumably does not exist has, as the House might expect, decided that if anybody must suffer a lack of sulfur, it must be America.

As a result the committee has graciously directed that the United States export 960,000 tons of American sulfur in 1951, and inasmuch as that decision creates a sulfur shortage that would not otherwise exist, the National Production Authority has issued order M-69, which puts sulfur under a rationing system. Sulfur, which is vital to the production of newsprint, therefore will be available in smaller quantities for newsprint production, and it is estimated that the newsprint supply may be cut as much as 20 percent as a result.

With world newsprint already in short supply in the United States, the sulfur order, which presumably would affect

American and Canadian newsprint producers equally, could have a disastrous effect on publications in the free world at the very instant when other segments of our bureaucratic labyrinth are urging that more newsprint be produced as an effective means of counteracting Soviet propaganda. In any case, small newspapers and publications, which already have to scramble the best they can for newsprint because of existing shortages, will find themselves in a serious predicament, and beyond doubt many will have to go out of business.

I am therefore introducing today a bill (H. R. 5379) increasing by 50 percent the amount of sulfur for the American and Canadian newsprint industry above that provided by NPA Order M69. I have addressed a letter to the chairman of the House Interstate and Foreign Commerce Committee's subcommittee investigating newsprint, my esteemed colleague the gentleman from Texas [Mr. Beckworth], asking for immediate hearings in an effort to unravel the knots which our bureaucratic one-worlders have tied themselves into. We should decide once and for all whether the United States intends to promote freedom of the press and the maximum access to truth or whether this policy is to be laid aside because of a handful of bureaucrats want to play chess with sulfur production.

The National Production Authority has estimated that our 1951-52 supply of sulfur might be as much as 20 percent short of American industrial demands. If a reduction of 20 percent in the supply of necessary sulfur is denied to newsprint manufacturers, we will be faced with a shortage of at least 1,000,000 tons of newsprint. It would seriously affect the economy of the newsprint industry in the United States and Canada, and would certainly cause some of our American newspaper publishers to close their doors.

The Congress of the United States has been working through its various committees for years in an effort to assist the newsprint industry and the newspaper publishing business to find ways and means to increase their supply of newsprint.

In the last 5 years both American and Canadian newsprint manufacturers have spent great sums of money to build new plants and to modernize existing plants in a program to speed up and increase production. The 1951-52 production of newsprint is dependent on increasing quantities of sulfur. To place a curb on sulfur allocations to Canadian and American manufacturers is contrary to the best interest of our Nation and will cause hardships to one of Canada's basic industries.

There is no real shortage of sulfur in the United States. The present shortage is an artificial one created by the present administration. American production of sulfur is now two and a half times that of prewar levels and more than enough to meet every American industrial demand. The State Department through the Economic Cooperation Administration has set up what is known as the International Materials Conference. The purpose of this Conference, according to Mr. Theodore L. Sweet, the

American representative on the International Materials Conference on sulfur is to set up continuing international machinery through which all of the interested governments of the free world can cooperate in the solution of material shortages which are world-wide in scope and effect.

The sulfur committee of the International Materials Conference is made up of 13 countries, 5 of which are members of the United Kingdom. They met early this year and considered the requests of all countries for allocations of American sulfur and decided what was to be done with our American sulfur production. Their figures, which our administration approved, call for the exporting of 960,000 tons of American sulfur in 1951. Having approved these figures for export, we now find that we cannot meet our own industrial demands. Hence, NPA issues order M-69, which puts sulfur allocations under a rationing system. This order also affects Canadian sulfur requirements for they are not considered as exports, nor do they require export licenses.

Under this order, NPA can and does control the amount of sulfur necessary and vital to our defense program, and rightly so. But to curtail American and Canadian sulfur requirements used in the manufacture of newsprint is shortsighted and obviously an unnecessary order.

Newsprint has always had to have a relatively small amount of sulfur used in the process of its manufacture. There is no substitute if we are to have a high-quality product that can meet the standards of strength needed for present high-speed news presses. The entire pulp and paper industry, which once used a much larger proportion of our total sulfur production, now uses less than 10 percent. Only 11 1/2 pounds of sulfur are used to produce 1 ton of newsprint as against 56 1/2 pounds for one ton of kraft paper.

Canada, which depends entirely upon the United States for its supply of sulfur, imports 252,000 tons and uses 77 percent of its total imports for paper manufacturing. Canada produces approximately 80 percent of our newsprint.

Sulfur is one of the oldest and most widely used elements, and it is found in some form in almost every land. The ingenuity and efficiency of the American sulfur industry, risking its capital in exploration and in new methods of production, has made sulfur available in extremely large quantities and at very low costs. The current world shortage of sulfur is not due to any failure on the part of the American sulfur industry to produce.

Mr. L. M. Williams, Jr., president of the Freeport Sulfur Industry, in a letter dated July 17, 1951, to the House Subcommittee on Newsprint, wrote:

United States sulfur productions is, in fact, more than enough to meet the full needs of American industry. These needs are not being met only because of the large exports of sulfur. . . . These exports made at the direction of our Government are equivalent to about one-fourth of our production. . . . Our allies overseas have access to reserves of sulfur sufficiently large to supply all their needs. Production from these sources not only has failed to keep pace with the requirements of these coun-

tries but has not returned even to prewar levels. If the deficit is to be placed at any door, it should be theirs and not ours.

When our State Department through ECA agreed to let the International Materials Conference allocate approximately a million tons of American sulfur for export to foreign countries, we in effect guaranteed to the world a cheap and bountiful supply of sulfur at the expense of our own economy and industry. Ironically, we also loan or give outright to many of the countries the money to buy our sulfur.

As far as I am able to determine, there is no other country which rations or controls its sulfur once it has received the sulfur from us. There are no American controls as to the ultimate use of exported sulfur. A foreign purchaser could buy sulfur for \$26 a ton, American export price, and resell it in foreign markets for \$60 a ton, Italian export price. We could not stop him.

These allocations of sulfur to foreign countries at the low American prices will only perpetuate world shortages, for as long as the rest of the world is guaranteed a cheap supply of sulfur by IMC from the United States supply, they will not reopen their own sulfur plants.

We have no stockpile of sulfur in the United States, nor is there a program of stockpiling contemplated. We have only 10 to 20 years of present production left in our known American sulfur deposits.

When I first began my investigation into sulfur shortages in the newsprint industry and traced the shortages to the International Materials Conference, I found some rather interesting facts that affect many basic materials. The International Materials Conference now has seven committees whose recommendations control the following 13 important products and materials: Copper, zinc, lead, sulfur, cotton, tungsten, molybdenum, manganese, nickel, cobalt, wool, and paper and pulp. It is significant to note that the United States is the largest or second largest producer of these materials under international control, and in every case the United States is the largest consumer.

But it becomes even more interesting to note the vital commodities that are not controlled by this so-called international machinery to solve world shortages.

There is no international machinery set up to control the British monopoly of commercial diamonds, nor the South American monopoly of tin.

Nor is there any attempt by the International Materials Conference to touch the British-Malayan crude rubber monopoly which has been gouging United States tire manufacturers for years.

Nor has there been a committee set up for oil and petroleum. With the British and Dutch having a combined output greater than the United States, the British have felt that there was no need for such international machinery. But now that the British have lost their oil holdings in Iran, our State Department will shortly announce that the United States will soon place her petroleum production into the hands of another foreign committee.

We are in effect, through the International Materials Conference, placing the economy of the United States into the hands of a semi-world government, giving away control of basic materials vital to our American free enterprise system.

To the anticipated charge that this bill will single out the newsprint industry and give it special consideration denied to other industries, I need only point out that all our vital defense industries' demand for sulfur under order M69 are and will be taken care of. This bill takes the newsprint industry out of the non-essential class into which order M69 has placed it. It takes it out of the class as such nondefense industries as detergents, insecticides, fertilizers, rayons, paints, and a multitude of nonessential products which use sulfur in their manufacture.

This bill will place the American and Canadian newsprint industry needs on a par with foreign newsprint manufacturers in Norway, Sweden, and Finland. It places our American and Canadian manufacturers of newsprint on the same footing as the foreign manufacturers now using our sulfur in the manufacture of nonessential products.

My investigation into newsprint shortages has led me to believe that the present administration has gone out of its way to discriminate against our newsprint industry.

Scandinavians have been gouging American newspaper publishers with prices running 200 to 300 percent above the United States and Canadian newsprint price. OPS has placed a price ceiling on newsprint at \$116 per ton, yet they allow the Scandinavians to charge black market prices of \$200 to \$350 per ton.

The International Materials Conference committee on paper and pulp has now decided that American newsprint manufacturers must export part of their production, thus increasing our newsprint shortage. The NPA under Order M45 has ruled that all United States paper manufacturers must set aside three percent of their pulp production for market sales of pulp, once more increasing our United States paper shortage.

I hope that all of these things will be brought to light and cleared up when the House Subcommittee of the Interstate and Foreign Commerce Committee makes a report on its newsprint investigation.

This bill is not intended to be a cure-all for the newsprint industry.

This bill will enable the newsprint industry to have access to the essential raw material of sulfur to meet production demands.

This need is so essential that it justifies special action on the part of this Congress.

Newsprint is too important to the welfare and preservation of our American tradition of free speech and freedom of the press to allow its production to be in any way hampered by restrictive, unjustified and unnecessary bureaucratic controls.

Retirement of Hon. Peyton Ford as Deputy Attorney General

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I have prepared paying tribute to Hon. Peyton Ford, who is retiring as Deputy Attorney General to reenter the private practice of law.

There being no objection, the statement was ordered to be printed in the Record, as follows:

I should like to say a few words of tribute to a well-deserved official of the Department of Justice who is leaving the Government to reenter the private practice of law.

He is Peyton Ford, who has resigned as Deputy Attorney General of the United States.

Mr. Ford, with whom I have had many associations in the line of duty, has rendered not only to the Department of Justice, but to the United States a service which, together with his career in the Navy, has certainly earned a "well done."

Mr. Ford came to the Department of Justice in 1946, after serving as a lieutenant in the Navy in the Atlantic, the Mediterranean, and the China-Burma-India areas. During those years he saw much combat.

Although Mr. Ford, in the sense of age, is a young man, his experience is legion.

He was Assistant Attorney General for the State of Oklahoma in the years 1939 and 1940.

Following his duty with the Navy, he was appointed Special Assistant to the Attorney General in 1946 by Attorney General Tom C. Clark, who is now an Associate Justice of the Supreme Court.

Mr. Ford's capabilities were quickly recognized by the President and the Attorney General with his appointment as Assistant Attorney General to head the Claims Division of the Department of Justice in 1947.

A few months after this appointment, he was elevated to the position of the Assistant to the Attorney General, which title the Congress later changed to that of Deputy Attorney General. In this position he had, under the Attorney General, direct supervision of the Department of Justice.

I have known Peyton Ford to pursue, without regard to his personal time or energies, the fullest efforts for that which would reflect credit not only to the Department but in the best interests of his country. There has never been a time during my tenure as a Congressman and as a Senator of the United States that Mr. Ford has not been available to lend full and complete support to any problem placed before him.

Despite the long arduous hours as Deputy Attorney General and his close liaison work with the Congress and his countless daily routine problems, Mr. Ford has found time to argue several cases before the highest court of the land.

I should like to say that our former colleague, J. Howard McGrath, who is now the Attorney General, voiced my feelings in his formal acceptance of Mr. Ford's resignation when he said: "It is with deep personal regret that I accept his resignation," and added that "During the 2 years I have been Attorney General I have acquired a very

genuine esteem and affection for Mr. Ford and I am deeply appreciative of his fine service and loyalty."

Mr. Ford's successor, A. DeWitt Vanech, has served long and capably in the Department of Justice, and I know he will continue to do a good job.

Encroachment by Government on Private Industry

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. O'CONOR. Mr. President, the question of further encroachment by government in the fields heretofore reserved to private industry is giving much concern to citizens throughout the entire country.

The matter is discussed expertly, and its implications weighed with authority, in an address made before the Thirty-fourth International Labor Conference of the International Labor Organization in Geneva, Switzerland, by William L. McGrath, president, the Williamson Heater Co., Cincinnati, Ohio, and a splendid American.

Members of the Senate will be interested, I know, in the attitude of representatives of other nations, who are working with representatives of this country in international activities, and I ask unanimous consent that the address by Mr. McGrath be printed in the Appendix of the Record so that the well-qualified views expressed may be given the wide prominence they deserve.

There being no objection, the address was ordered to be printed in the Record, as follows:

For the third successive year, I have served upon the Committee on the Application of Conventions and Recommendations, and I urge you most earnestly to study its report.

The work of this committee is overshadowed by the issues and arguments developed in the committees which are drafting conventions or recommendations covering the items on the current agenda. But it is in the Committee on Application that we endeavor to learn what have been the actual results of the conventions that have been passed. And I can assure you that attending three successive sessions of this committee is indeed an experience in progressive disillusionment.

I did not think, when I first became a member of the United States employer delegation to this conference, that this august body, now an arm of the United Nations, would be guilty of passing so many conventions which it should have realized would have little probability of ratification in most countries. But such is the case.

I did not dream that nation after nation would give only lip service to treaty obligations. But for 3 years now, I have listened to an imposing procession of alibis, pretenses and excuses, offered by countries in an effort to explain why they have not implemented by legislation conventions which they have long since ratified.

My concern over this matter contributed to a discussion, in our committee, in the

course of which some members apparently assumed that I was suggesting the abandonment of conventions. They were wrong in that assumption. But I do think it is high time that we reviewed carefully the whole subject of the nature and purposes of the convention, lest the ILO fall into international public disrepute.

As I understand it, a convention is presumed to be an international law which, when ratified by a nation, stands as a treaty among all nations which likewise ratify it.

What happens then, when the ILO passes a convention? The word is flashed around the globe—great news for the workers of the world. The ILO has enacted another international law to raise living standards everywhere. Union and government men can tell the people what they have done for the workingman.

But what are the actual facts? They are, as you well know, that the convention will apply only in such countries as may eventually ratify it—and even then only if it is backed up by implementing legislation.

I say, therefore, that when we pass a convention that has little hope of general ratification, we are guilty of gross misrepresentation. And we are moving further in that direction year by year, as clearly shown in the ratification chart prepared by the office. In fact, the ratification tables originally prepared by Sir John Forbes Watson, as brought up to date by the office and appended to the Applications Committee report, show that in our entire history we have an average ratification record of only 16½ percent.

It has been suggested that a country should vote in favor of a convention it knows it cannot ratify, on the ground that the passage of the convention would help underdeveloped countries achieve progressive legislation.

My own view is that hypocrisy is a poor foundation for social progress. When a government delegate supports a convention, the natural assumption is that his country could and might ratify it. If he knows, when he casts his vote for the convention, that his country cannot and will not ratify it because it is contrary to his country's laws and principles, he is, in my opinion, guilty of misrepresentation. His vote is deliberately misleading.

This is not only unfair to other nations; it would indeed be a sorry example to set for the underdeveloped countries who are relatively new at these meetings and have presumed that we speak with honesty and candor. If a so-called advanced nation can vote for a convention on a tongue-in-cheek basis, so can they. If nations to whom they look for guidance can make a pretense for political purposes, so can they. And what real progress could be made toward helping underdeveloped countries achieve progressive legislation if the ILO were to degenerate into a form of mutual insincerity?

Is political expediency of the moment to determine the vote on convention ratification?

Can we afford to let what started out so nobly as a real instrument of international law degenerate into a mere medium of propaganda?

A recommendation carries with it no elements of misrepresentation. But lest the workers themselves some day turn against us in disillusionment, we must be more cautious as to conventions.

I pass now to the second phase of this problem, namely, failure to pass implementing legislation after ratification.

It was my impression that after ratification, necessary implementing legislation became a contractual obligation. I note that in the preamble to the ILO Constitution, the member countries are referred to as the "high contracting parties." The constitution also provides that after ratifying a con-

vention the contracting party "will take such action as may be necessary to make effective the provisions of such convention."

In the United States, we have great respect for the sanctity of contract. In our country, an employer would not sign a contract with a union and then say, behind closed doors, "Of course, I have no intention of living up to the terms of the contract. I only signed it because the story would look good in the newspapers." But that seems to have been the spirit in which various member countries have ratified conventions. Some countries are still trying to explain otherwise, after 20 years.

Other countries offer sincere explanations of failure to implement a ratified convention by legislation; explanations with which our committee is reasonably sympathetic, because they are based upon fact. One country says, "We had a change in administration." Another says, "We try and try, but we can't get the law through the legislature." Conditions which have developed in a country since ratification may have made the application of some of the provisions of the convention impracticable. So the explanations continue, year after year, in our committee hearings, following a tedious and familiar pattern.

Nevertheless a contract has been broken; a treaty has been violated. Ratification has been a sham and a pretense, and again the ILO is involved in misrepresentation.

Some countries seem little concerned over the matter, and appear surprised that our committee should take it seriously. One government claimed that it should not be criticized for its shortcomings, because to show its good faith it intended to vote for more new conventions at this conference. Note, too, as stated in appendix I of our subcommittees report, that although ratified conventions are supposed to be brought before the "competent authorities" within a year or at the longest 18 months, only 17 out of the 60 countries who were members in 1940 have as yet done so with respect to all of the conventions passed at the 1949 conference.

The fact is that instead of realizing their contractual obligations as to conventions, under the constitution of the ILO, member countries are to a large extent treating various conventions as if they were recommendations. Would it not have been better for the reputation and standing of the ILO if such conventions had been passed as recommendations in the first place?

There is another aspect of our committee's hearings which concerns me greatly. That is the emphasis placed upon ratification and legislation, rather than upon working and living standards achieved.

Bulgaria has ratified 62 conventions; the United States has ratified 5. Is Bulgaria therefore a more advanced country than the United States? A country may have high living standards, but unless it has passed ILO legislation it gets no credit for them in our committee.

Does the passage of ILO laws represent the sole measure of progress; the sole evidence of the influence of the ILO? In this connection may I quote Mr. Benitez, the employer's delegate from the Philippines. On June 15, Mr. Benitez said, in his address to this body:

"It seems paradoxical that, when delegates convene for their legislative work in the conference, they give the impression that only by the enactment of a law can the ILO fulfill its threefold mission, particularly in the giving of leadership in the field of social policy. Here, I respectfully submit, is where perhaps we need to rationalize and readjust our attitude toward the objectives of the ILO. In the light of the adopted new emphasis in ILO policy, by the sending of experts to the four corners of the world, especially to the underdeveloped regions, and

putting all the accumulated international experience which is available at the service of States members with concrete social and labor problems; in the face of the rapidly growing importance of this new ILO objective, and the keen demand for it from the agricultural nations, the old attitude, that only by law can the ILO give leadership, needs to be discarded.

"Our Government had not ratified a single convention ever since the Philippines became a member in 1948. And yet, I dare say that no single institution has had more influence than the ILO in clarifying our people's thinking with regard to the respective role of the workers and the employers in a democratic society."

The fact is that we have gone out of bounds with respect to conventions. Instead of limiting them to broad principles to which all can subscribe, we have attempted to apply them to the field of specific detailed legislation. Here is where our trouble lies. Here is where we run contrary to the principle of local self-government. This is why we have difficulties with ratification.

In this connection the report of our committee quotes the authors of the ILO constitution as follows:

Subjects will probably come before the conference which, owing to their complexity and the wide differences in the circumstances of different countries, will be incapable of being reduced to any universal and uniform mode of application. In such cases a convention might prove impossible, but a recommendation of principles in more or less detail which left the individual States freedom to apply them in the manner best suited to their conditions would undoubtedly have considerable value."

When we try to tell a country the exact nature of a law it must pass, we are stepping beyond a convention and over into the field of implementation. That, I submit, is something which each country has a right to decide for itself.

It is excellent that nations agree on basic principles. But any effort to interfere with the freedom of countries to pass their own individual laws as they see fit will in the long run result only in nonratification, nonimplementation, and resentment.

Evidence of such resentment is accumulating in the records of our committee.

One government suggested that the Committee on Application should act as a guiding body, rather than as a chamber of inquiry.

Another stressed, as he expressed it, the "right of the congress in a democratic country to pass implementing legislation or not, as it pleases," regardless of previous ratification of the convention to which such legislation would apply.

This amounted in fact to an outright defiance of a treaty obligation, and as such is to be deplored. It was nevertheless a realistic statement of what is the actual situation. I ask you—does there exist any practical operative method of compelling a country which has ratified a convention to proceed to implement it? As one government delegate expressed it, "If the ILO thinks it can force us to pass legislation, it is very much mistaken."

Indeed, some member countries called upon the carpet by our committee did not appear. They had ratified conventions years ago, but had never enacted the legislation needed to put them into effect. Why should they subject themselves to the indignity of being belabored by other countries for failing to do what they obviously have no intention of doing? Their government representatives were conspicuous by their absence, but that very absence indicated how little significance they attached to the matter. Yes, they failed to implement a convention but, as we say in the States, "So what?"

Unless we mend our ways, our practice may some day give rise to the expression, "as meaningless as an ILO convention."

I am told that in many parts of the world it is vital to have face. If we are to have the face of the ILO, we must stop passing conventions which become in fact a travesty upon international law.

Let us couch our findings and suggest our methods chiefly in the form of recommendations. Let us confine conventions to broad principles on subjects that are genuinely adaptable to international legislation, and enact only such as are truly tripartite, easily ratifiable by the majority of countries, capable of implementation under the principle of local self-government, and enjoying the full prospect of broad adoption as international law.

I repeat, I do not suggest the abandonment of conventions. I ask only that they be treated with the respect which they deserve.

Gen. Daniel Morgan

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr MARTIN. Mr President, the September 3 edition of *Life* magazine contained an article on Gen. Daniel Morgan. I have received a letter from Mr. Charles F. Hirst, of Scottsdale, Pa., in which he makes a fine historical reference to Gen. Daniel Morgan. I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SCOTTSDALE, PA., September 4, 1951.

HON. EDWARD MARTIN,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR MARTIN: I am hoping that prior to the receipt of these presents you shall have found time and opportunity to at least glance at the September 3 edition of *Life* magazine with special reference to page 53 wherein there is proposed the question "Who gets the general's body?"

Now, I know, Senator MARTIN, that you will be inclined to say "How come writing to me about that?" Well, I'll try to explain.

You will note that the matter discussed at some length in the aforesaid publication has to do with just what should be the correct location for the final interment of the earthly remains of the noted pioneer frontiersman and equally noted general of the Revolutionary War, Gen. Daniel Morgan, commander of the celebrated organization known as Morgan's Riflemen. And, Senator MARTIN, it is well known that you have always been interested in anything having any direct or indirect bearing on the history and records of the military exploits of Pennsylvania's military organizations.

For, although the article published as above mentioned makes no reference thereto, it is a fact that "Morgan's Riflemen" was not a purely Virginian organization but really mainly constituted of western Pennsylvania pioneers.

I also direct your attention to the first paragraph at top of page 59, wherein the statements made regarding the organization of the company of famous riflemen are almost entirely historically at fault, for,

rather than being recruited at Winchester by General Morgan the idea for its foundation was conceived by Gen. George Washington and the greater portion of the personnel was assigned from the "Eighth Pennsylvania," the great and famous revolutionary regiment especially authorized by Congress to be recruited from the pioneer frontiersmen of western Pennsylvania. The confusion of the Virginia connection being no doubt due to the Mason and Dixon's line had not then been surveyed and the fact that a great portion of the Western frontier lands were really in Pennsylvania instead of in Virginia. . . . And it would not be beyond expectation if sometime soon the Senate should be called upon to provide some appropriation for the erection of a memorial to the glorious exploits of Gen. Daniel Morgan and his famous riflemen, which organization really took place in or near Philadelphia at a time when Washington's forces were particularly hard pressed by the British.

So it would reasonably appear that the rightful location for such memorial or monument would be at or near the actual exact spot where the exact recruitment occurred which would thus be in a little private burial plot where once stood the first courthouse, Westmoreland County, Pa., whence on January 6, 1777, the Eighth Pennsylvania began its famous march entirely west to east across our great Keystone Commonwealth, 300 miles across all of Pennsylvania's mountains. This march, considering the hardships encountered, was second only to the march executed by the Revolutionary troops under General Arnold so dramatically described in the historical novel entitled "Northwest Passage."

I am sorry, Senator, to thus encroach on your time, but when it is noted that the issue in the *Life* magazine herein mentioned has a circulation of more than 5,000,000, it certainly merits a little more than merely a passing notice.

I therefore subscribe myself,

Yours very respectfully and sincerely,
CHARLES F. HIRST

Relations Between the United States and Canada

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr FULBRIGHT. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Message to Canada," which was written by Mr. John Park Cravens of the magazine, *Arkansas*, and which appeared in Canada's national newspaper, the *Globe and Mail*, on August 4, 1951. I also ask that an editorial in the same paper commenting upon the article be printed following the article.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

A MESSAGE TO CANADA

I was born and reared in the Ozark Mountains located in the central southern United States. The rivers and mountains were given French and Indian names before the United States Government purchased this mountain range from France in the Louisiana Purchase in 1803.

Near the little town in which I live is Mount Magazine (Magasin in French), named by the French about two centuries ago. It is known as the highest peak between the Rocky and Allegheny mountain ranges. One mile from my home is the river, Petit Jean, named by the French for Little John, an exploring French soldier killed on the river while fighting the Indians.

Years later the Indians left and then came the white settlers, practically all of Anglo-Saxon descent. My forefathers were of Scotch Irish, English, Welsh, and French descent. And in the days of my grandparents it was truly a land of Elizabethan ways, and in some respects is yet. In my clan were the Cravens, the Arvecks, the Rices, the Brooks, the Jacksons, the Harwells, the Patts, the Popes, the Lanes, the Connors, the Carpenters, the McKinnies, the Herndons, the Rogers, and others.

BIRDS FROM CANADA

In my youth I was truly a nature boy roaming the mountains hunting game, fishing in the streams and hunting Indian arrow-heads, pottery, and their various relics when I was not at work at home on my father's farm.

I was an admirer of many types of game birds, and from the north every year came many beautiful specimens of migratory birds to build their nests and raise their young, and some would stay only a few days and continue their flight on to the south. And one day in my youth I asked my father where these birds came from when they would come winging in out of the north, and he replied, "Canada."

Canada. In my youthful heart, mind, and soul for a land there was no name more beautiful. In my mind I associated the beauty of the birds, their songs, their freedom of flight and my admiration and love for them with Canada. And when I advanced far enough in my school grades I began to study about Canada and the British Empire. And many times from the Ozark Mountain tops I would gaze far into the north and think of Canada, that great land so far away.

In these Ozark Mountains when the weather is clear the rising and setting sunsets are beautiful, and in my youth I loved to watch them. But more beautiful of a clear night was when I would go alone to a giant cliff a half-mile from my home and there look toward Canada and see the North Star.

GOD'S NIGHT LANTERN

I thought of the North Star as one of God's great night lanterns to the people of Canada and the northland. Silhouetted against the sky were birds in flight from your land toward the south, and the North Star had lighted up the landmarks and streams to guide the way. Sometimes I would climb to the top of a tall pine tree to get a higher view and wish I could take wings like a bird and fly to your great land for a few hours' visit, and I imagined it would be an enchanted paradise, the land of rainbow waters, and the land where a fairy king with his magic wand gave the birds those beautiful colors and tints.

I have never been to your country, but it has since my youth been a part of my mind, heart, and soul. To me there is no boundary between Canada and the United States when it comes to my loyalty and love.

The birds I loved in my youth and also love today knew no boundary line between Canada and the United States. And may our two countries forever be this way in relationships and spirit, and may persons of my country and your country who in their youths idealized that land beyond the horizon never have that ideal shattered.

At the age of 18 I volunteered as a United States soldier in the First World War. And today I have a 19-year-old son who is a United States soldier in Korea. Oh, be-

loved Canada. I have seen your fighting men who are braver than the bravest of the brave. Oh, sons of the land of the North Star. I will never forget Mons, Vimy Ridge, and Flanders Fields. And since then down through the years every bird I see from your country that has the color of red about it, I think of the blood your sons shed and their lives they gave for your country and my country. Oh, men of Canada. You go into battle with hearts and bodies as strong as your stately forests, your hearts as pure as your driven snows and your rainbow waters, your minds and purpose as clear as your golden sunshine, and you were as free as your fowls of the air, and to protect this freedom you died so willingly, so gloriously, and so bravely. May the eyes of no foreign enemy ever see your stately forests, your rivers and lakes of rainbow waters, your snow-capped mountains, your golden valleys, your beautiful villages, towns, and cities.

GET BETTER ACQUAINTED

And may God grant that only the wings of our birds and our planes will ever fly over our lands. I have never seen any planes other than our United States planes in the air over my native mountains here. I would dearly love to see some Canadian planes winging in from the north. It would thrill me as much as a flock of birds winging in from Canada in the days of my youth. The people of Canada and the United States should get better acquainted and learn more about their neighbor.

Just as God set forth in His plans ages ago for birds of the air during certain seasons to wing their way south so has your country carried on a pride, a tradition, a loyalty, a justice, a culture, and a progress that has lived for hundreds of years. And such lives in the hearts, souls, and minds of all classes of your citizens, and their reverence for these things is godly, and in it there is a strength that can never be overcome by any enemy.

The location of your country and its type reounds with freedom and I believe in the near future years a progress unequalled will come to it.

MILLIONS TO COME

The birds still follow their paths, and always they have an objective. And, too, your great country has an objective I believe the good Lord means for it to reach in His future plans for this world. My opinion is there is a glorious future for Canada. Millions of liberty-loving people seeking homes will turn their eyes toward the vast domains of your country. In the near future years a great general progress and an increase in millions in population will cause Canada to come into her own.

May the flags of Canada, the British Empire, and the United States fly forever as symbols of world leadership, liberty, righteousness, and progress. In conclusion I say: God bless Canada.

God save the king.

JOHN PARK CRAVENS,
Magazine Arkansas, U. S. A.

WHAT A NEIGHBOR KNOWS

Elsewhere on this page today we publish a letter which is poetic in its inspiration, majestic in its conception, and heart-warming in its sincerity toward this Dominion.

"I have never been to your country," writes Mr. John Park Cravens, of Arkansas. Although he has not been here, most assuredly in his heart he has long dwelt among us. It was his mind, guided by the literature he has read and the personal contacts he has made with Canadians, which perceived the immensity of our country and its potentialities. But it was his rich and resourceful imagination which endowed Canada with a

nobility and integrity that now in turn should challenge and inspire us.

"No name more beautiful than Canada," it has seemed to him, when the winging birds came down in their timeless custom, and the North Star whispered to him of a land he had never seen yet vividly knew as only poets can know. His nature reveals itself as he involuntarily employs the sweeping colors for Canada which a cosmic brush bestowed in such bewildering lavishness on his native Osarks.

"So has your country carried on a pride, a tradition, a loyalty, a justice, a culture, and a progress that has lived for hundreds of years." "Millions of liberty-loving people seeking homes will turn their eyes toward the vast domains of your country." It is profoundly moving to know that such deep trust and friendship exist for us who as a nation have too often not had a self-confidence to match these sentiments. May we be worthy of our neighbor's high assessment and his intensely reasonable prophecy. Even better than he knows what we are does he know what we should be.

Money Goes Overseas

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. SCHOEPEL. Mr. President, on Friday, September 14 of this year, there appeared in the Topeka Daily Capital a very important editorial entitled "Money Goes Overseas," which I am sure concerns every taxpayer of this country. I ask unanimous consent that it be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

MONEY GOES OVERSEAS

During the current controversy over how much Federal money should be earmarked for flood relief and rehabilitation in Kansas, we suppose no one questions that Uncle Sam has dollars to spare for the purpose. However, we doubt that the average Kansan has any conception of how much our Federal Government is spending on much less worthy projects in foreign lands. Members of the Congress have been attempting for a long time to round up the figures and reach the grand total, but with little success.

This much, however, is known. Our Government is the biggest dues-paying member of the United Nations and its myriad of affiliated groups. In 1950 alone, the assessments against the United States for the U. N. proper came to \$13,596,243, or almost half the total assessments against all of the participating nations of the world combined.

As Kansans await Federal action on rebuilding dikes for immediate flood protection, and on long-range flood-control projects, Federal money keeps right on flowing swiftly overseas.

In addition to our contributions to the U. N. proper as a membership fee, for example, we are paying our millions for side-issue projects. We are paying \$2,519,907 into the World Health Organization; \$1,316,375 into the International Labor Organization; and \$1,355,000 into the Food and Agriculture Organization. There are dozens of others of lesser consequence as far as the upkeep is

concerned, but they add up to a shockingly high bill which we taxpayers pay.

All these things are in addition to huge expenditures for foreign military build-up and economic development. This money goes chiefly to organizations in which only a relatively few theorists are interested or have any knowledge.

No wonder the people of Kansas wish our Government would be as prompt and generous in sending funds to relieve distress in the flood areas and to provide protection against future floods.

Flood-relief bills are dormant in congressional committees at the same time swift action is demanded on proposals to levy more funds for those in other lands.

"Do it now—time is precious," is the cry raised in connection with almost all foreign spending bills, but as far as flood-relief legislation is concerned, "let 'em wait" seems to be the order of the day. Administration leaders, it is hoped, will join with Members of the Kansas congressional delegation in jarring flood legislation out of its log jam of inertia.

Anglo-American Partnership

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most interesting article entitled "Lest the Dreadful Scales Begin To Dip," by the world-famous economist Barbara Ward, which appeared in the New York Times on Sunday, September 16. This article is so informative and thought provoking that I wish it could be read by every person both in the United States and in the British Commonwealth.

There being no objection, the article was ordered to be printed in the Record, as follows:

LEST THE DREADFUL SCALES BEGIN TO DIP—
ONLY AN INSPIRED ANGLO-AMERICAN PARTNERSHIP CAN BALANCE THE WEIGHT ON THE SOVIET SIDE

(By Barbara Ward)

In every great successful alliance there is always an inner core of partner states bound together by the closest ties of confidence and understanding. In the last war Mr. Roosevelt and Mr. Churchill became living symbols of this inner strength. In the First World War, France and Britain should have formed a like unit, but only reached it in the last year under the leadership of Marshal Foch. In the Napoleonic wars such a nucleus of close partners was never really formed at all, and that may have been one reason why the war dragged on for two decades. Today we may not face actual war, but the risks of the "cold war" are fateful enough to make unity within the great Northern Atlantic alliance the pivot of western survival. As the partners gather at Ottawa this week the dangers they face are not less than those which threatened Roosevelt or Churchill or the younger Pitt.

Their alliance must be strong. So much everyone will agree. But is it so obvious that they need, like every other group of allied states, a strong, confident, united central core. That central partnership can, of

course, only come into being between the United States and the British Commonwealth. If they cannot coalesce fully, who can? Unhappily for the Western World, unhappily for freemen everywhere, the chances of their partnership becoming really trusting and unshakable are at the moment slender. More still, it seems certain that the coming 12 months will be a period of particular strain in British-American relations.

The starting point is the state of the domestic policies in both countries. The United States will be preparing for a Presidential election. Britain probably will also be involved in or on the eve of an electoral campaign. Such periods are rarely noted for statesmanship and moderation. This time, however, a new twist of misfortune may well be added. Foreign relations, and in particular Anglo-American relations are likely to be an actual issue in the two campaigns.

Aneurin Bevan has already fired the first round in Britain. In his bid for leadership in the Labor Party he expressly asks for a weakening of British ties with the United States and goes on record that a rearméd America may be a greater menace to world peace than an armed Russia. He stands no chance of winning this campaign for leadership, but by forcing the issue he may be able to decide the themes upon which the electoral controversy will turn—and the theme of aggressive capitalist America has already been announced.

In the United States, far-eastern policy can hardly be left out of the Presidential contest, and here again some of the notes have already been sounded. The dismissal of General MacArthur, supposedly under pressure from Socialist Britain, British kowtowing to Communist China, Britain's selfish concern with Hong Kong's trade—all these themes have been developed fully in recent months. There need be no doubt that they will return as partisanship and temper begin to rise.

Nor can one draw much comfort from the hope that since in Britain it is, roughly speaking, the Left that sounds off most loudly against America, while in the United States it is the Right which least loves Mr. Attlee's Britain, the other side of the political arena in both countries will provide a necessary moderation and cancel the extremes. This is, unfortunately, not so.

Enthusiasm for America is far from invariable in conservative circles in Britain. Here the sense of Empire is strongest, and with it longing for the old days of undivided British control. The tendency to think of Americans as anti-imperial interlopers, dies hard. Equally, on the American Left, the picture of Britain as an old empire, seeking, like Fafnir, to lie and possess, is quite as vivid as a more recent interest in Britain's Socialist experiment. In fact, it is true to say that throughout the last 6 years there has always been present in Anglo-American relations some good grievance or misunderstanding which enables both Right and Left in both countries to throw stones at the neighbor across the Atlantic.

As if this running undercurrent of friction were not enough, there is the added difficulty that in neither country does any really effective group work constantly at the task of correcting, explaining, interpreting, and enhancing each nation's views of the other. Hardly any political leader of first-class caliber in Britain has gone out of his way to give the lie to Mr. Bevan's vaporings. In the United States, where the slightest murmur that the Nationalists in China may possibly have lost the civil war through their own fault is pounced upon as clear evidence of Communist sympathies, few people have bothered to correct gross misrepresentations about Britain's trade with China or to point out that Japanese-Chinese trade in the first

months after the Korean war actually expanded.

There may be, indeed there no doubt is, a widely diffused and vague goodwill on the subject of the "English-speaking world," but there appear to be very few really prominent citizens who feel the unity of that world as a first and burning call upon their energies. In America it is easy to start the cheers for the gallant Turks, the gallant Greeks, la bello France, and even Franco's Spain. In Britain, admittedly, it is more difficult to work up enthusiasm for any foreigner, still the Scandinavian peoples and the stubborn Dutch can sometimes raise a cheer. But when it is a question of the two peoples in whom the hinge of the free world is fixed, the Americans and the British, the answer is usually silence—complacent, friendly, embarrassed or hostile, according to the occasion—but silence nonetheless.

Yet will anyone doubt that their alliance is the hinge of the world? It needs very little military and political arithmetic to add up the facts of Soviet power and Soviet ambition and to realize that the universal balance of power is perilously close to swinging down upon the Soviet side. Take away one iota from the Western side and the dreadful scales begin to dip. Let the shaky hands that hold together the Atlantic world be loosened a hairsbreadth and the Soviet side of the balance begins inexorably to move. The balance is on a razor's edge and all that holds it is unity in the West, above all things, unity in the English-speaking world.

Stalin is aware of this fact, even if the English speakers are not. The sound of crowbars and levers at work on the cracks in the Western edifice echoes ceaselessly through Soviet diplomacy, and no breach is pried open more lovingly than the ones which open between Washington, London, Ottawa, and Canberra. The most satisfactory aspect of Soviet strategy in the Far East—from the Kremlin's standpoint—has been to throw British Labor Ministers and American Republican Senators into the same China pot and watch them boil. Disunity is the hope and aim of every Russian maneuver. Even if the West prefers to be blind, the Soviet leaders know the feather-balance of the great scales of power and seek to break down the weight which British-American unity alone can provide.

It is the obviousness of the Soviet interest in Western disunity that persuades many people on both sides of the Atlantic to take a more lighthearted view of British-American differences. "Do not," they plead, "be upset by these surface irritations. Do not be deceived by these apparent disputes. Deep down the links of common tradition and common speech hold firm. And in any case"—at this point a cynical note creeps in—"even if those links were shaky, Uncle Joe would keep us in line. Trust the Kremlin. Every time British-American relations get into a real snarl the Russians do something outrageous—and there we all are back again in step. Do let us forget this highfalutin' stuff about loving each other and defending civilization. It is our security and our national interests we have to defend, and, fortunately, the Soviet Union goes on showing us that our security and the defense of our interests take us along the same road. What more do you want? A utopian love feast? Be your age."

One can perfectly well admit the validity of a good deal of this argument. It is true that fear of the Soviet Union has produced in the Western World a unity and a closeness of cooperation that would have seemed inconceivable in 1945. But is that the whole story?

The last admonition, "Be your age," has a sinister ring. By all means, be your age. But what sort of age is this? An age of simple power politics, in which the defense

of security and self-interest make up an adequate diplomacy? An age in which—as in the late nineteenth century—the only question is how to hold in check the ambitions of another nation-state indistinguishable in structure, aims and outlook from one's self? Is it this sort of age?

If so, the glibbling minimum of unity which constant injections of Russian hostility can maintain in the British-American body politic is no doubt sufficient—unsatisfying but sufficient. But is it that sort of age? Or may it be another sort of age, so sinister and savage and unnatural that the machinations of Bismarck and the imperial ambitions of the Czar seem as harmless as power politics in a small-town party caucus?

There is no need for a long, ambitious survey. The last 6 months will do. The worst, the darkest, the most terrifying pages of the last half year tell of new evils which do not so much disrupt man's history as abolish man himself.

With older and maturer minds the weapons are terror and torture. In the last 6 months we have heard from the few survivors—at the Brussels tribunal examining Soviet slave camps—the details of how whole areas have been stripped of their peoples and the expelled sent in open cattle trucks to the Siberian desert of ice. Not one-third of the former population of the Baltic States now remains. The fact that families are carefully and deliberately separated is only a minor detail in the systematic dehumanization of what were once free and lawful men.

In Hungary this summer a new twist has been given to the horrible tale. Thousands upon thousands of quiet, decent people whose only fault was a possible lack of sympathy for the Communist regime were taken from their homes after midnight and dumped—with barely a suitcase—in camps or in the open fields or, more ominously, removed across the Soviet frontier.

From time to time this dark mass of unrecorded personal misery is lighted up by some lurid individual case. In the last four months the senior Catholic Archbishop in Hungary has been arrested, held incommunicado and brought to trial, where, like a ventriloquist's dummy, he "confessed" that his father was a kulak and he himself had plotted against the regime.

Nor are men from the West immune. In these same months William Oatis, the American newspaper correspondent, has been forced down, in Prague, the same shameful path of self-incrimination. Another American—Robert Voegelé—has returned to tell the tale of what mental and physical tortures are applied to bar man from his final dignity—the dignity of martyrdom.

This ruthless elimination of human personality is not reserved only for those who might be suspected of anticommunism. In the last 6 months Vladimir Clementis, Communist Foreign Secretary of Czechoslovakia, has paid the penalty of those whose communism does not take the form of abject and total surrender of national interest to the new Soviet imperialism. Nationalism and patriotism may not be the strongest defenses of human personality, yet they are strong enough to be marked down in the Soviet elimination of man.

Such are the methods for minds which the Communists feel they cannot bend or mold. But for the young millions growing up within the Soviet orbit the process of dehumanization need not be carried on by torture and terror. Before the mold of genuine, independent manhood has set, it can be melted away in the furnace of mass suggestion and mass hypnosis.

Nowhere is the success of this method being put more sharply to the test than in Germany, where Soviet hopes are pinned on "winning the youth." But the campaign is

universal. Hysteria, revivalism, group emotion, the raving rancor of the lynching crowd, the sinking of the individual spirit in the dark passion of the herd—these are the levers which Communist hands have been manipulating in Berlin this summer.

And as the intoxicated youths march and march, yelling like a cataract at the mention of Stalin, shoulder to shoulder in their colored shirts, while little girls of 8 run shrieking, "Stalin! Stalin!" and fling posies of flowers at his picture, while thousands pledge themselves, in the new hateful Soviet doubletalk, to "fight for peace"—while this passion roars like a Bessemer furnace, the lineaments of man, of reason, of justice, of humanity, of pity melt away.

Not young men and women on the threshold of maturity march in the streets, but automata puppets pulled by strings in the hands of men whose control they eagerly and deliriously accept. The Berlin Festival of Youth should leave us in no doubt about this element of delirious acceptance. No doubt there were questioners and doubters among the millions but in the main the festival was an act of faith, faith in a new de-factored race of beings, bound by mass instinct, only capable of blind instinctive obedience.

It has not been necessary to go 1 day beyond the last half year to produce this terrible picture of dehumanization carried forward by aggressive faith. All these things have happened and are happening. This, and no other, is the age in which we live.

So it is now time to ask whether the kind of British-American relations upon which the optimists appear to rely is adequate to such a challenge. If the strongest and closest supporters of Western civilization can rely upon a unity that goes no further than the grumbling admission of common funk, then the only analogy is of two urchins playing marbles under the awful eye of the angel of the last trump. If British-American partnership is the core of Western survival, and the strength, unity and imagination of the English-speaking peoples the center of Western civilization—and who will deny that this is so?—then anyone who loves the West and prays for survival can do little but sit down and weep when he compares the dark energy and terrible faith of Soviet imperialism with the lackluster, lukewarm, touchy and suspicious alliance which appears—most of the time—to be the best that the United States and the British Commonwealth can offer.

Let us all admit that we contrive to scrape along. Let us all admit that things might be a good deal worse. But the real question is whether the partnership and the energy and the vision are equal to the enormity of the Soviet challenge shown even in the last 6 months. And the only honest answer must be: it is not.

Yet, it is surely not an inevitable answer. There are a hundred ways in which this vital partnership could be made the pivot of free-men's hopes—provided the need to do so were frankly accepted on both sides of the Atlantic. There is nothing wrong with the liberal ideals and aims which inspire America and the British Commonwealth. Democracy, responsibility, freedom, peace, economic co-operation, the raising of backward peoples—all these are so clearly the dream of humanity that Soviet double talk has appropriated the lot. The challenge lies in making these old ideals live, to make the acceptable faith a compelling thing by means of obvious works.

Here, too, the outlook is not discouraging. To give only one example, the Marshall plan did more in 2 years to rebuild Western idealism than a thousand Berlin rallies could ever do, and it should not be beyond the wit of

American and British leaders to see that schemes of comparable vision and generosity—with the economic burden more universally shared—were ready for practical application three times in each decade. In fact, the whole record of Western achievement since the first day of lend-lease proves that there is no vision too great and no generosity too imaginative for Western peoples to evolve, provided the will and the leadership are there for the task.

The worst aspect, therefore, of the Western World today is precisely this lack of leadership and lack of thrusting energy in the two greatest centers of the free world—London and Washington. While electoral campaigns come up behind the political horizon and little men take pleasure in vilification and idle spite, no commanding voice is raised, no nation-wide movement of citizens is stirred to proclaim what all should know to be the truth—that the West faces not a simple aggressor but a conspiracy against man himself, and in these stakes no partnership between the free can be too close and no joint enterprise of theirs too magnanimous in vision, tolerance, and strength.

Newspaper Coverage in Kansas Highest in Country

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. SCHOEPEL. Mr. President, I wonder if I might intrude briefly, for a very few moments, into the prevailing gloom we have been living in during the past week while discussing war and rumors of war and the spending of this Nation's wealth, to bring to our attention a much happier subject.

I am permitting myself to boast about my home State of Kansas—not about its preeminence as a wheat State, but about its record in the field of literature.

Not many of my friends and colleagues perhaps know of our eminence in this line, and I beg their indulgence of my natural desire to tell them about it today, and I ask unanimous consent to have printed in the Record an editorial from the El Dorado Times of El Dorado, Kans., entitled "Another First for Kansas."

There being no objection, the editorial was ordered to be printed in the Record, as follows:

ANOTHER FIRST FOR KANSAS

Kansas has scored another first, which carries its own meed of credit to the people and institutions of the Sunflower State. This State, according to report by the current issue of Editor & Publisher, has the highest level in daily newspaper coverage of any State in the Nation.

Daily newspaper circulation in Kansas averaged 722 per 1,000 adults in 1950, as compared with the national average of 555. The Parsons Sun discusses this achievement in the following comprehensive way:

"That, we venture to say, is a tribute to the high literacy of Kansas citizens and to their desire to keep informed on events in the world about them.

"Kansas newspapers in all modesty also can take a bow. If their product didn't

merit public attention by thorough and interesting coverage of the news, newspaper readership in Kansas would not be far above the national average.

"Otherwise there is no explanation of why Kansas daily newspaper circulation is 722 per 1,000 when the figure is only 553 in neighboring Missouri, 508 in Oklahoma, and 481 in Nebraska, or 53 in a highly prosperous State like Pennsylvania, or 554 in the sunny State of California.

"This is information in which both Kansas subscribers, bless 'em, and their newspapers can evidence great satisfaction."

Conduct of Political Campaigns

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Fair Dealers Only See Mud Coming Their Way," written by Gould Lincoln and published in the Washington Evening Star today. It deals with the conduct of political parties in political campaigns.

There being no objection, the article was ordered to be printed in the Record, as follows:

FAIR DEALERS ONLY SEE MUD COMING THEIR WAY—DEMOCRATS FORGET HOW LONG THEY HAVE DEFAMED FOES

(By Gould Lincoln)

Who defames who, or, if you prefer, who defames whom? The Fair Dealers, from President Truman on down the line, are screaming from the house tops that their Republican opponents are using detamatory tactics—literature and speeches. They don't like it. They don't like the experience they had with the Republican defamers in 1950, and they don't want any more of it in 1952.

These screams come with ill grace from the Fair Dealers, the successors of the New Dealers, who have been hurling mud for so many years they seem to think it their exclusive right. Remember what they said about Herbert Hoover, who happened to be President of the United States? Remember the accusation that he was in reality a British protagonist, with no thought of the welfare of the United States? And the Roosevelt attacks on businessmen who had the temerity to be Republicans and oppose some of his pet schemes? According to Mr. Roosevelt, and later to Mr. Truman, every thought of these men was for their own selfish prosperity and against the safety of their country and the happiness of the American people.

WHEN THEY RECOGNIZE MUD

Maybe the Trumanites recognize mud only when it is coming their way. Chairman Guy George Gabrielson of the Republican National Committee, in his appearance before the Senate Rules Subcommittee, known as the Gillette subcommittee, which is seeking some way to bring about "cleaner" elections, asked if it was defamatory to publish flat statements that the Republican Party is the war party, that the Republican Party is the party of inflation. And he asked if it was defamatory for President Truman in his 1948 campaign to tell a Minnesota

audience that "Republican leaders in Congress are the errand boys of big business and special privilege."

What gets under the hide of Mr. Truman and his followers particularly is the charge made by Republican opponents that the Reds were coddled and treated softly by the Roosevelt and Truman administrations. It hurts now that the American people—and the administration—have finally come to recognize just what the Reds are trying to do to us. It hurts, too, because there is no possible escape from the fact that step after step was taken by these administrations up until 1946, and even thereafter, which boosted the Reds in Russia and more lately in China. They don't like it, either, when charges are made that individuals in the Government have been disloyal—yet they have been forced to go ahead with loyalty tests to safeguard the country because individuals have been shown to be disloyal, and some of them are now in jail, some are dead, and some are out of the Government.

TRUMAN ALREADY IN STRIDE

The President already is getting into his stride for the 1952 campaign. His recent speech to a group of western political leaders in San Francisco, where he had gone to open the Japanese Peace Treaty Conference, was vituperative. Further, it is the boast of some of his followers Mr. Truman is getting ready another "give 'em hell" campaign. The charges of defamation, therefore, against Republicans, considering the source, are enough to break the soft hearts of the American people—if they didn't make them laugh.

The Trumanites protest, too, against the Republican charges of graft, political influence, milk-coat gifts, deep freezers, waste of the people's money, and so forth. Of course they do. They defend themselves in every way they can. This howl about defamation is the latest wrinkle.

Every one is or should be for "clean elections." The tempo of election campaigns, however, is set by the men at the top. In 1948, the Republican campaign was pleasant and good tempered when Governor Dewey, as a tough prosecuting attorney, might have torn the Truman administration to shreds. Not so the Truman campaign, when the President set out to "give 'em hell." Nor are the Republicans next year going to pull their punches—nor should they.

Death of Hon. Walter P. Stacy, Chief Justice of the Supreme Court of North Carolina

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Tuesday, September 18, 1951

Mr. HOEY. Mr. President, Hon. Walter P. Stacy, Chief Justice of the Supreme Court of North Carolina, died last Thursday in his home in Raleigh. He was one of the greatest jurists our State has produced, and his fame had spread throughout the Nation. Four Presidents of the United States—Coolidge, Hoover, Roosevelt, and Truman—had called upon him to serve on important boards to settle national labor controversies. He had been strongly urged for appointment to the United States Su-

preme Court, and he would have graced that high tribunal.

Judge Stacy made many observations worth recording. One was in defining a liberal as "a person who is not willing for the law to be interpreted as it is written." Another was that "in North Carolina the voice of the people is the voice of finality."

I ask unanimous consent to have inserted in the Appendix of the RECORD a very splendid editorial from the Raleigh News and Observer paying tribute to Judge Stacy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT ITS BEST

Ever since becoming a State, North Carolina has prided itself justly upon the high quality of its judiciary. For 34 years (the last 30 of them continuous) Chief Justice Walter Parker Stacy, who died yesterday, embodied the North Carolina judiciary at its best.

The son of a Methodist minister, Chief Justice Stacy was born at Ansonville on December 26, 1884, and spent his boyhood in several different towns in the State. He attracted State-wide attention early in life as an outstanding student and debater at the University of North Carolina.

After only 4 years of residence at Wilmington, the only city in which he ever practiced law, he was elected a member of the 1915 general assembly. In 1916 he became at 31 the youngest superior court judge.

In 1920, Judge Stacy was elected as an associate justice of the supreme court, the occasion marking the last time he had opposition for nomination during his 30 years on the court. During his first term he was appointed chief justice, a position he held longer than any other man in the history of the State.

High esteem for Chief Justice Stacy in North Carolina was well nigh universal, but his reputation was by no means confined to this State. He first attracted national attention as the member of a Railroad Labor Board appointed by President Coolidge in 1928 and his service on that Board was so outstanding that he was later named to serve on numerous other labor boards by Presidents Hoover, Roosevelt, and Truman. He served as chairman of boards appointed by President Roosevelt to deal with Nationwide textile and steel strikes and was Chairman of the important Labor-Management Conference called by President Truman in 1945.

Chief Justice Stacy was essentially a judge and his viewpoint was primarily that of an impartial arbiter. However, he had his own philosophy of government and that philosophy was perhaps expressed best in an opinion delivered several years ago in which he said:

"In North Carolina, the voice of the people is the voice of finality."

That same philosophy is reflected in numerous other opinions written by the late chief justice, who was also noted for his impatience with any tendency to thwart justice by resort to technicalities. Although he was a member of a court which was sometimes torn by factionalism, particularly in his early service, he was never part of any faction. His opinions were usually the opinions of a majority, but many of his ablest opinions were those containing dissenting views.

Although he never became the eldest member of the court in point of years, his activity off the bench was curtailed sharply in recent years by physical infirmities. How-

ever, ill health never interfered for any long period with his duties, and during the last year he devoted much of his attention to the additional duties as administrator of all North Carolina courts, a duty conferred upon him by a constitutional amendment adopted in 1950.

North Carolina and the Nation have lost an outstanding judge and a citizen who contributed much to his State and his country. But Judge Stacy's opinions will live and his memory will be honored as long as men read the reports of the North Carolina Supreme Court.

United States Dodging Blame for Oil Shortage

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. HÉBERT. Mr. Speaker, it would seem that the United States Government is engaged in the old shell game of the carnivals. First you see it and then you do not.

It is strikingly peculiar that one time a quick decision is made and then presto, the situation changes, and a decision cannot be made.

David Kleck, the oil editor of the New Orleans Times-Picayune and the New Orleans States, who has been running a series of articles in those newspapers on the grab of the tidelands by the Federal Government, has come up with another exposé which makes most interesting reading.

Here is the most recent "First you see it and then you don't" in the tideland shell game:

UNITED STATES DODGING BLAME FOR OIL SHORTAGE—PERLMAN CHARGES STATES HALT TIDELANDS OUTPUT

(By David Kleck)

Exploration for oil in the Gulf of Mexico and in bays and in inlets off the Louisiana coast gained momentum for more than 4 years until December 12, 1950.

On that date a decree of the United States Supreme Court, issued incident to a suit filed against Louisiana by the Federal Government, had the effect of halting the search for minerals in the tidelands.

With this same Federal Government, through its Petroleum Administration for Defense, urging a greater production of oil to meet the free world's growing demands, a controversy has arisen as to who is responsible for the "slacker" role" being played by the tidelands at this time of emergency.

ANSWER CONTRADICTORY

Did the Federal Government slow the flow of tidelands oil, or are the States responsible for this situation?

This question is being answered in two contradictory ways.

On Wednesday a letter from United States Solicitor General Philip B. Perlman to Senator JOSEPH C. O'MAHONEY, chairman of the Senate Interior Committee, supposed to be considering tidelands legislation, was made public. The letter charges Louisiana, Texas, and California with resorting to dilatory tactics in blocking development of the much-needed offshore oil resources.

Perleman said a quitclaim bill passed by the House in July, and awaiting action by O'MAHONEY's committee, was designed to enrich the tidelands States at the expense of the other 45 States of the Union.

UNITED STATES SOLICITOR TALKS

Asserting that these three States had blocked and frustrated Federal efforts to complete an administrative set-up for the tidelands, Perleman said:

"World conditions have made immediate and additional development of oil resources vital

"The successful defense of the Nation from foreign enemies may depend on it.

"Three States have been carrying on their campaign to take these resources for years. Hundreds of millions of dollars of these resources have already been taken without Federal consent."

(The Times-Picayune has shown how the orderly development of the tidelands established a daily production of about 18,000 barrels with prospects for doubling or tripling this output. But with the injunctive effect of the decree, new exploration was prohibited.)

KEMP ANSWERS PERLEMAN

On the other hand, in Baton Rouge, La., Attorney General Bollivar E. Kemp, Jr., asserted that the United States Solicitor General was guilty of accusing the tidelands States of adopting his own tactics.

The Solicitor General was merely "trying to get the first blow in," Kemp said.

"He is anticipating that the Federal Government will be accused of these very same dilatory tactics," Kemp added, "and therefore, he is getting in and accusing the States first."

Kemp noted that the quitclaim bill, passed by the House last July, had seen no action in the Senate because Chairman O'MAHONEY had been busy with other matters. Wednesday O'MAHONEY said that he did not know if his committee could consider the quitclaim bill at its regularly scheduled meeting next Tuesday because of Senate business.

WOULDN'T NEED HALF HOUR

Kemp added:

"Exhaustive hearings have been held on the tidelands and O'MAHONEY has said his committee does not need to hold a hearing. The committee wouldn't need over one-half hour to bring the bill out if they could spare the time.

"If Perleman and O'MAHONEY are sincere in their desire for action, they can simply let the committee express itself by a vote at next Tuesday's meeting.

"If they allow a vote on the quitclaim or any other bill, they'll get action immediately. And if they allow the bill to reach the Senate floor and receive the thought of that body as a whole, it'll get quick action.

CHARGES CATCH PHRASES

Kemp further asserted that Perleman had an affinity for catch-phrases and that his letter to O'MAHONEY was just another effort to cloud the issue.

The Supreme Court decree enjoined all operations without permission from the Secretary of the Interior, Oscar Chapman. This official has reiterated several times that he does not have the authority to permit new drilling in the offshore areas.

However, Chapman has made an exception to this rule and authorized one well in the Gulf on the grounds that underground wastage would occur in a particular reservoir without drilling of a second well.

Participants in the tidelands controversy have questioned whether Chapman has the right to issue one permit on the grounds of underground wastage if he allegedly cannot allow wholesale drilling on the grounds of national defense.

STOPPED BY FEDERAL SUIT

Meanwhile, from Texas, a further side of the controversy was supplied by Texas Attorney General Price Daniel who answered the Perleman letter with a wire to O'MAHONEY.

Daniel said:

"Texas, California, and Louisiana were in the midst of a development program which would have assured the continuous production of oil and gas from these lands when we were stopped by Federal suits.

"These suits were deliberately filed in the face of opposition by a majority of the Members of Congress. Congress refused to authorize the filing of the suits and later voted to leave the States with the lands they had claimed in good faith for the last 100 years."

SAYS CONGRESS WILL IGNORED

Daniel said Perleman and other Federal officials had ignored the will of Congress when the bill was vetoed by President Truman. They filed the suits anyway.

"These same Federal officials have been employing dilatory tactics to keep State ownership legislation and a State interim control bill from being reported by your committee," Daniel told O'MAHONEY.

"If immediate development is needed for national defense, it can be obtained with greater speed through continuation of established State operations than through an already overburdened Federal bureau which has no experience in this particular type of development."

Los Angeles' Pressing Water Problem

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. McDONOUGH. Mr. Speaker, we who live in the Los Angeles area have become increasingly aware of the importance of our water supply and today fully realize that California is faced with a very serious water shortage. We understand as people from other regions of the United States can never realize just how vital water is to the Southwest and particularly to southern California. If the population, industry and farming in this area are to continue expanding, we will need every drop of water we can get from the Colorado River and all the water which can be obtained from any other source.

The history of the development of water supply for Los Angeles is one of continuous expansion. The original source of our local water supply, the Los Angeles River, has for more than 150 years provided water for the community. This river, an underground river except during the winter rains, supplies about 52,000,000 gallons of water a day for Los Angeles, and it has been necessary for the city to construct a system of underground galleries and some 75 wells to divert the water for our domestic needs.

By 1900, however, Los Angeles was faced by the necessity of obtaining additional water to meet the demands of its expanding population, and the water system was extended. In 1908 construc-

tion was commenced on the Los Angeles-Owens River aqueduct, a 238-mile water carrier which tapped the snow-fed creeks of the east slope of the High Sierras. This project was completed in 1913 at a cost of \$24,500,000, and for a time the water supply was adequate.

By 1930, the population of Los Angeles had increased again to 1,500,000 people, and again the search for more water began. This time the Mono Basin, located 250 miles north of Los Angeles and adjoining the Owens River watershed, was developed to augment the aqueduct supply.

Since 1930, the population has continued to soar, and according to the latest figures, Los Angeles County has a population of 3,813,718, of which almost 2,000,000 represents the city of Los Angeles.

Today Los Angeles, as a member of the Metropolitan Water District of Southern California which was organized with 11 member cities, receives in addition to water from other sources, a supply from the Colorado River.

In the last few years in spite of the tremendous development of the water supply for Los Angeles, we have a water shortage in this area which has reached serious proportions due to the enormous industrial, agricultural, and population expansion throughout southern California. In the Los Angeles area we have the largest production center for aircraft in the United States, and many other industries are now operating in southern California on a large scale.

At the same time that the demands on our water supply have been steadily increasing, we are facing the effects of a 5-year dry spell which, unless broken by considerable rainfall this winter, may, in the opinion of many of our water authorities and farmers, turn sections of southern California into virtual dust bowls.

For the past 5 years, our rainfall has been so light that reservoirs are nearly dry in parts of southern California and wells may be pumped for only a few hours at a time in some districts—not at all in others. All districts are rationing water, and in the agricultural areas many owners of citrus and avocado groves are using the little water available merely to keep their trees alive.

The water table has also been going down steadily, further decreasing our supply for southern California, and the present supply of water from the Colorado River and the other sources available to us no longer is adequate to meet industrial, agricultural, and domestic needs.

It is this increasingly serious shortage of water in southern California which has given rise to the bitter controversy between California and Arizona over the water from the Colorado River.

California must receive all of the Colorado River water to which this State is entitled, or we will face a water shortage in the foreseeable future which will curb development and endanger our whole population.

Without an adequate supply of water, the future of civilization in southern California will be doomed as surely as

though struck by war or pestilence. Without water the population not only cannot continue to increase, but many now living in this area would have to leave.

The struggle which has developed between California and Arizona over the distribution of water from the Colorado River is not a new issue, but another chapter in the fight for water in the Southwest. From earliest history the Southwest has depended upon water for life, and water has been the center of violent controversy. Control of water was the key to survival in this arid region, and today, even with all the modern developments to save, salvage, and store water and to utilize every possible water source, there is not enough water in the Southwest to supply the needs of the people.

Arizona wants water from the Colorado River, and California recognizes the right of Arizona to water to which that State is legally entitled. But Arizona now wants more water from the Colorado River than is necessary to supply the needs of its present population. Arizona wants water to develop arid desert regions in that State which are at present largely uninhabited, and have no large centers of population.

Here in southern California our problem is to supply water to a population already residing in our cities and towns and in agricultural areas already developed and producing. Our people work in defense industries which are turning out vitally important materials for our Armed Forces.

Our agricultural area, which depends upon irrigation, in Los Angeles County amounts to 185,000 acres and produces fruits and nuts, vegetables, livestock, and dairying products which are an important contribution to the Nation's food supply.

If Arizona succeeded in obtaining the water it wants from the Colorado River, it would do so by taking away this supply from existing operating projects in California. Arizona's proposals, if approved, threaten to wipe out the rights of the Metropolitan Water District of Southern California to Colorado River water which would be disastrous for all the people in this area.

California entered into water contracts with the Secretary of the Interior during the period of 1930 to 1934 upon the expectation that California agencies would be entitled to use an aggregate of substantially 5,400,000 acre-feet annually of Colorado River water. Under this expectation, California agencies entered into contracts to underwrite the entire cost of Hoover Dam and power plant and to repay the cost of the All-American Canal, and undertook the financing and construction of other works and facilities to utilize the full amount of Colorado River water covered by Interior Department. All of the main works have been built and are in operation.

These works involve an investment by California of over \$550,000,000, and obviously developments involving such large investments and commitments would not have been undertaken if there

had been any doubt among the California agencies concerned as to the validity of California's rights to Colorado River water.

Arizona proposes, however, to limit the use of Colorado River water by California to about 3,900,000 acre-feet annually, an amount that would provide about 1,500,000 acre-feet less than the minimum needs of present operating projects in California.

California needs every drop of water from the Colorado River to which we are entitled, and we cannot agree to any reduction in that amount when such a reduction will affect our whole population. The entire coastal plain region from Los Angeles County on the north to San Diego County on the south, an area with a present population of about 5,000,000, is using Colorado River water to meet present demands, and is absolutely dependent upon this source to meet all future water needs.

Just because you may have water now by merely opening the tap in your kitchen, bathroom, or to sprinkle your lawn, do not be led to believe that this can always continue without interruption. You all know the old saying that "We never miss the water 'til the well runs dry." Well, that can happen in Los Angeles and southern California unless we continue to fight vigorously for our water rights from the Colorado River. I shall certainly do my part to preserve California's just and legal rights to Colorado River water and to see to it that there is no reduction in the amount of water we are now receiving from this source.

Thumbs Down

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Yakima (Wash.) Herald of August 17, 1951, in opposition to the proposed Ice Harbor Dam. It is interesting to note that this is the largest newspaper published in the congressional district wherein the dam would be located.

The editorial follows:

THUMBS DOWN

Fisheries experts connected with the commissions of Oregon and Washington and the United States Fish and Wildlife Service insist that major dams on the lower Snake River will destroy a large percentage of the salmon runs in the Columbia River.

Sponsors of the dams hammer on their essentiality in the production of power, as aids to navigation, in the control of floods and for the irrigation of arid lands.

The first of four dams in one unit, and the dam currently being pressed in Congress, is Ice Harbor. Initial appropriations for this barrier have been written into bills, and then cut out of those bills, several times in this and in recent sessions of Congress.

A few days ago an item of \$4,000,000 was put back into the rivers and harbors bill for Ice Harbor Dam. The legislation is now before a conference committee of both Houses. Those for and those against Ice Harbor are concentrating their fire on the conference committee. And the pros and cons cut across party lines, even within the Northwest's delegation in the House and Senate. Why? Because there are sectional and economic "interests" involved, all professing to be interested only in the welfare of the Pacific Northwest region and the Nation as a whole. Politics, as the saying goes, is politics.

Here in Yakima, we are not identified with the primary results of the Ice Harbor bill's success or failure. We participate in secondary or incidental benefits of either an open Snake River or one that is harnessed, of course. We are aware of salmon's value as a food and as a recreational resource. The importance to this entire area of the four-fold benefits from power, inland waterways, irrigation and flood control is recognized, too.

In any direct conflict of objectives and results as arises in the case of Ice Harbor Dam, however, one is forced to examine comparative values. No compromise is practical. The Ice Harbor Dam itself is unfeasible without supporting dams upstream. The only scientific authorities upon whom we may depend forecast the inevitable doom of the salmon if the dams are built. It will be either dams or fish in the Snake River. And we have not been impressed by efforts to discount the alarmed testimony of interested biologists.

We have previously made a choice in behalf of the salmon resource. The arguments against construction of the Ice Harbor Dam are as good today as they ever were. And they are good enough for us.

The simple fact is that we do not need the Ice Harbor Dam as much as we need the salmon in the Columbia River. That is not to oppose additions to the power supply of the region. But there are other and more feasible major sources of kilowatts to be produced. And we cannot become at all enthusiastic about the true value of other auxiliary benefits claimed for this project.

If the conference committee of Congress wants to legislate with both reasonable economy and the basic interest of the Pacific Northwest region in mind, it will reject the Ice Harbor Dam.

Red Anti-Semitism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of my colleagues the following article, which appears in the September 1951 issue of the National Jewish Monthly:

I SAW THOUSANDS SUFFER FROM RED ANTI-SEMITISM—AN EYEWITNESS ACCOUNT BY A CZECH JEW WHO SURVIVED SOVIET CONCENTRATION CAMPS

(By Paul Andich)

AUTHOR TELLS OF JEWISH LIFE CARRIED ON UNDERGROUND DESPITE RED INTIMIDATION

(More evidence of anti-Semitism in the Soviet Union is coming to light all the time. Last June we published a study of this subject by Victor Lasky. Now we present a

deeply moving personal account of actual experiences suffered by one who managed to survive Soviet imprisonment and who made it a point to find out all he could about Jewish life in Russia while he was an unwilling "guest" of that country. It is a rare eye-witness story on the subject from a completely Jewish point of view. It was written exclusively for the National Jewish Monthly. Paul Andich is a pen name, used to protect the author's relatives overseas. He was born in Czechoslovakia in 1921. After the German occupation of Prague in 1939 he escaped to Poland, hoping to reach England and join the Free Czech Army. Prevented from doing this, he found himself trapped in Vilna when Hitler and Stalin divided up Poland between themselves. With thousands of other Jews and Poles he was shipped into the Soviet Union by the Red Army. There he did forced labor in many communities until he was suddenly arrested by the NKVD and sent to a concentration camp in central Asia. No charges were ever made against him. He and other Czech Jews were freed from the camp in 1942 when they agreed to join a Czech Army that was being organized in Russia. After service at the front in the infantry he was transferred to the air force and became a fighter pilot. At the end of the war he was back in Czechoslovakia, but it was in the Russian zone, so he fled to Western Europe as a DP. In 1949 he reached the United States, and now lives with his wife and American-born child in Chicago, where he is a member of B'nai Brith (Editor.)

After working for 3 months in the coal mines of the Donetz Basin, I clearly understood that my only chance for survival lay in getting out of this hell. I therefore sent one petition after another to the local Soviet (communal administration), and finally—after 2½ months—I was granted a personal interview.

Upon entering the office I was taken before an elderly man who smiled encouragingly at me. It was the first time since I had been in the Soviet Union that I had received a friendly smile from a Soviet official. I told him that I felt weak and could not stand the terrible strain of the work in the coal mines, adding that I had been to a doctor who had been unable to diagnose any specific ailment.

The elderly official interrupted me.

"I examined your case, and agree with you," he said. "Beginning tomorrow, you will start work in the automobile factory, Red Star. We will put you on the drill press, and after you learn how to operate it, things will be easier than they were in the mines."

He handed me a paper of official authorization to leave my job in the coal fields. As I started to thank him, he came from behind his desk and walked over to me. "You are a Jew, aren't you?" he said. "You are in a bad spot, but if I can help you, let me know."

WORKERS DISCRIMINATION

In the automobile factory there were several other Jews deported from Poland. The other workers practiced discrimination against us, either from anti-Semitism or because it was expected of them. We Jews always stuck together and freely shared our feeling and impressions.

A few weeks after I began work in the factory, one of these Jewish forced laborers was badly mangled by a machine, and died in a few minutes. We were unable to do anything for him in his brief agony because the Soviet supervisor, with threats and insults, forced us back to our work. But we could not endure the thought that this young Jewish friend of ours should be buried like a dog by unfriendly strangers, so we decided to give him a Jewish funeral.

We knew only one Soviet Jewish worker in the factory, and after work one of us approached him and told him of our intention. When he heard what we were plan-

ning, the man was terrified, and asked us if we realized that any gathering for religious purposes was extremely dangerous. We told him we knew that, but that the deceased had come from a religious family in Poland and that we were willing to take the risk involved in giving him this last religious service.

The Soviet Jew nodded, and whispered an address. When darkness came, two of us went out to the cemetery where our friend was lying in the mortuary. After a long discussion we finally managed to bribe the gravedigger, who then handed the body over to us. We had to dress it completely in order not to arouse the suspicion of the driver who was to take us to the address the Soviet Jew had given us.

"This guy is drunk," we told the driver, "and we have to take him home." The driver nodded, fortunately not much interested. It was a ghostly ride, in the open carriage, across the dark streets of a dirty town, with the corpse propped up between us.

UNDERGROUND SERVICES

We entered a dilapidated frame house, one of thousands of dirty, dark dwellings, worse than the filthiest slum in Western Europe. A little girl was waiting for us and guided us across the back yard into a kind of garage or abandoned workshop, illuminated only by two candles. After placing the body on the floor, we looked around and perceived several shadows near the wall. One of them approached us.

"I am the rabbi," he said. "We are ready for the prayers, the washing and the dressing of the dead. You are strangers in this country and perhaps don't know that all of us here are risking our freedom and the freedom of our families for what we are doing now. Of course, that does not matter. I mention it only in order to impress upon you to be very careful and never reveal this place to anybody under any circumstances."

Then he prepared the body, and the other men silently prayed for our dead friend. When the service ended, the rabbi shook hands with us, we took the corpse, and one of the men drove us back to the cemetery in a farm wagon. I could not refrain from asking him about the other Jews in town.

MANY DEPORTATIONS

"There are now about 30 Jewish families left in Voroshilovgrad," he said. "The others were deported one by one during the last few years. Some day we shall probably meet them somewhere in the Arctic regions, in the Far East, or in Central Asia, because we, too, will certainly be deported."

"Why do they persecute you?"

"Nobody knows the exact reason for this manhunt directed against the Jews," he answered. "Sometimes they accuse us of being capitalists, but, of course, we are all poor working people, living in great misery. At other times they say that we plan counter-revolution when we come together to pray. But we still meet for prayers on almost all of the holidays. Up to now they have not discovered us, but they know that we remain loyal to our faith, and that is reason enough to them for putting us in concentration camps and deporting us. We must hide when we celebrate Chanukah; we have to keep our Menorah buried in the ground. But all these things won't help. Sooner or later we, too, will be driven away. But it really does not matter. Isn't this whole country one vast prison? There is little difference between being in Voroshilovgrad or somewhere behind the Urals."

"I want to join you in your services on Friday evening," I said. He named a street and a house number.

There was a heart-warming atmosphere in the modest home of our host, a young shoemaker whose wife did all she could to help us welcome the beginning of "Shabbos" with joyous dignity, even though we were in hid-

ing like thieves or murderers. I was amazed to find among the people present the elderly man in the local Soviet office who had helped me leave the coal mines. He recognized me and greeted me cordially.

"Do not believe that I am one of them," he said, meaning the Government. "I got this office job because they did not trust me enough to give me the teaching post I wanted after my graduation. It isn't a pleasant or interesting job, but it has given me the opportunity of helping some Jewish families."

I was deeply moved by the humble but inspiring services, and walking home I asked the man if this little community was a rare exception or whether there was still a measure of Jewish life in the Soviet Union in spite of more than 20 years of systematic annihilation of Russian Jewry.

"The Soviets never were friendly to us Jews," he replied, "not only because of the religious factor, but also because they did not consider us to be proletarians. As a matter of fact, under the Czar most Russian Jews were small but independent artisans—shoemakers, tailors, etc. Although there is nothing left of such independent economic activity, we have still not become economically assimilated. The Soviet Jew usually wants to work as a member of an *artel*, a kind of small workmen's cooperative, he avoids the big factories, and almost never works as an agricultural laborer."

"The Communists consider us to be elements standing between the classes of the proletariat and the peasantry, and therefore dangerous to the whole social structure of the state. Our fidelity to the faith of our fathers makes us even more suspect. The few Jews who did become important in the Soviet administration were completely liquidated after the big purges in 1937 and 1938, and after 1939 some units of the Communist Party and its affiliated youth organization did not admit Jewish candidates, although this discrimination was unofficial."

CLINGING TO JUDAISM

"As persecution intensified against us, we intensified our religious activity as our only means of surviving complete destruction. It is interesting that in spite of the enormous pressure against us from the schools and the whole political system, even our Jewish youth became increasingly attracted by our religion, which seems to be an answer to their search for truth, which they cannot find in the official ideals of the State. Having hoped for years that the revolution would bring us freedom from fear and an end to anti-Semitism, we turned back to Judaism when we saw all our hopes frustrated."

"Yes, there is still a Jewish community left in Russia—but of course it has to be carried on underground. You will perhaps be surprised to hear that even in the concentration camps and in the deportation areas there is Jewish activity. Of course, the most important task is to help each other, in this way we try to escape the hardships imposed upon us. We try to maintain contact with Jews who have already been deported or imprisoned, to trace their residences in order to relay news to their relatives. It is a great effort in which we are united, and we wish that the Jewish world abroad could know something about it."

Our conversation was suddenly interrupted by the sound of an approaching police car, and for a moment we feared we would be caught. But the militiamen only forced us to undergo a routine check-up at a nearby tavern. Nevertheless, we left one by one, and in different directions.

My status in Voroshilovgrad was that of a forced laborer removed from the Russian-occupied area in Poland for security reasons. I could not quit my job without authorization, and I received less for my work than the Russian workers. I had to report to the

NKVD (internal security forces) twice a day. But I was free to do whatever I wanted with my spare time. Several months after my first contact with the Jewish families of Voroshilovgrad, I received an order to prepare for transfer within 24 hours.

HARRIED BY NKVD

I succeeded in contacting my Jewish friend in the local Soviet. "They are sending you to Baku," he told me, "where you will work in the oil refineries. They suspect you of knowing too much about present conditions in this town. I will give you the name of the rabbi in Baku who will certainly do what he can for you."

And he did. When I went to see the rabbi, I expected to find an intimidated, afflicted man, like the majority of Soviet Jews I had already met. Instead, I found a real giant, who had a long white beard and hair, which gave him a biblical appearance. "I am one of the few Caucasian Jews who used to live in the mountains," he told me. "The Czar and the Reds did everything they could to annihilate us, and there are very few of us left. But you see that I am still here, and I will help you as much as I can." He generously provided me with food, since it was very difficult for a stranger to find anything to eat in Baku at that time.

But apparently the NKVD found out that I had contacted the rabbi, and in a week I was sent to Yalta to work in a tobacco plant. There was a young Jew among the workers there who shared a barrack with me. It was not hard for me to identify him because the other workers all referred to him as "the Jew." He came from Leningrad, and was a former student at the Institute of Technology there. But he had been expelled from the college after his parents were deported on charges of disloyalty to the state, and he had to work as a laborer to earn a living. After more than a year's agonized search, he finally located his family in Central Asia through the channels of the Jewish community in Yalta.

"Nobody will ever know," he told me, "how many of us disappeared, never to return. What we want is to be left alone, that's all; because we have seen that there cannot be any assimilation, even if we speak Russian and never leave the country. I don't mind working here as a laborer. You can hardly imagine what I suffered at college. There I met with systematic, so-called scientific discrimination. I was barred from all social life; nobody tried to be friendly with me, and I could not participate in any extracurricular activity. Here they call me 'the Jew' and hate me, but at least their anti-Semitism isn't hidden under a pseudo-scientific, socialistic cloak."

Three months after I came to Yalta, he was arrested on charges of political opposition and I never saw him again.

On July 2, 1941, my turn came. I was arrested by the NKVD because, as a foreigner, I was considered to be a potential collaborator of the Germans, who had just invaded Russia. In those tragic days, when the German armies had penetrated deeply into So-

viet territory, the secret police seemed to have nothing better to do than launch a big manhunt for Jews. Many thousands filled newly created concentration camps, or went to prison. But among those who were not taken under the protection of the NKVD, the spark of solidarity was still alive.

When the high holidays came, I found myself in the huge prison of Charkov, existing under the most inhuman conditions. I was in a cell built for 5 but actually shared by 40 persons. Nevertheless, it was the most wonderful holiday in my life, because when I went on my 10-minute walk outdoors in the prison yard, one of the guards handed me a big food package. "An old woman left it for you," he said. "She would not leave her name."

I don't know how, in those days of confusion and danger, the Jews of Charkov could learn the name of a Jewish prisoner in the overcrowded prison of their city, or how they managed to find food for me when there was the most acute shortage, especially in that part of the country. Who will ever know the limits of Jewish ingenuity when there is a question of helping a brother in need?

Problems of the Aged

EXTENSION OF REMARKS

or

HON. SIDNEY A. FINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. FINE. Mr. Speaker, under leave granted me by unanimous consent, I include the following address made by Hon. Oscar R. Ewing, the Federal Security Administrator, on the occasion of the dedication ceremonies for the Hebrew Home for the Aged, 5901 Palisade Avenue, Riverdale, Bronx, N. Y., on Sunday afternoon, September 16, 1951.

I recommend it as a splendid presentation of the subject matter, as well as a deserving tribute to a fine institution, the product of the ingenuity, industry, and faithfulness of the many who have selflessly devoted themselves to the laudatory task of making life peaceful and restful for the aged.

The address follows:

When you dedicate a new institution, you announce to the world that you are making a fresh start. And nothing in all the world is more fitting than to make a fresh start with our older people. That is what you are doing, and all of you who have put so

from various places in the Soviet Union. Many of the foreign-born Jews spoke Yiddish, and the Russians may have assumed it was a German dialect and that those who spoke it menaced Russian security.

"The Russians themselves explained, later on, when most of the Jewish prisoners were removed behind the Ural Mountains for defense work in various camps, that they had arrested the Jews to protect them from the Germans. This explanation is false, because in the first and most dangerous weeks and months of the German invasion, the Jews remained in prison even in highly exposed places like Charkov. They were sent to concentration camps in Siberia, central Asia, and the Far East only when the Soviets needed them as workers in the newly created war plants. The Russians made so little distinction between Jews and Germans that often they put German war and civil prisoners in already established Jewish camps, where both were treated the same."

much of your hearts, your energy, and your money into the fulfillment of the dream of this beautiful new home for the aged have a right to feel that you are rendering a service to others which is in the noblest tradition of religious expression.

I am truly honored to be with you this afternoon. In recent years, since I have been in Washington, I have become more and more interested in the problems of aging in America. But I have an even more personal interest in this institution here in Riverdale. I live in Riverdale, too. My home is only a few blocks from here. So I welcome the Hebrew Home for the Aged, and its residents, as neighbors. I am sure they will be good neighbors, and I am proud to have them here.

This new home is a symbol of the quiet revolution that is going on in the make-up of our Nation. Our population is changing swiftly and inexorably. People live longer today than ever in our history because the great advances in science and the progress in human well-being have made longer lives possible for us. We have more older people in the United States than ever before. And this is even more important: the proportion of older people in our population is steadily growing.

It is still too early for us to be fully aware of what this great change will mean to our country. But we do know this: that it will have an effect on our whole way of life, on our work, our production, our leisure time, our family relationships, and on all of the other things, big and little, that make up our lives.

We have stood before the world as a young and vigorous nation, taking from the Old World the best it had to offer and fusing in this New World a new and youthful civilization of our own. Now we have grown out of the American adolescence. We are mature today.

Throughout our history we have been a lucky people. When we went through the birth pangs of the Republic we were fortunate enough to have the leadership of a remarkable generation of great men—Washington and Jefferson and Madison and Hayn Salomon and Adams and a host of others. In the travail of fraternal warfare we produced a great humanitarian President, Abraham Lincoln. In the depths of the depression we found new hope and new confidence in the leadership of Franklin D. Roosevelt. These were personalities who made their mark on their times, we produced them in the very nick of time.

But now our country is faced with a new responsibility, heavier and more far-reaching than ever before. We are confronted with the necessity of taking the leadership of the free world in a world-wide struggle of ideologies. Not till 10 years ago had history thrust us so squarely into the very middle of the maelstrom of international tensions. Now we are engaged in a great battle for peace, a battle that calls upon all our resources—material, physical, intellectual. The whole world of freemen—and of men who yearn for freedom—looks to us for mature leadership.

And once again we have been the beneficiaries of good fortune. In His own inscrutable way God has granted us the great gift of maturity even as we become launched on the most difficult, most dangerous, most significant period in all our history. The nature of our population has changed, and, with the increasing level of maturity, of stamina, of experience, of calmness, we face the complexities of our time better fortified than ever in all our history.

But this revolution of the birthdays has also raised many problems which we have yet to solve. Mostly, they are human problems. We have not yet learned how to adjust ourselves to the new age structure of our population. We have not yet succeeded in adapting ourselves to the needs of older people or in helping them adapt in turn to

¹ Editor's Note.—We asked the author to explain this statement. Here is his reply:

"It is hard for me to explain the Russian attitude toward the Jews during World War II. From personal experience I know that in the first days of the German attack, a great number of Jews were arrested by the NKVD. Before I reached Aktjubinsk concentration camp, I went through 11 prisons, and everywhere I found many Jews among the prisoners. Almost all of them were arrested in the first weeks after the German invasion. In Aktjubinsk itself I found thousands of Jews, although I do not know the exact number. They were mostly from the Baltic region, Poland, and Rumania, and included some German Jews who had escaped to Russia after 1933. There were also Jews

the society in which they live. To find the answers to these problems is one of our greatest challenges, and particularly for those institutions which are devoted to the welfare of humanity.

I need not tell you that Americans of the Jewish faith have earned for themselves an enviable reputation in the humanities. Your fellow citizens know that American Jews have for generations been in the forefront of the philanthropies, the humanitarian movements, the organizations for human welfare, that are so plentiful in America. It is hardly surprising that Jewish groups should also be among those working hardest on the problems of aging in America. National organizations like the Council of Jewish Federations and Welfare Funds and the National Council of Jewish Women, and scores of local Jewish groups across the country, have set outstanding examples in the fields of health, recreation, group living, old-age counseling, and community surveys. You have transmuted your great heritage of brotherly love and religious devotion into its modern counterpart: the intelligent, realistic dedicated effort to help those who need help.

I have some knowledge of how much work and thought and love went into the achievement of this new Hebrew Home for the Aged. I know the story of how the home began originally in Harlem and how, through the years, under ever-increasing handicaps the home sought to bring cheer and hope to its residents. And I know how the great dream of a new home, a place of sunlight and happiness and warmth and love, was born, and, finally, when the war ended, how you worked and planned and gave to make the dream come true. Here it is. It is not simply a building of wood and earth. It is a part of yourselves for all the world to look upon and understand and accept—not a monument, but a vessel of love, a living symbol of that great precept which an ancient rabbi called the very essence of Judaism and which we who are Christians call the Golden Rule: Do unto others as you would have others do unto you.

When I was a boy in Indiana, we did not often have a problem about the old folks. Of course, people didn't live as long as they do now. It is an astonishing thing to remember that the average age of the average American has increased by almost 17 years in a single lifetime. More of our people lived on farms or in small towns. There was room for the old folks and there were things for them to do. Grandpa could help with the milking and the chores and then maybe doze for a little while under the apple tree if he got tired; and Grandma sat in her rocker and darned the socks if her eyesight was good enough, or she helped with the cooking. It was a large, happy, full life, the family was supreme. But things have changed. More and more of us live in cities and the apartment houses that mark our times do not give us much room for large families. We have efficiency apartments and little kitchens and never an extra room for the old folks.

This is one of the byproducts of the urbanization of America. It has transformed the behavior of the American family, by and large, and it has raised a number of special problems for the older folks. After all, we still like the idea of home—no matter how old we are. To older people, I think, the need for a place to call home is even more acute than to others who have grown up without any memory of the large, rambling, easy going life of days gone by. The home, however it may have changed through the years, is still the heart of our hearts, the same place from which we can set out in the daily rounds of life. It is the symbol of privacy and of independence and of security.

Not so very long ago the greatest tragedy that could befall an old person was to be compelled to leave his home and go to an institution. In those days, an institution meant the poorhouse, the traditional county infirmary, the old-age home that was not a home at all but a place of last resort, a place where people went to die rather than to go on living. Too often such places offered no privacy; they provided food that was poor and tasteless, their medical care was inadequate; they were far away from family and friends; and they gave no thought to the ways in which older people might continue to be active and useful. They were not very pleasant places; yet most of them were filled with people who had nowhere else to go.

But even these places, bad as they were (and there are still some of these antiquated, unpleasant institutions in existence), there have been even worse ways in which older people are sometimes forced to live. The last census showed that hundreds of thousands of them are living alone in third- and fourth-floor walk-ups, in dilapidated tenements, without social contacts, starving to death spiritually if not physically. And there is the heavy proportion of older people in the mental hospitals, too often unnecessarily—shunted to one side by the community only because they have worn out before their time, because they have been made old too soon through lack of something to do, something to think about, someone to talk to.

We are going to have to change all this. We are going to have to work out new ways of making life pleasant for people who are heavy with years. This new Home for the Aged is part of the very change that I am talking about. When you look over these grounds, when you examine the structure and layout of these buildings, you realize that this is not the end of the road for the people who will live here. It is the place where life can begin again. It is a place of friendliness, and warmth, and cheer. The beauty of these surroundings, the medical service, the occupational therapy, the social rooms emphasizing participation in life rather than withdrawal from life, the easy access to the community of which you are a part—all these are essential to our new concept of the full life for older people. The key word in the name of this institution is the word "Home." The people who live here are not inmates, or patients, or clients; they are residents. This will be their home.

These residents want to fulfill the great needs of religious conviction which play so strong a part in their lives. They want to be active and do things on their own. They want to remain alert mentally. They want to feel that they belong, that they are wanted and loved, not because they are old but because they are people who deserve to be wanted and loved in their own right. They want the years that lie ahead of them to be years of life and satisfaction, the fulfillment of all the work and hardship and achievement that they knew as they advanced toward the later years.

When we see old people who live listlessly, drawn into themselves, silent, utterly dependent, vegetating until death seems like mercy, then we must say to ourselves, "They did not wish to be like this. We made them that way."

But when we see older people, overcoming the infirmities of advancing years, happy and active, with a continuing interest in the life around them, busy at tasks that are congenial to them, devoting themselves earnestly to their prayers and their families and their everyday activities, then we have a right to say, "We helped them find the satisfactions of the later years. We have learned from them, and we have taught them. They are a part of us, and we of them. Here, in this lovely Hebrew Home for the Aged, we have

searched for the way in which the new years that we have added to our lives may be long, fruitful, happy years. Here is a place where we can fulfill the bright hope that lies in every human heart, the hope that the best years of our lives lie in the future, not in the past."

In this spirit, we dedicate the new Hebrew Home for the Aged. We dedicate it, in all humility, as a house of hope, a house of promise, a house of fulfillment. May all who come here discover new life and new happiness. May they find here that greatest of human aspirations: peace of mind and peace of soul.

Washington's Gavel

REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. GOODWIN. Mr. Speaker, 158 years ago today George Washington laid the cornerstone of the Capitol. The gavel used by Washington on that memorable occasion has had a most interesting history over the intervening years and as we observe the anniversary of the laying of the cornerstone, it seems appropriate to repeat the following story of the Washington gavel as told over the signature of W. J. M. in the pictorial magazine of the Washington Sunday Star of September 16, 1951:

WASHINGTON'S GAVEL

By W. J. M.

A priceless historical relic that is little known to the general public, although it has been used time and again in both governmental and civilian ceremonies, will mark its 158th anniversary Tuesday.

It is the little marble-headed gavel used by George Washington when he laid the cornerstone of the Capitol on September 18, 1793. It now is owned by Potomac Lodge, No. 5, of the Masonic order. The gavel was presented to the lodge by Washington.

It has become one of the city's most closely guarded relics, being kept in its own glass case in the vault of the Riggs National Bank branch at Wisconsin Avenue and M Street NW.

Washington was anything but a city when the Capitol cornerstone was laid, but it put on its best pomp and ceremony for the occasion, despite the fact that the parade was broken up in order that the marchers could cross Tiber Creek, single file, on a log that served as a bridge. The procession marched from President's Square to the Capitol along a country road which, generally speaking, followed what is now F Street.

The procession included members of Masonic lodges from Georgetown, Alexandria, and a newly formed District chapter, two bands and members of the Virginia artillery. A 500-pound ox was barbecued as a climax to the festivities.

After the cornerstone ceremonies, Washington presented the gavel to the Georgetown Lodge and the trowel to the Alexandria Lodge. Both articles had been made especially for the occasion by John Duffey, a member of the Fredericksburg (Va.) Lodge. The trowel now is in the museum in the Masonic National Museum in Alexandria.

In making the gavel, trowel, and other articles used in the cornerstone laying, Duffey may have been influenced by more than patriotic motives. A little apple polishing may

have been involved. His daughter was the wife of Washington's landscape gardener. Duffey was a silversmith.

Some years passed before the Georgetown Lodge, which had been organized by 12 men in 1789, realized the historic value of the gavel. But in 1847, President Polk used it in laying the cornerstone of the Smithsonian Institution.

Other Presidents who used it were Fillmore, Buchanan, McKinley, Theodore Roosevelt, Taft, Harding, Hoover, and Truman.

It has been used as a symbol of authority in the dedication of the Washington equestrian statue, centennial services at Mount Vernon, and cornerstone ceremonies for additions to the Capitol, the Old House Office Building, the Departments of Labor and Commerce, the Washington Monument, Constitution Hall, American University, and numerous churches, schools, and lodges.

So valuable has the gavel become that it is taken from the bank vault only with the approval of the lodge membership. About 100 years ago the lodge ruled that the gavel, when lent, must be accompanied by a committee of three members, who are not to let it out of their sight. It is carried in a special velvet-lined leather case.

It is made of the same marble that was used in the original fireplaces and other decorative pieces in the Capitol. The handle is wood. In 1856, an engraved gold cap was added to identify it as the one Washington used.

Only once has the lodge lost sight of the gavel and then only for a few hours.

In 1899, President McKinley used it at Mount Vernon while presiding over the centennial observance of Washington's death. At the conclusion, he handed it to a Mason nearby and the Presidential party headed for the steamboat to return to the District.

The gavel committee was in pursuit, but guards refused to allow the three to board the boat and they were forced to wait for the next one.

The gavel, in the meantime, had been handed from one to another, but it finally was traced to a merchant who had locked it in his safe. At the committee's request, he opened his store and the gavel was returned to the lodge rooms the same night.

The Georgetown Lodge became the Potomac Lodge in 1811, shortly after it erected its first building, which still stands on Jefferson Place in Georgetown. Its present building, at 1210 Wisconsin Avenue NW, was completed in 1859. Samuel T. Beachman now is lodge master.

In 1922, the Riggs Bank offered to provide extra-safe protection for the gavel because William W. Corcoran, a cofounder of the bank, also was elected master of the Georgetown Lodge in 1827, about the time the historic importance of the gavel was being appreciated.

cles throughout the United States. For the sake of the American taxpayers, who have all they can bear of these scurrilous burdens, I hope we can expose this case quickly enough to stop it.

Many a surprise package has been opened lately in Washington. Out of some of them have come mink coats, deep freezes, gratuitous jobs, and neat bottles of influence bearing the administration label. They are insignificant compared to the iniquitous deal which is my subject here.

We cannot be certain yet just what all will be found when we complete the unwrapping of this newest package, but a variety of things already have popped out.

These include:

First. The Harvey Machine Co. of Los Angeles.

Second. Leo—or Lawrence—Harvey, president of the firm, of Russian descent, whose name may not be Harvey.

Third. A \$46,000,000 loan, approved by Secretary of the Interior Oscar Chapman, to the Harvey company for a new aluminum plant in Montana.

Fourth. An attempt by the Interior Department and its Bureau of Reclamation to create a great power shortage in Idaho, Montana, Washington, and Oregon for the purpose of getting control of power and water in those States and establishing new authority for Secretary Chapman and Reclamation Commissioner Michael Straus.

Fifth. Suspicious circumstances under which "strange-gage" Navy shell testers were found in the Harvey Co. plant when that company was working on war contracts.

Sixth. Employment of a former Assistant Secretary of Interior and legal counsel for the Bonneville Power Administration by the Harvey Co.

Seventh. Employment of a member of the California State Legislature as public-relations counsel by the Harvey Co.

Eighth. The rise of Lawrence Harvey—or Leo—as a Democratic leader.

Ninth. How Harvey suddenly was offered a gigantic loan to make him the fourth largest aluminum producer in the country, yet he had no working capital, was not a big industrialist, and knew little or nothing about aluminum.

These are only a few of the ingredients which are contained in the disgraceful mess. I shall include many others as I unfold the story.

Lake many other foreigners, including the Russians, the United States gave the Harvey brothers a golden opportunity. They worked, and schemed, and prospered. Their machine company in Los Angeles grew, and when the war came along they received lucrative contracts.

Lawrence Harvey was observing, and in his frequent visits to Washington he saw how loyal supporters and contributors to the administration were favored. He set out to become a prominent member of the Democratic Party and to become friends with those who could do favors for him. He worked hard at it and gave money, and he soon began to be known as a good Democrat.

The Government had spent \$8,200,000 to construct an aluminum plant near

the Harvey Co. After the war, Los Angeles power authorities did not want a large block of the available power of the area to be used in operating the plant. It became war surplus.

Harvey went after it, and he got it for \$1,503,000.

Meanwhile, Harvey's background had begun to interest some State and Federal agencies from another standpoint. The report of the California Committee on Un-American Activities might be interesting reading to any of my colleagues who wish to look further into this situation.

Harvey became a member of the Los Angeles County Democratic Central Committee, and it was widely known that he was active in supporting candidates financially. He took an active part in committee activities.

With money he made off war contracts he was able to finance a deal to purchase an office building in Los Angeles. It was called the Subway Terminal Building. Although downtown, it had not been a financial success because it was a little out of the path of development of the new Los Angeles business area.

Soon after Harvey purchased the building, however, it was filled with Federal Government departments and a large new post office.

It was after the war that reports began to come out about some strange occurrences which had taken place in the Harvey Machine Co. during the time it was working on Navy contracts.

One day in 1943, a machinist in the company told Navy inspectors that he had been ordered to make an off-size testing gage for Navy shells. The Navy and the FBI both investigated. Evidence discovered was turned over to the Justice Department. The evidence included an order written by Herbert Harvey for the off-size testing gages. The Justice Department never prosecuted the company or Harveys.

Lawrence Harvey's political career continued to progress. He employed a member of the California State Legislature to help him with such things as purchasing the aluminum plant and getting favors from both the State and Federal Governments.

Now, with the big aluminum plant in his possession, a legislator-publicity man on his payroll, steadily improving connections in Washington, Harvey was in a position to try for a really big favor. Meanwhile, he had not neglected his political duties, or his contributions, and he was being mentioned in the newspapers as a leading candidate for Democratic National Committeeman from California. With this prestige, he figured he could make real headway.

By this time, Harvey had learned that influence was necessary, and that it had to be bought. He looked around for a good man to advise and assist him in this undertaking. Harvey thought he saw a chance to become a big aluminum operator, but what he knew about making aluminum could be put in a very small aluminum thimble. But he had a plant, and even though it was making no aluminum it qualified him, and he had political connections that were getting better all the time. In this case, the

Secretary Chapman Engineers Another Great RFC Scandal for Harvey Machine Co.

EXTENSION OF REMARKS OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. SAYLOR. Mr. Speaker, a vicious new scandal, involving another great RFC loan and perpetrated by high officials and politicians of the administration, is spreading its unhealthy tenta-

know-how didn't have to do with making aluminum. It had to do with political influence.

Harvey engaged the service of C. Girard Davidson to help him become an aluminum mogul. Davidson was formerly with the legal division of the Bonneville Power Administration and was an Assistant Secretary of Interior. He was an old pal of Chapman and Straus, an ardent New Dealer and Fair Dealer and a social planner par excellence.

When he and Harvey got their heads together, Davidson had left the Interior Department and had moved out to Portland, Oreg., to practice law. It was announced in the press that his first client would be his old favored employer, the Bonneville Power Administration.

I believe, Mr. Speaker, that the picture begins to take shape here. I shall complete it.

Here I think is a good place to mention Robert R. Rose, of Casper, Wyo. He recently was appointed Assistant Secretary of Interior, supposedly to direct the mining activities of the department. Rose is a good Democrat. He has political ambitions. Wyoming's lone Congressman, WILLIAM H. HARRISON, is a Republican. Oscar Chapman doesn't like Republicans, he doesn't like Republican Congressmen especially, and he knew that Rose could get a lot of good publicity as an assistant secretary, dealing with mining and metals in this time of emergency.

Lawrence Harvey was willing and anxious to back Democratic candidates with good dollars. Harvey was interested in being a big aluminum producer. Aluminum was metal. Rose had to do with metals for the Interior Department. It would be interesting to know how much Rose understood about Harvey's ambition to promote an immense steal from the taxpayers. Did Rose take office knowing he would receive substantial financial backing from Harvey when he ran against HARRISON next year in Wyoming? The continuance of this investigation might well disclose very interesting matters along this line.

Meanwhile, Harvey and Davidson were working hard to get a big loan for an aluminum plant in Montana, near the town of Kalspell. And up in Kalspell, Harvey had a strong supporter. This was Don Treloar, a radio-station operator. Treloar is a good friend of Democratic incumbents in Montana, especially one of them who has burning aspirations to be a Senator from Montana. They do not like Republican Congressmen, either, and to beat the Republicans they would need heavy cash contributions. Harvey was a good prospect. Thus, it would be interesting if this investigation were carried into that field. Just what understanding was there between Chapman, Treloar, Harvey, and the ambitious Montana Democrats?

The stage was set.

On August 28, this year, the Associated Press sent the following story out of Washington:

The Defense Production Administration Tuesday approved a loan of \$46,000,000 to the Harvey Machine Co., to build an aluminum plant at Kalspell, Mont., and an alumina-producing plant near Everett, Wash.

The agency said that \$32,000,000 of the credit will be used to set up a three-line aluminum-reduction plant at Kalspell with 54,000,000 tons annual capacity.

Of the remaining money, \$3,000,000 was advanced for the purchase of ore boats and \$11,000,000 for the facilities to produce alumina—the next-to-final stage in the production of aluminum from bauxite ore. The Everett plant will produce 108,000 tons annually.

The loan was recommended early this month by Secretary of the Interior Chapman. It was approved by DPA after agreement by the Harvey Machine Co. of Kalspell to the Government's terms and conditions. The firm is a subsidiary of the Harvey Co. of California.

The terms of the loan, which will be made by the Reconstruction Finance Corporation as the agent of DPA, call for maturity in 20 years and interest at 4½ percent.

The note is payable in equal quarterly installments starting a year after completion of the new facilities.

The company is obligated to provide an equity of \$8,000,000, as follows: \$2,500,000 to be raised before any of the RFC credit is drawn, another \$3,500,000 to be raised within 18 months, and \$2,000,000 in working capital to be available on completion.

The DPA also will require a \$1,000,000 personal-performance bond to be signed by the head of the firm, Leo Harvey, Sr.

Other conditions provide that no dividends are to be paid by the company until the loan is paid off, the Government is to receive through RFC any savings from tax benefits which may be granted, and the Government is to receive half of the net income after taxes from both the subsidiary and parent companies.

One factor influencing the making of the loan, DPA said, was an understanding that Harvey would reserve a "substantial" part of its aluminum ingot output for sale to independent aluminum fabricators who lack their own sources of supply.

The agency also commented that the project will provide an important competitive influence in the primary aluminum industry.

It is interesting to note that Oscar Chapman, probably the biggest political power in the administration, and President Truman's right-hand political aid, was the first to approve the proposed loan, and in fact initiated the proposal.

It is also interesting to note that Chapman and Straus have been having a hard time getting the control they want of the power—in this case hydroelectric and not political—in the Northwest. There is need for more power, and the people of the Northwest have formulated sound programs for developing it. But these programs would not make Chapman and Straus dictators and they are fighting them.

Chapman and Straus have been attempting to force unsound projects down the throats of the Northwest people, and having been rebuffed, they have schemed to override the will of the people, and even the will of Congress.

Their scheme is this: They are doing all they can to make the power shortage worse. If it gets bad enough, they have a chance of getting the projects they want and the control they crave under the stress of the defense emergency.

The Harvey loan comes under this scheme, as well as under the political machinations of the administration. The Harvey aluminum plant would create electric power-eating potlines at the very time when the DPA and the BPA are

most seriously concerned about the Northwest power shortage.

Many publications, including Fortune magazine, have charged that this power shortage is being deliberately created through allocation of electricity to the aluminum industry simply to provide the lever for the building of more dams. It would also put Chapman and Straus in a position to dictate terms of power development in the Northwest.

The Harvey loan was a two-sided weapon in the hands of the Interior Department—for politics and electric power.

Chapman had a tough time getting the Harvey Co. qualified to receive the loan.

It was late last July that Chapman reported the Harvey Co. had notified him it could not provide the necessary capital to take the loan. The company did not have the money, seven or eight million. Chapman, ably assisted by Davidson, found a way.

Chapman produced a proposal whereby Harvey would put up \$3,500,000 and the balance would be raised by selling stock to independent aluminum fabricators.

John Corlett, a reporter for the Boise Statesman, has done an excellent job of exposing details of Chapman's and Harvey's joint endeavors, assisted by Davidson. Much of my information comes from Corlett.

The Harvey's contribution, under the Chapman plan, would be provided in cash, equipment, land, and engineering. Here, that old aluminum plant Harvey got for a few cents on the dollar down in Los Angeles came in handy. It gave him some equipment, land, and engineering, the quality of which is decidedly suspect.

August 23 was the deadline for Harvey to accept the Chapman plan and the terms of the loan. Harvey was not to be found. However, the DPA said it was keeping the door open, and if Harvey was a day late it would not matter.

On August 25, Harvey accepted. Reluctantly, of course. But he was talked into it by Chapman, Davidson et al.

Three days later, on August 28, the DPA approved the loan.

One of the things about the loan that most pleased Harvey was that 85 percent of it would be amortized through taxes.

Davidson had not been heard from much during all the negotiations, but now he popped up in Portland. He told the press that providing he and Harvey didn't get bogged down in paper work, the new plant would be operating within a year.

The plant would draw its power from the Bonneville Power Administration, another Davidson client, and spearhead of the Chapman-Straus drive in the Northwest. Of course, Davidson has long been their spokesman for a Columbia Valley Authority.

Obviously, the loan would help that cause, as well as help the Democratic candidates in the Northwest.

It looked until a day or two ago that Chapman had got his way, that Harvey was on the way to the big league, that

political money would flow into the Democratic coffers in the Northwest, and the taxpayers would be swindled again. But, Mr. Speaker, something happened.

An unidentified person made a formal complaint about the loan to the RFC. The RFC, remembering its recent unhappy experiences, held up the loan papers.

Hasty letters regarding the loan suddenly went from Chapman to Stuart Symington, RFC head, and Manly Fleischmann, chief of the DPA. Chapman suddenly had withdrawn his approval of the loan. He used the excuse that he wanted to study it some more.

Just what will happen, Mr. Speaker, has not been determined. But I repeat that for the sake of the taxpayers I hope this scandalous deal will not be consummated.

Equally as strongly, I hope that a thorough investigation will be made of this matter, and that it will be explained how a politician can walk into the Federal Treasury and take out \$46,000,000 with little or no security.

Melrose Pays Tribute to Admiral Forrest P. Sherman

EXTENSION OF REMARKS OF

HON. ANGLIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Monday, September 17, 1951

Mr. GOODWIN. Mr. Speaker, the city of Melrose, Mass., under the leadership of Mayor Thomas L. Thistle with the cooperation of the board of aldermen and a citizens' committee paid signal honor to the late Admiral Sherman at an impressive memorial service on Sunday, September 9, 1951.

Under leave to extend my remarks, I include the following excellent story of the ceremonies from the Melrose Free Press of September 13, 1951, also excerpts from an illustrated brochure prepared for the service including the order of ceremonies, a biographical sketch, and the text of the bronze memorial tablet:

MELROSE PAYS TRIBUTE TO ADMIRAL FORREST P. SHERMAN AT SERVICES

The grateful citizens of Melrose, high ranking Naval officers and members of veterans' organizations, gathered at Memorial Hall on Sunday afternoon to attend memorial services for Admiral Forrest Percival Sherman, who died in Naples, Italy, July 22, 1951, while on a diplomatic mission for the United States.

Congressman ANGLIER L. GOODWIN of Sheffield Road was chairman of the committee in charge of arrangements and the memorial address was delivered by United States Senator LEVERETT SALTONSTALL.

Rear Admiral Hewlett Thebaud, commandant of the First Naval District, paid sincere tribute to the late admiral, praising the brilliancy of his mind, his never falling interest on what was going on in the world and his commendable characteristics, which personified the time honored tradition of the Navy—an officer and a gentleman.

The Reverend Warren C. Herrick, rector of Trinity Episcopal Church, offered the open-

ing prayer, and the memorial prayer was given by Capt. G. L. Markles, USN, Chaplain, First Naval District.

Congressman ANGLIER L. GOODWIN read the remarks that were written by him and incorporated in the CONGRESSIONAL RECORD on July 25, and Mayor Thomas L. Thistle offered the resolutions passed by the board of aldermen on July 23.

The double quartet of the Melrose Amphion Club sang two beautiful selections and Herbert Irvine presided at the organ.

In dedicating the bronze plaque to the memory of Admiral Sherman, Mayor Thistle told the audience that this was the first time that the city had dedicated a plaque to the memory of an individual. He explained that there were plaques commemorating the heroes of the several wars in GAR Hall and that this plaque would soon be placed in this hallowed hall.

Among those attending the services were former friends, school teachers who had taught the late admiral, former Mayors Charles H. Adams, Robert A. Perkins and Carl A. Raymond. Members of the admiral's family, including his sister and brothers, with their wives and families, occupied the boxes in the rear of the hall.

Two beautiful bouquets of flowers were on the stage at either side of the speaker's rostrum and the plaque was directly in front of it.

The services were impressive and each speaker addressed the audience without introduction.

The color guard of the American Legion Post No. 90 took part in the services, and the members of the post and those of the auxiliary occupied a reserved section.

State Senator Sumner G. Whittier, of Everett, who represents this district, was among those attending.

The members of the memorial committee included Congressman Goodwin, chairman; the Reverend Herrick, Stanley C. Battles, past commander of Melrose Post, No. 90, American Legion; M. Kenneth Taylor, present commander of Post No. 90; and William A. Tomer.

ADDRESS BY SENATOR SALTONSTALL AT MEMO- RIAL SERVICES FOR SHERMAN

Senator LEVERETT SALTONSTALL paid glowing tribute to the work and high ideals of Admiral Forrest P. Sherman at the memorial service last Sunday afternoon in Memorial Hall. For the benefit of all who may not have been able to attend the exercises the speech is printed in full.

"It is with great yet sorrowful pride that I join you all today to pay tribute to a great soul and a great American. It is eminently fitting that on this memorial occasion we should reflect upon Forrest Sherman's magnificent contribution to the cause of freedom and to the Nation he loved and served so well.

"On Friday, July 13, I called Admiral Sherman and asked him if I could have a talk with him and get his opinion on some questions which were bothering me. He said, 'You will have to see me today because I am leaving for Europe tomorrow for 10 days.' Then he said, 'Why don't you come to lunch with me?' I accepted, and went over to the Pentagon. I found myself at lunch not only with Admiral Sherman but all his deputy chiefs of staff. There were about seven of us all together.

"I assume it was another act of generosity on Admiral Sherman's part. I am sure that he was planning this luncheon with his chiefs of staff, but when I asked him to see me, he invited me to the luncheon. As a result, I asked him many questions so that while the rest of us had a pleasant, healthy lunch, Admiral Sherman had to gulp his between answers to my questions. He seemed well and was as ready as ever with his answers on difficult problems. But this was

the way he always appeared to us who are Members of Congress. He wanted to do his part at all times at whatever sacrifice was required of him to give us the information that we wanted concerning our military services."

UNIFICATION OF SERVICES

"While the measures for unification of the armed services were before the Congress, Admiral Sherman was the representative of the Navy. I was a member of the Armed Services Committee and later of the conference committee that adjusted the differences between the two Houses. During that period of several months, I saw Admiral Sherman from day to day. No one could have been better informed on all the angles of the subject, on all the differences between the branches of the armed services, than he. He always presented the point of view of the Navy clearly and forcefully, yet he was so cognizant of the need of greater unification of the services for more efficiency, more economy and greater strength of operations, that he helped to create language that smoothed out the difference and at the same time moved us forward to a comprehensive bill that ultimately became the Unification Act of 1947."

SUPPORTED NAVY

"At the time there was criticism that he was letting the Navy down. He never let the Navy down. He made certain that the Navy maintained its identity and its important place in our Nation's defense. That Act of 1947 has since been modified and improved. It has served, as it was designed to serve, as a basis for peacetime as well as wartime unified operations. It was built firmly upon the foundation for the unified planning and action which we saw carried on during World War II, and which we see now being carried on successfully in Korea and in the European planning.

"Since 1947, the obvious flaws in that act have been eliminated, we hope, by the Unification Act of 1951. Again Admiral Sherman because of his part in the previous drafting in 1947 played an important role. This spring he presented evidence in his position as Chief of Naval Operations. We listened to him with even more respect than we had in 1947. His stature had grown. The criticism that he had compromised the Navy was completely stilled by his great leadership in the brief period of time that he was our chief of naval operations.

"Admiral Sherman died while on a trip that included two great objectives: the inspection of our naval operations in the Atlantic and in Europe, and the creation of a better understanding in Spain, in England, and on the Continent. His comprehension of our problems of security was well summarized by him in his testimony to the Appropriations Committee of the House when he was testifying this spring. He expressed so accurately and truly our own feeling in these words."

THOUGHTS ON UNIFICATION

"The question was asked him: 'What is the best hope of averting a general war?'

"Admiral Sherman replied: 'That is a question of broad policy. In my opinion, the best hope of avoiding a general war lies in a combination of several courses of action: One is to be sufficiently strong to deter our possible enemies from starting a general war. Another very necessary course of action, it seems to me, is to have alliances which are strong enough, sufficiently well-tested, and composed of allies who are sufficiently determined to act in unison to deal with instances of aggression, such as the one in Korea, more promptly and more effectively.

"On the other hand, if we believe, as I do, that we are facing an opponent who does not want a general war now, but who wants to do everything possible to exhaust us, to drain

off our energies in a small operation here and a small operation there, induce us to do things that will impair our economy, then we want to face the fact that we are in an operation which may become an endurance contest, there ore, it is wise to achieve the level of military strength which we can sustain over a period of years. The worst thing that could happen to us, as I see it, would be to go to a full-out mobilization and not have a fight then go into a period of cut-back trying to save money and pay our debts, and then suddenly find ourselves in a fight."

CONGRESS RESPECTED SHERMAN

"The Members of Congress respected Admiral Sherman not only because of his knowledge and his skill in solving the practical problems that face our armed services today, but also because of his so evident patriotism and lofty ideals. What we need so much today was typified by him and the life that he led. He had the courage to be a good leader of fighting men, but he gave them not only inspiration from his courage, but also inspired them with a greater will to fight and to die if necessary out of love for their country."

MAN OF IDEALS

"Today we hear much about the moral let-downs by all of us. It is true. We have let down somewhat. We have let slip from us some of the ideals on which our forefathers founded our country, but this was not true of Admiral Sherman. In all the petty scraps within the Navy, and in all the fights and compromises between the services in the Congress, he maintained his ideals and the background on which all our work must be done—the security of our country."

"Many times I have thanked God that in this free country of ours, where we have gone from peaks to valleys in military strength, we have always had sufficient numbers of men who love the life in our Armed Forces to give us the necessary leadership when we must quickly ascend another peak. We think first of General Washington in the War of the Revolution, then follow through with Lee and Grant in the Civil War. We come to Admiral Dewey and Theodore Roosevelt in the Spanish War, and then to Pershing and Sims—to mention just two in World War I. And then in World War II, Marshall, Eisenhower, Nimitz, Mitscher, and many others."

"All my lifetime I have been impressed by the fact that when this Nation has known its greatest need for leadership, that leadership, with experience and knowledge, has always sprung into active being. Every American heart has thrilled to the sound of names such as I have mentioned, and the early naval heroes—Barry, Jones, Perry, Lawrence, and others. To this roster now we can add with heartfelt pride the name of Forrest Sherman, who in time of war proved his skill and gave his utmost, and in a period of this Nation's greatest peacetime trial proved equal to every task and to every assignment in freedom's name."

"While I did not have the opportunity to know him in his youth, I have read how he always loved the sea and how he went sailing with his grandfather in New Bedford—how, when his grandfather died suddenly on one of these sails, Forrest Sherman, at the age of 12, faced the crisis and brought the boat safely to shore and summoned help."

EXPERT SEAMAN

"It was that same spirit—the love of the sea, the knowledge of the sea—that made it possible for him by expert seamanship and skillful maneuvering to save the lives of so many of our men when the aircraft carrier *Wasp* was sunk. Sherman lived up to the full traditions of a naval commander when he was the last man to leave that ship. It was his quick judgment, his obvious cour-

age, and his quiet methods that permitted so many men to go down the ropes safely ahead of him."

"He is rightly given the credit of working out the plans by which, under the leadership of Admiral Nimitz, many of the leap-frog operations that ended the war in Japan were made possible. As one who led his class in the Naval Academy, as one who saw the future of aviation, as one who understood the part of the Navy in an operation in the great Pacific Ocean, he used the great brain that the Lord had given him and created the plans down to the last detail that allowed others to carry out in practical form and to successful conclusion the operations that he had prepared so ably and thoughtfully."

"It is a difficult thing for those of us not burdened with military and naval responsibilities to imagine the nature and the scope of the burdens of the chief of naval operations in 1951. It demands the possession of many skills beyond those required by the usual naval career. The chief of naval operations has to be an administrator of superior ability, a diplomat persevering and patient, a scholar of extensive background, a commander of men, and at the same time a source of ideas."

"As America has had world obligations thrust upon her, so her sons in service have had to take up that burden of obligation to the full extent of their individual abilities. A man's service to his Nation at the level on which Admiral Sherman lived is one of awe-inspiring weight and complexity. But Forrest Sherman did endure the heat and burden of his calling with cheerfulness, with vigor, and with remarkable skill."

HAPPY HOME LIFE

"I count among some of my most pleasant experiences during my stay in Washington the several dinners that I have enjoyed with Admiral and Mrs. Sherman at the house on top of the hill near the Cathedral which the Navy assigns to the chief of naval operations. On those occasions, Admiral and Mrs. Sherman entertained cordially, hospitably, and gave each one the feeling that he or she was the guest that they wanted most to have with them. On these occasions and in a few conversations with him, I got something of what his family life with his wife, his daughter, and his grandchildren was like. It was a wonderfully happy one."

"In this memorial service we can draw hope and inspiration for our future in this country from the efforts that Admiral Sherman has made in our behalf and which, like his soul, can be immortal if we labor to keep them alive—the inspiration of patriotic sacrifice, of moral and physical courage, and of everlasting ideals that a true lover of freedom and of the knowledge and the responsibilities that go with freedom can give us. The security of this Nation, on the sea, in the air, and on the land, is ever our objective, as it was his, for on that security the freedom of our Nation and many another nation depends. In the name and in the example which Forrest Sherman has set us, let us resolve to do our full duty in pursuit of these ideals."

MEMORIAL SERVICES, SUNDAY AFTERNOON, SEPTEMBER 9, 1951, 4 O'CLOCK, MEMORIAL HALL, MELROSE, MASS.

Organ selections: Herbert Irvine, organist. Prayer: Rev. Warren C. Herrick, pastor, Trinity Church.

Resolutions adopted by Melrose Board of Aldermen: Hon. Thomas L. Thistle, mayor of Melrose.

Lamp in the West, by Horatio Parker; Double quartette, Amphion Club of Melrose.

Remarks delivered in House of Representatives at Washington: Hon. ANGER L. GOODWIN, Congressman from Melrose.

A personal tribute: Rear Admiral Hewlett Thebaud, United States Navy, commandant, First Naval District.

Organ selections: Herbert Irvine, organist. Memorial address: Hon. LEVERETT SALTONSTALL, Senator from Massachusetts.

The Navy hymn, Eternal Father Strong to Save, by Dykes (requested by members of family of Admiral Sherman): Double quartette, Amphion Club of Music.

Dedication of Memorial Plaque by Mayor Thomas L. Thistle.

Memorial prayer: Capt. G. L. Markle, United States Navy, chaplain, First Naval District.

BIOGRAPHICAL SKETCH

Admiral Forrest Percival Sherman was born in Merrimack, N. H., October 30, 1896, and as a boy removed to Melrose with his parents. His father purchased a house, which he supposed was in Melrose, but when the Melrose-Wakefield boundary line was perambulated, it was found to be in Wakefield. Frank J. Sherman had been elected an alderman from ward 1, but the courts disqualified him from accepting the position because he was a nonresident.

Mr. Sherman sold that property and purchased a home at 11 Warwick Road and at the following election he became an alderman, serving for several terms. The family later moved to 187 Porter Street, which Admiral Sherman always considered his home.

Admiral Sherman graduated from the Franklin grammar school and from Melrose High in the class of 1914. He then entered the Massachusetts Institute of Technology and was appointed to the United States Naval Academy in 1914.

While a midshipman he won the Navy "N" as a member of the intercollegiate championship fencing team, was regimental adjutant, and was awarded the class of 1871 prize, Navy dress sword and knot, as the member of the graduating class most proficient in practical and theoretical ordnance and gunnery. Graduated with distinction, second in a class of 203, and commissioned ensign in June 1917, his subsequent promotions were as follows: Lieutenant (junior grade), October 15, 1917; lieutenant, February 1, 1918; lieutenant commander, March 1, 1930, commander, July 1, 1937, captain, January 1, 1942, rear admiral, April 3, 1943, and vice admiral, December 28, 1945.

During the world war, Admiral Sherman served in Mediterranean waters on the U. S. S. *Nashville*. He served later on the destroyer *Murray* which was based in Brest, France, and in August 1919 he joined the U. S. S. *Utah* after which, in September 1920 he was transferred to the U. S. S. *Reid*, flagship of Destroyer Squadrons 1 and 9, Atlantic Fleet. He then commanded the U. S. S. *Bary* from May to October 1921, when he reported for duty as flag lieutenant to Rear Adm. Newton A. McCully, United States Navy, commander, control force, Atlantic Fleet, U. S. S. *Florida*, flagship, serving in that assignment until June 1922.

In June 1922 Admiral Sherman reported to the naval air station, Pensacola, Fla., for flight training. Designated naval aviator, December 22, 1922, he served continuously with naval aviation from that time. In April 1923 he joined Fighting Squadron 2, Aircraft Squadrons Battle Fleet. A year later he returned to Pensacola where he served as an instructor until June 1927, after which he completed the course at the Naval War College. He reported in June 1927 to the U. S. S. *Lexington*, then fitting out, and served on that aircraft carrier from her commissioning, December 14, 1927, until December 1928 when he joined Scouting Squadron 2, based on the aircraft carrier *Saratoga*, being placed in command of that squadron in April 1929. In May he was assigned duty as flag secretary on the staff of Rear Adm. Henry V. Butler, United States Navy, commander,

aircraft squadrons, battle fleet, of which the *Saratoga* was flagship, serving in that assignment until June 1930.

Admiral Sherman was an instructor in the department of seamanship and flight tactics at the Naval Academy, Annapolis, Md., 1930-31. In May 1931 he rejoined the *Saratoga* with duty on the staff of Admiral Harry E. Yarnell, United States Navy, commander, aircraft battle force, U. S. Fleet. In June 1932 he assumed command of Fighting Squadron 1, based on the *Saratoga*. That squadron won the aircraft gunnery trophy in 1932-33. Admiral Sherman personally won the Navy E in both dive bombing and fixed guns. In June 1933 he reported for duty in the Bureau of Ordnance, Navy Department, Washington, D. C., where he had charge of the Aviator Ordnance Section until June 1936 when he joined the U. S. S. *Ranger* as navigator. A year later he was transferred to duty as fleet aviation officer on the staff of Admiral Bloch, commander, battle force, United States Fleet.

From February 1940 until February 1942 Admiral Sherman had duty in the War Plans Division, Office of the Chief of Naval Operations, Navy Department, Washington, D. C. During that period he was a member of the Permanent Joint Board on Defense, Canada-United States, and also served as naval aviation adviser at the Atlantic Conference in August 1941. Following 3 months' duty at headquarters, commander in chief, United States Fleet, as a member of the Joint Strategic Committee, he assumed command of the U. S. S. *Wasp* in May 1942, and was commanding officer of that carrier when she was sunk by enemy action in the Solomon Islands area, September 15, 1942. For his service in command of the *Wasp* he was awarded the Navy Cross with the following citation:

"For extraordinary heroism as commanding officer of the U. S. S. *Wasp* and flag captain to the commander of a task force during the occupation of Tulagi-Guadalcanal and subsequent operations. In addition to supervising plans for employment of aerial support to cover the initial landing, Captain Sherman, by his proficient skill and astute leadership, contributed to the relentless fighting spirit and aggressive courage which enabled his group to destroy hostile opposition in the air and on the beach. His outstanding performance of duty was a decisive factor in the success of our forces and was in keeping with the highest traditions of the United States Naval Service."

Following the sinking of the *Wasp*, Admiral Sherman was chief of staff to Vice Admiral John H. Towers, USN, commander, Air Force, Pacific Fleet, from October 1942 until November 1943, and for services in that assignment was awarded the Legion of Merit with the following citation.

"For exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as chief of staff to commander, Air Force, Pacific Fleet, from October 14, 1942, to 1943. A skilled and aggressive leader, Vice Admiral Sherman coordinated the planning, training, and logistic requirements which produced efficient naval aviation in the Pacific throughout a vitally important period. His resourceful initiative, keen foresight, and conscientious devotion to duty were contributing factors in the advanced state of preparedness of the aviation units of the Pacific Fleet for the central Pacific campaign and the successful prosecution of the war against the enemy."

On November 24, 1943, Admiral Sherman was transferred to duty as deputy chief of staff to Admiral Chester W. Nimitz, USN, commander in chief, Pacific Fleet and Pacific Ocean areas, and for services in that assignment was awarded the Distinguished Service Medal.

Admiral Sherman represented the Navy in the initial conferences with the Japanese at Manila in August 1945, and was present with

Fleet Admiral Nimitz aboard the U. S. S. *Missouri* in Tokio Bay when the formal surrender of the Japanese was signed September 1, 1945. In October 1945 he was ordered as commander, Carrier Division 1, and in December 1945 as Deputy Chief of Naval Operations (Operations), Navy Department, Washington, D. C., where he was responsible for plans, fleet operations and training, intelligence, and joint activities. In January 1948 he was ordered as commander, United States Naval Forces, Mediterranean, which title was changed to commander, Sixth Task Fleet, on June 1, 1948.

In addition to the Navy Cross, the Distinguished Service Medal, the Legion of Merit, and the Purple Heart Medal (awarded for wounds received aboard the *Wasp*) Admiral Sherman held the Victory Medal, Patrol Clasp; the American Defense Service Medal, Fleet Clasp; the Asiatic-Pacific Campaign Medal; the American Campaign Medal; the World War II Victory Medal; the Navy Occupation Service Medal, and the Philippine Liberation Ribbon. The Government of Great Britain made him an honorary companion of the Order of the Bath and awarded him the Oak Leaf Emblem after mention in dispatches. The King of Greece awarded him the Grand Cross of the Order of the Phoenix.

Admiral Sherman was sworn in as Chief of Naval Operations on November 2, 1949, when he assumed the rank of admiral. His appointment quelled public arguments over allocation of budget money and of missions.

All five of Admiral Sherman's brothers have served their country in the Armed Forces: Edward A., of 738 Lynn Fells Parkway, formerly a lieutenant-colonel in the Army, now director of the Massachusetts Committee for the Hoover Report, who graduated in the same class with Admiral Sherman at Melrose High School; Kenneth, now superintendent of schools in Andover and a former lieutenant commander in the Navy; Col. Paul Dwight Sherman, at present commander of the Marine barracks at Charlestown for the New England area, Frank J. Jr., of Cleveland, a former Army colonel and now an executive with a large soap company in Cleveland, Ohio; and Lt. Comdr. Ernst L., a member of Admiral Carney's staff in Europe.

He has one sister, Miss Mary Sherman, now residing in Andover.

Admiral Sherman leaves his wife, Mrs. Dolores Brownson Sherman, a daughter, Mrs. John Fitzpatrick, and two grandchildren.

Admiral Sherman died in Naples, Italy, July 22, 1951, on the eve of his departure for the United States, after negotiating for United States bases in Spain.

He was buried at Arlington National Cemetery on July 27, 1951, with an impressive salute from all the Armed Forces which he helped to weld into a unified fighting team.

RESOLUTIONS PASSED BY THE BOARD OF ALDERMEN ON JULY 23, 1951, TO HONOR THE MEMORY OF ADMIRAL SHERMAN

The board of aldermen, at a special meeting on Monday evening, passed the following resolution on the death of Admiral Forrest P. Sherman, Chief of Naval Operations, United States Navy:

"Whereas the untimely passing of Admiral Forrest P. Sherman, Chief of Naval Operations of the Defense Department of the United States, has, in a very special way, laid a burden of deep sorrow on the hearts of the people of this city of Melrose where he lived as a youth and grew to manhood, and which he always regarded as his home; and

"Whereas it is now remembered that the career of Admiral Forrest P. Sherman, from its earliest beginnings, was marked by a constant tenacity of purpose in the attainment of the high goals he set for himself, surpassing brilliance and intrepidity in assisting in the defense of his country in time of war and, during the period of his service as Chief of

Naval Operations, a knowledge and understanding of the responsibilities given to him and an appreciation of their relation to the welfare of his country and the security of its citizens which gained for him the complete confidence of his superiors and, indeed, of all the people of the United States, to a degree which warranted entrusting to him missions of the most vital importance to its continued existence as a free democracy and the maintenance of its prestige among the nations of the world; and

"Whereas it is further remembered that the achievements of Admiral Forrest P. Sherman have not only brought richly deserved credit to himself and distinction to the country which he so faithfully served, but peculiar honor to the community of which it could truly be said that he was its most illustrious citizen: Now, therefore, be it

"Resolved, That we, the mayor and members of the board of aldermen in the city of Melrose, in the Commonwealth of Massachusetts, acting in behalf of the citizens of said city, do hereby give solemn expression to our sincere regret and sense of irreparable loss in the death of Admiral Forrest P. Sherman; and be it further

"Resolved, That these resolutions be spread upon the records of the board of aldermen and that a copy thereof be prepared and sent to the family of Admiral Forrest P. Sherman as a token of sympathy to them in this tragic hour."

CONGRESSMAN GOODWIN'S TRIBUTE TO ADMIRAL SHERMAN IN HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., IN CONGRESSIONAL RECORD OF JULY 25, 1951

Mr. GOODWIN. Mr. Speaker, the flags in my home city of Melrose, Mass., are at half staff today in honor of the memory of Admiral Forrest P. Sherman, who has achieved greater distinction among the illustrious in the Nation's history than any other man who has called Melrose his home. Although born in the neighboring State of New Hampshire, he grew up and went to school in Melrose after the family moved there when Forrest was a boy. The people of Melrose have taken great pride in his career and are shocked and grieved at his sudden death. In their behalf I extend to his widow and family through the medium of the Record sincere and heartfelt sympathy.

Graduating from Melrose High School with top honors and from Annapolis second in his class, his notable naval career had its beginning. The pages of naval history will forever record his brilliant exploit as captain in command of the carrier *Wasp* torpedoed in World War II, but there is another incident in his early life which has quite as much of the drama which brings a thrill to the heartstrings but also carries a touch of real prophecy. When a very young boy it was his pleasure to spend as much time as he could with his grandfather, a New Bedford sea captain, who taught him seamanship and naval lore while cruising in Buzzard's Bay. One day while out in a 21-foot catboat the grandfather suffered a heart attack and passed away. Heartbroken, Forrest yet remembered his lessons in the lore of the sea and in the finest naval tradition he lowered the flag to halfmast and brought the little craft with his grandfather's body aboard, safely over the waters of Buzzard's Bay into New Bedford Harbor.

Thus perhaps was written in the stars where no man may read that Forrest Sherman, the boy of 12, was destined to write for himself a brilliant record in the naval hall of fame culminating in the responsible post of Chief of Naval Operations of the United States.

His untimely death came while he was engaged in a diplomatic mission abroad, a mission of great importance to our national defense. His capacity for leadership, his balanced judgment and his qualities of statesmanship, along with his naval learn-

ing and ability, have insured for Admiral Sherman a place on the rolls of the greatest naval leaders of all time.

TEXT OF BRONZE MEMORIAL TABLET

In memory of Forrest Percival Sherman, 1896-1951, Admiral, United States Navy.

Born in Merrimack, N. H., from early childhood he called Melrose his home—educated in the Melrose public schools, he graduated from the Melrose High School in 1913 and United States Naval Academy in 1917—on destroyer duty in European waters in World War I, commanded U. S. S. *Wasp* until she was sunk off Guadalcanal in 1942—awarded Navy Cross for heroism—planned the strategy for United States victory in the Pacific—appointed Chief of Naval Operations in 1949—died in Naples, Italy, July 22, 1951, while on a diplomatic mission for his country.

"He knew to perfection the lethal engineering of his profession and when called upon to be a diplomat he met the requirements admirably—a man who lived always affirmatively during days when great negatives assailed all men of intellectual sensitivities, in all his commands, in all his missions, in all his posts, he served his country well and faithfully."

Erected by the citizens of Melrose, September 9, 1951.

Freedom's Open Door

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. MANSFIELD. Mr. Speaker, I am indeed proud to call to the attention of the House the prize winning essay in the Sixteenth Annual National High School Essay Contest sponsored by the Ladies Auxiliary to the Veterans of Foreign Wars. This essay was done by Catherine Diederichs, of Missoula, Mont., and in addition to receiving the \$1,000 first prize cash award, she also received a gold medal.

Catherine Diederichs is a graduate of the Sacred Heart Academy in Missoula and she follows a long line of distinguished essayists and orators from the Montana educational institution. To Catherine I want to extend my sincere congratulations and to her family, all of whom are personal friends of mine, and her many friends, my best wishes for a job well done. She is indeed a credit to her school, to Missoula, to Montana, and to the Nation of which she is a worth-while citizen. My congratulations also go to the Ladies Auxiliary to the Veterans of Foreign Wars for continuing such a fine patriotic contest every year.

Mr. Speaker, under leave granted to me, I am enclosing the following newspaper story carried in the Missoulian, of Missoula, Mont., for Tuesday, August 28, 1951, and also the prize winning essay:

NATIONAL ESSAY CONTEST WON BY LOCAL GIRL

Catherine Diederichs, 18-year-old daughter of Mr. and Mrs. George H. Diederichs of 711 West Spruce Street, is the winner of the

\$1,000 first prize cash award and gold medal in the sixteenth annual national high-school essay contest sponsored by the Ladies Auxiliary to the Veterans of Foreign Wars. Announcement that her entry was the winner, on the subject Freedom's Open Door, was made Monday night at the national encampment of the VFW in New York city.

Miss Diederichs entered the competition as a senior at Sacred Heart Academy, from which she was graduated in June. During her academic career she participated in declamation, dramatics, choral club, and journalism. For two semesters she was co-editor of the school paper and cobusiness manager for one semester. In music, after 8 years of study, she gave her senior piano recital this year.

She is employed in the business office of St. Patrick Hospital and her future plans include college, where she hopes to major in business and continue her studies in music.

"Her mature understanding of the problem about which she was writing and her excellent literary style were two of several points which made hers the winning essay," said the VFW auxiliary president.

The judges for the national awards which attracted entrants from every State and Hawaii were James Irving Clump, editor of Boys Life, chairman, Dorothy C. Stratton, national executive director, Girl Scouts of the United States of America, and Edward Heiligh, NBC radio and TV newscaster and master of ceremonies.

Three other top cash awards, with medals, were awarded to Patricia Nadine Anderson, 17, Yakima, Wash., \$500, second prize, Patricia Anne Hale, 18, Staunton, Va., \$250, third prize, and John Sakellakis, 18, Cleveland, Ohio, \$100, fourth prize.

Miss Diederichs' winning essay follows:

'FREEDOM'S OPEN DOOR

"Man, from the beginning of time, has found himself in a world of many choices.

"He is continually opening and closing doors as he seeks for happiness.

"Two of the basic elements in this happiness are freedom and security—elements for which man through the ages has, paradoxically, suffered and risked his all.

"Just exactly what are freedom and security? Why do they mean so much to man?

"Freedom is an exemption from slavery, imprisonment, and restraint. It is the enjoyment of God-given rights and privileges.

"Security is a freedom from fear, anxiety, and care. It is the consciousness of adequate power and safety.

"Freedom and security mean so much to man because they represent the kind of life that God intended for man—life spent in accordance with the principles underlying the Declaration of Independence and the Constitution; life lived, consequently, in the enjoyment of the four fundamental freedoms. Freedom of worship and of expression; freedom from fear and from want.

"With the assurances that freedom and security offer, is it any wonder that man has been willing to travel a hard and bloody road? Is it strange that he has thrown his whole weight against the door that promised to open to him a glorious world?

"But sometimes man in his search for freedom and security has mistaken the door. The eternal stars have looked down upon him crossing the wrong threshold and falling, beaten, without having claimed the treasure he sought. Driven by force, led on by persuasion or tricked by deceit, he has tried one door after another—imperialism, capitalism, socialism.

"Within the lifetime of today's youth, men in Europe attempted to coax or to herd their fellow men through the doors marked fascism, nazism. In the Orient, the door was marked 'Imperialism.' These tempt men no more; they have been recognized for what they are, with their aftermath of slavery and bloodshed.

"Now we are confronted with only two doors totally opposed to each other, yet seemingly alike in many ways. And we must make our choice—a choice that will decide our own, our family's, and our country's future. How shall we know which to defend?

"At a distance they appear alike in general style and contour. 'Good of the common man; advancement and equality for all, the brotherhood of men'—these are the alleged framework of both.

"But let us make a close-up examination of both. This door on the left—the grain of its wood is not like that of the door on the right. 'The good of the common man' here means the complete direction of the common man by a few who call themselves 'the state.' The state decides where a man shall work, what he shall be paid; where he shall live, what he shall say; how he shall worship, when, and where, and if he may join his fellow men in assembly. All this is done, of course, for his own good. He himself cannot know what is good for him; the state alone knows that.

"And the door on the right? Beyond that door the common man has a voice in the choice of those who rule him. He has something to say about rules and regulations which affect him so vitally.

"Another characteristic supposed to be common to both is that of 'advancement and equality for all.' Communism, indeed, makes no distinction as to creed or color—provided the individual is a willing tool in the hands of the politburo. Such a man is the equal of every other tool.

"When this situation is compared with the idea of advancement and equality for all as understood by the builders of the door on the right, what a difference we find. 'All men,' said they, 'are created equal, endowed with the inalienable rights of life, liberty, and the pursuit of happiness.' And they held all men entitled to the fruits of their toil, and of their genius. Religious faith, party affiliation, social standing, nationality—none of these is a reason for privilege or persecution.

"And then the last idea—the brotherhood of man. If all men are brothers, Someone must be their common Father. That Someone is God—the reason for our ideas of justice, of brotherhood, of human dignity. But that Someone is the object of the Communist's hate, the obstacle standing in his way.

"These are the differences we find as we examine the grain of wood in the two doors. And there is another difference, freedom's door is open—there is nothing to hide from the eyes of the searcher. The door on the left is closed, only the few may know what goes on behind it.

"Is the door of freedom perfect? No; termites of prejudice, of dishonesty in public life, of cut-throat competition have made inroads upon it. The American homes, hinges of the Nation, are too often corroded and broken. These evils threaten to leave the door to the mercy of the tempest, which may slam it shut forever.

"Yet, who can see the evils behind the other door if it remains always closed? Some blindly stagger through that unknown arch, others enter in at the other door on the left because they despair, seeing the termites at work on the right-hand door.

"A return to God's law with its emphasis on brotherly love, personal integrity, and the sacredness of the home—this is the remedy for the evils of our day. This is the one counterattacking force which will exterminate the termites. This is the one force which will make strong freedom's open door and in that strength will communism be defeated.

"Therefore, as we stand at the parting ways, as we ponder the principles underlying our way of life, as we consult our reason, we have no alternative; we have only one door to choose—freedom's open door."

Procurement Problems Affecting the Nationalist Chinese Government

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles which I believe are the last two articles of the Alfred Friendly series on the procurement problems affecting the Nationalist Chinese Government, about which Mr. Friendly has been writing with such clarity and so well in the Washington Post.

The first is Mr. Friendly's article which appeared in the Washington Post of September 14, 1951. The article is entitled "Two Recalled Chinese Officers Have Seen Nothing of Charges."

The other article, entitled "Chinese Clerk Here Discloses Attempted Bribe To Hush Mow," appeared in the Washington Post of Sunday, September 16, 1951.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of September 14, 1951]

TWO RECALLED CHINESE OFFICERS HAVE SEEN NOTHING OF CHARGES (By Alfred Friendly)

The two Chinese Air Force officers ordered by Chiang Kai-shek to return to Formosa to face charges have not yet received any document spelling out the accusations against them, it was revealed yesterday.

Col. Hsiang Wei Hsuan, one of the two accused officers, said yesterday that although 23 days have elapsed since the recall order was issued, "we have not received any document of any kind" and know of the accusations only through what they have read in the papers.

He said he and the other man accused with him, Lt. Gen. P. T. Mow, have exercised "all possible pressure on our Embassy" to obtain official papers from their Government substantiating the charges, but that none have been forthcoming.

The Chinese Embassy, meantime, yesterday made its first official statement on the case of General Mow and Colonel Hsuan since the recall order was issued on August 21.

In light of the violence of the attack made by Chiang on the two men, the Embassy document was surprisingly conciliatory to them. It did not echo the charges in any way, but said only that it was able to give public assurance "that appropriate and effective steps will be taken by the (Chinese) Government in due course to bring to light all the relevant facts of the whole matter and to do full justice to all parties concerned so as to reassure public confidence."

The Embassy noted that the cases had given rise to much publicity and press speculation on the circumstances leading to the dismissal. The cases, it said, "are complex in character and involve questions of personal integrity, military discipline, safeguarding of public funds, and government procurement policy."

The Chinese Government, the statement continued, "is giving careful consideration to all the issues involved and to the public interest" in them here.

The two officers have already begun preparing answers to the charges, insofar as they know them from press reports from Formosa.

One asserted that General Mow had received more than \$39,000,000 in 1945 for the purchase of air force equipment but has not accounted for \$19,000,000 of it.

In partial answer, the officers defy the Chinese Government to show that more than about \$10,000,000 was remitted to Mow for air force purchases in 1945. Evidence of what was sent him, they say, is contained in records of the Bank of China in New York.

A second charge was that Mow espoused the cause of a "disloyal" staff member, Colonel Hsiang, and that there is suspicion that Hsiang was a Communist agent.

Formosa said it had ordered Hsiang sent home first on May 24, 1950, and six times since.

In reply, the officers assert the recall order of 15 months ago only asked Hsiang to come home for consultation "for better understanding" between the Washington office and Formosa headquarters.

If that was a reflection of Formosa's suspicion of Hsiang as a Communist, the officers ask, why did Formosa assign him a year later, as it did, to members on the Chinese armed forces joint purchasing commission here?

In Formosa, meantime, the head of the Chinese General Staff yesterday called for a special military court to try General Mow and Colonel Hsiang.

The Chinese chief of staff is Gen. C. J. Chou, with whom Mow and Hsiang have been battling for almost a year. They have charged him with countenancing graft and corruption for his personal profit.

The Associated Press reported that Chou expressed his willingness to face such charges in court. Through its official news agency, the Chinese Government promised the two officers in Washington a "fair and just trial," if they would return.

It said Mow would be given a full opportunity to voice his accusations of corruption, and said his fears of being executed if he were returned were not justified.

COULD HAVE SUPPLIED PLANES, BROKER SAYS

Claire M. Waterbury, Los Angeles aircraft broker, told the Washington Post yesterday that the company with which he is associated, Aircraft Sales, Ltd., could have supplied 25 Mustang fighters which another concern was negotiating for in a deal blocked by General Mow and Colonel Hsiang.

The Post stated, on earlier information, that Waterbury's ability to produce the planes, which were to be reconditioned, was in doubt.

Aircraft Sales, Ltd., has since supplied four of the planes to the Haitian Government, which has reported its enthusiasm for them and their performance, Waterbury declared. Furthermore, he said, his company is still in a position to supply to appropriate buyers from 10 to 15 Mustangs overhauled in an "as new" condition.

Waterbury called attention to the company's successful experience in reconditioning and overhauling planes for other governments and foreign customers, who have expressed full satisfaction with the aircraft received.

[From the Washington Post of September 16, 1951]

CHINESE CLERK HERE DISCLOSES ATTEMPTED BRIBE TO HUSH MOW (By Alfred Friendly)

A clerk in the Chinese purchasing mission here has disclosed that he was asked to relay an offer of a half-million dollars to Lt. Gen. P. T. Mow to keep quiet and stop his accusations of corruption within the National Government.

Besides the money, the clerk said, the offer included assurance that the Chinese Government would not attempt to extradite him and his chief subordinate, Col. V. S. Hsiang.

Mow is chief of the Chinese Air Force office in Washington and Hsiang is his executive officer. For more than a year they have been waging a campaign against what they consider dishonest and corrupt financial practices in the Formosa government.

In turn, Generalissimo Chiang Kai-shek accused them of mishandling funds and on August 21 ordered them to return to Formosa to face a list of serious charges.

The employee who said he was approached with the bribe offer stands in close confidential relationship to Mow. He identified the man who made the proposal as a local Chinese, not connected with the Embassy.

From the clerk's account it appears the proposal did not come from the Embassy but rather from certain other representatives of Chiang Kai-shek in this country.

The clerk reported he was approached on August 24, just 3 days after the order recalling Mow and Hsiang, and that the offer was rejected on August 28, the next time he was in touch with the man who made it.

There were no witnesses to the affair, except the two men who met together. The Chinese purchasing mission employee has made a signed statement of what transpired. In part for his protection, however, neither his name nor the name and associations of the person he talked to can be made public.

Here is the story of what happened as described in the clerk's written statement:

On Friday afternoon, August 24, he received a phone call from a Washington Chinese whom he knew, asking that they meet immediately in front of the Empire Pharmacy, 1738 Connecticut Avenue, just a couple of blocks from Mow's office on LeRoy Place.

The clerk went there at once and found the man parked in his car in front of the drug store. The clerk entered the auto and the conversation began.

MOW'S GOOD FRIEND

The man said that although he had had a misunderstanding with General Mow and therefore did not want to approach him directly, he was still the general's "good friend" and was worried about his situation.

He asked if the general and Hsiang were "100-percent sure" they could not be extradited. If not, he implied, perhaps the general might want to consider some arrangement by which he would be assured that no extradition would be attempted. If Mow and Hsiang decided they did not want to continue causing trouble, the problem could be solved and they might also get "maybe \$200,000 or \$300,000. * * * " The man left his sentence unfinished.

He resumed by saying he had information that Chinese Ambassador Wellington Koo and another Chinese general, recently sent from Formosa to Washington to look into Mow's and Hsiang's battle with their home government, had already gone to the State Department to arrange extradition.

STATEMENTS PROVED FALSE

The State Department concurred, he continued, and the matter was to be arranged in coordinated action by the following Monday.

[These statements were false, for it is known that the Chinese Embassy has not made any such representations to the State Department. Moreover, as the Embassy would have known, but as the man making the offer apparently did not, there is no extradition agreement between the Chinese Nationalist and the American Governments. Accordingly, the two officers cannot be extradited. The State Department could order them deported if they lose their credentials as Chinese Government employees, but it could not prescribe where they would be

sent, nor could it turn them over to the Chinese Government.]

If Mow and Hsiang were just a little less than 100 percent sure they could not be extradited, the man continued, they might well consider an arrangement that would give them complete assurance.

HOLDOUT PROPOSED

The man implied this could be done if they gave up their campaign. Then, it could also be arranged, when they turned over to the Nationalist Government the Chinese Air Force funds in the possession of their office, they could hold out a sum that might run as high as \$500,000. A report on that amount, presumably showing its gradual disbursement for office expenses, could be made later to the Chinese Government, the man said.

He advised the clerk that Mow could make known a decision to accept the deal to one or another of certain personal representatives of Chiang Kai-shek now in this country, designating them by name.

The clerk was told to phone the man who made the suggestion at his home at 6 that night and if there was no answer to try again at 7.

The clerk said he phoned both times, but there was no answer.

EARLIER ATTEMPTS MADE

The clerk reported that 4 days later, on August 28, the same man telephoned him to ask what Mow's decision was and to know his attitude. The clerk replied that Mow's attitude, as of that moment, was perfectly normal, that he was working hard and was very busy, too busy to speak to his good friends. When his case had been concluded, the clerk continued, he would be delighted to get in touch with the man. At that the Chinese at the other end of the line rang off without comment.

According to Colonel Hsiang, who was interviewed on the affair, the blunt offer was merely the climax to a succession of earlier attempts, all of them much more discreet, to buy off Hsiang and Mow.

ASSURED OF PAY

One of them, Hsiang said, was made last spring, concurrently with an order from Formosa to close down the Washington office of the Chinese Air Force and turn over its functions to a new agency. Mow was assured that, even though his job would be taken out from under him, he would continue to receive the same pay, disbursed from a different source.

Hsiang has in his possession the document containing this offer, but for the present declines to have it made public.

A few days after this offer, Hsiang said yesterday, a meeting was held at the Chinese Embassy to effect the proposed turn-over. In that gathering, Hsiang made vigorous charges of corruption and the meeting ended without agreements on the reorganization.

Three days later, on May 7, General Mow was handed a cabled message from Chiang Chin-kuo, the Generalissimo's oldest son and head of the Nationalists' secret police. It had been sent in the special care of a relative of Chiang on official business in this country.

Hsiang Held to Blame

The first part of the message gave Mow warm assurances of the high regard in which he was held by his Government.

The second part sought to put all the blame on Hsiang for the difficulties that had arisen. It warned Mow that if he continued to support Hsiang's intransigent ways, Mow's position and reputation would be endangered.

The last part said if Hsiang had difficulties in making a turn-over to the new agency resuming the duties of the Chinese Air Force Washington office, they could be settled and compromised by agreement between Mow and the officer named as the head of the new agency.

"A solution can definitely be found," the cable said. The cable was sent before the recent charges against Hsiang and Mow were made by the Nationalist Government.

Colonel Hsiang interprets the cable as being, first, an obvious attempt to divide Mow and himself, giving Mow a way out of the affair by placing all the blame on Hsiang; and second, providing Hsiang himself a way out.

The suggestion of a way out for him, Hsiang says, is in accord with one of the oldest of the Chinese precepts—when you press an enemy from the front, you always give him a way to escape from the rear, because otherwise he will be forced to fight back fiercely.

The Heart of Italy, Her People

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr ANFUSO. Mr. Speaker, it is a warm pleasure for me to introduce into this record and to recommend to my colleagues that they read the account of Miss Ursula Scervini entitled "The Heart of Italy, Her People," written after her recent tour of Italy.

Miss Scervini is a student and the daughter of Mr. Frank Scervini, well known espouser of human causes, who made the trip to Italy with his daughter and later visited Israel to further his advocacy and sponsorship of religious freedom throughout the world as the basis for universal peace.

THE HEART OF ITALY, HER PEOPLE

(By Ursula Scervini)

Neapolitan songs and black-haired, brown-eyed, sentimental singers, who gather in groups of two or three along the multicolored Bay of Naples to sing their hearts out for a few liras, a piazza in Capri, where people from many countries meet, who although they speak different tongues all have the same universal thought, the beauty of the Blue Grotto, a carriage ride through the Via Borghese in Rome, shopping on the Ponte Vecchio in Florence, swimming in the cool green Adriatic waters of the Lido, or the indescribable excitement of Venezia's Piazza San Marco—all this and more is what makes up Italy. This is the heart of Italy.

For many years before the war, people from all over the world journeyed to see this boot-shaped land. There were those who had the means to travel in the greatest ease, and others who worked, planned, and saved to take the voyage. Today, it is still the same. The waves of war may have left parts of Naples in shambles and left many homeless but they have not washed away the warmth and gaiety of the Italians or the attractiveness of Italy that draws so many tourists to her shores each year.

Traveling through Italy, one may meet an Irishman at the Vatican Museum in Rome, an Englishman on a holiday at San Remo on the Italian Riviera, a Frenchman on the ferry that goes from Naples to Capri, an American riding in a gondola along the Grand Canal, a Chinese visiting Dante's home in Florence, or a Dutchman in Genoa.

There are many ways of touring Italy. Some people come to see the ancient ruins, or the birthplaces of the great Renaissance painters and writers, or the historic cathedrals. These, of course, should be seen; yet Italy is made up of more than this.

To really see Italy, one must know her people, eat her food and drink her wine and become at heart an Italian. Italy gives to her tourists many things: happiness, excitement, education, and gaiety. Often she gets nothing in return. What does Italy want in return? She wants nothing. It is up to the tourist to give something.

A friendly manner to an Italian waiter, a bit of shared laughter with a guide, the exchange of ideas and conversation with the Italians you meet daily throughout your stay in the country—these are what the tourist should give to Italy. For if you give an Italian a bit of yourself, he will give you something far better—a bit of his heart.

A tour of Italy should be for knowledge not only of her famous sights, but also of the character and personality of her people who will show you what Italy is really made of.

A perfect tour of Italy would begin at Naples. On a cool night after the heat of the day and the weariness of sightseeing, one should take a stroll to one of Naples' famous restaurants, Ciro's or Zi Theresa on the bay, or D'Angelo's, overlooking the bay. Once there you would order the specialty of the house, a Neapolitan pizza. After a few minutes a singer might come over to you and ask for your request. To send him away would be foolish. Find out through him one of the things that makes up Italy's heart. It is music. Neapolitans are famous for singing, whether they sing American or Italian songs. This past summer in Naples, words from the songs September Song, My Foolish Heart, and a Neapolitan song, Anema e Core, were sung by everyone, native singers as well as tourists.

In Capri, one learns of the simplicity and beautiful handiwork of the Italians. In doorways, women sit weaving gold threads in white and black evening shawls, and men sit outside their shoe shops, making gold sandals by hand. Along the shore, teen-aged boys will rush over to you in hopes of taking you out to the Blue Grotto in their boats. Capri shows us that Italians are hard-working people—people who have very little to work with yet turn out a finished product exquisitely beautiful in its own simple way.

Of course we all know of the large-scale industry of Genoa, Rome and Milan, but in places like Capri, Sorrento and small villages in Calabria, where everything is made diligently by hand, we can see what Italy is really made up of. It is made up of hard-working people, who use their extraordinary artistic talents in making laces, leather goods, glassware and numerous other objects for all people to enjoy. In Venezia, one doesn't leave the Isle of Murano's glassmaking shop, or the Isle of Burano's lace factory without making some purchase, that will always bring back to him the wonder of seeing these Venetians turn out these works of art that seem like gifts of God.

In Rome, the big city, one sees many things that make up the character of the Italians. On a Sunday morning at St. Peter's one can see the love of religious that is part of the Italian people. Everyone, young and old, rich and poor, flock to Mass and Holy Communion. They are thankful to God for what He has given them and they pray to Him to watch over their Holy Father, the Pope.

In Rome, from the people's dress, one sees the individuality and knowledge of style and fashion that the Italians have. In the night clubs of Rome, like the Casino delle Rose and the Belvedere delle Rose, one sees the natural gaiety of the Italians. Here they dance and sing and share the warm companionship of their friends.

In Rome, also, the tourist will want to see the Colosseum, the Catacombs, the Swiss Guards at Vatican City, and the opera at the Baths of Caracalla. But besides these, the

tourist should spend an hour at one of the city's numerous sidewalk cafes, observing the people as they pass by.

In Venezia, one sees many things that make up the heart of Italy. People say that there is no other city in the world quite like Venezia. This is true because nowhere else in the world is there a city built on water.

The tall, fair-haired Venetians, full of gaiety and life, all have a love for art and music. In most Venetian homes, whether palaces along the Grand Canal, homes near the Piazza San Marco or poor dwellings on some side-street canal, there will be some work of art, in the form of a painting, a novel or a record.

The Venetians still cling to the old customs of their ancestors. In the summer months, traditional feasts are carried on, with the decorated gondolas filled with Venetians in evening dress, passing under lighted bridges, going from Venice to the Lido.

Since the Venetians are so near the Lido, the playground of the world, they are more cosmopolitan and international than most other Italians. In Venice you find smartly dressed women, well-educated men, and numerous events going on continuously which bring gaiety, excitement, and knowledge to everyone. In Venezia, among other things, you will find the International Film Festival, the Lido Casino, open-air concerts, art exhibitions, and exquisite shops selling the famous Venetian glassware.

A tourist in Venezia should, of course, see the Doge's Palace, the pigeons of the Piazza San Marco, the Basilica of San Marco, the House of Gold, and other palaces along the Grand Canal and, of course, should take the romantically famous gondola ride. However, apart from all this, to complete his tour, the traveler should form a warm and lasting friendship with a Venetian. From this friendship with a Venetian, the tourist will understand the intelligence, emotionalism, and sentimentalism of the Italians.

From the richness of Venice, we go down to the south of Italy, Calabria, with her immense proud mountain ranges. Here the majority of the people have been untouched by the modern machine age. Donkeys are still the main means of transportation, the homes are primitive, and women and children are seen barefoot and overworked more times than not. Families carry their wares to the city markets from the country villages in baskets carried on their heads. This is the primitiveness of the heart of Italy.

Now do we really know what makes up the heart of Italy? It is made up of both old and new. Through its streets you can ride in a horse-drawn carriage in the midst of automobiles, bicycles, donkeys, or motorcycles.

In most other countries the different social classes have nothing in common. Yet in Italy both rich and poor enjoy and understand art and music, gaiety and happiness. The unity of religion also binds the people together.

Almost everyone strives for education in Italy. Farmers and workmen drive themselves in order to send their children to schools. The upper classes take the education of their children as a matter of course. Yet if they had to, they too would labor untiringly to educate their children. In a country that had as its ancestors Dante, Michelangelo, Cellini, Cavour, and other great names, it could not be different.

The contrast of old and new is ever present in Italy—ancient ruins and modern apartments, shoeless people and hand labor in the south with fashionably dressed people and industry in the north. The love, laughter, and tears of the Italian people flourish among the old and new surroundings. This is the heart of Italy.

So it can be seen that it is not only the waters of the Mediterranean, which appear

blue, green, or gray according to the tricks of the sun, or the famous blue skies, or the famous landmarks, that make up Italy. It is her people who make up her most important part.

These people who make the cooking and serving of food an art, who sing from their hearts, understand and appreciate art and music, respect traditional customs, who use the 10 fingers that God gave them to mold into shape the many types of objects that people use for work and play and beauty—these warm-blooded, emotional, sentimental people with the big brown eyes—these make up Italy. They are the heart of Italy.

If you want to see the industry of Italy go to Rome and Milan. If you want to see her excitement, gaiety, and culture go to Venezia. If you want to see her heritage of art and writings go to Florence—for her seaports go to Naples and Genoa. Capri will show you her beautiful simplicity. If you want to smell her perfumed flowers, go to San Remo.

If, however, you wish to see her heart, cherish her people. There you will find the heart of Italy.

Labor's Role in the Defense Effort

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by William S. Tyson, Solicitor, United States Department of Labor, at Little Rock, Ark., Labor Day celebration, entitled "Labor's Role in the Defense Effort":

I am deeply honored by your invitation to participate in the various activities which have been programmed here today to celebrate Labor Day. I am happy to be here with you and to bring to you the greetings and best wishes of our Secretary of Labor Maurice J. Tobin.

Arkansas' nickname of the Wonder State was apparently not just plucked out of the thin air. An extremely strong case can be made out that it is just that. Not because this State has the only known deposit of diamonds in North America or that it produces over 94 percent of the bauxite or aluminum ore mined on this continent. What I believe to be much more impressive and conclusive is the evidence that Arkansas has within its borders vast natural resources which make it virtually self-sufficient.

This beautiful capital city is surrounded by fertile, productive fields, and not far distant can be found vast stands of high timber, coal, oil, and natural-gas deposits, and many other mineral resources. The State is a remarkably healthy place to live, is abundantly supplied with water resources, affords many good industrial sites that lie contiguous or in proximity to railroads, highways, and utilities, offers exceptional recreational facilities, and is so situated that approximately one-third of the population of the United States can be reached with 48-hour freight service.

But perhaps what is more important, the working men and women of Arkansas, of Little Rock—indeed, of all of our country's farms and urban centers—are celebrating Labor Day 1951 as free men and women, as men and women enjoying an ever-increasing standard of living, as men and women confident of their ability to maintain a cherished way of life and assured that the future holds promise of even better things to come.

These are the underlying reasons, I believe, why your celebration here today is in the form that Peter McGuire envisaged, and it has surely exceeded in scope and color anything of which he could have dreamed. Peter McGuire was a delegate to the Central Labor Union of New York in 1882 when he made a motion that one day in the year be designated as "Labor Day," to serve "as a general holiday for the laboring classes" and to be devoted to "the industrial spirit, the great vital force of every nation." He recommended that there be a street parade, "which would publicly show the strength and esprit de corps of the trade and labor organizations."

By 1923, Labor Day had been recognized officially by an act of Congress and by legislation in each of the 48 States. Parades, demonstrations, and meetings have been part of the traditional celebration. It was once noted that "those outside the labor movement test its strength and virility by the way in which Labor Day is observed." If that comment is still true, there can be no doubt in anyone's mind concerning the strength and virility of the labor movement here in Little Rock, Ark.

There is no better illustration of the place labor has won in the life of America than the universal acceptance of Labor Day by the people of the United States. It is unique among our holidays. It does not commemorate a historic event. It did not come down to us as tradition. Yet it ranks with all the other great festivals of our land. It has, in less than two generations, grown to be so much a part of our scheme of things that most Americans have come to cherish it as a matter of course. That is a remarkable development. Within a relatively short time, Labor Day has woven itself into the very heart of this great republic.

To my mind, Labor Day should not simply be a day on which Labor, with a capital L, pauses to assess the accomplishments which have been achieved during the previous year, tremendous and gratifying though they may have been. It should also be, as President Truman has said, a day set aside for "a sober evaluation of the problems that labor, together with all other groups in our country, face in our complex world." And, this year, perhaps, too, it should be a day of tribute from the Nation to its working men and women for their vital contribution to the cause of world peace and freedom.

"The American worker," as the President noted not so long ago, "enjoys an economic, political, and social status solidly established on democratic principles and unequaled elsewhere in the world." It is a status which has been achieved because now firmly imbedded in our national thinking is the realization of the honor and dignity that goes with the creative effort that produces every worthwhile thing we have or use. Perhaps because it is now so intimate a part of the fabric of our society there is a tendency to regard lightly or ignore the dignity attached to human labor in the United States. We forget much too easily that in other times and in other lands manual labor has been scorned. One of the greatest philosophers of the Golden Age of Greek culture wrote that "in a perfect state no artisan will ever be admitted to citizenship," and other leaders of that culture and the succeeding Roman culture echoed that sentiment. And in the last decade, even in highly industrialized countries, we have witnessed the most shockingly brutal attitudes toward human labor. The Nazis made a mockery of human labor when they erected over the entrance of the infamous concentration camp at Auschwitz a sign reading "Work Shall Set You Free." The irony of this expression was that what they meant was freedom through death's door, yet it was a path which many sought in order to escape the brutality of soulless men who regarded machines with far greater com-

passion than they did their fellow men. And, even more recently we have been hearing reports of workers in Eastern Europe enslaved in what is nicely termed "corrective labor camps."

In sharp contrast is the American attitude toward labor. Today the status of the American worker is an enviable one. Of course, it has not always been thus. Not so many years ago the American economy too often witnessed bloody strikes, labor spies, yellow-dog contracts, union-breaking activities, long hours, low wages, and the sight of emaciated working children. It took the ceaseless efforts of the leaders of labor, a great depression, and the dauntless devotion to the Nation's welfare of two Presidents, Roosevelt and Truman, to effect the tremendous changes that have occurred. In the last two decades there has been enacted a moral economic program that has given social and economic justice to American workers. Under that program American working men and women have had guaranteed their right to band together in a union and require that management in turn deal with them, have had guaranteed to them fair labor standards with respect to minimum wages and maximum hours, and have guaranteed, too, among other things, protection when they lose their jobs and when they reach old age. Incidentally, one of the great accomplishments of the past year was to bring about a revision of the old-age and survivors' insurance law that now gives an equitable and fair payment to the insured retired older people of America.

Programs such as these have given recognition to the human dignity of man—they are the essence of true Americanism. But neither labor nor the Nation as a whole can rest upon these laurels. What has been termed the "good fight" is not yet over—if, indeed, it ever is. The struggle for social betterment and economic security continues both defensively to hold the hard-won gains and offensively to achieve others. In view of present world conditions, it is pointedly true today that "Eternal Vigilance is the Price of Freedom." It is also the price of economic security. And, too, it is the price of social progress.

Freedom, economic security, social progress and world peace are today unhappily threatened by the Pied Piper of Moscow who, given the opportunity, would lead the peoples of the world to their own destruction. In the present great world struggle against the slavemongers of Eastern Europe, free labor is going to play a vital role. Manpower and its efficient utilization are going to play a great part in determining the outcome of this struggle, and as to its happy outcome there is no doubt in my mind.

The job ahead is a really challenging one. The shifting of some three millions of working people will have to be effected to carry out the contemplated program. Mass production of defense items is not expected to be reached for another year yet, but tremendous strides in expanding our basic economy to support the defense program have already been taken. Steel capacity is moving toward an annual capacity of 118,000,000 tons by July 1953, primary aluminum production in 1954 is expected to almost double 1950, a proposed 40-percent electric power expansion by 1953 is under way and comparable expansions are planned or underway for many other industries.

The manpower program as it stands now is one that we can meet, aid meet in a free way. Our program is a voluntary one. I might point out that in the last war, Britain had selective service for women. Thirty-eight percent of the women over the age of 14 were in the labor force. In the United States without compulsion, 37 percent of our women were in the labor force. It took at least that margin of 1 percent that the

British had in excess of what we had in the labor force to administer this kind of a program, so that I would say our free method has demonstrated that it is the best system.

While the Russians enjoy a 3 to 2 manpower superiority, the fact remains that the free world's workers far outproduce the enslaved peoples under Soviet rule or domination. The tremendous outpouring of goods from our factories was one of the great contributing factors to the winning of World War II, and is again going to be a great factor in winning the present struggle—possibly, even without an all-out war which all of us fervently pray can be avoided. While we are on this subject of productivity, you may be interested in some estimates of the extent to which the American worker outproduces any other worker in the world. Taking America with a standard of 100, Britain's productive capacity per man is 50; France's is about 33, Italy's is about 15; Russia, according to the last available statistics, was 12—it is probably better than that now, because it is difficult to get information from behind the iron curtain. In other words, an American worker, it is estimated, produces at the rate of eight times the average Russian worker.

Let me say that our trade-unions in America have played a great part in achieving such a high rate of productivity, because the great majority of the American trade-unionists appreciate the fact that productivity per worker is what has given to us the highest living standards in the world. This productivity is going to stand us in great stead in the difficult period in which we find ourselves at the present time.

Every time I hear talk of production and productivity, I am reminded of a little story I heard not so long ago. During the first Russian 5-year plan an American pilgrim was ushered into the director's office of a model factory. He stared wide-eyed at the production chart hanging on the wall. "Oh, yes," said the director, "during the first year we produced only 5,000, the second year, 50,000, the third, 500,000. This year we'll probably make a million."

"Is that so? May I ask what you are producing?" asked the visitor.

The director reached out to the belt conveyor and pulled off a little brass tag for the visitor to inspect. It read "The elevator isn't running."

A story such as this one is pleasant to hear and, we hope, true. But we must not permit such stories or phony sweet talk to lead us down the path of complacency and indolence. It is a path fraught with dangers for the unwary wanderer.

There are, of course, some aspects of the present situation which, insofar as they affect the American worker, leave something to be desired. The danger of inflation is still with us. The balance sheet of labor's gains and losses for this past year is not perfect. But no balance sheet ever is. On the whole, however, a healthy situation is shown and known to exist.

In conclusion, let me say this. You know as well as I do what labor has done to build a better America to live in, but strange to say, you have to keep coming back and explaining to the people, and keep constantly refreshing their minds on it, as there are always some who would like to eliminate the rights of the worker if they could do it by fair means or foul. A strong trade-union movement is one of the best protections that we have against Red or Black totalitarianism. That is why in Germany under the Nazis and in Czechoslovakia under the Communists the trade-unions were the first organizations to be taken over or destroyed. Your organizations must participate on an ever-widening scale in the building of a sound, free economy dedicated to achieving greater security, freedom, ma-

terial well-being and equality of opportunity for all. That is the challenge of today, and I have no doubt that American labor will continue to meet it with the same courage and determination it has displayed in the past.

Customs Simplification Bill

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr REED of New York. Mr Speaker, under leave to extend my remarks, I am inserting in the Record the following statement of Mr O R Strackbein, chairman of the National Labor-Management Council on Foreign Trade Policy, before the Ways and Means Committee, on the customs simplification bill, H R. 1535, August 15, 1951.

The National Labor-Management Council on Foreign Trade Policy, of which I am chairman and for which I speak, is composed of 15 or 16 industries that are equally represented in the council by labor and management. I am also executive secretary of America's Wage Earners' Protective Conference which is composed exclusively of national and international unions affiliated with the American Federation of Labor. Most of these unions are also represented on the council.

H R. 1535, the customs simplification bill, is of great interest to us because of its bearing on and reflection of foreign trade policy.

At the very outset we wish to say that we fully support the stated objective of the bill insofar as it seeks simplification of customs procedure and greater economy and efficiency of administration. While the recommendations of McKinsey & Co may not in all instances assure greater economy and efficiency if put into effect, we do not feel qualified to question them for obvious reasons.

On the other hand, we wish to express our deep concern over sections of the bill that are derived from sources other than the McKinsey report. These are provisions that have little or nothing to do with efficiency and economy of customs administration and which, if adopted, would in some cases, at least, lead not to simplification but to a greater volume of work.

There are two principal sources of these provisions that are extraneous to the avowed objective of simplification and greater economy. One is the charter for an International Trade Organization (ITO) and the other the General Agreement on Tariffs and Trade, known as GATT. Actually there is little or no difference between these two sources and it would be unnecessary to mention the ITO as a source of the recommended provisions but for the fact that the ITO Charter did not prosper before Congress when it was submitted for ratification. It was subsequently withdrawn from Congress by the State Department after 5 years of work on it.

The present bill, H R. 1535, is a replica of H R. 8304, which was introduced into Congress May 1, 1950, but did not come to a hearing in the Eighty-first Congress. The failure of the ITO Charter to make progress in Congress became evident after H. R. 8304 had been introduced. The withdrawal of the charter took place still later, but before

the present bill, H. R. 1535, was introduced on January 15, 1951.

A reading of the Analysis of the Customs Simplification Act of 1950, distributed by the Treasury Department in 1950 turns up several references to the ITO Charter. One is on the first paragraph on page 6, another, in the last paragraph, same page. A further such reference occurs in the first paragraph on page 22; another in the second paragraph on page 24; yet another on the bottom of page 25. Three additional references appear, one toward the bottom of page 39, a second, near the top of page 42, and a third, in the second paragraph on page 47. This is a total of eight references to the charter.

It is possible, we believe, to substitute GATT for the ITO in all these instances since the two are virtually identical in the class of provisions involved in the bill, H. R. 1535, and its predecessor, H. R. 8304.

The Treasury Department, in its testimony before this committee, did substitute GATT for the ITO, and was justified in doing so because of the nearly identical character of those provisions in ITO and GATT that gave rise to various sections of the customs simplification bill.

We come now to the basis of our objection to those provisions in the present bill, H. R. 1535, which had their origin, first in ITO and then, with failure of ITO to gain ratification by Congress, secondly, in GATT.

It should be borne in mind that the General Agreement on Tariffs and Trade (GATT) is in effect only provisionally. Its final effectiveness depends upon the appropriate alteration of domestic statutes that presently conflict with some of the GATT provisions.

We are faced in this question with an issue that is highly controversial in character. In the first place, there exist substantial grounds for questioning the validity of the General Agreement on Tariffs and Trade which was negotiated in Geneva in 1947. It may be contended very reasonably and with conviction that no such broad authorization was contained in the Trade Agreements Act of 1934, on which the General Agreement is based as is required to justify GATT legally.

Secondly, this was tacitly recognized by the State Department itself when it sent the charter for an International Trade Organization to Congress, which contained virtually all of the substantive and procedural provisions of GATT, for ratification. By contrast, the General Agreement on Tariffs and Trade (GATT) which is very broad in both its express provisions and in its implications, and repeats much of the ITO Charter, was never sent to Congress for ratification.

The ITO Charter having met with insufficient acceptance in the House Committee on Foreign Affairs to lead to a committee report after full hearings, was, as has already been pointed out, withdrawn by the State Department. This was the nearest approach to a congressional test to which any of the provisions of GATT have come. The complete failure of the ITO Charter to gain legislative approval can thus hardly be construed as shedding a favorable light on the legislative acceptance of GATT were that agreement submitted for ratification.

For the sake of clarity it should be said that the reduction of duty rates in the General Agreement is not in question. Clear authority existed for that action, and it is not contested. We refer to the other provisions, among which are those upon which a part of H. R. 1535 is based.

Now we find some of the GATT provisions making their appearance in the customs simplification bill. We do not wish in any sense to suggest that the Treasury Department had in view any objectives other than their stated ones. We do say that when the first bill, H. R. 8304, was drawn there was indeed no particular reason why the Treasury Department should have foreseen the legislative fate of the ITO Charter since the Depart-

ment was not alerted or on notice to be on guard. It was therefore natural enough to include the ITO provisions in H. R. 8304, the original customs simplification bill. The subsequent failure of the charter should, however, have raised some question in the minds of Treasury officials; but since they were in a position of doing something by request, in a field, moreover, which is not their specialty, namely, that of foreign affairs, this oversight may be overlooked. Therefore, we have no quarrel with the customs administration of the Treasury Department.

In the customs simplification proposal they had a good vehicle. Somebody else saw this and asked them to carry a load of extraneous merchandise. In the beginning even this may have been justified, i. e., in H. R. 8304, on the ground that legislative approval of the ITO was believed to be forthcoming, but after the failure of ITO, the Treasury Department should have been relieved of the burden of this extraneous merchandise. It should have been unloaded.

We feel strongly that the true customs simplification proposal should be allowed to go ahead on its own merit and think it should obtain early approval. At the same time we object strongly to the hitch-hiking companions. We think they should be taken off the vehicle, made to stand on their own feet and, if they seek legislative approval, that they do so on their own merits, in their own name and on their own history. We repeat that at the outset they may have been suitable cargo, but not since the ITO Charter met its legislative fate.

We would not feel so strongly if we did not recognize the very great importance of the issue at stake. This is whether it is wise procedure whereunder the executive arm of the Government may make far-reaching commitments in executive agreements with other countries, which involve conflicts with our existing statutes, and then confront the legislative arm with a moral imperative to modify our statutes accordingly. This amounts to moral coercion of the legislative branch by the executive, through the device of placing the legislative branch in the position of either ratifying the action of the executive or running out on an agreement made by the executive. If this process were not halted the executive could completely circumvent the Congress.

If that is what the American people desire and seek, when and after they understand the issue, that is one thing. When, however, this is by way of being accomplished without their knowledge and without full debate—that is another matter, and we object.

So that the sources within the defunct ITO Charter and the provisional General Agreement on Tariffs and Trade (GATT) from which important parts of H. R. 1535 are derived, may be more clearly seen, the more important of these sources are given below related to the pertinent sections of H. R. 1535, the customs simplification bill.

Section 2 (a). This section provides that the word "materially" be inserted in the Anti-Dumping Act of 1921. This means that in order to obtain a remedy a domestic industry, in competition with imports which are dumped in this market, must prove material injury and not merely injury as at present.

ITO source. Article 34 of the Habana Charter for an International Trade Organization, paragraph 1, provides as follows:

"The members recognize that dumping, by which products of one country are introduced into the commerce of another country at less than the normal value of the products, is to be condemned if it causes or threatens material injury to an established industry in a member country or materially retards the establishment of a domestic industry."

GATT source: Article VI, paragraph 1, of the General Agreement on Tariffs and

Trade, is identical with the ITO provision on dumping, the pertinent part of which was quoted in the preceding paragraph.

Section 2 (b): This section would conform our law to both the ITO Charter and GATT. Article 34 of the ITO Charter, paragraph 5, and Article VI, paragraph 5, of GATT, are identical and read as follows:

"No product of any member country imported into any other member country shall be subject to both antidumping and countervailing duties to compensate for the same situation of dumping or export subsidization."

Section 2 (b) of H. R. 1535 provides that if an antidumping duty is collected there will be deducted any countervailing duty collected on the same transaction.

Section 2 (c) of the bill makes the same provision where a countervailing duty is collected. Any antidumping duty on the same shipment or transaction will be deducted.

These two provisions carry out the ITO and GATT provisions that no product shall be subject to both duties.

These provisions of H. R. 1535 are obviously no part of customs simplification. It is doubtful that the management firm of McKinsey & Co. made a recommendation on this subject. The section is not so attributed in the Analysis of the Customs Simplification Act of 1950 distributed by the Treasury Department.

Section 3 Special marking requirements: This section, according to the analysis just referred to "goes beyond the ITO charter which provides in article 373 as follows: 'Whenever it is administratively practicable to do so, members should permit required marks of origin to be affixed at the time of importation.'"

The repeal of the special marking requirements was based on a McKinsey recommendation.

Section 8 Temporary free entry: According to the analysis this section, by which the term of temporary free imports would be extended from a total of 1 year to 3 years, would gratify the ECA. Evidently customs simplification has nothing to do with the proposal and the suggestion is probably not in the McKinsey report.

Section 13. Value: McKinsey & Co. recommended the abolition of foreign value as a basis of duty assessment and called for a broadening of the other methods.

However, both the ITO charter and GATT have articles on the subject of value.

ITO source: Article 35, paragraph 2, of the ITO charter says:

"The Members recognize the validity of the general principles of valuation set forth in paragraphs 3, 4, and 5, and they undertake to give effect, at the earliest practicable date, to these principles."

GATT source: Article VII, paragraph 1 of GATT says the same thing in slightly different words. Both documents provide that "they (Members or contracting parties) shall upon request by another (Member or contracting) party review the operation of any of their laws or regulations relating to value for customs purposes in the light of these principles."

The extent to which H. R. 1535 would "give effect" to "these principles" may be seen from several comparisons:

1 Section 402, Tariff Act of 1930: The Tariff Act of 1930 under "foreign value," "export value" and "United States value" calls for merchandise "freely offered for sale."

ITO and GATT: Article 35, paragraph 3 (b) of the ITO charter and article VII, paragraph 2 (b) of GATT both provide that value be based, among other things, on merchandise actually sold or offered for sale.

H. R. 1535: bases "export value," "United States value" or "comparative value" on the

price at which the merchandise is "freely sold or offered for sale."

The analysis previously referred to, on page 20, paragraph (6), says "The appraiser may use actual sales instead of offers in determining 'export value,' 'United States value,' or 'comparative value.'" It will be noted that the existing law does not make a provision for taking actual sales into consideration but only offers. This is in accordance with our commitment to "give effect, at the earliest practicable date, to these principles" (as quoted from the ITO charter above).

We do not at this point comment on the desirability of adding actual sales to offers of sales as a source of price information. That is beside the point. Our interest is in the genealogy of parts of H. R. 1535.

2 Internal taxes: Section 402 of the Tariff Act of 1930, which is the section defining "value," does not exclude internal taxes from value.

ITO and GATT: These two instruments contain identical language, as follows:

"The value for customs purposes of any imported product should not include the amount of any internal tax, applicable within the country of origin or export, from which the imported product has been exempted or has been or will be relieved by means of refund."

H. R. 1535, page 22, paragraph (f), provides with respect to taxes as follows:

"The value of imported merchandise ascertained or estimated in accordance with this section shall not include the amount of any internal tax, applicable within the country of origin or exportation, from which the merchandise undergoing appraisement has been exempted or has been or will be relieved by means of refund."

A reading of the underscored portions of the ITO-GATT version and of H. R. 1535 will disclose the almost verbatim repetition of the former in H. R. 1535. Again, we do not at this point address ourselves to the merits of the proposal but to the origin of it; and the latter is very clear.

3. Usual wholesale quantities: The Tariff Act of 1930 uses the criterion of "the usual wholesale quantities" as the basis of value. This is found in section 402 (c), (d), and (e).

ITO and GATT: Article 35, paragraph 3 (b) (ii) provides that the quantities imported, if not comparable, should be "quantities not less favorable to importers than those in which the greater volume of merchandise is sold in the trade between the countries of exportation and importation."

The identical provision is found in GATT under article VII, paragraph 2 (b) (ii).

H. R. 1535: In defining "usual wholesale quantities," H. R. 1535, page 24, paragraph (5), says that this means "the quantities usually sold in the class of transactions in which the greater aggregate quantity of 'such or similar merchandise,' in respect of which the value is being ascertained or estimated, is sold."

That the concept of "greater aggregate quantity" represents a change from present practice becomes clear when we turn to the Treasury Department's "Analysis." On page 20, par. (9) appears the following statement:

"(9) It (the proposed bill) also defines 'usual wholesale quantities' in such a manner as to mean the quantities in which the greatest aggregate quantity of merchandise is sold, whereas under the present law the usual wholesale quantity is the quantity in which the largest number of individual transactions occur."

The proposed adoption of the ITO-GATT principle would establish the larger wholesale transaction as the basis of value. These might be expected to represent lower prices than lesser wholesale quantities which under present practice figure more prominently in determining "the usual wholesale quantities."

Thus the suggested change is a modification of the present practice to conform such practice to ITO and GATT.

Section 14. American selling price: The American selling price is now used for valuation purposes under paragraphs 27 and 28 of the Tariff Act of 1930 and under three other paragraphs in pursuance of determinations made under Section 336 of the Tariff Act of 1930.

ITO and GATT: Both ITO and GATT provide that "the value for customs purposes of imported merchandise . . . should not be based on the value of merchandise of national origin." (ITO charter, article 35, paragraph 3 (a); also GATT, article VII, paragraph 2 (a).)

The American selling price as now utilized under the Tariff Act of 1930 is in violation of the principle of ITO and GATT that the value of merchandise of national origin should not be used. This explains the proposal to abandon this system of valuation. On page 24 of the Treasury Department's "Analysis" it is stated in the second paragraph that "the continued use of 'American selling price' for the appraisement of any merchandise would not comply with this provision"—referring to article 35.3 of the ITO, quoted above.

Paragraph (c) of section 14 would drop from section 336 of the Tariff Act of 1930 the authority to establish the American selling price.

Section 20. Conversion of currency: This section provides for the substitution under stated circumstances of conversion values set up by the International Monetary Fund for the rates now supplied by the Federal Reserve Bank of New York.

ITO and GATT sources: Article 35, paragraph 5 (a) of ITO and article VII, paragraph 4 (a) of GATT provide that the conversion rate of exchange to be used "shall be based on the par values of the currencies involved, as established pursuant to the Articles of Agreement of the International Monetary Fund or."

The Treasury Department analysis on page 39 says, near the end of the first paragraph:

"Provision would also be made for application in the future of any international rules for currency conversion when multiple rates of exchange are maintained, which may be established as provided in the charter for an International Trade Organization now before Congress for consideration."

Since the abandonment of ITO, the similar provisions of GATT should be substituted in the preceding paragraph. This leaves no doubt of the origin of section 20.

Section 23. Conversion of processing taxes to import taxes: This section conforms to ITO article 18, and to GATT, article III. These articles recognize certain principles of internal taxation and provide that no contracting party or member "shall otherwise apply internal taxes or other internal charges to imported or domestic products in a manner contrary to the principles set forth in paragraph I."

Among these principles is the one that processing taxes should not be applied to imported or domestic products so as to afford protection to domestic production.

Section 24. Internal revenue taxes: Section 24, if adopted, would bring certain internal revenue laws which now discriminate against certain imported products into conformity with article 18 of the ITO Charter and article III of GATT. Paragraph 4 of article 18 of the ITO Charter is the same as paragraph 4 of article III of GATT. They provide that—

"The products of any (member country or contracting party) imported into any (member country or territory of any contracting party) shall be accorded no less favorable treatment than that accorded to like products of national origin in respect of all laws,

regulations, and requirements affecting their internal sale, etc."

Section 24 represents an effort to modify our internal revenue laws in a manner to assure equality of treatment of imports and domestic products.

These citations are sufficient to establish the origin of a number of the sections of H. R. 1535 as coming initially from the charter for an International Trade Organization and, after the demise of that document, from the same or similar provisions in the General Agreement on Tariffs and Trade.

It is not only possible but probable that some of these Treasury Department's proposals would have been virtually what they actually are even if the ITO and GATT had never been proposed or negotiated. The similarity may in some instances be purely coincidental. For example, the Treasury Department (Customs Bureau) apparently has long hoped to change the existing law which bases value on the price, not of goods sold, but of goods freely offered for sale, in such manner that actual sales, as proposed in H. R. 1535 and as provided in ITO and GATT, may be used as evidence of value.

Also it may be pointed out that although in several other respects, as previously documented, section 13 (valuation) is based on ITO and GATT principles and provisions, neither ITO nor GATT prescribe the abandonment of "foreign value" as a method of valuation. This abandonment was a recommendation of the McKinsey report.

Nevertheless there remain several proposals of H. R. 1535 that are clearly related to ITO and GATT and clearly represent efforts to modify our statutes to bring them into conformity with the provisions of those documents.

As previously stated, we are opposed to this manner of ratification of GATT. The implications of that agreement are too far-reaching, both economically and politically, to make its acceptance a byproduct of the approval of some other piece of legislation.

Only recently it became apparent how the General Agreement on Tariffs and Trade had tied our hands against immediate international action. We found, when we sought to abrogate our trade agreement with Czechoslovakia, our sovereignty impaired to an extent that quite obviously was not generally understood. Situations might arise in which such impairment would visit disastrous consequences upon us.

The point is that if we as a country openly and willingly undertake commitments that limit our sovereignty, after full knowledge and debate, well and good, but if this end is about to be accomplished in a roundabout way, without a full disclosure of the intent and the probable consequences and without full debate, we can only oppose any such proposal as strenuously as we know how.

We hope therefore that H. R. 1535 can be freed of the objections mentioned. In that event we would gladly support the bill.

Know Your Waterways

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LARCADE. Mr. Speaker, with the granting of unanimous consent to extend my remarks in the Appendix to the Record, I think the following article inserted in the Washington Post by the Marine

News, New York, would be of interest to the Members of Congress and the country generally.

The article follows:

KNOW YOUR WATERWAYS—DISTRIBUTION—CIVIC DEVELOPMENT—DEFENSE

Distribution is one of the critical problems of the Nation. Low-cost transportation is an essential in its solution. Bulk materials, agricultural and certain manufactured products move at lowest cost by water. This is made possible through river and harbor development and improvement. No other Federal expenditure contributes more to the welfare of the people and to the building of the Nation than that for waterway development. Only a small part of the public understands the vital part played by waterways in national defense. "This is a war of transportation," said Lieutenant General Somervell, commanding general, Army service forces, during World War II. The value of waterways to the Nation during that period is beyond estimate. The growth of America, its industrial supremacy, the high living standards of its people are due largely to the development of the Nation's unparalleled natural waterways. There are few areas which have not been benefited by harbor and channel improvements, few which cannot be further benefited by continuing waterway development and expansion.

The Slumbering Taxpayer

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. LANE. Mr. Speaker, we have a big and expensive program to deal with in defending ourselves and the free world from Russian imperialism, masked by the big brother trap of communism.

Americans will cheerfully sacrifice in order to support this program, but they will not condone waste and extravagance in its administration.

The flag of patriotism must not be used to conceal extortion.

Hidden taxes are a fraud and deceit practiced by government upon its own people.

Eventually the people wake up to the fact that taxes do not hit some, but all. And when they realize that they are all in the same boat, they demand an end to spendthrift policies.

The people of Canada are stirring, and there should be a lesson in that fact for us. At least one member—to the credit of the Canadian Government—is honest about the whole problem. You will find his refreshing suggestion in the following editorial from the *Montreal Gazette* of August 20, 1951:

THE SLUMBERING TAXPAYER

Painless dentistry may be an excellent thing. But perhaps some one ought to put the pain back in taxpaying. As far as taxes are concerned, the taxpayer is under too deep an anesthetic.

One businessman in New Jersey had the idea that his employees should be allowed to hold their money for a while. He wanted them to feel how much they were really giving up. Once in a while he gave them their full salary. They were delighted to see how

much they were earning. But inside the envelope was a note. The note informed them how much they themselves would have to pay back in all the taxes that are usually deducted at source.

Perhaps this method was not quite legal, and it is not known just how long it was carried on. But that businessman had something, at least in the idea of letting people pay their own taxes once in a while.

When Mr. Beardsley Ruml, the great tax expert, inspired his pay-as-you-go plan, he undoubtedly had the best of motives. He himself explained that his plan sprang from the "personal and humane desirability of removing from millions of citizens the constant threat of unpaid tax debt." It was his idea to have "current taxpayers."

Perhaps there are few humane measures that governments have been more eager to adopt than Mr. Ruml's pay-as-you-go plan. For people do not really miss what they never really had. If the plan were ever ended, cries and maledictions, and unspeakable groanings of the spirit would arise every year, when the total sum of income taxes had to be raised. But as it is, the money is silently, almost invisibly, extracted month by month or week by week. When income-tax time rolls around, there is only an adjustment to be made.

The Ruml plan has had other effects, which may not have entered Mr. Ruml's expectations. Many cases of organized workers have come to look upon the take-home pay as the only real pay. In their bargaining, they have simply passed the cost of the income tax on to the employer. As such it has become an additional cost of business, and is often passed on to the consumer in the price of what he purchases.

In other words, this tax that is supposed to be direct and obvious, becomes hidden and indirect. It becomes only another item in the cost of living that everybody is always complaining about, as though it were a mysterious disorder, due to the spots on the moon.

Income taxes have not only been made easy for those who pay them. The Government went further in 1919. It raised the tax exemptions so as to remove about 750,000 taxpayers from the rolls. It was estimated at that time that about two out of every three of the working force in Canada would be no longer aware, even by the pay-as-you-go method, of what the Government is spending.

The process of making taxation painless has gone still further. For taxation has become increasingly indirect and hidden. Back in 1945 46 Canadians were paying nearly twice as much taxes directly as indirectly. But by 1949 50 nearly one-half the taxes had become concealed and hidden. This is not, of course, to say that the people were paying less. On the contrary they were paying more, but with even less consciousness of what they were paying. Here again they have been cursing the high cost of living, without being really aware how much of that cost is coming from the taxes they aren't aware of.

Despite the increasing use of anesthesia in tax collecting, Government spokesmen go on saying that it is the public that keeps demanding that the Government should spend more and more. But if the Government is only bowing before public demand every time it increases its spending, it is hard to understand why such extraordinary measures are taken to conceal from the public what the real cost is.

Hon. Paul Martin, the Minister of National Health and Welfare, was once speaking about the need of informing the public of the heavy burdens that each increase in social security will involve. "I believe that we should deal with this thing frankly," he was saying. "As we go along with these various subjects, we should point out their

cost, point out what it means by way of additional responsibility to the citizens."

The approaching cost of old-age pensions raises this point very clearly. It is said that a special tax will be imposed, as the citizen's contribution to the plan. But if this tax is merely another deduction at source, or another hidden tax on goods sold in the shops, the thing will not be dealt with frankly. It will just be another mysterious increase in everybody's cost of living.

Uncle Sam's International Tourists Bureau Within ECA

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. WOOD of Idaho. Mr. Speaker, last Thursday evening, September 13, while on an inspection trip through the Coeur d'Alene National Forest, our party had occasion to stop at the McGee Ranger Station for coffee and a short rest. While there, a motley crew of about 40 or 50 men pulled into the station.

Upon asking their identity, the ranger informed us they were a party of European foresters routed there by the United Nations, and accredited by Secretary Acheson.

The ranger had instructions to show them everything in the Coeur d'Alene Forest, and extend every courtesy to them, giving them every opportunity to "spy out the land" exactly as the foolish Canaanites did to the Israelites spies sent out by Joshua, who returned bearing grains and fruits of the land they shortly afterward invaded and conquered.

I saw the same crew later registering at the finest hotel we have in Coeur d'Alene. Nothing was too good for them.

Inspecting them at closer quarters at the hotel, I found several Europeans, but several had a most distinctly Slavish cast of head and features.

Must we always give our potential enemies carte blanche in spying out our land before the prospective invasion, which the administration seems to fear so highly, and which they are bankrupting this country to forestall?

The following report by the noted economist, Paul O. Peters, gives the answer as to who is footing the bills. In closing, one must remember ECA funds are yours—the taxpayers' money. One must also remember there is no provision in the Constitution authorizing any department of this Government to allocate funds for any such purpose to benefit the nationals of any foreign country.

UNCLE SAM'S INTERNATIONAL TOURISTS BUREAU IN ECA

(By Paul O. Peters)

Just a few days ago the Economic Cooperation Administration announced that Marshall-plan dollar allotments for the first 11 months of the current fiscal year reached the total of \$2,183,720,000. The total so far allocated since the start of the ECA programs to Western Europe amounts to \$11-

659,911,000. Other millions went in aid to Greece, Turkey, China, and countries in the Far East.

One of the generally overlooked money-waiting schemes employed by the managers of the ECA programs to build up so-called better relations with countries we are aiding, appears to be the promotion of international travel, principally at the expense of the American taxpayers.

Every few days, a group of Americans, representing various organizations shove off for Europe to be taken on personally conducted tours to see how effective our help to the Marshall plan countries has been.

At the same time groups of Europeans are being brought to the United States, where at the expense of the American taxpayers, they are taken on tours of our farms, cities, industrial plants and of Washington.

In Press Release No. 2250, the ECA reports that to May 13, 1951, "The ECA program has brought some 500 groups, including teams up to 12 or more as well as the one-man missions, to the United States. They have studied the industrial and scientific know-how which has given this country its high productivity and output."

On June 7, 1951, ECA announced, "Some 80 executives and technicians from the wood-using industries of Western Europe will come to the United States this summer to study timber processing methods developed here."

On June 11, 1951, it was announced by ECA, "About 20 top-ranking metal scientists and engineers from the free nations of Europe will attend the World Metallurgical Congress in Detroit in October, at the invitation of the American Society for Metals and under Marshall plan sponsorship."

NOW HERE IS THE PAYOFF

Under its technical assistance program, ECA will sponsor the dollar costs of the metallurgists from the Marshall plan countries, covering travel and living expenses in the United States. Travel to and from New York will be provided by the participants themselves, their employers or their governments, since this portion of the expense can be met with their local currencies."

Faith and the Future

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Pilot, Boston, Mass., of September 8, 1951:

FAITH AND THE FUTURE

President Conant, of Harvard, has consistently shown himself to be willing to face the most complex issues of modern living with a highly independent and resourceful mind. In the most enthusiastic traditions of the scientific spirit he has sought to solve our present problems with a truly creative realism. This is not to say that he has always been successful; many problems have refused to be resolved by the simple logic of the scientific study, requiring as well the weighing of certain imponderables with which the scientist has almost no familiarity. This does not, of course, make a man a poor scientist; it merely handicaps him in the larger interpretation of human life which we have been taught to call philosophy.

While the scientist, then, is at home among those realities which admit of measurement, he is somewhat less advantageously situated when he preoccupies himself with matters distinctly outside this province, being notably unfortunate, it seems, in the field of moral wisdom and its kindred subjects. This is highly regrettable, but attributable, among other causes, to the narrow specialism into which the processes of modern education have wandered or perhaps been forced. It is surely then no offense in our day to tell the scientist that he is not a philosopher, or at least not a good one; he feels with reason that his standing in this class is somewhat amateur anyway. It will surely then not be taken amiss when we tell him at the same time that he is not a prophet either, or once again not a good one.

It was this last role—that of prophet—that President Conant essayed this week in his widely quoted remarks to the American Chemical Society. As one might expect of a chemist talking to chemists he said on this occasion that the physicists, who have pretty much the best of the publicity lately, were the "modern alchemists" and their prophecies regarding our atomic future were open to question. He himself went beyond questioning them, he denied all the wonderful prognostications of the Sunday supplements and went on to some spectacular predictions of his own. All of these were fascinating, some few were comforting, at least one showed a real flaw in the "crystal ball." This last was on the question of population control where a new dawn began with the opening of the birth-control clinics in India and did not end till, in the last decades of the present century, "the attitudes of (the) religious leaders of the world on this subject * * * (were) completely altered."

For some religious leaders we will not speak; the gyrations of their moral systems are too spontaneous to be patterned. For the Catholic Church, however, a prediction on this question would not be in any sense idle—birth prevention by artificial means will remain a sin against the natural law in the days ahead as it has in the days gone by. The same nature which will assist in the production of the new world described by President Conant can be relied upon to keep constant the laws of its existence and upon these immutable laws rests the validity of this moral concept. While Catholics insist upon this position, they must not be thought to be callous to the problems of populations; they are not at the same time readily convinced that the easiest approach, even when scientific, is necessarily the best. It is impossible so to convince them when this approach is also immoral.

For all this President Conant has envisaged for the future a free world in which men will find the peace so fruitlessly sought in our own times; we join his thoughts and his prayers for this better world. Whether an atomic or a solar world we know it will be a better one if it manages to preserve the twin towers of faith and freedom.

An Indian Speaks

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. STEED. Mr. Speaker, the following editorial from the Tulsa, Okla., Daily World contains a statement from

Gov. Johnston Murray, of Oklahoma, which I think will be a source of pleasant information to all who read it:

Popular interest and particular resentment were aroused when an Indian soldier was denied burial in a private cemetery in Iowa. The incident was greatly magnified when the President offered a hero's burial at Arlington.

Gov. Johnston Murray, of Oklahoma, part Indian, made one of the most striking comments of the season:

We are a proud people. I am especially proud of the fact that I have never found an atheist or a member of any subversive group among my fellow Indians.

That is a complete statement and vital comment. It is a matter of conviction in this part of the country that Indians are not only the original Americans, but that they, more than the rest of us, consistently stand out against the isms.

From Ottawa to Rome

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following editorial which appeared in the Sunday, September 16, 1951, issue of the *Il Progresso Italo-Americano*:

FROM OTTAWA TO ROME

The third of the three great conferences of the democracies dealing with the international crisis brought on by Russian aggression is now under way. At Ottawa, capital of our good neighbor to the north, Canada, the Council of the North Atlantic Treaty Organization is considering a number of weighty military questions. Italy is represented by its able Prime Minister Alcide De Gasperi, who also holds the portfolio of foreign minister.

Few, if any, differences will arise insofar as the stock-taking phase of the sessions is concerned. We are certain that though progress will be recognized and registered in the development of an effective collective-security system, there will be no military man of competency who will say that free Europe already has a defense system strong enough to stop Russian aggression.

The real problem at Ottawa is what has to be done to secure such a defense system in time? Here there arise such questions as: How are the commitments for the forces under General Eisenhower to be divided? What is the capacity of the various member nations to carry out what is asked of them? Where are the weak spots to be plugged? Shall Turkey and Greece be admitted to the NATO?

We do not pretend to be military experts. We will not attempt to give detailed answers in a technical sense to the various problems of basic strategy confronting the military leaders of the democracies. But it is clear to us that if world peace is to be preserved, there must be redoubled efforts for positive and effective preparations for victory in war—should that catastrophe become unavoidable. It is likewise clear to us that Turkey and Greece, two nations steeled in the fight for national independence and freedom, should be admitted to full membership in the NATO. We are heartily for any and

every move which will strengthen the Atlantic alliance as a force for democracy, as a deterrent to aggression and as a machine of collective security that will smash any power that dares plunge the world into another conflagration.

THE ITALIAN QUESTION

It is precisely on this account and in this spirit that we must underscore the following the conferences at Ottawa will be judged largely by the extent to which they provide the decisions and the means for rallying to the cause of democracy and peace the full human and industrial resources of Italy. Our esteemed contemporary, the New York Times, summed up the situation rather aptly when it declared editorially a few days ago:

"NATO will not be really strong until France and Italy solve their Communist problems. It will not be safe until Germany is stronger, until United States production and her Armed Forces reach full strength, until Europe is united. Shall we have the time? Perhaps not—but certainly we have no time to lose." (September 10, 1951)

Indeed, it is too late to dilly-dally. These tasks are urgent. They cannot be met by strong words. What the democracies need and what Russia fears is not tough words but tough weapons. Additional rosy reassurances to Italy will not get her great northern factories humming with defense production for herself and her allies. Prime Minister de Gasperi knows, as we do, that even the firmest pledges of support in the future will not boost Italian production, reduce unemployment and thus remove the most fertile field from communism in Italy.

In fact, our country's economy will be more balanced and strengthened if we shift to Italy the production of some of the huge supplies of defense matériel needed by the Atlantic Alliance. Indeed France and even Britain would be greatly aided thereby financially in that it would slow up the dollar drain which has become dangerously heavier on them as a result of the mounting costs of rearmament. Tito himself could benefit greatly in the matter of getting vital equipment in time—if Italy's full productive capacities were harnessed and if he showed some spark of decency and friendship toward the Italian people whose aid and comfort he needs so badly these days.

TREATY MUST GO

But here we come right into the entire question of revising the treaty forced upon Italy and the problem of returning Trieste to the Italian people. One of the most practical and urgently needed ways of strengthening the Atlantic Alliance is through strengthening Italy. But this cannot be done without a drastic revision of the pernicious pact. By now it should be clear even to London and Belgrade that the very spirit and provisions of the Italian treaty are incompatible and in direct conflict with the spirit and provisions of the Atlantic Alliance. The latter is an instrument for peace and justice. The treaty disarming and degrading Italy is a weapon of war, a product of blind vengeance, a vehicle of Communist subversion and Russian aggression.

The Mediterranean is not divisible. A loss of Italian influence or prowess in this highly strategic area can only be reflected in a restriction and reduction of the power of the Allies on the entire front against Communist machinations and Russian aggression. Nor can Italian morale which is essential to general allied good will be maintained, let alone enhanced, as long as Italy burns with a feeling of grave injustice inflicted upon it. We speak here not for Italian interests in a narrow sense. We speak only for the interests of democracy in the widest sense. To continue the restrictive clauses of the Italian treaty is to continue to restrict the growth of the might of the

Atlantic Alliance—at a critical hour when we cannot afford to lose even a moment.

In some respects, the sessions at Ottawa will only begin tasks which will be finished by the next meeting of the NATO Council to be held in Rome in October. We fervently hope that Ottawa will at least lay the sound foundations for just and proper steps to be ratified at Rome for the defense of the Italian people and for their full and effective role in the protection of free Europe and the security of the free world.

Katyn Massacre

EXTENSION OF REMARKS

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. RADWAN. Mr. Speaker, under leave to revise my remarks in the CONGRESSIONAL RECORD, I want to first commend the gentleman from Indiana [Mr. MADDEN] for sponsoring House Resolution 390, which I support wholeheartedly.

The gentleman from Indiana is to be commended for using such language in his resolution which will make possible "a full and complete investigation and study of the facts, evidence, and extenuating circumstances both before and after the massacre of thousands of Polish officers."

I want to thank the gentleman from Indiana for his sincere hope that the files of the Department of Defense as well as the Department of State will be available to this committee in making such a full and complete investigation. In this connection, I want to stress that any records or evidence which the Office of War Information had and which may now be in the possession of either the Department of Defense or the State Department, must be made available to any investigation conducted by this select committee.

I join with the remarks of the gentlemen who have spoken before me, giving the details of the Katyn massacre. There is no doubt that this is the worst crime ever committed. The deliberate destruction and barbaric murder of the flower of Poland's manhood was not just a crime against the Polish people. It concerns the entire civilized world. It is the worst crime against humanity and will be so recorded in history's black pages. The entire world should and must know the horrid facts surrounding this crime. It is needless for me to repeat the other appropriate remarks that have been uttered by my colleagues on this floor today.

However, I do wish to point out that someone in our Government in the present administration was responsible for either suppression of evidence or inaction when we consider the following questions:

First. Why was evidence, apparently obtained by our Office of War Information concerning this Katyn massacre, never offered at the Nuremberg trials?

Second. Why did the State Department prohibit the Voice of America from

telling the truth about Katyn? From 1943, when the story broke, up to a time well after the invasion of South Korea, the Voice of America was suppressing truth about Katyn.

Mr. Speaker, I am sure that a complete investigation following the adoption of this resolution will make it possible for the "truth which has been crushed to earth to rise again and be heard."

Arizona Leaders Angered When Magazine Prints Their Own Drought Story

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. ENGLE. Mr. Speaker, for several years we in the Congress have been told by Arizona spokesmen that their State was on the verge of economic ruin because of a water shortage. Mostly these cries of despair have come from members of the Arizona congressional delegation and witnesses seeking approval of the central Arizona project.

Attracted by Arizona's dire predictions of her own collapse, Life magazine dispatched cameramen and writers to the scene, and in its August 13 issue published a series of pictures on the subject.

Arizona's cries of despair immediately changed to cries of anguish and anger. Business leaders and officials branded the Life story exaggerated, unfavorable and sensational. Newspapers, bankers, businessmen and civic organizations declared that Life magazine had done the State of Arizona serious harm in publishing the story on Arizona's water situation.

Yet, for several years now many of these same persons have informed the Congress that unless the central Arizona project was approved the State of Arizona would dry up and blow away, and probably a third of the population would be driven from their homes, farms, and stores, hungry, displaced people with neither food nor protection.

I am including here several of these statements which are in conflict with the testimony given by Arizona proponents before Congress.

Leading in the sharp denunciation of Life were the two largest Arizona newspapers, the Republic and the Gazette, both published in Phoenix.

The Arizona Republic on August 22, carried a front-page headline which said: "State's economy safe in drought, leaders say." A larger headline on page 2 of the same issue said: "Drought situation overemphasized by Life, chagrined Phoenixians say."

The news story which appeared under both these headlines follows:

Arizona has a troublesome water situation—but it is not nearly as bad as painted by Life magazine.

This was the view taken Tuesday by Phoenix business and civic leaders, every

one of whom attacked Life for what they termed gross overemphasis of the State's drought conditions.

Leader of the attack on the magazine was Walter R. Bimson, president of the Valley National Bank.

Bimson criticized Life for placing too much emphasis on the fact that Governor Pyle called an emergency committee to set up an effective ground-water code.

In a five-page letter mailed Tuesday to dozens of insurance companies, banks, and bond houses throughout the Nation, Bimson wrote:

"Because of the Life article many of our eastern friends have become alarmed about their investments in Arizona.

"Our concern and the Governor's concern is not with the outcome of our current crops, but rather with the development of a constructive long-range control program.

"Arizona is recognized as the most efficient cotton producing area in the world. It is therefore attractive to out-of-state people who wish to come here to develop new cotton lands. In an effort to conserve existing investments and to prevent overuse of our limited water supply, the Governor has wisely recognized the need for some reasonable control of the underground water supply."

The banker said the Life pictures were made in a "notoriously dry area of Arizona—the Grand Canyon area," and therefore was not truly representative of the State as a whole.

He stated that within the past 2 weeks field specialists from the Valley National had inspected a ranch adjoining one mentioned in Life and found that the general condition of the range is better than in some previous years.

There have been good summer rains in many of the cattle-range areas, Bimson wrote, although in some other areas the ranges were admittedly dry.

"However, this year, fewer cattle have had to be moved to better ranges than in many years past. In fact, many out-of-state herds are being brought into Arizona in order to utilize our surplus feed."

Bimson said there need be no fear that the shortage of water either now or in the future would adversely affect the growth of our cities.

"It is quite possible," he declared "that long-continued drought might reduce our cultivated farm acreage, but drought, no matter how long continued, could not reduce to a critical point the supply of water for further development and growth of our cities."

Even highly industrialized cities, he pointed out, use very little water compared to the amount used to grow crops.

He said that even if the population of Phoenix and Tucson were to double they would require only an additional 50,000 acre-feet of water.

"And this is enough to irrigate less than 10,000 acres of farm land, or about 1 percent of our total farm acreage," he noted.

Bimson said agriculture and livestock together produce about \$250,000,000 annually, or about one-fourth of Arizona's total annual income.

Added the banker: "While a curtailment of farm production would adversely affect our general economy to some extent, our source of wealth and income are so well diversified that we cannot foresee any conditions relating to present or future water shortages that would materially curtail our continued progress."

Among those siding with Bimson on the harmful aspects of the Life article were Joe Refanes, of Refanes, Ely, Beck & Co., Phoenix investment house; John B. Mills, prominent resort and hotel operator, James A. Smith, accountant and president of the Phoenix Chamber of Commerce; and R. J. McMullin, general manager of the Salt River Valley Water Users Association.

Mills said the article could have an adverse effect on the State's multimillion dollar tourist business because the magazine had failed to note that the drought does not affect domestic water supplies.

The chamber of commerce is taking vigorous steps to counteract the impression left by the article, Smith said. He disclosed that releases will be mailed this week to 400 newspapers and magazines, to let prospective tourists know that there will be no shortage of water for them.

On August 23, the Arizona Gazette published an editorial which, in view of the statements made by Arizonans before Congress, is both astonishing and perplexing. I hope my colleagues who have been obliged to give their attention to the proposed multibillion dollar central Arizona project will take the time to read the Gazette's editorial, which follows:

IT WILL TAKE MORE THAN DROUGHT TO STOP US

Life magazine's picture of the Arizona drought may have been overenthusiastic, but no one has branded it false. We really are short of water. That's why so many of the people currently lambasting Life happen to be leaders in the fight to bring Colorado River water into the State through construction of the central Arizona project.

Confusing, isn't it? Either we need water, or we don't. And if we don't, why spend hundreds of millions of dollars to bring it here from the Colorado? Just wait until the California propaganda boys who want to stymie the project bill in Congress get their hands on that one.

Actually, the situation is simple enough. We do need more water to prevent a certain number of acres from reverting to desert. We do need more water to insure bumper crops on all the acreage now under cultivation, and to continue the expansion of agriculture in Arizona. But even if we never get a drop of Colorado River water, and even if the drought continues, we aren't going to dry up and blow away.

We have plenty of water for domestic use. As Walter Bimson, president of the Valley National Bank points out, if the population of Phoenix and Tucson were to double, another 50,000 acre-feet of water per year would be required. This amount would irrigate only 10,000 acres of farm land, or less than 1 percent of our cultivated farm acreage.

There is plenty of water available for the limitless development of the tourist trade and for far more expansion of manufacturing. Except in a few locations, the mining industry has all the water it needs. And there is enough water to maintain our agricultural output at close to its present level of \$250,000,000 a year.

If we go through a period of unprecedented population and industrial growth during the next few years, and if the drought continues, it is conceivable that we will have to curtail farming somewhat. But even if agricultural activity were to drop 10 percent, there would still be more than enough left to provide a stable base for our economy.

To a farmer, a drought period may seem to last forever, but like everything else, droughts end. We have had dry spells before, and we will have them after the current droughts break, but Arizona will keep on expanding. The same dry weather which harasses the farmer is the lure that attracts thousands of visitors and new residents to Arizona every year. We gain far more from our dry climate than we lose to it.

Under the circumstances, investors, here and in other States, would be foolish to sell Arizona short. Nor are they doing so to any significant extent. One eastern company has refused to take up some mortgages on a Phoenix subdivision, and other eastern

investors have asked their friends in Arizona to explain the Life article. But local securities are firm, and there is ample demand for Arizona municipal bonds.

Smart investors do not put too much stock in magazine articles which obviously are calculated to be as sensational as possible. Instead, they act on facts. And the facts are that Arizona's over-all economy will grow right through this drought, and any foreseeable future drought. Until the central Arizona project becomes a reality, however, the farm factor in our economy probably will remain stationary.

In concluding these remarks, I wish to quote from a column entitled "Our Amazing Arizona," signed by Columbus Giragi, which appeared in the Arizona Republic on August 23.

Mr. Giragi wrote:

Life magazine is at present about as popular in Arizona, and especially the Phoenix area, as ants at a picnic.

In its August 13 issue, the national magazine used 5 pages to present a picture story of agricultural and domestic water shortages and drought effects in our State.

The powers that be of a large eastern investment company reportedly saw the magazine portrayal, and forthwith canceled a planned program to buy \$3,000,000 in mortgages on a Phoenix subdivision.

Nothing shakes people out of their lethargy faster than a kick in the pocketbook, and Phoenix business leaders responded nobly to the severe jolt—and rushed to man the guns.

Let it be definitely understood that this humble one bemoans the blow to our amazing Arizona which this unfavorable publicity inflicts.

Let it be further definitely understood that we applaud the efforts on the part of our business leaders in resisting the grossly unfavorable publicity.

Mr. Speaker, that seems to sum up Arizona's attitude at this time. Do the Arizona proponents wish to tell one story in Washington and another to the rest of the Nation?

LeTourneau Talks About

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD some remarks which appeared in Now. The remarks are those of one of the outstanding men of our Nation, Mr. R. G. LeTourneau.

They are LeTourneau Talks About.

R. G. LETOURNEAU TALKS ABOUT WHAT TIME DO YOU HAVE?

We have heard a lot about States' rights and whether it's right or wrong. We all know, of course, that more and more the Federal Government is collecting the taxes and setting a lot of broad policies that could be handled by the individual States. I am not so sure that each State shouldn't collect some of the taxes now assessed by the Federal Government and do its own subsidizing of the farmers, etc., but there is one piece of business that ought to be tended to by the Federal Government, as it affects practically everyone, and is costing the Nation a lot more than most people realize by lost time upsetting train, plane,

and bus schedules, long-distance calls, etc. Few people travel as much as I do (about a quarter million miles per year) so they don't come in contact with it as much as I do, but there are a lot of people traveling from place to place and it affects every one of them. The piece of business I refer to is daylight-saving time. It worked all right during the war because the Government took a hand in it, but since then it's been a mess.

I don't care whether we have daylight saving or not. After all it's not so important because people can get up early if they want to, and I don't see any reason why a manufacturing plant couldn't set the hours up if the majority of the people wanted to without changing the clock, but what I want to know is what time it is going to be in the next town when I arrive there to speak or do some business. What time do I have to leave to make an appointment, and what kind of time does the plane leave on so I won't be late, which is bad; or an hour ahead of time, which means an hour wasted. With all the caution and long-distance phoning ahead which my gang does it still happens quite often. The worst of it all is nobody really gains by it. It would cost nothing to stop the loss. Just make it a Federal law that you do or you don't—either way is all right with most of us just so we know what time it is going to be when we get there.

I've even gone so far as to call up on the phone myself before going and say, "What time are you on?" and the man said, "We are on eastern time. We are on daylight time," but when I got there I found it was central daylight or eastern standard time, whichever way you wanted to say it, but not eastern daylight. A little edict from Washington for the good of the Nation as a whole would help out a lot and cost little. (Or else the governors' conference or the mayors' conference or some patriotic group ought to do something about it.) A friend of mine introduced me this way. You may be able to steal his money and get away with it; but if you try to steal his time, you'll get into trouble. Well, I do like to make the minutes count.

I'm glad my Lord and Saviour Jesus Christ took time to leave the heights of heaven's glory and come down to this sin-cursed world to suffer, bleed, and die for my sins. That's why I take time to go hither and yon around this old world to tell others what the Lord has done for me.

A Debate on Reciprocal Trade Agreements Policy

EXTENSION OF REMARKS
OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. JENKINS. Mr. Speaker, a short time ago two capable gentlemen debated the question of tariffs and trade. That debate is set out in the following report:

RADIO DEBATE ON TRADE AGREEMENTS POLICY BETWEEN JOHN M. LEDDY, DIRECTOR OF THE OFFICE OF ECONOMIC DEFENSE AND TRADE POLICY, STATE DEPARTMENT, AND O. R. STRACKBEIN, CHAIRMAN, THE NATIONAL LABOR-MANAGEMENT COUNCIL ON FOREIGN TRADE POLICY, ON AUGUST 19, 1951

Mr. BATES. The Liberty Broadcasting System, from its studios in Washington, D. C., presents Public Hearing.

This is Carl Bates, inviting you to join us tonight in a discussion of tariffs and trade.

What advantages were expected to be gained by the people of this country when the multi-nations agreements were first brought about? Will abrogating our trade agreement with Czechoslovakia have the desired effect? How are the American workers protected from the effects of low-priced imports? These and many other questions we hope to answer in the discussions to follow.

First, may I introduce our two experts for tonight's Public Hearing, Mr. John M. Leddy, Director of the Office of Economic Defense and Trade Policy of the State Department, and Mr. O. R. Strackbein, Chairman of the National Labor-Management Council on Foreign Trade Policy.

Now, many Americans, I am sure, have just a slight understanding of the rather complicated tariff policies. Mr. Leddy, will you please give us a simple explanation of what our tariff policies are and how they operate?

Mr. LEDDY. Well, Mr. Bates, our tariff policy today—our whole trade policy—is based on the reciprocal trade agreements program. This was begun in 1934, approximately 17 years ago, and was initiated by Cordell Hull. The whole idea of this program is that we are better off, and the world is better off, if we trade more one with another. In other words, if our exports are larger and our imports are larger, that produces an economic benefit to all of our countries—all of the countries in the free world.

I think you had one question there. What is this multination agreement? I don't think many people understand that, so I would like to explain that, before the war, we used to conclude with other countries individual, separate, bilateral agreements; in other words, there were only two countries to each agreement. Since the war, we have junked all of that policy and established the multilateral agreement in which a large number of countries enter into a single agreement among themselves. Under this agreement, we grant tariff concessions, that is to say, we reduce our tariffs, we bind our tariffs on individual commodities, and all of the other countries reduce or bind their tariffs on the goods that we ship to them. There are about 30 countries which now belong to this multination agreement, which we call the General Agreement on Tariffs and Trade. The short name for it is the GATT, and I think that if we use that name hereafter in this discussion, it will simplify matters.

Mr. BATES. Mr. Strackbein, do you have anything to add to that explanation?

Mr. STRACKBEIN. The question of the General Agreement on Tariffs and Trade today, I would say, is a highly controversial one. I am very much interested in knowing on what authority the State Department entered into the General Agreement on Tariffs and Trade, otherwise known as GATT. There is no question of the State Department's authority to enter into the bilateral trade agreements of which Mr. Leddy spoke a minute ago, but I would like to know just what explanation he has as to the authority upon which the entry into general agreement was based.

Mr. BATES. Mr. Leddy—

Mr. LEDDY. Well, I would first say it wasn't the State Department; it was the President and the administration. The State Department itself has no authority. The authority resides in the President.

Mr. STRACKBEIN. You know, however, that the State Department is a part of the executive arm and as such is a spokesman for the administration, or at least it would be expected to reflect the administration's policy and to take part in formulating those policies.

Mr. LEDDY. The only reason I like to make that point clear is because there have been frequent criticisms by you, Mr. Strackbein, and others who have opposed the trade

agreements program, that it is the State Department that runs the entire program. That simply isn't the case. Every agency in this Government which has any interest in international trade, including the Departments of Commerce, Treasury, Agriculture, the Tariff Commission, Interior, Labor, and other agencies—all participate in the formulation of our foreign-trade policy. In other words, this is not just a diplomatic policy; this is a sound, basic, long-term economic policy; but all parts of the Government participate.

Mr. STRACKBEIN (interrupting). But, Mr. Leddy—

Mr. LEDDY. Let me get to the second part of your question, which is a legal question: Under what authority does the President enter into a multilateral agreement under the trade agreements program? The answer to that is that the Congress has delegated to the executive branch through the Reciprocal Trade Agreements Act the power to enter into agreements with foreign countries for the reduction or the binding of tariffs and other trade barriers.

Mr. STRACKBEIN. That's it exactly. I want to take it up from there for just a minute. There is no question that such a delegation of power was made by the Congress to the President to raise or lower the duties by 50 percent; but there was nothing in that Trade Agreements Act of 1934, as I see it, that authorized the entry into a general agreement of the character that was negotiated in Geneva in 1947 and which, in a number of instances, conflicted with existing laws of the United States, and which, I may say, requires, to become fully effective a change in these laws. Now, I would like to know by what authority the State Department, whether it is the administration or the President, can carry us to such a position in an international agreement.

Mr. LEDDY. Well, I don't want to get into too much technical detail here, but the President applies this multilateral agreement known as GATT, to the extent of his executive authority. He is not purported to change any domestic law. There is no real constitutional question here. The President has the authority to do what he did under the Reciprocal Trade Agreements Act and if anyone has any question about it, they can always take the matter to the courts.

Mr. STRACKBEIN. Well, the courts are not open for this particular question. However, the point that I'm trying to make is this: That the President of the United States has entered into an agreement, an international agreement, which involves conflict with our existing laws. Now, undoubtedly it is expected that the United States will honor its agreements; therefore the pressure upon Congress to modify our laws, of course, becomes very great. There is a moral commitment, and my protest is that such commitments should not be made before Congress has first been consulted.

Mr. LEDDY. Congress authorized the action under the Reciprocal Trade Agreements Act and since this agreement was entered into in 1947, it has extended the Reciprocal Trade Agreements Act.

Mr. STRACKBEIN. Yes, but it has not—it has not authorized this kind of an agreement.

Mr. LEDDY. It has not prevented it.

Mr. STRACKBEIN. I want to say this: That I do not believe that the American people know the extent to which we have, in this manner, tied our hands against immediate action, and I think this was highlighted and spotlighted in the recent development in the jailing of Mr. Oatis in Czechoslovakia. The question was raised what sort of countermeasures can we take? One of those suggested was that we abrogate our trade agreement with Czechoslovakia, but on looking into that question, it was found that we

could not do so unilaterally, on our own part, without consulting all the other nations, and that the first opportunity of doing that was the middle of September. In the meantime, Mr. Oatis remains in jail.

Mr. LEDDY. Well, let us go to the merits of the question. Implied in what you have said is that this country should not get involved in international commitments in the international trade field.

Mr. STRACKBEIN. I don't say that—I don't say that at all. I say there are perfectly legal and proper grounds for agreements but not for entering into agreements that conflict with our laws and that have the effect of tying our hands when we later find some matter coming up that demands action on our part.

Mr. LEDDY. Well, the commitment that we are involved in in the general agreement does not conflict with our domestic laws as they now stand, nor can I see that the fact we are, as you say, committed not to take action against Czechoslovakia without the consent of other countries. I don't see how that is illegal under the Trade Agreements Act.

Mr. STRACKBEIN. It is my understanding that the General Trade Agreement does conflict with at least 8 or 10 of our laws—

Mr. LEDDY (interrupting). No, sir—

Mr. STRACKBEIN. And cannot be fully effective until these changes are made by Congress.

Mr. LEDDY. That is the point. The executive is applying the agreement only to the extent that they do not conflict—

Mr. STRACKBEIN (interrupting). Yes, but they are creating this moral commitment. They are putting the Congress in the position of running out on our agreements unless they modify our laws in accordance with the agreement.

Mr. LEDDY. There is no moral commitment whatsoever. The Congress is perfectly free to decide to change the law or not to change the law. Why don't we debate the question on the merits as to whether the law is good or bad, rather than on whether there is some moral commitment involved.

Mr. STRACKBEIN. I claim that the procedure in itself is bad; that before going abroad and making agreements that involve our statutes, the State Department or any other executive department, any other executive arm of the Government, should first apply to Congress and say "This is what we want to do," instead of doing these things and then coming to Congress and say "We have made such and such an agreement; now please modify this, please modify our statutes to conform them to our agreement. Otherwise we will be in the position of running out on an international agreement."

Mr. LEDDY. Well, Mr. Strackbein, I would question whether many Congressmen or Senators would agree with you. Before 1934 it was the practice of the Congress itself to make the tariff. We found out in 1930 that that system went all wrong—

Mr. STRACKBEIN (interrupting). That was based, however, on a constitutional provision, was it not?

Mr. LEDDY. No. Under the Constitution the Congress has the authority to make the United States tariff, to decide what rates—

Mr. STRACKBEIN (interrupting). Also to regulate foreign relations—I mean foreign trade—not foreign relations—foreign trade.

Mr. LEDDY. That's true; but what I am saying in that due to the fact that the Congress in 1930 passed an extremely high tariff, which was terribly damaging to this country in its foreign economic relations, Congress itself decided—

Mr. STRACKBEIN (interrupting). Just a second—

Mr. LEDDY. Just let me finish what I want to say.

Mr. STRACKBEIN. All right.

Mr. LEDDY. Congress itself decided to delegate hereafter authority to the executive

branch to enter into tariff agreements with other countries on the ground that that was a much more scientific, much more expert and a much more sensible way of proceeding in our relations with foreign governments.

Mr. STRACKBEIN. Mr. Leddy, that gave authority to raise or lower the tariff by 50 percent and did not give authority to make all these other agreements involving broad questions of commercial policies on which there might be a great deal of difference of opinion.

Mr. LEDDY. Oh, yes sir; Mr. Strackbein.

Mr. STRACKBEIN. Nothing spelled out—that character—

Mr. LEDDY. We have always had in our trade agreements, ever since 1934, long before we entered into this multilateral arrangement, what we called general provisions in our tariff agreements, which set forth a general trade policy governing the treatment that we would accord to foreign goods.

Mr. STRACKBEIN. But Mr. Leddy—but none of them as broad as these commercial provisions in this general agreement on tariffs and trade; and furthermore I dare say that the people didn't even know that you were placing that type of provision that you speak of in the bilateral agreements. It is only when an occasion arises such as the recent one of Mr. Oatis, and when the spotlight is thrown on the situation, that what has been done in the past, begins to come out; and it is then that we begin to examine and see what has been done during all these years; and now, under these circumstances, Mr. Leddy, I repeat that I do not believe that it is good policy, that it is wise policy, for the State Department to enter into agreements that conflict with our laws and then expect the Congress to ratify them.

Mr. LEDDY. Mr. Strackbein, the Trade Agreements Act has been renewed every 2 or 3 years since 1934. On every occasion there has been the fullest possible opportunity for Congress and the people to see precisely what has been done. On this last occasion, the Trade Agreements Act was renewed by an overwhelming majority of both parties in both Houses.

Mr. STRACKBEIN. Yes, but after extensive amendments were applied to it, one of which required the abrogation of trade agreements with the Communist dominated countries; as you know.

Mr. LEDDY. That is true; I would like to say a few words about that. We concluded this multilateral agreement, this GATT, in 1947. Czechoslovakia was one of the 18 countries, I believe was the number, which entered into this multilateral agreement. At that time Czechoslovakia was a democratic country with a private enterprise system. The relations between Czechoslovakia and the United States—

Mr. STRACKBEIN. Right at this point—

Mr. LEDDY. Were very friendly—

Mr. BATES (interrupting). Mr. Leddy, will you continue your statement, please, and then Mr. Strackbein—

Mr. STRACKBEIN. All right—

Mr. LEDDY. Yes. It was not till 1948, after the agreement had been entered into, that the Communists took over Czechoslovakia. Since that time—

Mr. STRACKBEIN. Now, Mr. Bates, I must challenge that statement. The agreement was not proclaimed until after Czechoslovakia had gone behind the iron curtain. There were numerous protests made at that time. I made one of the protests myself, so naturally I ought to know. And yet the agreement was proclaimed; nevertheless, it was put into full effect on the ground that we needed a listening post over there, or something of that order; now we have had a listening post for 8 years and what has it—what fruit has it borne?

Mr. LEDDY. Well, I want to keep the record clear. When we concluded the agreement,

when we signed the agreement in 1947, in October, Czechoslovakia was a democratic country and it was not until after the negotiations were over that it became Communist—

Mr. STRACKBEIN (interrupting). That is correct.

Mr. BATES. Again, please, let's have just one speaker at a time.

Mr. STRACKBEIN. Before the agreement was concluded, before it was proclaimed, I should say, Czechoslovakia had gone behind the iron curtain.

Mr. LEDDY. That is true; that is a technical point. But I would say—I would agree with you that experience has shown that the relations between ourselves and Czechoslovakia in the political field are such that it does not make sense any longer for us to maintain economic obligations toward Czechoslovakia under the general agreement on tariffs and trade, and it is the policy of the administration to seek a severance of those obligations so that we will have no international problems even in a technical sense.

Mr. STRACKBEIN. Mr. Leddy, that policy was determined by the Congress when it passed the last trade-agreements extension bill. There is a definite provision in that act that says that the United States or the President shall as soon as practicable withdraw and abrogate trade agreements and the concessions with any and all countries behind the iron curtain—so that is no choice of the State Department—that's no policy that was generated in the State Department. In fact, in hearings, as far as I recall, the State Department opposed that provision.

Mr. LEDDY. No, the State Department and the administration suggested that time be given to dissolve these international commitments before actions were taken by the United States—

Mr. STRACKBEIN (interrupting). How much time did you want?

Mr. LEDDY. We did not oppose in principle, and the action that we are now proposing to take goes far beyond the mere withdrawal of concessions. What we are after is to seek a complete severance of all commitments between this country and Czechoslovakia with respect to economic and trade matters.

Mr. BATES. Gentlemen, may I ask this question: If the 30 nations agreement is abrogated in September, what should be the immediate action of the United States of America to deal directly with each country? What new policies might be developed? Mr. Leddy, could you answer these questions?

Mr. LEDDY. Well, what we are attempting to achieve in September is an action by all of the parties to the general agreement on tariffs and trade which would sever the obligations between the United States and Czechoslovakia. This would avoid any technical violation by the United States when it raises its tariff against imports from Czechoslovakia, but this does not affect or involve our relations with other countries, parties to the general agreement on tariffs and trade. All these other countries are friendly countries and a part of the free world. We do not wish to take action to hurt them.

Mr. BATES. Any comment, Mr. Strackbein?

Mr. STRACKBEIN. No. I think that is a very good reply and I think that it is true that the withdrawal of the agreement from Czechoslovakia would not of itself upset the General Agreement on Tariffs and Trade. That would not be involved and would not be necessary.

Mr. BATES. I understand Americans returning from abroad are faced with the payment of customs duties on goods brought in to this country, of course. Now, the value of the goods is based on a fair market value of the goods in the country of origin. Now, this market value may be based on very low wages paid to the working people, much

below the American standard of living. How does this affect the American working people?

Mr. LEDDY. I would like to talk to that point. That is an argument that we have heard for many, many years from those who are interested in high tariffs and high protectionism in this country. The argument is that foreign workers receive lower wages than in the United States and therefore that they can cut their sales prices to us well below our cost of production. But I think if you look at the American industry, by and large, you will find that we are out-selling and outcompeting other producers all over the world in industries where we pay the highest wages ever going. The reason for that is because of our productivity. The worker here even though he makes more money per hour, can produce more units, more things per hour, than foreign workers. Now that isn't true for every single industry, obviously, but it is true for a large number of our industries and we export manufactured goods and agricultural products throughout the world because of our tremendous productivity in this country and we can pay high wages because we have great productivity.

Mr. STRACKBEIN. May I comment on that, Mr. Bates?

Mr. BATES. Go right ahead, Mr. Strackbein.

Mr. STRACKBEIN. It is entirely true that in the mass-production industries, such as the automobile industry, the steel industry, the electrical-equipment industry—all these industries where mass production is in effect—that we can undersell the products of foreign producers even though we pay much higher wages. But let me point out that not all the industries in the United States are mass-production industries. There are hundreds of industries in this country, hundreds of industries, vital industries, industries which do not have these great advantages in the aggregate employ millions of people, of mass production and automatic machinery, and so on, and those are the industries that even though they may in some instances have higher productivity than is enjoyed in other countries, nonetheless, do not have this higher productivity in sufficient degree to offset the extremely lower wages paid in many other countries and competition under those circumstances is very injurious to American producers and American labor, and we feel strongly that the proper protection should be given under those circumstances simply to bring the imported products on a competitive parity with those produced in this country. That is all that we ask.

Mr. BATES. Gentlemen—I beg your pardon, Mr. Leddy, did you have more to say?

Mr. LEDDY. Well, I was going to say that sounds like the old argument, that whenever there are differences in cost of production between this country and a foreign country we ought to put a tariff equal to the difference.

Mr. STRACKBEIN. I don't think so at all, Mr. Leddy. I pointed out that relative productivity should be taken into account; but where our relative productivity is not sufficiently above that of other countries to offset the differential in wages, then there should be protection to that extent. Now, assume that in some of these other countries where low wages are paid that automatic machinery has been installed we have sent a great deal of equipment and machinery abroad, modern machinery and modern equipment, and plants all over the world are being modernized. And yet their wages are not coming up, yet the productivity will greatly increase and the advantage that we otherwise had, or previously had, in productivity is fast disappearing in many instances.

Mr. LEDDY. I would just like to point out that the industries you are talking about, the ones that you represent, Mr. Strackbein, are

very largely already protected by tariffs and have been protected for many years. I think the argument between us is that you would like to see a much higher tariff and we would like to see a moderate tariff simply to—

Mr. STRACKBEIN. (Interrupting). I don't subscribe to that difference. We would like to see a tariff, as I say, whatever the level might be, which would give competitive parity between the imported products and the products of our factories produced by our own workmen and our own producers.

Mr. LEDDY. Well, that is a theory that would stop all international trade.

Mr. STRACKBEIN. Oh, I don't think so at all—I don't see how that could—you might as well say the trade within the United States would stop under those conditions. Companies within industries compete with one another. We have the minimum wage laws; the wages and productivity are in many instances very much the same. Trade flourishes under those conditions and contrary to stopping trade, it flourishes.

Mr. LEDDY. Yes, but what you are proposing is a system whereby every State in the Union should put up a tariff around its borders in order to even up differences in cost production among the various States.

Mr. STRACKBEIN. I think you are reading something into my words that I haven't said at all. I say competitive parity. Let the goods come in and compete on a fair competitive basis in this country. Let the best goods win.

Mr. LEDDY. All right. Good. Suppose you could say if you let the best goods win, you shouldn't have a tariff at all. After all, the tariff is the means by which the Government is giving special aid to particular industries in order to aid them in competition.

Mr. STRACKBEIN. Mr. Leddy, when the advantage that the imported goods have consists in the fact that they pay lower wages, then it is not the best goods that win. It is the goods that price-wise can undercut those which were produced under conditions where higher wages were required, required not only by law but under collective bargaining agreements. Therefore, it does not to me make sense that we should allow goods from the outside to come in to undercut the price and quality for quality cut the price below our own. I don't see how our employment can hold up, how our production can hold up under those conditions.

Mr. LEDDY. I don't see how our production or employment can hold up if we stop our imports, because that, as you very well know, is going to stop our exports, too.

Mr. STRACKBEIN. But we are not stopping, we are not proposing to stop our imports, Mr. Leddy. As you well know—you are the head of this office in the State Department—about two-thirds of our total imports come in totally free of duty. Now, only one-third of them pay any duty at all. So we are not talking about stopping our trade at all. We are talking about establishing fair conditions of trade. Fair condition of trade has been a policy in our domestic field for many years. We have set up minimum wage laws, we have set up the Federal Trade Commission, and the fair trade practice laws, and so on, and the Justice Department has tried to see that competition continues—all of this has actually made for fair trade conditions; and where you have fair competition, it has not in any way stopped, or in any way restricted our trade; on the contrary, it has made the best kind of conditions for commerce to be carried on. All that we ask is that goods from the outside abide by the same principles.

Mr. LEDDY. Well, we would agree to that, Mr. Strackbein. The trade-agreements program is fully consistent with what we are trying to do through the Justice Department and Federal Trade Commission in promoting a wider area of competition. I think the difference boils down to whether or not you

consider that the tariff on a particular product is too low; while we consider that it is not too low. But I would like to point out that the Reciprocal Trade Agreements Program has a way in which these differences between us can be settled by an impartial fact-finding board. Under the trade-agreements program we have the United States Tariff Commission. When any company or industry feels it is being seriously injured by imports, it is able to take its case to the Tariff Commission and to ask that a full investigation be made and if the Tariff Commission finds that imports are in fact causing serious injury to a domestic industry, then the tariff can be increased, and all I can say is that on a controversial matter of this sort, we think that an impartial fact-finding system of that sort is the best answer.

Mr. STRACKBEIN. Mr. Leddy, the Tariff Commission has had some 20 applications for escape, as you call it, under the trade agreements. In only one instance out of those 20 has the Tariff Commission given any relief at all; and regardless of what you might think, these industries that make applications to the Tariff Commission don't do it for the fun of it. They do it because they are very much concerned about the competition and are injured by it and yet relief has been forthcoming in only one instance, Mr. Leddy, out of 20 applications. Now, we don't think that a very good record and it was for that reason that the amendment changing the escape clause was inserted in the last extension of the Trade Agreements Act.

Mr. LEDDY. Well, I think, Mr. Strackbein, that the answer is that you just haven't been able to prove your case before the Commission.

Mr. BATES. Gentlemen, it is time to adjourn our Public Hearing for this week. For the past half hour, we have been discussing the important and controversial subject of tariffs and trade. We sincerely hope that in the course of the discussion we have answered questions that you may have asked. Our thanks go to our two experts, Mr. John M. Leddy, Director of the Office of Economic Defense and Trade Policy of the State Department, and Mr. O. R. Strackbein, Chairman of the National Labor-Management Council on Foreign Trade Policy.

From the Nation's Capital, the Liberty Broadcasting System has brought you by tape recording another Public Hearing in an important subject. This is your moderator, Carl Bates, speaking.

Address of Hon. Edith Nourse Rogers of Massachusetts at Dedication of Littleton Monument

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by me Sunday, September 16, in dedication of Littleton Monument in the honor of the memory of the heroes of the Revolutionary War, given to the town of Littleton, by Col. and Mrs. Edward Fletcher:

Thank you, Mr. Conant. It is with deep pride and heartfelt appreciation I join with

you and my friends here in Littleton in the dedication of this monument so generously and thoughtfully given by Colonel Fletcher in honor of the memory of the brave men of Littleton who joined with others of Middlesex County to win and establish a free Nation. Through their valor and sacrifice not only this great Nation was born but also the free way of life was established for the first time on this earth.

This ground, this earth on which we stand here, and throughout the hills and green valleys of Middlesex is the hallowed soil of freedom. In itself it constitutes a monument to the freedom which was born here, that never can be shattered. To mark the intimate areas on this precious soil where God-inspired men rushed out to join with others in this first battle for freedom is a noble thing to do. And to carve their names in lasting granite, symbolic of their strength and character, is most fitting. To erect this beautiful monument in their memory, bringing them and their courage, constantly to the generations to follow is not only a most generous act by Colonel and Mrs. Fletcher but also a deed of deep patriotism. In the establishment of this monument, Colonel and Mrs. Fletcher have reached way out into the ever-lengthening dawn of new generations to inspire them with the courage, the spirit of sacrifice, and the strength of character so necessary to maintain the free way of life.

In the years to come who can foresee the challenges to this free life we hold so precious. As the children of these rapidly passing years grow to maturity and sense the meaning of this great monument I know they will resolve to hold fast during their time all that was so dearly won in those stirring days of long ago. I, too, can say in truth never can so many owe so much to so few. The debt to these brave men can never be paid. Colonel and Mrs. Fletcher, I give to you my heartfelt thanks for this patriotic gift and what it means to our great and wonderful country now and in the future.

During our time we, too, have experienced stirring days. We have shown the world that we are determined to keep the faith with these brave men of 1776, and that we intend to hold fast to all that they gained. We know that freedom lost never can be regained. In two great wars and in the cruel, tough fighting in Korea we have shown the enemies of freedom we will not permit our precious way of life to perish on the point of the sword. We have shown the world that the men and women of this day and hour possess the same courage, the same character, the same spirit of sacrifice as did the men whose memory we honor here this afternoon. That which is gained by valor can be preserved only by valor.

In all respect to the fighting hearts of the men who fought to gain freedom I must tell you now that those of our time, of this moment, who face the fire and fury of modern mechanized warfare to preserve and maintain freedom are of great heart, stamina, and character. They are just as brave and just as courageous. In my years of public service I have seen and talked with thousands on the battlefield. I have visited and worked to help thousands of the wounded in the hospitals. I have worked to help them have a future in the free life they have helped to preserve. I know their courage, their spirit, their sacrifice. I know that in their body flows the same forces of determination that commanded the spirits of the men in whose memory this monument is being dedicated. If the generations of the future meet the challenge as well in their time, America need have no fear and freedom will not perish from the earth. I am confident they will meet their challenge for men and women who are free have a noble cause to live for and to die for.

If the only way the faith of these men could be broken and freedom lost was by the

sword I would have no fear for the future and the free way of life. We have shown many times we cannot be defeated by the bombs of an enemy. If we keep prepared, and we must be adequately prepared at all times, we can successfully meet the challenge of any enemy.

Unfortunately, however, there are other ways in which freedom can be lost. Our way of life can be dissipated into nonexistence by foreign ideologies developed and supported within our own boundaries. Communism is one of these ideologies now threatening our way of life here at home. This challenge must be met and defeated.

Freedom can be lost by unwise economic policies here at home, such as the dissipation of the Nation's resources at home and abroad. Freedom can be lost through excessive taxation. Freedom can be lost to the people of this great Nation through an economy planned in such detail that the individual no longer has the privilege of choice. Freedom can be lost by exploitation for selfish gain. There are far too many people in this country who care not for America and the preservation of its liberties, but only to take advantage of the free way of life for selfish gains. Those who exploit this great land and fail to do their duties as citizens and comply with the Nation's laws must be exposed and freedom denied to them. Those who misuse freedom are not deserving of its rights and privileges. Freedom can be lost by lethargy and the failure of the people to be interested in the affairs and conduct of their Government.

Freedom can be lost through the failure of restoring to the Nation the resources and strength absorbed in the battles to maintain freedom. We are told that Okinawa and other island territories are to be returned to the Japanese after a time, in accord with the treaty just signed. How do you feel about that? How do you think thousands of United States Marines who stormed this great Japanese fortress in the bloodiest, fiercest battle of the Pacific, will feel about that? If we are to keep faith with the men who sacrifice to win victory you cannot give away the fruits of their victory. Such action is a gradually weakening process. The island territories conquered at such great sacrifice should not be given back to Japan.

These are some of the chasms in which we can lose our freedom. If we are to keep the faith we must be alert to all of them. We cannot afford to become lax in any of them. We must protect ourselves from these hazards for if we fail, we are certain to lose all that was won by these men we honor today and preserved and maintained by the many courageous men and women who have followed them. It is the duty of each generation to protect the liberties preserved for them by those who preceded them.

In these days of stress when our liberties are threatened again it is the desire of us all to avoid a great war and to live in peace. There is no peace, however, when we know or even fear there are enemies who would destroy our country and our free way of life. We cannot afford to take chances with our country and our freedom. We cannot strive for peace through compromise if in the end we are compromising our freedom. Remember this. Please remember this. Peace without freedom is slavery. This is the meaning of this wonderful monument.

It is my belief that we should try to work out all of our international difficulties by peaceful means. I do not believe, however, we can ever afford to compromise our freedom. Again I wish to emphasize, freedom lost never can be regained.

As we strive for peace we must be alert to all of the difficulties and be prepared to meet any test thrust upon us. The American people do not want war. Never has our country sought war as a way of settlement of difficulties. On the other hand we have

ably demonstrated that we are capable of destroying any nation which decides to make war upon us. If history has taught us anything it has emphasized time and again that the nation which resorts to the sword is destroyed by the sword.

I believe a peaceful world is possible. The nations of the world are slowly moving in this direction. Until there is more international understanding, faith, and a spirit of good will toward men this goal we so greatly desire to achieve will not be reached. Until it is reached we must be prepared to successfully meet any challenge to our way of life. To do less would be to break faith with the men in whose memory Colonel and Mrs. Fletcher have had erected this beautiful monument. Always it will be an inspiration.

Again I want you to know I deeply appreciate being invited to join with all of you in the dedication of this fine monument. I am proud to be your Member of Congress and very proud to represent in the Nation's Capitol, Middlesex County, the birthplace of freedom.

This Is Your Country

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. REAMS. Mr. Speaker, Mr. Louis Bromfield, a distinguished citizen of Ohio, has written many effective articles on conservation and flood control. He has had practical experience in the solution of the flood-control problems in Ohio. I wish to place in the Appendix of the Record his most recent article, *This Is Your Country*. It refers to the Missouri Valley flood which so recently devastated a large area of our country:

THIS IS YOUR COUNTRY—POLITICIANS, ARMY ENGINEERS SHOULD BE EXCLUDED IN PLANS FOR SOLVING MISSOURI FLOODS

Now that the first shock of the flood disaster in the Missouri Valley has abated a little, it seems to me wise for the people to make some solid and sensible plans for the flood control of the great Missouri River in particular and the whole Mississippi Basin as well.

These plans cannot be left to the Army engineers and the Reclamation Bureau of the Department of the Interior alone. Neither really represents the people of the Nation. Both have potent lobbies in Congress and both are among the most voracious seekers and spenders of the taxpayers' money and at times outdo each other in planning fantastic and improbable projects. Nor can the solution of the problems be left to Congress alone which is very largely uninformed as to problems of erosion, flood control, and agriculture, and is subject to the log-rolling tricks which every year adds millions to the general pork-barrel appropriation burdens of taxpayers.

Many proposals have been made by various organizations and individuals. The general diversity of opinion as to the means of coping with the Big Muddy have produced crops of fanatics ranging from the biggest-dams-in-the-world school, represented by the extremists among the Army engineers, to those who would control floods merely by planting grass and trees. These fanatical elements have done harm at both ends of the stick.

There has also been the dispute over the so-called Missouri Valley Authority plan which would set up an interstate control board to manage the area along lines more or less similar to the Tennessee Valley Authority. While all this hubbub and confusion has been in progress, disasters, huge losses to property owners and added taxes for the overburdened public have been piling up.

VAST WATERSHED AREA

A vast watershed such as the Missouri cannot be controlled by the individual and uncoordinated efforts of the States involved, especially in a huge area which ranges from dry country, in need of irrigation, to rich bottom lands and great cities in need of protection from floodwaters. On its record of extravagance and general inefficiency, the problem cannot be left to the Army engineers (In this respect it should be noted that the Hoover Commission, made up of many of our leading unpolitical and disinterested citizens, recommended taking away all control of our rivers from Army engineers.)

Under the New Deal, the Department of the Interior and its Reclamation Bureau became to some extent a boondoggling agency with the philosophy of spending—just spending—even though the expenditure of \$10 brought back only 50 cents (See the number and fantasy of some of their Rocky Mountain area proposals.) Under the Fair Deal it has become as well a political agency which spends money in given areas to buy the votes.

Two bills are now before Congress for dealing with the flood and irrigation problems of the Missouri Valley, one presented by Congressman RANKIN, of Mississippi, and the other by Senator MURRAY, of Montana. Neither of them are sound bills, and the Murray bill, as might be expected, has a good many Socialist features and would to some extent put the States at the mercy of the Federal Government.

OHIO SOLVED SIMILAR PROBLEM

The solution of the Missouri Valley problem, in the opinion of many people of authority and information, lies neither wholly in vast and fabulously expensive dams, dredging in order to permit the Queen Mary to dock at Kansas City's perpetually washed-out levees, nor in merely the planting of trees and grass but something in-between. The model for many of the tributary watershed areas of the Missouri already exists in the State of Ohio in the Muskingum, Miami, and other watershed developments which have come to be studied by people from all over the world. It is a plan and system, administered by a public corporation under a board of judges and civilian directors, which includes upriver dams for impounding floodwaters together with reforestation projects and strict soil conservation observation within its borders. The two most commendable and sound facts of its existence are that (1) The Federal Government, save through the Army engineers' control of rivers, has no authority whatever over the project, (2) that it pays taxes on every acre of its lands.

Not all of the Missouri Valley could be managed under the Ohio conservatory pattern—for example, the Badlands area of the Missouri Basin would be unmanageable under such a system—but the whole of the agricultural and grazing areas could follow this scheme pretty closely.

It seems to me that what is needed is a commission, similar to the Hoover Commission, made up of able, experienced, and disinterested citizens with politicians, Army engineers, Department of Interior officials and cranks excluded, to examine the situation and draw up an over-all plan in terms of American democratic procedure with due reference to States' rights. The plan could then be delivered to Congress for action. In-

deed, such a procedure seems to be the only method by which a solution can be reached in which the American people will be protected from Army engineers, bureaucrats, politicians, and finaglers.

Not All Were So Lucky

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, many who oppose Communists in certain labor organizations, in the administration, were not as lucky as Martin Dies.

The following is an editorial taken from the Chicago Tribune of September 14, 1951:

RIGHT FROM THE START

Former Congressman Martin Dies, of Texas, asserts that the salvation of the United States depends upon getting rid of the New Deal administration which coddled the Communists and built Russia to its present stature as a world menace. People will heed Mr. Dies because they know not only that he is right now, but that he was right many years ago when few voices but his own were raised against the Communist peril.

Mr. Dies was the first chairman of the House Committee on Un-American Activities. He was a member of Mr. Roosevelt's party, but he would not take orders from the White House to lay off the Communists. In the years before Pearl Harbor, Roosevelt had helped build up the mass-industrial unions to support his political ambitions. He was indifferent to the fact that Communist organizers were extensively employed in the formation of this labor front. He didn't want the Communists in the unions exposed because that would weaken the base of his political pyramid.

Mr. Dies went after Communists wherever he found them. He found a great many of them within the administration itself. He found that the White House regarded them sympathetically. The President's consort ran with them. The President assured Mr. Dies that communism was no menace, that several of his best friends were Communists, and that Russia was America's natural ally.

Mr. Roosevelt already had three good reasons for soft pedaling Communist influence. An important segment of his political following was permeated with it. It had infiltrated his administration. He and his wife were by temperament receptive to it.

A fourth reason why Roosevelt desired silence on the subject was that he was determined to take the country to war and he would have to accept Russia as an ally.

But Mr. Dies couldn't be dragged away from the trail. The consequence was that he was subjected to such a campaign of organized vilification by the administration as has been directed against no foe of communism since, with the exception of Senator McCARRY. Mr. Dies never retreated. His charges were never controverted. Only when his health became impaired, forcing his temporary retirement from Congress, did he abandon his fight.

Now, with his health restored, Mr. Dies finds himself in the enviable position of a man who was right from the beginning and is acknowledged to have been right. Vindication has rarely been provided with such rapidity by events. The intentions of Russia

toward the United States are now clear to every American—even to the administration which fought Mr. Dies every step of the way. The Hiss, Coplon, Wadleigh, Harry Dexter White revelations, together with innumerable others, have demonstrated the Communist treachery within the Government. The CIO has been forced to clean house in the Kremlin-dominated mass unions.

The signs are that Mr. Dies is on his way back to Washington. Once back in Congress, Mr. Dies will find plenty of work to do, helping to drive the Communists to cover and to save the country, for Mr. Truman stands in the same relation to the Communists as did Mr. Roosevelt. While professing to fight them abroad he is their protector at home, proudly wearing upon his lapel the plastic medal of the order of the red herring, first class.

Resolution on William N. Oatis

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. ASPINALL. Mr. Speaker, it is the habit of tyrants to ignore the dignity of the individual who falls within the confines of their power. Laws, rights, truths, these mean nothing to tyrants. Their answer to any outbreak of light within the enveloping darkness of their evil machinations is suppression. Selfish and unscrupulous leaders cannot erect despotism upon the backs of men endowed with individual rights and the freedom of the expression thereof.

An American Associated Press correspondent in Prague, Czechoslovakia, William Oatis, recently came under the heel of tyrannical, totalitarian suppression. At his mock trial, it was charged that he had sought information, that he had sought to find out what was going on. The farce was justly publicized by the free-world press because any free man knew that he was, indeed, doing just that. It is the function of a free press to report, without fear or favor, what is going on whether it pleases those in power or not. The conviction, if such term may be used to describe suppression, only makes plain the fact that a police state can allow no light to be shed which might make men free in knowledge because action follows knowledge.

Thus, freemen everywhere are rising in wrath and objection over this sham trial but all too real conviction of William Oatis. Evil is being spelled out and again referred to as evil so that men may continue in freedom. For this reason I take pride in inserting in the Record a declaration by freemen that: William N. Oatis shall be freed and vindicated, and that evil shall be blotted out wherever it raises its ugly head. The resolution, adopted by Aerie, No. 595, of the Fraternal Order of Eagles of Grand Junction, Colo., spells out how this may be done.

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his

duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation, and

Whereas Mr. Oatis was arrested and held in detention without access to friend, embassy representative or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous kangaroo court, completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet news agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of Government, at which often much "off-the-record" information is discussed. Now, therefore, be it

Resolved, That Grand Junction, Colo., Aerie, No. 595, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie, No. 595, of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet news agency Tass as well as all satellite-nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 6th day of September 1951.

AERIE, No. 595, GRAND JUNCTION, COLO.

Attest:

BURL M. McKEEL,
Worthy President.
ROY O. POWELL,
Secretary.

Czechs Torture John Hvasta

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from today's Washington Daily News:

A CALVARY OF AGONY—CZECHS TORTURE YANK, UNITED STATES TOLD

John Hvasta, American and Navy veteran held in a Czechoslovak prison, has been subjected to torture and a Calvary of agony, according to an eyewitness report.

Mr. Hvasta's jail is a filthy middle-ages dungeon, a report released by the National Committee for Liberation of Slovakia said.

Committee spokesman, Dr. V. S. Krajcovic, said conditions are probably the same in the jail where Associated Press Correspondent William N. Oatis is imprisoned.

The report was said to come from an escaped fellow prisoner of Mr. Hvasta. The American, a Hillside, N. J., former United States serviceman, is in the prison at Leopoldov. He has been there since 1948 on a spy charge. Mr. Oatis is in Pankranc Prison on similar charges.

PRISONER ESCAPES

The identity of the author of the report was not disclosed. He said he was a fellow prisoner of Mr. Hvasta in Leopoldov "until the day of my escape."

No one who has not been a political prisoner in Leopoldov can imagine "that in this twentieth century still exists such a torture chamber," he said.

The Communists have covered the windows with tin plates, cutting off fresh air and sunlight and leaving the prisoners buried alive, he said.

"The prisoner is worse than buried alive," he added. "The prisoner is not allowed to see from which side and how many people are finished in the so-called 'Kazamet'."

RESULT WAS TERRIBLE

He said Mr. Hvasta was tortured in January 1950 because Communist spies overheard him telling other prisoners about the existence of real liberty and democracy in the United States.

"The result was terrible," he said. "He had to go through the entire procedure of torture and Calvary of agony. Mr. Hvasta finished in the so-called 'Kazamet'."

This was a windowless dugout in the prison walls, infested with rats and insects, where prisoners went 3 days without food, 3 without water, and underwent 3 more of castigation.

New York Times 100 Years Old Today

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HELLER. Mr. Speaker, I want to take this opportunity to felicitate the New York Times, one of the world's leading newspapers, which is today completing the first hundred years of its existence and is now entering upon its second century of recording news events throughout the world. This is an occasion which should be noted wherever freedom of the press still exists, for only in a free world can a newspaper of this caliber make progress and enjoy a century-old existence during which it contributed vastly to the diffusion of knowledge, culture, and civilization.

How different the world of 1951 is from that of 1851. There is probably not a single aspect of our civilization that has not made some progress to a greater or lesser degree, but in the final analysis we may question the degree of happiness and peace of mind it has brought to humanity as a whole and to each nation individually.

I shall leave that for the philosophers and historians to ponder over and to in-

quire into the political, social, economic, technical, cultural, and spiritual changes and revolutions that have taken place in the world generally and in the minds of men in particular over the past 100 years. The New York Times played a vital role in faithfully recording these changes and in influencing the thoughts and actions of America.

The New York Times has also been a great and constructive force in the growth of New York City as a leading world metropolis, a center of business, manufacturing, commerce, education, science, the arts, and so forth. When the first issue of the New York Times appeared on September 18, 1851, New York City had only about a half million population, and my own borough of Brooklyn was then an independent city of only about 150,000 souls. We have gone a long way since then.

As we take time out to look back briefly over the last 100 years and to recount the many services and achievements of this leader in American journalism, let us also look forward in the hope that in its second century of existence the New York Times will record the story of happier events for humanity and a world truly at peace.

Mr. Speaker, in connection with the centenary anniversary of the New York Times I am placing in the RECORD an article by Meyer Berger, published in the Times on January 1, 1951, reviewing the history and development of this great newspaper. The article is as follows:

YEAR OF CENTENNIAL OPENS FOR THE NEW YORK TIMES—PANORAMA OF PROGRESS, SINCE SEPTEMBER 18, 1851, SHOWS AFFECTION TO THE AELIS OF ITS FOUNDERS, AND THEIR SUCCESSOR IN 1896

(By Meyer Berger)

The New York Times starts its centennial year today. It will be 100 years old on September 18, 1851.

The newspaper was founded by a group that included Henry Jarvis Raymond, of Lima, N. Y., George Jones, of East Poughkeepsie, N. Y., and Edward B. Wesley, of Albany, N. Y.

Later Times backers included Fletcher Harper, Jr., of Harper & Bros., who had started their magazine in 1850. E. B. Morgan, of Aurora, N. Y., a pioneer in Wells Fargo Express, and Leonard Jerome, former Prime Minister Winston Churchill's grandfather.

Mr. Raymond began his newspaper career on Horace Greeley's New York Tribune, and was one of the most distinguished journalists of the period. Mr. Jones worked in the Tribune business office at the same time. They became friends there.

Mr. Raymond had talked for years of the need for a newspaper that would focus sharply on important news and devote less space to personal feuds between owners of competing sheets, or to crusading for causes in which the owners were personally interested, a common journalistic weakness of the fifties.

He wrote the Times' prospectus early in 1851, and Mr. Wesley read his copy on July 4 that year to friends jolling on the sun-warmed ruins of old Fort Putnam at West Point, N. Y. They thought it sound.

The document called for a 1-cent newspaper to be circulated in the cities of New York, Brooklyn, and Williamsburg. It promised correspondence from intelligent gentlemen permanently enlisted in its support.

It also promised full reports on Government affairs, on religious matters, on agriculture, the sciences, industry, and literary

reviews and intelligence prepared by competent persons, besides impartial reporting on drama, music, and on the arts generally.

The Times, the prospectus said, "is not established for the advancement of any party, sect, or person * * * will seek to be conservative in such a way as shall best promote needful reform * * * will endeavor to perpetuate the good, and to avoid the evil. * * * Its main reliance for all improvement, personal, social, and political, will be upon Christianity and republicanism."

The Republican accent was prophetic; Mr. Raymond was to make history as godfather of the Republican Party.

The Times founders were committed in the prospectus to try to "encourage and advance education, to promote economy, concord and justice in every section of the country, to elevate and enlighten public sentiment, and to substitute reason for prejudice, a cool and intelligent judgment for passion, in all public affairs and in all discussions of public affairs."

Mr. Wesley, a broker, was impressed. He raised \$100,000 for the venture, he and Mr. Jones each contributing \$20,000. Mr. Raymond had no cash to put up but got a substantial share of stock for his talents and for his enterprise.

The first edition of the Times was put out under physical handicap. New York had about 500,000 residents then and was in a building boom. Carpenters and other artificers were overwhelmed by contracts and a little hamstrung by a shortage of building materials.

CENTURY'S CONTRAST IN EDITIONS

There were no windows or light fixtures in the building at 113 Nassau Street when Mr. Raymond opened shop there in early September 1851. He and his staff wrote their stories for the first issue in longhand by waverling candlelight and had frequent resort to matches as cool night breezes swooped through the window frames, playfully snuffing the candles' flame.

There was no telegraph at 113 Nassau Street then, and the Atlantic cable had not been put down; but the Times on September 18, 1851, carried proportionately more national and international news than any other New York newspaper published that day and in the days that came after. It was, perhaps, a little weaker on local items, but that department improved as the staff grew.

Most of the foreign news items had come from London on the Royal Mail steamer *Europe*, then by rail from Boston. Most of it was at least 12 days old, much of it older, but that was fast for those days, and the London representative had put aboard newspaper files from all parts of the Continent.

Today more than 1,000,000 words and the equivalent of about 250,000 more in financial tables pour into the Times over communication devices that might have made Mr. Raymond and his contemporaries gape, but the 1851 staff was almost boastfully proud of the speed it had made with the news it got into that first edition 100 years ago.

BIG EVENTS ACROSS ATLANTIC

Most of the foreign items were culled directly from newspapers of the countries where the stories originated, which was then common journalistic practice. Mr. Raymond preceded these with a crisp summary not unlike the current Times front-page feature, *World News Summarized*.

A good bit of space that first day went to Britain's astonishment over the yacht *America's* defeat of Britain's boat on the Solent. There was a long piece of excitement in Paris over the pending Louis Napoleon-Prince de Joinville contest, and there were many items from other countries, each impressively headlined with the name of the place of origin.

There had been a fugitive-slave riot in Lancaster County in Pennsylvania and Mr. Raymond's staff had gleaned their facts about it from Pennsylvania and Maryland newspapers.

The almost inevitable weather story had the lead under the headline, "New York City," and was offered in neighborly style: "The weather was the theme upon which we hinged an item for our morning edition, but we have been forced to forego the infliction of it upon the public by the proceedings of the Boston Jubilee which our special correspondent has forwarded to us. Never mind, the President [Millard Fillmore] cannot always be lionizing through the country, and as soon as he returns home we shall endeavor to do this important subject full justice."

WHAT WAS HAPPENING HERE

Workmen, the local column reported, were finishing the fountain in Washington Square, which only a few decades before had been a public burial ground out in the country. There was a new steamboat service between Manhattan and rural Flushing (fare, 1 shilling) and the city hall fire watcher had sounded the cupola bell twice to bring out volunteer companies. A Broadway omnibus team had fractured a pedestrian's skull.

A bloomer costume, another local item said, "made its appearance in Sixth Avenue day before yesterday. A crowd of conservatives manifested their hostility to this progressive movement by derision."

This was all front-page stuff. There was a separate heading for news from Brooklyn, then an independent city, and a note from Long Island about a tomato grown by Mr. Frederick Rowland of Hempstead that weighed 2 pounds and 3 1/4 ounces.

Mostly, though, the Times gave its space to graver news, and prospered because of it. In its second year it went to eight pages, twice as many as it printed throughout its first year, and kept growing in prestige, size, and circulation with advancing time.

Mr. Raymond's formula had worked and there were few departures from it in the newspaper's century of existence. It steadfastly remained pretty much a day-by-day account of human achievement. Its files faithfully trace man's errors as well as his stubborn advance toward better living.

The files are packed with national and world history. There is, for example, a comprehensive obituary of Daniel Webster done in longhand by Mr. Raymond himself, and a remarkable record of the Civil War, of events leading up to it, of the Reconstruction, and Abraham Lincoln's administration.

The Gettysburg Address was front-paged, but editorially next day the Times thought Edward Everett's speech at Gettysburg more eloquent and more enduring. Most other newspapers similarly misappraised the Lincoln classic.

Mr. Raymond, physically small, had extraordinary courage. One night in July 1863, after he had editorially called on the law to crush looting bands of antidraft rioters in New York City, they marched on the Times office at 41 Park Row, heavily armed and calling for his blood.

Mr. Raymond and Winston Churchill's grandfather quietly waited for the mob as it poured down from the Bowery whooping and hollering into Printing House Square. Both sat behind the now-rangled Gatling guns ready to spray the rioters, but the hoodlums learned about the guns and swerved off.

When they set fires in the Tribune office across the square Mr. Raymond sent 16 of his men armed with rifles to help police drive off the mob.

The Times' account of the shooting of Abraham Lincoln at Ford's Theater, headlined *Awful Event*, still brings that sad incident into tragically sharp focus. The editors made one major error that night, they

put black borders around all front-page columns, but the President had not died when the edition went to press.

RATTLING THE TWEEED RING

When Mr. Raymond died in 1869 Mr. Jones took over. He clung to Mr. Raymond's basic policies, even in costly crucial periods. He attacked the Tweed ring in 1871 when other newspapers closed their eyes to the ring's unholy plundering of New York City's funds, and coldly turned down a \$5,000,000 cash bribe proffered by Dick Connelly, a Tweed lieutenant sent to call the Times off.

The Times remained almost uncompromisingly Republican until James Blaine was nominated by the party to run for President in 1884. Then, after its warnings that he was unfit for the office of Chief Executive went unheeded, it reluctantly backed the Democrat, Grover Cleveland, who won. From that time on it remained politically independent.

Hard times weakened the newspaper after Mr. Jones' death in 1891. By 1896 its circulation was down to around 9,000 copies a day, and the group of Times men who had bought it from the Jones heirs were in despair. The plant that Mr. Jones had built and expanded at 41 Park Row, once the handsomest newspaper establishment in the city, was shabby, its presses needed replacement, and the revenue from advertising had faded almost to vanishing.

On August 18, 1896, after the Times had gone bankrupt, it was taken over by Adolph S. Ochs, a young publisher who had purchased the Chattanooga Times in Tennessee and developed it as one of the best newspapers in the South.

Mr. Ochs had arrived independently at the same news principles that Mr. Raymond had conceived but which had somehow faded and withered on the New York Times.

"It will be my earnest aim," Mr. Ochs wrote for the issue of August 19, 1896, "that the New York Times give the news, all the news, in concise and attractive form, in language that is parliamentary in good society, and give it as early if not earlier than it can be learned through any other reliable medium; to give the news impartially, without fear or favor, regardless of party, sect, or interests involved."

The new publisher, a printer by trade, used his knowledge of this art to give the Times a neater, cleaner format. He introduced better and more ample business and financial news features, an illustrated Sunday supplement (now the Sunday magazine) and a weekly section devoted to news and reviews of books.

In 1898, after Mr. Ochs' meager starting capital had been spent in vain effort to compete with the New York World and the New York Journal, both rich publications which spent comparative fortunes on Spanish-American War coverage, he dropped the price of the Times to 1 cent.

This measure of desperation became effective on October 10, 1898. The publisher's contemporaries were sure that the move would prove suicidal; that the price drop would lead readers to think that the Times had cheapened in all respects.

Mr. Ochs said: "It is the price of the newspaper, not its character that will change" and when readers realized that this was fact, the Times won thousands of new readers and increasingly greater advertising volume. It moved out front as one of the world's leading newspapers and stayed there.

Times Tower was finished in 1905 and Times Square took its name from it. Eight years later the newspaper needed a large annex in Forty-third Street, west of the Square. Subsequent additions inspired by circulation and advertising gains and for more space for news-handling, the last finished after the close of the Second World War, gave the Times one of the largest newspaper publishing plants in the world.

Since Mr. Ochs' death in 1935, the newspaper's high-quality news tradition has been furthered under his son-in-law, Arthur Hays Sulzberger. The Times today has more than 1,300 correspondents on full or on part-time assignment, and unmatched communications facilities for handling their copy. Mr. Raymond's entire working force had fewer than 50 men. The Times today employs more than 4,000 men and women. In Mr. Sulzberger's regime, the Times has increased its prestige in the news-gathering field, which has been reflected in its advertising and circulation growth.

A HUNDRED YEARS OF GROWTH

In 1851 the total circulation of New York's 15 newspapers was 130,000 a day. The New York Times circulation, 100 years later, is more than 1,100,000 on Sunday, and in excess of 635,000 daily. In 1950 the Times carried more than 39,500,000 lines of advertising, the highest amount in its century of existence.

Mr. Raymond's Times used a total of 30,000,000 newsprint pages between September 18, 1851, and September 18, 1952. More than 15½ times that amount of newsprint was used for one recent Sunday edition, or just 1 day's press run. The change has been that great.

There have been other remarkable changes in the 100 years since 1851—such changes as the Times' founders could never have conceived in their most fantastic dreaming, yet based fundamentally on their original formula for faithful news presentation.

The decision to create a newspaper that would be as complete a human record as possible has endured for 100 years. Historians who pore over Times pages can easily trace a century of mortal progress and recession there. The acorn and the oak come quickly visible to discerning eyes.

On Tuesday, June 13, 1854, for example, the first four columns in the Times told under the headline, "Japan opened," what Commodore Perry had achieved in commercial treaty negotiations at Yedo, now called Tokyo.

The article was complete with interesting detail on the Japanese resources, habits, customs, and beliefs, all pretty much unknown to the average reader in 1854. A side story told of the burial of Robert Williams of the United States Marine Corps who had died aboard the U. S. S. *Mississippi* during Perry's visit.

Almost 100 years later a Times man hovered over Nagasaki in a B-29 to report in detail the destruction wrought by an atomic bomb. And now in Yedo the Times has its own news bureau equipped to communicate by telephone, wireless or cable with the home office off Times Square.

News of Perry's achievement in Japan was 10 weeks reaching the Times. Today news of that country, of Korea, India, China, Tibet, and other Far East places where history is bubbling, gets to the office in split seconds when such speed is necessary.

One hundred years of important human undertakings everywhere on the globe, under its vast waters and in the skies above it, have been fixed in the Times record in printer's ink to cover one century in the daybook of mankind.

Spiritual Values in Modern Political Life

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. AYRES. Mr. Speaker, yesterday, the Republican State chairman, Mr. Ray

Bliss, of the great State of Ohio, had a meeting of the Republican chairwomen. It was an inspiration to me to attend this meeting. Mrs. Florence Morris had arranged a wonderful program. My distinguished colleagues Congressman J. HARRY MCGREGOR and Congresswoman FRANCES P. BOLTON also attended the meeting.

The main address was delivered by Mrs. BOLTON. It was keyed to the women and, at the request of the State vice chairman, Mrs. Florence Morris, concerned itself with the spiritual values in modern political life.

Mr. Speaker, under unanimous consent to revise and extend my remarks, I include our distinguished colleague's remarks upon this occasion:

SPIRITUAL VALUES IN MODERN POLITICAL LIFE

(Address delivered by Hon. FRANCES P. BOLTON, before a meeting of the county chairwomen of Ohio in Columbus, Ohio, September 17, 1951)

First I must thank our Republican vice chairman, Florence Morris, for this great pleasure and privilege of meeting with you who are the chairwomen in Ohio's 88 counties, and to share with you the pride Ohio Republicans have in our women members of the Ohio General Assembly, to whom I have listened with such interest.

It is always refreshing to be with Ohio women—whose national committeewoman is Katherine Kennedy Brown. Katherine, it is good to see you.

What a splendid program has been prepared. I share with you your enthusiasm over Senator BRICKER's decision to remain in the Senate. I know you join with me in a determination to give him unfaltering and joyous support.

No one could give you more vital pictures of what campaigns in rural and industrial areas are and should be than HARRY MCGREGOR and BILL AYRES, that is certain. Both men are hard and earnest workers, both are able, both must be returned next year that the people in their districts in the great State of Ohio can be assured of real representation in the Congress.

I have been asked to talk about spiritual values in modern political life.

I am sure you agree with me that only Florence Morris would give anyone such a subject.

Ever since I had her letter asking me to come to this meeting my subject has been consciously and subconsciously with me. It is the result of these processes of mind that I bring to you today with a humility that is combined with a deep sense of privilege.

You are a group of outstanding women. You are in places of great responsibility at a moment when the fate of men hangs in the balance. Because you are women you are instinctively aware that there is but one reality and that is the spiritual. Unless you can translate that knowledge into practical action in every area of life that you contact, to every area of life in which you live, whatever you do will be superficial and in some essential way will fall of accomplishment. I could not talk with you about it, however, if I were not certain that you are doing just this, whether consciously or unconsciously, every hour of the day and night.

We are Republicans, living in a Republic, believing in a democratic way of life. I want to talk about this word "democracy" for a moment because it is essentially a good word; its original meaning was clear, but it has been desecrated, and we have permitted that desecration. We have allowed the New Dealers to bandy it around until everyone has become so confused that perfectly good

Republicans are calling this great country of ours a democracy. Out in the world the U. S. S. R. calls itself a democracy. And who protests? Who uses the technique of constant repetition to show them up for what they are, to counteract Moscow's consummately skillful use of that—the strongest of all teaching techniques—repetition?

Thomas Jefferson founded the Democratic Party—Republican-Democratic Party. Never once in his first inaugural address did he mention the word "democracy" or any derivative thereof, although he made several direct references to the republican form of government under which this Nation operated.

Governor LEHMAN, of New York, in his first inaugural address in 1933, did not use the word either. In 1935 he used it twice; in 1939 he used it or a derivative 25 times. In his annual message of January 1940 he used it 33 times. Ever since the advent of the New Deal this misuse of the word has been deliberate, in an effort to confuse the electorate into believing that the Democratic Party and America's original democratic principles are one and the same. Up in Cleveland we have found that our new citizens join the Democratic Party because they believe just this.

What power there is in a word.

Benjamin Franklin told the people of his day in clear, unclouded language that they had given us "a Republic," adding with great vision and foresight, "If you can keep it so."

Now I want to examine this word "democracy" a little. Let me give you the Encyclopedia Britannica. It says: "Democracy is a form of government based upon self-rule of the people. Democracy is a way of life based upon the fundamental assumption of the equality of all individuals and of their equal right to life, liberty, and the pursuit of happiness."

Aristotle criticized the decaying Athenian democracy because he regarded it as a perverted form of the state where the citizens at large govern—because such democracy considers only the poor, not the common good, says he.

Democracy, says the Encyclopedia Britannica, presupposes the existence of opposition as a legitimate partner in the democratic process. It rejects any totalitarian or monolithic identification of the state with one party or with one dogma. It means the recognition of the fundamental values of individual liberty and of the equality of all men. Democracy has many shortcomings, but these should not be allowed to foster a spirit of unproductive criticism which, in its wish to put something better, etc., in place of corruption, mediocrity, etc., is not clear about the alternative which turns out to be some form of old authoritarianism, however streamlined it may seem. By its own very essence, democracy can never be perfect because that would presuppose a perfect citizenry.

Democracy as a way of life within any government must have—

1. A popular constitution.
2. A parliament of some kind.
3. Universal suffrage.
4. A disciplined party system.

Through these (Encyclopedia Britannica) there can be equality of persons, who recognize that upon each individual is placed that responsibility which in other systems is placed upon the ruler.

Here in this land of ours, we base our conceptions upon the right of the individual to be free to develop his peculiar faculties—and we place upon him by our republican form of government, the responsibility to protect the freedom of every individual against injustice from his fellows or from his government. Why do we do this? Because an individual, per se, is so important? No. Rather do we endeavor to make possible a life of

individual development because it is the foundation stone of our belief that the individual is made of the very essence of deity. "And He breathed on them the breath of life, and they became living souls"—not our breath, but His.

So we and all members of the nations of earth as individuals are important to the life and the being of God. Hence, this great Republic of ours is of vast importance in the universal plan—and we who are women, we who are Republicans—a party born out of the need of the common people for justice and opportunity—have a tremendous responsibility. We who are women, especially those of us who have the responsibility of leadership in areas outside our homes, have a particular responsibility to go deep into our own souls to discover and rediscover what is truth for us. We need to know what is fundamental to us as children of the living God. We must have a center—firm, strong, immovable—from which we can swing out in any direction without losing balance, for we must always be able to swing back with confidence and inner peace.

Socrates held that: "The end of being is to find out God." Certainly all who believe beyond all shadow of doubt in immortality know with the ancients, that "never the spirit was born, the spirit shall cease to be—never—end and beginning are dreams." We who are Christians have grown up with that awe-inspiring "In the Beginning was the Word, and the Word was of God, and the Word was God." That Word is the reason for life upon our earth, set as it is in the great galaxy of the firmament—it is the incarnation, the visible form of the beauty and the being of the Infinite. We who are women have a particular responsibility to that Word. It is we—who are the matrix of God's life in earth—who must keep that Word alive!

To do this we must go deep into our own souls to discover and rediscover what is truth to us.

There is no one formula for this. Each must find her own way. But if you are to carry well the responsibility of your office, you must find it and walk upon the road it reveals to you with courage.

So I would have you use words with a new sense of their importance—with a constant consciousness of their power. Try to think of them as bits of that Infinite Word that was made flesh and dwelt among us. Remember always that it is the essential, basic meaning of words that is of such crucial moment in these days.

We are agreed, are we not, that fundamental values are spiritual values no matter into what areas of living we go.

In His wisdom, the Infinite God has made Himself visible in the beauty, the splendor, and the awesomeness of the firmament. He has made Himself visible upon the earth in majesty, in discipline, in beauty, in darkness, and in light. The earth is His—it is the visible symbol even as we are. Because God is—we are. In the beginning was the Word.

Perhaps you feel I emphasize the word *unduly*—yet—you go out from here to build not only the framework but the structure of a newly reborn Republican organization and party, reconsecrated to protect the essential freedom of the individual and to convince everyone you contact of the inescapable responsibility that rests upon the individual if freedom is to survive.

You who are here today have accepted leadership in your counties. You stand with a lighted torch at the crossroads, hoping that

all who pass that way may choose the road to freedom and ultimate peace. Perhaps the word you speak in greeting gives them the courage to choose well.

Oh, yes; you must be able to answer their questions, you must give them clear, down-to-earth answers. You must use words whose roots go deep, even while they open up windows that give a glimpse of heaven.

You will perhaps speak to them of liberty. Are you ready to give them a sense that liberty is of the spirit—that where the Spirit of the Lord is, there is liberty (II Corinthians 3:17). Can you persuade them through your own passionate belief that obedience to divine law is liberty? (Judge Skeel—Newton D. Baker.)

Can you give them back their faith in themselves as responsible members of a free society based upon law—not men? Is your own faith like the "bird that feels the light and sings when dawn is still dark"? Is your faith in this great Republic of ours, in its destiny, an active thing—a brave endeavor—a splendid enterprise—not passive, but vividly alive?

Are you ready as a Republican leader in your community to give leadership, when John Buchan defined as "courage and wisdom with a great carelessness of self." Is your strong center of your life secure? Is your belief in fundamental freedom based upon liberty under law impregnable?

Ella Wheeler Wilcox wrote:

"This is the weightiest moment of all time, and on the issues of the present hour a nation's honor and a country's peace, a people's future, aye, a world's, depends."

In 1781 George Washington wrote: "We must not despair, the game is yet in our own hands, to play it well is all we have to do. And I trust the experience of error will enable us to act better in the future. A cloud may yet pass over us, individuals may be ruined, and the country at large, or particular States, undergo temporary distress, but certain I am that it is in our power to bring these matters to a happy conclusion."

We are privileged indeed to be in positions of responsibility in the political life of these United States at a moment when woman's understanding of the world's need of spiritual consciousness can have great bearing upon the future.

Indeed, we must not despair over the fact that the morale of our people has fallen into the mire. Rather must we permit the errors of omission and commission to enable us to act better in the future.

Knowing that the strength of a nation is the morale of its people, let us take hold of our own party—quietly, purposefully, prayerfully, and with complete faith in the power of the word, whether spoken or unspoken, giving to it our strength, our courage, our confidence in victory for the right, rightfully presented. Yes, we have been the minority party 10, those many years, but let us remember that it is the minority that have stood in the vanguard of every moral conflict, who have achieved all that is noble in the history of the world.

IN THE BEGINNING WAS THE WORD

The moment is upon us when we must assume the responsibility that is ours to keep the Word of the Infinite alive.

May the God of all give us strength and purpose, endurance and faith, humility and courage that we may truly serve Him on the political pathways upon which we have set our feet. May His blessing be upon us each day as we go forth and each night when we commend our souls to Him in sleep that we may contribute to the coming of peace.

Pay Boost for Federal Employees Overdue

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. LANE. Mr. Speaker, there was a time when many young Americans prepared themselves in serious competition to win jobs as clerks or stenographers with the Federal Government. Such jobs represented steady income and security. Many folks dedicated their lives to these humble careers.

That was "once upon a time."

Today those jobs are underpaid and insecure.

Government workers are poor relatives sitting at the end of Uncle Sam's table with no recognized union to give them the collective-bargaining rights enjoyed by workers in private industry. They must beg the Congress for a little more to eat, hoping that the Congress will recognize that their incomes are lagging far behind the rising cost of living and take steps to close the gap.

Both the House and Senate have approved bills providing for an upward adjustment in pay for Federal workers. These bills are close enough to have their minor differences ironed out without delay.

I urge my colleagues to pass this legislation as soon as possible and to make the increases retroactive to July 1, 1951, the beginning of the fiscal year.

Big government is like big business. Its success depends primarily upon the skill and the morale of its workers. To get and hold the best employees, it must provide incentives. A worker who is treated fairly by his employer, and that includes adequate pay and opportunities for promotion, becomes an efficient and confident worker with pride in his job and loyalty to the firm that are definite assets to any enterprise.

This morale is lacking in the operations of the Federal Government today, for reasons understood by every man or woman who works to support a family.

In the following facts we see the cost of our neglect.

During the past year for every 10 persons who have entered the employ of the Federal Government almost 4 persons have left that service.

No private business could survive with such a rate of turnover attended by all the added costs of training successors.

All of us are concerned with the heavy taxes that are being levied upon us and with the mounting public debt.

Perhaps too many employees have been taken on by some Federal agencies.

But this is no reason for holding the regular and essential employees to substandard wages. It is unreal and unfair to pass the blame for waste in Government to those workers without whom Government could not function, and

whose income is anemic by present standards.

Remember too that Federal employees do not have the insurance of unemployment compensation to tide them over the reductions in force that make them jobless and without income while they search for other employment. Thousands of VA employees are in this very situation today. They have received notices of dismissal, but they will not have unemployment compensation to assist them over the job-seeking interlude that will follow.

Again, the Government worker has much more taken from his pay for retirement purposes, than the worker in private industry.

Indifference to the plight of Federal employees has forced them to drastic measures to alleviate the squeeze under which they exist.

In San Francisco they inserted the following ad in a newspaper and I quote:

Postal employees desire part-time work to provide decent living conditions for families, not possible under present salaries

Conscientious, intelligent, industrious, versatile help offered

Field covers various occupations, baby sitters to truck drivers

Available day or night.

Duration of employment bearing on adequate post office pay increase by Congress.

Permanent employment possible.

For information write box 3001, San Francisco 19

After all, it is the duty of the Federal Government to collect revenues, to provide for the common defense, to protect our borders, to maintain a postal service, to conserve and utilize our natural resources, to maintain regulatory agencies for the health and well-being of our citizens, to care for and rehabilitate the disabled and displaced veterans of our various wars, among other obligations.

These responsibilities cannot be fulfilled properly with underpaid employees who themselves become the victims of gnawing worry and discouragement.

Gentlemen, I move that we do something substantial this week to recognize those faithful employees who serve the Nation

To compensate for past oversights, I believe that the minimum increase for all should be \$500.

It deserves to be the first order of legislative business to be enacted this week.

McSweeney on a Snowball

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. AYRES. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial:

McSWEENEY ON A SNOWBALL

A bureaucratic government, into which category the Federal Establishment of the United States has degenerated gradually over many years, has enormous opportunity to perpetuate itself—which means to

preserve appointees' jobs and continuously create new ones for political workers

It perpetuates itself by direct and indirect political pressures, primarily by creation of public support through dissemination of "publicity" and "information."

Thousands of men and women are employed by Federal agencies to write "news" and prepare "information." These materials not only find their way into the columns of newspapers and magazines, but are picked up as factual and educational by the writers of textbooks. So the voters of tomorrow as well as today are conditioned to the idea of paternal government.

It is virtually impossible for the advocates of a contrary philosophy of government to present their case with equal force, for the bureaucrats have at their service the far-flung resources of the Federal Government and the prestige the stamp of government bestows

The net result of the whole business is that men and women living out of taxpayers' pockets use taxpayers' money to sell the public on maintaining present bureaus and creating new ones for "improving" the lot of the people

Clevelanders saw the process at work on Labor Day, when John McSweeney, of Wooster, spoke to an A. F. of L. crowd of 50,000 at Geauga Lake Park

McSweeney is a loyal Democrat who was defeated for reelection to Congress last year. He was one of the lame ducks taken into the bureaucratic nest in Washington under President Truman's wing. McSweeney is a special assistant to Price Stabilizer Mike DiSalle

McSweeney made a political speech. He not only pleaded the cause of a particular brand of controls legislation, but he sang the praises of DiSalle and other bureaucrats

His job, theoretically, is to carry out duties specified by Congress. But at Geauga Lake he made a political speech, at the expense of the taxpayers he was bamboozling, for the Plain Dealer's Washington Bureau learned that it is the system for the DiSalle bureau to pay transportation and \$9 a day expenses

Senator Jenner of Indiana has pointed to another example by asking a Senate committee to ascertain who paid the expenses of five Government appointees who attended a recent meeting of the Democratic Party at French Lick. Mike DiSalle was one of the five on that political mission

The use of tax moneys by Federal jobholders for feathering their own nests constitutes one of the most difficult and serious problems facing the American public.

It is obvious that Federal jobholders are going to show their own work only in the most favorable light, that both sides of controversial projects and policies will not be fairly presented by them. It is obvious, too, that expenditure of tax money for whipping up support for additional tax expenditures is evil. However, the problem is not a simple one

For at least 30 years Congress has been struggling with it. An act of July 11, 1919, provided "No part of the money appropriated by any enactment of Congress shall, in the absence of express authorization by Congress, be used directly or indirectly . . . to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill."

However, special acts setting up particular agencies make provision for dissemination of information, and it is often impossible to draw a line between information and political propaganda. Likewise, it is often impossible to distinguish between political activity and official business

On March 30, 1950, the Comptroller General, who is a creature of Congress, reported to the House Lobbying Committee the following "Perhaps an even greater evil in public expenditures for lobbying consists not

so much in direct appeals to the Congress, but in campaigns put on throughout the country at large for the purpose of inducing the electorate to put pressure on Congressmen and Senators."

And that's what we saw on Labor Day. McSweeney spent some money appropriated for stabilizing prices to whip up public support for bigger and more odious price-control laws and expenditures.

This is one of the reasons why bureaucratic government always grows like the snowball. And we'll see it happen to the Price Stabilization Bureau—it will grow, and grow, and grow while prices go higher and higher. The more it spends, the less it will stabilize, but the more public passion it will arouse in its own behalf.

Lysander Smith, May His Tribe Increase

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, the passing of Lysander Smith, Binghamton, takes from our midst a newspaperman the like of whom there are too few today.

If all newsmen would take a page from the book of Lysander Smith, the world would be a far better, and safer place in which to live.

This gentleman came from the diminishing school of factual reporting, from among those reporters who feel that smear, innuendo, and propaganda have no place in the realm of newspaper corresponding.

Lysander Smith hated off-color descriptions of people and events. He strove only to do what the truly American reporter should do, to give the facts, unvarnished and untinted.

Cub reporters too often grovel and fawn about the knees of opinionated editors and bigwig publishers. They prefer crumbs from the tables of the mighty instead of climbing, in dignified fashion, the ethical rungs in the ladder of their profession.

Lysander Smith went about his daily work for long years, patiently determined to be a credit to his contemporaries, and an asset to truth in the world of journalism.

He will be sorely missed by those of us who depend upon the integrity of the newspaper fraternity, not to twist, not to misrepresent in distorted columns, the accurate recording of our daily deeds and words, but to cover with dexterity, with honesty, with tolerance, and with clarity the actions of those duly elected by the people.

Lysander Smith's name should be emblazoned on the frontispiece of every newspaperman's primer as a lasting symbol of fair, above-board, straightforward reporting.

An American newsman, hostile to the poison-pen, refusing to succumb to the left-wing journalism of smear, so popular with some, a star reporter and a fine gentleman of the ultra-American school was Lysander Smith, newspaperman extraordinary.

Soil Conservation Expenditures

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD certain information and statistics about soil conservation expenditures:

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND
MARKETING ADMINISTRATION,
Washington, D. C., August 24, 1951.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This will acknowledge your requests of August 10 and 17, 1951, to James M. Hunt of the Agricultural Conservation Programs Branch, and the attached letters in regard to the funds expended for conservation.

This is the information about which you wrote the Secretary of Agriculture on July 25. The Assistant Secretary of Agriculture wrote you on August 8 that the work of compiling the information was under way. The tabulations for a number of States are completed but unless we hear from you to the contrary we will wait until the material is completed for all States, at which time it will be sent to you.

We wish to point out, however, that the data available in the Production and Marketing Administration relate only to the assistance under the agricultural conservation program, and do not include any information with respect to the work of the Soil Conservation Service or other agencies dealing with conservation. We will therefore be able to furnish you the data which you requested from Mr. Paul H. Walser, State conservationist, Temple, Tex.

Your letters from H. T. Price, B. P. Vance, and Paul H. Walser are attached.

Sincerely yours,

HAROLD K. HILL,
Acting Administrator.

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Temple, Tex., August 1, 1951.

Hon. LINDLEY BECKWORTH.

Member of Congress, Washington, D. C.

DEAR LINDLEY: This morning we have received a letter forwarded from College Station requesting information on how much money in the last fiscal year was spent for soil-conservation purposes in each of the counties in the United States. As you know, our work is done in soil conservation districts, many of which are not on county lines. For this reason, it will be extremely difficult to determine the expenditure of Soil Conservation Service funds on a county basis.

I believe that your letter must have been intended for the Production and Marketing Administration which does expend its funds on a county basis so I am forwarding your letter to Mr. Vance for reply.

If I have misinterpreted your letter please let me know. I send best regards and good wishes.

Sincerely,

PAUL H. WALSER,
State Conservationist.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING
ADMINISTRATION,
College Station, Tex., August 14, 1951.

Hon. LINDLEY BECKWORTH.

House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: This will reply to your memorandum of August 6 with which you enclosed correspondence from Mr. Paul Walser, State conservationist, SCSS. Information had been requested on the amount of funds expended for conservation activities in all Texas counties as well as in the counties in the United States.

As pointed out in a letter dated August 7, these data are available in the office of Mr. James M. Hunt, Chief, Division of Statistics and Economics, ACP branch, Production and Marketing Administration, Washington. I am sure that he will be glad to furnish the figures for Texas counties as well as for all counties and parishes in the United States.

Very truly yours,

B. F. VANCE,
Chairman, State Committee.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING
ADMINISTRATION,
College Station, Tex., August 7, 1951.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: This is in reply to your letter of July 25, 1951, in which you requested information on the amount of assistance given farmers and ranchers in all counties in the United States for performing soil and water conservation practices during the 1951 fiscal year.

We do not have this type of information for all counties in the United States in this office. I suggest that you contact Mr. James M. Hunt, Chief, Statistical and Economics Division, ACP Branch, Production and Marketing Administration, Washington, who is responsible for getting the type of information you desire and who will be glad to assist you.

Very truly yours,

R. T. PRICE,
Executive Officer.

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D. C., August 29, 1951.
Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: In response to your letter of July 25, 1951, we have secured a report from each of our seven regional offices, itemizing by appropriation and county the amounts of funds obligated by the Soil Conservation Service during the fiscal year 1951. Since our accounting records are not maintained on a county basis, we have had our State and regional offices estimate the county breakdown of all the money obtained during the year.

In addition to the county breakdown we have shown an obligation of \$185,810 for "various" purposes with an explanatory footnote. We have also shown the obligations for the District of Columbia during the 1951 fiscal year. We hope that these figures will provide you with the analysis you desire.

Sincerely,

H. H. BENNETT, Chief
P. S. We are returning herewith correspondence attached to your memorandum of August 28.

Obligations by appropriation, fiscal year 1951

Item	Total	Soil-con- servation research	Soil con- servation operations	Land utiliza- tion and re- treatment of submarginal land	Water con- servation and utiliza- tion projects	Flood control
Various	\$185,810	\$1,721	\$101,034	\$35,115	\$61	\$79,989
District of Columbia	1,206,763	151,871	959,415		21,012	122,957

¹ Includes the Service printing and reproduction expense of \$101,720; expense of the National Engineering Standards Unit, headquartered at Lincoln, Neb., \$60,301; miscellaneous research expense, \$1,710; and \$19,016 for basin investigations and comprehensive planning on the Arkansas-White-Red watershed covering 9 States. It is not possible to equitably distribute these items on a county basis.

Converse.....	42,158		35,413	6,745			California research: Riverside County—Benefits all of California South of Tehachapi.						
Territory covered: Albany.							Idaho Research: Ada County—Benefits southern Idaho.						

11 Territory covered: Albany.
 12 California research: Alameda County—Benefits irrigated areas generally but mainly those west of the Mississippi River.
 13 Irrigation funds shown under Alameda County are administered from Berkeley, Calif., but cover work in all of California and Nevada on snow surveys. The nature of that work makes it impracticable to distribute the cost on a county basis. Snow courses

do not follow county lines and very generally the benefit goes to counties in which no courses are actually located.

14 Irrigation.
 15 California research: Riverside County—Benefits all of California South of Tehachapi.
 16 Idaho Research: Ada County—Benefits southern Idaho.

¹⁷ Idaho Research: Fremont County—Benefits southern Idaho and northern Utah.
¹⁸ Oregon Research: Umatilla County—Benefits the lower rainfall areas of the Columbia Basin.

¹⁹ Washington Research: Benton County—Benefits northeastern Oregon and eastern Washington.

²⁰ Washington Research: Whitman County—Benefits the higher rainfall areas of the Columbia Basin.

^a Included in Maui.

^a Includes Kalawao.

^a Territory not divided into counties.

^a Territory served: Entire State of New Mexico, and all irrigated areas in Arizona, Colorado, Utah, and the other Western States.

^a Territory served: Entire State of New Mexico.

²⁶ Territory served: All irrigated counties in State.

²⁷ Territory served: All of Arizona, New Mexico, southwest Texas, southern Utah, southern Colorado, and southeastern Colorado.

²⁸ Territory served: 4 Counties in Grand Valley of upper Colorado River Basin.

²⁹ Territory served: All irrigated counties in the United States.

³⁰ Territory served: All counties where meadows are irrigated in the Western States.

³¹ Territory served: All irrigated counties in the State and all canal lining projects in all irrigated areas in the United States.

³² Territory served: All irrigated counties in southern and central valleys of California.

³³ Territory served: All irrigated counties in the State.

³⁴ Territory served: All irrigated counties in eastern Oregon.

³⁵ Territory served: All irrigated counties in lower Rio Grande Valley of Texas.

³⁶ Territory served: All irrigated counties in the High Plains area of Texas.

³⁷ Territory served: All irrigated counties in eastern Washington.

³⁸ Territory served: Research: All counties where mountain meadows are irrigated.

³⁹ Operations: All irrigated counties in the State.

⁴⁰ Amount shown for Soil Conservation Research are listed opposite the counties in which the research station is located. Benefits derived from these research studies have a much wider geographic location. The respective amounts shown for Soil Conservation Research, from an application standpoint, would be distributed as follows: Champaign County, Ill., State of Illinois; Tippecanoe County, Ind., State of Indiana; Story County, Iowa, State of Iowa; Ingham County, Mich., State of Michigan; Hennepin County, Minn., region-wide; Boone County, Mo., State of Missouri; Coshocton County, Ohio, State of Ohio; Dane County, Wis., region-wide; La Crosse County, Wis., Wisconsin; Minnesota, and northeast Iowa.

APPENDIX TO THE CONGRESSIONAL RECORD

¹⁰ Amounts shown for Soil Conservation Research are listed opposite the counties in which the research station is located. Benefits derived from these research studies have a much wider geographic location. The respective amounts shown for Soil Conservation Research, from an application standpoint, would be distributed as follows: Champaign County, Ill., State of Illinois; Tippecanoe County, Ind., State of Indiana; Story

County, Iowa; State of Iowa; Ingham County, Mich., State of Michigan; Hennepin County, Minn., region- and service-wide; Boone County, Mo., State of Missouri; Coshocton County, Ohio, State of Ohio; Dane County, Wis., region-wide; La Crosse County, Wis., Wisconsin; Minnesota, and northeast Iowa

^a Auburn, Ala. Specifically: The upper and lower Coastal Plains of Alabama, Mississippi, Georgia, and the northern part of Florida. Broadly: This project affects the "civic" program in the entire southeastern region and in the humid portion of the western Gulf region. For example, results of studies at Auburn with rearing winter

legumes are being used on farms in all States in the Southeast and in parts of Louisiana and Texas.

^b Serves Marl and Rockland areas of southern Florida.

^c Serves Everglades region of southern Florida.

* Fleming, Ga. Specifically: The Bladen soil belt of Georgia, South Carolina, North Carolina, Virginia, and Florida. Broadly: This project will get useful information for all Coastal Plains areas where drainage problems occur.

* Watkinsville, Ga. Specifically: The middle and lower Piedmont areas of Georgia, Alabama, South Carolina, and North Carolina. Broadly: The Southeast and the humid portions of the western Gulf States. For example, soil and water losses measured on runoff plots at Watkinsville have been widely used by operations personnel in all States of the Southeast and in humid areas of the western Gulf region.

* Tifton, Ga. Specifically: The middle and lower Coastal Plains of Georgia, Alabama, Mississippi, South Carolina and northern Florida. Broadly: The Coastal Plains areas of the Southeast and the western Gulf region. For example, runoff plots at Tifton will give us the first measured soil and water losses we have had in the Coastal Plains. This information will be widely useful on sandy soils.

Grand total							Grand total						

* Raleigh, N. C. Specifically: The flue-cured Tobacco Belt of Piedmont North Carolina and Virginia. Broadly: The results at Raleigh will apply in areas of South Carolina, North Carolina, Georgia, and Maryland where flue-cured tobacco is grown on sloping land of the Coastal Plain. For example, row arrangement methods worked out at Raleigh are useful on all sloping land where flue-cured tobacco is grown. Also, the allotment at Raleigh covers drainage work in the Coastal Plain. Results of the drainage work are of greatest value in North Carolina and Virginia Coastal Plains areas. These are broadly useful in all Coastal Plain areas in the Southeast and in parts of the Northeast where drainage problems occur.

* Clemson, S. C. Specifically: The Piedmont areas of South Carolina, North Carolina, Georgia, and Alabama. Broadly: The entire region and parts of the western Gulf and the Northeast. For example, tillage studies at Clemson gave information that can be widely used in areas where sloping land is used for row crops.

* Blacksburg, Va. Specifically: The mountain and valley areas of Virginia and North Carolina. Broadly: The Southeastern, parts of the Northeastern, and humid portions of the western Gulf regions. For example, a special method of plowing and managing a green sod of perennial grass and clover developed at Blacksburg will be useful wherever sod is used in crop rotations.

Total	\$3,950

Includes \$918 of R-RO.

Includes \$3,851 of R-RO.

Includes \$3,725 of R-RO.

Data furnished by Dr. Neal.

Includes \$918 of R-RO.
 Serves Southern Maryland area; also the Coastal Plains area of New Jersey, Delaware, and Maryland.
 Includes National Cartographic Laboratory and National Nursery, totalling obligations of \$380,549.

APPENDIX TO THE CONGRESSIONAL RECORD

A5701

August 15, 1951.

To: Mr. G. O. Lathem, Chief, Regional Budget and Finance Division, Soil Conservation Service, Upper Darby, Pa.

From: J. L. McGuinness, research project clerk, Soil Conservation Service, Bailey Hall, Ithaca, N. Y.

Subject: County distribution, 1951 obligations

Re your letter of August 10 under the above subject, attached is the breakdown of counties in which our 1951 funds were actually obligated. Our breakdown of personal obligations is based on an estimate of time actually spent within a county except that brief reconnaissance surveys, etc., have not been considered.

We believe that our obligations should be prorated over all the counties of the State rather than charged to the counties in which they were made since the results of our work are applicable to the entire State. Broome County, which has no charge on the attached sheet, will have just as much use for the results of our research as Tompkins County, where we spent over \$16,000.

Obligations by appropriation, fiscal year 1951—Continued

Maj. Gen. George A. Horkan, New Quartermaster General

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. PRICE. Mr. Speaker, it was with a great deal of pleasure that I learned of the selection of Maj. Gen. George A.

Horkan by President Truman as the new Quartermaster General of the Army. Upon completion of Maj. Gen. Herman Feldman's tour of duty as head of the Army's Quartermaster department, General Horkan will assume his new assignment, contingent, of course, upon Senate confirmation.

General Horkan's record in military service has been such that I am certain the Senate will act speedily on his confirmation. His succession to the high position will give the Army another fine Quartermaster General. The country

has been fortunate that through World War II and the period following the most capable of officers have held the place. Both General Gregory and General Feldman built the Quartermaster Corps into an efficient administrative organization that gave the Army at home and overseas the best in technical services. In combat and in peace the Quartermaster Corps under General Gregory and General Feldman developed new techniques that contributed to the greatness of our Army.

I had the pleasure of being under General Horkan's command when I served as an enlisted man at Camp Lee. I know of his great ability. I have followed his record closely. In various important assignments, including that of chief quartermaster in Europe, he has acquitted himself as an officer of the highest integrity. His ability as an administrator has been proven in his many tasks. The Quartermaster Corps will continue its fine record under his leadership, and because of his progressive spirit I am certain it will increase in efficiency.

Under leave to do so, I herewith include with my remarks an editorial from the Washington Daily News of Saturday, September 15, 1951:

HE SOUNDS GOOD

Some stories of some generals and their off-duty relations with the great and small of industry have had a none too savory aroma. But there is one story kicking around that provides a pleasant change of pace.

It's about Maj. Gen. George A. Horkan, named this week by President Truman to be the Army's new Quartermaster General.

General Horkan, who learned his ethics here at Georgetown University back in 1915, commanded the Quartermaster Corps' operations at Camp Lee, Va., during the war. While there, he made a lot of friends with the big-shot industrialists supplying the Quartermaster Corps.

Around 1946 he was assigned to the Office of the Quartermaster General here. He collected more friends among the country's businessmen in the course of doing his job here.

Just before he left in 1948 to become chief quartermaster in Europe, a group of these industry acquaintances—none of whom were doing business directly with him—got together, kicked in several hundred dollars to present him with a handsome watch as a going-away present and a token of their esteem.

With an eye on values some military men have not been too aware of lately, General Horkan accepted the watch, then politely handed it back with a request that it be reconverted into cash and the money used to establish an annual award to the outstanding GI student at the Quartermaster School at Camp Lee.

It wasn't much money—only some \$300. The Horkan award, made each June at Camp Lee, isn't anything fancy—only an engraved pen-and-pencil set to the top GI scholar. But it brightens a side of the military ledger that could stand a little emphasis right now.

General Horkan's appointment is now before the Senate for confirmation. If the above is an index to the man, the Senators should have no trouble coming to a favorable decision.

How Pearson Maneuvers

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Santa Ana (Calif.) Register of September 10, 1951:

HOW PEARSON MANEUVERS

As we have said before, there is a distressing number of newspapers publishing the columns of Drew Pearson. Some of the publishers using the column admit to their readers that they won't vouch for the integrity of Mr. Pearson or even certify that to the best of the publisher's knowledge the columns are anything but journalistic garbage.

"The writer of this column is given the greatest possible latitude," explain these publishers, "and the opinions of the writer are not necessarily those of this newspaper."

This ridiculous editor's note disclaims the columnist who is being given the use of the newspaper's space and circulation. The absurdity of the editor's note is not always apparent to the reader who is vaguely tainted with that old nonsense about not agreeing with what the other fellow has to say but defending to the death his right to say it.

Nobody in his right mind subscribes to that idea. The law of the land does not entertain it. Fact is, the publisher of any statement is strictly liable, by law, for any assertion he publishes. This responsibility, incidentally, includes even the innocent printers who may have a hand in putting it into type. So, it is far from every man's right to say anything he pleases. More accurately, it is the right of every man to speak the truth and defend his statements once he has made them.

The reader may be fooled by an editor's note such as the one which appears over Pearson's columns in some papers. But the lawyers are not. And the libeled person may sue every newspaper in which the offensive column appears, although the publisher denies from hell to breakfast that he subscribes to the columnist's statements. If the publisher is leery of his columnist's accuracy and credibility, he ought not to publish the column. And that is as it should be. Well, what about this Pearson fellow? Does he tell lies? Is he credible?

This much we can say for sure. His writings are not morally sound. He is an old hand at stating a fact in such a way as to suggest something improper and untrue. That is an old stratagem of this trade—and other trades and professions—but it is none the less a sort of lying.

A recent example of Pearson's methods came to light in an excerpt from his radio broadcast of June 17. Said Pearson:

"In (Senator JOE) McCARTHY's file as a (Marine) Reserve officer today, there is a red card which says, 'This officer cannot be assigned active duty.'"

Pearson continued: "There was no red card in George Marshall's file and he never would have permitted one to be there. . . . McCARTHY is now known on Capitol Hill as 'Red Card Joe,' the man who has a red card in his file stating that, although a Reserve officer, he cannot be called to active duty."

Pearson of course, creates the impression that McCARTHY, unlike all other Reserve officers, has wrangled an exemption from active service or else has been found unworthy of it, and, secondly, that this unworthiness is somehow connected with a red card in his file.

The implication is clear enough. Senator McCARTHY asked the Commandant of the Marine Corps for an explanation.

The head of the personnel section replied: "At the beginning of the Korean hostilities it was considered that Members of the Congress would render more valuable service to their country in the Congress than they could serving on active duty in the Marine Corps, and it was therefore decided that Members of Senate and House of Representatives would not be ordered to active duty

at this time. Accordingly, the records section was instructed to make suitable notations in the record of all Members of Congress who have Reserve status. . . .

The unfinished business cards which we use are of three colors—pink, green and blue. They are used indiscriminately and it happened that the card in your record is pink."

And that is the story of "Red Card" Joe McCARTHY.

Without going into the controversy of McCARTHY's methods in Congress, we can say without contradiction that Pearson and the publishers who handle this column are guilty of the sort of "smear" tactics they usually impute to the Senator himself.

Whatever else they may want to say about McCARTHY, they should not stoop to belittle the military record or status of a much decorated former Marine who wears the Purple Heart.

A Brighter Prospect

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of September 15, 1951:

A BRIGHTER PROSPECT

The agreement of the Big Three Foreign Ministers on the general terms of a peace contract with Western Germany, to bring that area and its people into the western defensive line-up against the threat of the Soviet Union, has wider implications than a unilateral settlement with that part of Germany which is still free.

Such a settlement with Western Germany can very easily outline the shape of things to come, a gradual withering of the powers and services of United Nations, and a growth of balance-of-power pacts concluded without Soviet interference, or Soviet veto.

Britain, France, and the United States learned something to their advantage at the Japanese Peace Treaty Conference in San Francisco. They learned that it is possible to operate and negotiate outside of the framework of United Nations and make satisfactory settlement among belligerent nations if resolute action is taken.

Western Germany is essential to the strength, safety and security of Europe. In any other camp except that of the west it would be as dangerous as a time bomb. Associated with the western nations and arrayed against the Soviet Union there is assurance the Soviet Union there is assurance that the aspirations of the west Germans will not grow beyond the union of all Germany. The moderating influence of France and Britain and the United States would always prevail in this kind of arrangement and rampant nationalism would not stir the German people to the frenzied war hysteria of the past century.

There is the danger, of course, that the Soviet Union, seeing the last grand chance to keep the whole European continent in a ferment for another generation, might launch an aggression in Western Europe or the Balkans before the final rapprochement of the west Germans with the Big Three could be consummated.

Many diplomats of the western nations now profess to see something more than im-

provision in the development of American foreign policy. The adroit handling of the Soviet Union by Dean Acheson at the San Francisco conference, the patient negotiation of John Foster Dulles to make the Japanese treaty possible, have contributed to a new hope that the United States, acting in concert and leading the other western powers, can bring off a stable world situation without the all-out war that terrifies the people of Europe.

Indeed, here at home, the anti-Acheson forces are singing mighty small since millions of Americans saw Acheson slap the Russians down at San Francisco. All these things have brought the western powers closer to harmony on the question of a settlement with Germany.

The big stumbling block is Korea, and there are hopes that the Chinese Reds, having seen the big brother of all the little Reds slapped down, may be inclined to make United Nations take the blame for their involvement, while coming to a settlement with the west by the means of an accord with the Big Three.

These developments are by no means certainties, but they are strong possibilities emerging from a strong stand taken by the United States.

A Tax Break—Finally

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert C. Ruark which appeared in the New York World-Telegram of Tuesday, September 4, 1951. Mr. Ruark explains eloquently the very real difficulties confronting many of our people engaged in small business, the professions, and the arts in endeavoring to provide a source of income for the years after their retirement. Senator IVES' amendment is identical with my bill, H. R. 4373, which is presently pending before the House Ways and Means Committee.

A TAX BREAK—FINALLY

(By Robert C. Ruark)

I wish to blow a kiss today to the New York State Bar Association, which has been responsible for a chunk of legislation that may provide a little cheer for me and a few hundred thousand kinfolks—men of the small businesses, professions, and the arts who have not formerly been allowed to declare a depreciation on their own bodies as wage earners.

A bill is up for consideration by the Senate Finance Committee that is the fruit of some years of research by the bar associations tax experts. It is called the individual retirement plan, and is based on postponement of taxes on a portion of yearly earnings, thereby offering some security to people who work for themselves and, accordingly, have no boss to mail them pension checks in their old age. They have been prevented from adequate saving by the extraordinarily high taxes on earned income.

It is a very simple plan. It permits postponement of Federal income taxes on earnings paid into retirement funds maintained by a man's personal, agricultural, labor, busi-

ness, industrial or professional associations for the eventual security of their members. A man would be allowed to set aside 10 percent of his annual income, up to \$7,500.

Distribution of retirement income from such a trust, the bill proposes, is made when the participant is 60, either in a lump sum, in installments, or as an annuity. The postponed taxes fall due when the member begins drawing on the fund. The Government gets its whack, in the end, and thereby loses nothing, but in the meantime the luckless self-employer is at least permitted to hive up a few bob against the day he runs out of gas and wants to take it easy.

There is also an important amendment to the bill permitting a fund member to take out his savings before reaching 60 if permanent disability forces his retirement.

In all aspects, the proposed bill is fine. It allows an individual, first off, to provide his own social security. It eases his current tax pains while still permitting the Government to collect its full tithe eventually—thereby also providing a certain security for the Government. It lessens the likelihood of tax dodging by people who earn their money in cash. And it recognizes, finally, that the human being is easily the equal of a machine, and should be entitled to some provision for the fact that a human body deteriorates and depletes itself.

This is the first legislation that I know of which is pointed at that consideration. The Government allows a 27½-percent tax forgiveness on oil wells, because of the depletion quotient. It allows a capital gains on stock transfers and resale of property, and it will allow you to write off a depreciation on buildings and machinery.

But up to now the guy who runs his own business or plays baseball or paints pictures or hammers a typewriter or removes an appendix has been smacked right on the button by the tax people. Individual enterprise actually has been penalized by undue tax emphasis on earned income, and especially the enterprise of such people who must compress their major earnings into a relatively short span of years, people like actors and writers and athletes.

I have been hollering for years for some sort of Government intercession on behalf of the individual, and now it seems we finally have the necessary machinery in an amendment to the proposed Revenue Act of 1951, introduced by Senator IRVING M. IVES (Republican, New York). It has attracted widespread disinterest in the Congress so far, and I would sure like to see a little action.

I still figure that a man is as good as a house or a truck or a dirty old oil well, and it is about time the Government recognizes that the individual shows wear and tear for every day he toils. He should be allowed to provide for his own future, against the coming day when he just don't want to work any more.

Reduction of Meat Rations in Great Britain

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. AIKEN. Mr. President, on behalf of the distinguished senior Senator from Nebraska [Mr. BUTLER], I ask unanimous consent to have printed in the Appendix of the RECORD a brief news article ap-

pearing in the Washington Daily News for September 18, 1951. The article is entitled "Meat Rations Cut."

The article states that the meat ration for the individual consumer in Great Britain is to be reduced again—this time to 25 cents a week. The article illustrates once again what happens to the supply of meat for the consumer when unwise governmental regulations are imposed upon the meat industry.

Mr. President, this statement was prepared by the senior Senator from Nebraska; and it is in his behalf that I ask unanimous consent to have the rows article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEAT RATIONS CUT

LONDON, September 18.—Britain's meat ration will be reduced next week. Raised only this week to 30 cents worth weekly per person, the ration will be cut to its former figure of 28 cents worth. It will be reduced still further beginning October 7—to 25 cents.

A Tribute to Greater Chicago Lodge, No. 3, Loyal Order of Moose

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. YATES. Mr. Speaker, I take this opportunity to pay a well-deserved tribute to Greater Chicago Lodge, No. 3, of the Loyal Order of Moose. For the third successive year, this lodge has won, in competition with nearly 2,000 lodges engaged in international competition, highest honors in the community-service field. Many people, many organizations are devoted to the ideal of public and community service. Lodge No. 3 is a leader among these. Its members go far beyond the gesture of paying lip service only; they take action, and theirs is a record of fine accomplishment.

One of the distinguished members of Greater Chicago Lodge, No. 3, is Mr. Robert F. Hurlough, director of news for radio station WGN and Midwest director of news of the Mutual Broadcasting System in Chicago, Ill. I take pleasure in adding to my remarks a portion of the commentary which he made on August 22, 1951:

GOOD NEIGHBORS, AMERICAN STYLE

(By Robert F. Hurlough)

We are speaking to you tonight from Buffalo, N. Y., where we have made the presentations of civic awards to the outstanding lodges of the international fraternity, the Loyal Order of Moose.

It is of great importance that we recognize and understand the position of the fraternal and veteran organizations in connection with their place in society. As a matter of fact, there are many who do not understand these organizations, and have absolutely no appreciation of the vast accomplishments of fraternal and veterans groups—not only within

the narrow scope of immediate membership, but far afield as well.

Certainly we would need more time than we can possibly take here to catalog the positives in American fraternal life. But we are happy to announce that, this afternoon, Greater Chicago Lodge, No. 3, Loyal Order of Moose, was voted the winner—for the third successive year—of the top award in community service. This gold award of the fraternity was won in competition with 1,600 other lodges in the United States, Alaska, and Canada. The accomplishments of the Greater Chicago Lodge, No. 3, seem of such importance that, as good neighbors, we should all have an appreciation of what is being done to aid in community service.

It is, in a sense, rather astonishing: for the civic-affairs committee of No. 3 was among the first groups to recognize the appalling situation in regard to the growth of the narcotics menace to young people in Chicago. It went to work immediately on a very large scale to explore the subject in detail, and to work in the Illinois Legislature to bring about the legislation that now makes it a penalty—ranging from 1 year to life imprisonment—for peddling dope to minors in the State of Illinois. Judge Gibson Gorman, of the newly established court to deal with the increased narcotics problem, has stated that this stronger law will be of real benefit in the Chicago fight against the dope ring. No. 3's civic affairs committee has also been at the forefront in trying to find a sensible answer to the continuing problem of how to deal with the young dope addict who needs treatment for possible rehabilitation.

In addition, the usual support of the Red Cross, the cancer drives, the community fund, the public clinics, and dozens of such known, worth-while causes are augmented by aid to summer camps for children, off-the-street clubs, and special parties for underprivileged children. Members of lodge No. 3 serve with other public-spirited groups in solving our own problems in the American way. From X-ray machines and iron lungs, to rebuilding broken bodies and combating juvenile delinquency, all these fraternal and veteran groups, as well as service clubs, play their parts in trying to be good neighbors.

This great humanitarian service is too often overlooked by the many people who simply do not understand, and cannot appreciate, the extent of the accomplishments of these organizations. It is a part of America which is wholesome; for millions of Americans expend their time and energy in civic affairs and charitable works effected through their fraternal and other groups, even as they enjoy those very recreational and social features that, in days gone by, were organizations' sole reasons for being.

It seems proper that we, too, can be good neighbors, and realize the vast amount of good accomplished by these organizations that have accepted the challenge of helping others through voluntary rather than through controlled programs which seem more foreign to our way of life. Good citizenship is taught through the belief in God and the brotherhood of man. Tolerance of race, creed, and political beliefs within the framework of the American Constitution is the key-stone in the arch of fraternalism. From all this, you can see that the fraternal club down the street or the vets' club is a beehive of activity which is, for the most part, unknown to many neighbors. And this is true across the nation.

That Chicago's Lodge, No. 3, Loyal Order of Moose, should be the winner of the top honor in community service in this international competition within the fraternity is something of which Chicago can be proud, and every town or city has as much reason to be pleased that such groups do exist to aid in supporting the necessary charities and the needy. Surely such initiative, self-help, and consideration for the needs of others are qualities kindred to the very virtues that built America—and should be encouraged.

America's Great Challenge

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. WILEY. Mr. President, at noon on Friday, September 7, while out on the Pacific coast for the signing of the Japanese Peace Treaty, it was my pleasure to address the Commonwealth Club at its regular luncheon meeting in the Palace Hotel in San Francisco, Calif. It was a privilege to address this distinguished forum of political, economic, social, professional, and spiritual leaders of California.

I ask unanimous consent that there be printed in the Appendix of the RECORD the prepared text of my talk, and that it be preceded by a list of officers, governors, and study group chairmen of that distinguished organization. It is the type of great American group of which I wish we had counterparts in all of the States, if that were possible.

There being no objection, the list and the address were ordered to be printed in the RECORD, as follows:

COMMONWEALTH CLUB OF CALIFORNIA

OFFICERS

President, Ray B. Wiser.
Vice President, Justice M. T. Dooling, Jr.
Secretary, Henry J. Brunnier.
Treasurer, J. K. Moffitt.
Chairman, Executive Committee, A. H. Moffitt, Jr.
Executive Secretary, Stuart R. Waid.
Assistant Executive Secretary, William L. Hudson.

GOVERNORS

David D. Bohannon, Justice A. F. Bray, Monroe E. Deutsch, Paul C. Edwards, Prof. Claude B. Hutchinson, James A. Johnston, A. H. Moffitt, Jr., Richard R. Perkins, Prof. Edgar E. Robinson, Dr. Ernest G. Sloman, Roy Sorenson, Justice Homer R. Spence, Max Thelen, E. T. Thurston, Clarence E. Todd.

STUDY GROUPS

Administration of Justice, Gardiner Johnson.
African Problems, Norbert Einstein.
Agriculture, Donald R. Rush.
Atomic Bomb, Hilary H. Crawford.
City Planning, Col. Henry C. R. Akin.
Delinquency, J. C. Russell.
Economics, Monte Dornham.
Education, George B. White.
Forests and Recreation, F. P. Cronemiller.
Government Finance, Louis J. Kroeger.
Highways and Transportation, Harmer E. Davis.
Immigration, Edwin E. Grant.
Industrial Relations, Walter M. Warren.
International Relations, Col. James S. Hughes.
Latin America, Hon. Henry S. Waterman.
Legislation and Elections, Herbert Hanley.
Liquor Problems.
Mediterranean Problems.
Mineral Industries, Parker D. Trask.
Municipal and County Government, A. H. Sagehorn.
National Defense, John M. Scott.
Pacific Ocean Problems, Walter H. Hettman.
Propaganda, William A. Boekel.
Luncheon Program Committee, Francis V. Keesling, Sr.

ADDRESS OF SENATOR WILEY—AMERICA'S GREAT CHALLENGE

I am indeed proud to address this distinguished audience today. It is most fitting to do so in the city where, on June 26, 1945, there was signed a historic document by fifty nations. That document began in epic passages:

"We, the people of the United Nations—determined to save succeeding generations from the scourge of war . . . to reaffirm faith in fundamental human rights . . . to establish conditions under which justice and respect for the obligations arising under treaties . . . can be maintained . . . to promote social progress . . . to unite our strength to maintain international peace and security . . . to insure that armed force shall not be used, save in the common interest . . . do hereby establish an international organization to be known as the United Nations."

It is concerning the challenge to that Charter, the challenge to free nations, the challenge to you and me—that I should like to address you today.

YOUR RESPONSIBILITY FOR LEADERSHIP

I realize that I am speaking to leaders today, not just leaders in the economic, political and social life of San Francisco and of the great State of California, but leaders in public respect. Men and women look to you of this audience for guidance and direction. So, there is no one who hears my voice today who is not challenged to contribute to the leadership for which America and the world hunger. What, however, constitutes leadership in the face of today's and tomorrow's challenges? We will ponder the answer to that question too.

THE WORLD-WIDE CLASH

This is for you and for me a time of great adventure, oh yes, of greatness, if we will it so. The officials of many lands have been busily engaged in a new, yet an old task—that of treaty-making.

The difficulties which have beset us are obvious. They are symptomatic of the world-wide clash of two contrasting ideologies—two rival ways of life—the one, the Marxian way; the other expressed for us in the Judeo-Christian concept of man's dignity, expressed for others in the other great spiritual faiths of mankind.

The sparks of that clash—a clash between freedom and slavery—are everywhere to be seen. In the flame of battle in Korea, in the political struggle of Iran; in the fighting in Malaya and Indochina; in the threatening moves around Yugoslavia; in the tinderbox of Berlin.

These and other areas of the world check-board are the scenes of this conflict, the arenas of battle, a battle here of words; elsewhere of steel. The basic arena however is in the minds of men, and it is about that arena that I shall later speak.

In recent days, the world spotlight has been on the arena here. Here we have watched at close hand the arena of diplomacy in which the security and freedom of the Pacific are at stake.

THE REVITALIZATION OF WESTERN EUROPE

Over in Western Europe is another great arena—one from which I just recently returned. Within a period of but 2 weeks we of the Foreign Relations Committee visited seven major cities: London, Paris, Frankfurt, Athens, Ankara, Rome, Madrid. We talked to high leaders of six other lands besides. We conferred with General Eisenhower regarding the challenge he was facing as commander in chief of the North Atlantic Treaty forces.

I had been in Europe in 1947 and in the course of those 4 years that had elapsed since then I saw in 1951 a great change, a great growth and development. I saw the wheels of industry humming, the fields pouring

forth their foodstuffs. More important, however, I saw a new vitality in European morale. I saw a force which was lifting men of different nations out of their consciousness of self. It was helping them to become servants of the general European and world welfare. I saw men possessed as never before with a sense of moral responsibility, of personal dedication. Hope and faith had returned.

There is the key to success in this great struggle—forgetting self and thinking of others, rising above pettiness to meet the great challenges.

In Lake Success, N. Y., scene of the United Nations Security Council and Assembly, we see still another of the great arenas of earth.

A MEETING WITH MR. VISHINSKY

It was on my journey from Europe in 1947 on the *Queen Elizabeth*, that I met one of the individuals who was returning to Lake Success to represent the Soviet Union, Mr. Andrei Vishinsky. I relearned from him then one of the key differences between his way of life and ours.

I had been asked whether I would like to meet Mr. Vishinsky. I stated that I would indeed be glad to meet him; and so a meeting was arranged. Seeing him, I grasped his hand firmly, and I said "Mr. Vishinsky, I pray every night that the peoples of our two respective countries may fulfill their great responsibilities and be able to consummate a lasting peace." Mr. Vishinsky for a moment did not reply. His hand was gripped tightly in mine. Then, slowly he spoke: "I do not pray."

There is the juxtaposition of our two contrasting approaches.

No, Mr. Vishinsky and his colleagues do not pray, but everywhere about us on this earth today—in free lands and behind the iron curtain—there are men and women who do pray, men and women who do realize their need for divine guidance and direction.

WE ARE TURNING A CORNER OF HISTORY

They realize, as you and I do, and should, that we are at present passing through one of the great crises of history. Or rather to put it another way, we are turning a corner in history. To use the phrase of another day, we are in a new Armageddon, greater by far than the mighty conflicts which have raged before.

Fortunately, that conflict has largely been one of ideas and words thus far, and we pray that through ideas and words, we may successfully resolve it without force of arms.

But let no one despair. Who would want to live in a period of mere ease and contentment? This is an era, as I have said, of great challenge. These days call for strong men and women—with character and moral stability, men and women who know the cause of freedom, love that cause and will give their all to it.

Winston Churchill once spoke of the English people as living "their finest hour." It is for us to live our finest hour in turn in meeting the tremendous challenge which is ours. It is a time for greatness. Will we qualify?

OUR CIVILIZATION FOUNDED ON SPIRITUAL VALUES

Remember, we are striving to maintain western civilization. It is a civilization which consists of more than refrigerators, home permanents, washing machines, television sets, vacuum cleaners, and convertible cars. We are fighting basically for spiritual values, for which down through the centuries men have been willing to sacrifice their all.

We are fighting for the concept that every man is the brother of his fellow man, that truth and justice should and must prevail.

We are striving in the firm conviction that each individual shall have his right to life, liberty, and the pursuit of happiness. We are striving for the concept that the state must be the servant of the people, rather than its master. We are striving for the right of all people to realize their destiny to be free.

"I OF MINE OWN SELF" * * *

We pray, but Mr. Vishinsky does not. Ours is the Judeo-Christian concept which the Master expressed—the concept which was lived so dynamically by George Washington when he prayed at Valley Forge, by Abraham Lincoln when he "went to his knees," when all else failed. It is the concept which American boys are living today as they pray on the hillside of Korea.

It is the concept as stated by the Master—"I of mine own self can do nothing; it is the Father who worketh in Me." But, ranged against it is the Soviet concept implying that I of my own self am totally sufficient and that by material force and power I can achieve all of my objectives. The Soviet concept that believes that this is but a mechanical universe and that cannot conceive of any God of the Spirit—with the result that under such a government, men are serfs, the state is supreme.

Communism is not really a creed or a faith or a belief. It is a disbelief. Life under it has no meaning; life is a temporary thing without continuity. The individual under it has no worth except as a part of a collectivized machine. The individual isn't free to adventure. He must conform in every detail to the closed thinking and the iron rules of the state.

Is that what you and I want—for ourselves and for our children? Of course not. Is that what other free peoples want? Of course not.

Each free nation today is groping for the path to enduring freedom, not slavery. Whole new countries—only recently born—are seeking a new destiny for themselves—rather than slavery beneath the Soviet heels.

THE ABUNDANCE OF AMERICA

Here on these blessed shores, our country is growing as never before. Each year, we are adding 2,500,000 more new souls to our population. Think of the tremendous material needs and requirements of these young folks. Think of the schools we want and must build for them, the playgrounds, etc. Think of the clothes, the food we will so gladly provide for them. But think even more of the great faith in this Republic, that it is up to you and to me to instill in them. Think of the moral values which they must learn at our knees, if they are to be adequate to the responsibilities of their generation.

THIS IS A TIME FOR STRAIGHT THINKING

This is a time for straight thinking, constructive thinking. It is no time for hysteria or panic. Never before has there been a greater flowering of man's intellectual attainments of arts and sciences, social and physical. But never before, I believe, has there been a greater need for realization of the spiritual virtues of the universe.

THE UNFORGETTABLE EXPERIENCE OF PALOMAR

It was in 1948 that I came to your great State and visited Mount Wilson. There I had an experience which I shall never forget—in viewing the giant glass eye of Palomar, the 200-inch telescope which reaches out into near infinity to behold this universe, to record celestial events that happened millions of light-years ago.

Through the 200-inch telescope and its photographs, and through its companion, the Schmidt telescope, we have seen that our Milky Way contains billions of stars. But we have seen other star families, so to

speak, 100,000,000 of them dwelling in outer space. Each of these 100,000,000 Milky Ways is separated from the nearest star family by distances so vast that light often takes a million years to travel merely from one family to its closest neighbor. Each is restless, moving at 100 to 200 miles a second. But there are greater telescopes in the making, and they will record even more the majesty of this universe.

Who among us could contemplate these awesome facts and say, "I do not pray"? Who among us could conceive the great divine mystery of the universe and say, "I do not pray"?

My friends, now is, indeed, a time for prayer and a time for rededication, each in our own way. The papers speak about fears and neuroses. That is not the answer to the challenge of today.

Let me recall to you that in another climactic moment of American and world history—1861 to 1865—there was a humble man in the White House who exercised three techniques for adequacy. He utilized—

1. Humor.

2. Prayer.

3. An all-consuming dedication to the Republic. He lost himself in love and preservation of the great values of which he was the trustee.

We in turn can utilize all three of these techniques in our personal lives.

But are we doing so? Do we all have that consuming love of the Republic? The newspapers and radio tell us a different story—a story of milk coats and deep freezers and corruption and communism.

THE KEY ISSUE OF OUR TIMES

On this score, no doubt, many of you heard and were profoundly impressed, as I know I was, by the recent speech delivered in Des Moines, Iowa, by a great adopted son of California, a great American, the Honorable Herbert Clark Hoover. Former President Hoover pointed out in this address that the great issue of modern times is this: Decency versus indecency, morality versus immorality. This issue runs deeper than party politics. It goes to the very bedrock of the problem facing the American way of life.

Abraham Lincoln, too, had warned us that the greatest danger was the danger from within. So today, as dangerous as are the 175 poised divisions of the Red army, infinitely more dangerous is the menace that exists on our own shores.

And I refer not only to those individuals who have fallen hook, line, and sinker for the Communist line. I refer not only to the Alger Hesses, the Elizabeth Bentleys, the Judith Coplans, the Klaus Fuchs, the William Remingtons, and all of the other poisoned individuals, some of whom have now confessed and sought to repair their ways. I refer to those individuals who profess to oppose communism as such but who have been impacted by the Marxist dogma, the dogma of materialism, of selfishness, or any dogma that entails the notion that there is no harm in getting what you can, so long as you are not caught at it, whether you are a public official or in private life. The dogma that you can break the law's spirit just so long as you are smart enough not to break the law's letter. That is a cancerous attitude which destroys an individual and then can destroy a society.

Let us, my friends, not allow it to do so. Let us not allow this Eden to fall.

OUR BIG JOB

This is your job and mine—bigger than the job of making money or seeking personal power or prestige. This is the one big job for all of us.

Let's not sell America short.

As I cross this great continent I know that here today we are literally the light of

the world. We must not put that light under a bushel. We must ever see that it burns more brightly, radiating throughout the globe its beneficent principles of fearlessness and justice. What nation in all history has set such an example?

AMERICA'S NOBLE EXAMPLE

What nation pours billions and even more important, precious lives of its sons into a conflict, gains victory, and then takes the lead in seeing to it that the peace is based not on vindictiveness but on justice? What nation pours tens of billions abroad to revive its foes of yesteryear? What nation spurns all territorial grasping?

Ours. These wonderful 48 States; this blessed America.

No, let's not sell this country short. Nor, let us sell short the cause of freedom, the cause of other like-minded nations, our friends and partners.

Now, as each of us has witnessed the events of the last few days, there have come to mind these questions:

WILL THE SPIRIT OF THIS TREATY BE FULFILLED?

When this task is done, when this treaty has been signed and ratified, will it succeed? Or will it be another Versailles? Will it really vitalize the relationship between the high contracting parties?

No one knows the ultimate answers to those questions. No one can peer beyond the veil of the future and weigh its imponderables. But this we do know, that if the contracting nations do have the faith, the vision, and devotion, they can make of this treaty a great instrument which will save the various peoples forever from the scourge of war.

CREATING CHECKS-AND-BALANCES SYSTEM

I have often stated that one of the great underlying reasons why imperial Japan started on her path to Asiatic conquest was that there was no check and balance against the powerful Japanese Army chieftains. If the prewar Japanese Diet, however, had exerted a checkrein on that army, if the Emperor had, or if any other constructive force in Japan society had, the Japanese and all their victims would have been spared untold suffering.

Today, however, we trust that we have helped set up within Japan this dynamic system of checks and balances. Moreover, we trust that throughout the world we have set up a system of checks and balances so as to hold back the Russian tide. Let us continue to maintain that system here in our land—three separate and coequal branches—executive, legislative, and judicial—each performing its legal functions, none usurping the rights of the others.

Checks and balances—there is a key for the continuing success of this constitutional republic. Power corrupts. Absolute power corrupts absolutely. Power must ever be checked.

CONCLUSION—A NEW DAWN

Here, in this city of San Francisco, we trust that we are checking power in an appropriate way. We trust that we are helping to usher in a new dawn for human society—a new dawn for the fulfillment of the Judeo-Christian concepts which we hold so dear, a new dawn for the unfettered spirit of man.

It has indeed been a pleasure to be with you today.

After being with you today and meeting more of your fine citizens here on the coast I have an ever stronger faith that you will be adequate to your responsibilities, as I hope my associates and myself may be adequate to ours.

Thank you.

National Airlines Asks for Reduction of Its Mail Pay

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

NATIONAL AIRLINES,

Miami, Fla., September 18, 1951.

Hon. OTTO E. PASSMAN,

Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: Our company has just asked the Civil Aeronautics Board to reduce the amount of mail pay we receive from the Government.

Feeling that you, as a Member of Congress, will want to know about this unusual case, wherein an airline has voluntarily sought to lower its compensation for transporting the United States mail, I am enclosing a copy of a statement by National's president, G. T. Baker, announcing the basis for this important decision.

It is my hope that you will find this announcement to be of interest.

Sincerely yours,

JOHN L. MORRIS,

Vice President.

MIAMI, FLA.—National Airlines, Inc., has asked the Civil Aeronautics Board for a reduction in mail pay from the Government, it was announced today by President G. T. Baker. National is believed to be the first trunk line to make such request in airline history.

"In view of National's growth and increasing economic self-sufficiency," Baker said, "we have taken the lead in voluntarily seeking a reduction to the 45 cents per ton-mile rate which the CAB recently established for four of the other major airlines."

"This step has been made possible," he continued, "by the airline's success in building up its traffic and its revenues over the past few years. With record net earnings for the fiscal year just ended, National now stands fifth among all scheduled airlines in terms of net operating income. We believe the revenues lost through the reduction in mileage mail pay will be more than offset by revenues from increased mail tonnage as a result of the new ton-mile rate and also from operation of the company's present routes, interchange agreements, the new DC-6 daylight coach operations just inaugurated, and from the eight new DC-6Bs to be delivered in 1952."

During the fiscal year ended June 30, 1951, National received mail pay at a temporary rate which yielded \$0.117 per mile, one of the lowest per mile rates in the industry. Mail pay, according to Baker, has been of decreasing importance as a source of revenue, representing only 7.08 percent of total revenues in fiscal 1951, as compared with 11.22 percent for the previous year. In 1951, he pointed out, the airline paid more in Federal income taxes than it received from the Post Office.

"Airmail pay has helped the airline industry to operate profitably and to build up its fleets," Baker said. "The public's foresight in supporting the air-transport industry during its initial growth period by mail payments has helped to create a vitally important airlift-in-being, if and when a na-

tional emergency requires its use. The scheduled airlines of the United States can boast the greatest airlift capacity in the world. Without it, we could not hope to meet the demands of a war crisis."

"Now that National is in a position to do so, we want to reduce the burden on the taxpayer by seeking this rate reduction."

The scheduled airlines fleet now totals nearly 1,200 planes. More than 500 are four-engine aircraft, 132 are postwar two-engine aircraft and 537 are prewar two-engine aircraft. They have a combined capacity of more than 11,000,000 ton-miles daily (a ton-mile is 1 ton flown 1 mile).

In the Korean War, scheduled airlines carried 69 percent of the passengers and 52 percent of the cargo from the United States to Japan in the period from July 1, 1950, to February 28, 1951. Civil air carriers were also used to replace military transports diverted to the Berlin airlift.

Tass Thumbs Its Nose at News Principles

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Newark (N. J.) Star-Ledger of September 17, 1951:

UNITED STATES SENATOR MARGARET CHASE SMITH SAYS TASS THUMBS ITS NOSE AT NEWS PRINCIPLES

It is strange how so often the trouble-makers in this world get special consideration and special treatment that is denied the decent people who never do any injustice to anyone. It is equally strange how so often the good people who mind their own business and break no rules of conduct are abused and discriminated against in favor of the bad actors.

This strange pattern happens so often that to one who loses faith it might seem that you have to be bad in order to get the favors, that honesty and good will do not pay off in spite of what our mothers told us as children. Maybe there is something to the old saying that "it is the creaking wheel that gets the grease."

Take, for instance, the comparative cases of William N. Oatis, the American reporter imprisoned in Czechoslovakia, and that of the Russian pseudo news agency in Washington called Tass. Oatis was jailed in Czechoslovakia by the Communist puppets of Soviet Russia on trumped-up charges.

He is now serving a 10-year sentence after a rigged trial. For what? The Czechs say for spying. But the rest of the world knows that all Oatis was doing was trying to do his job of reporting the news to the rest of the world.

Now take a look at what happens to a certain Russian Communist agency in Washington, specifically the Washington office of Tass. Tass claims to be a public news agency. And under this false claim it enjoys the full privileges of the House and Senate press galleries, just like any accredited American member of the press galleries.

But Tass actually violates the rules of the United States Congress saying that the press galleries are to be restricted to those who are bona fide correspondents of repute in their profession.

The governing group of the press galleries, in interpreting these rules has barred representatives of United States Government agencies. Although the employees of Tass are registered as agents of the Soviet Government, and as such are not bona fide correspondents, they are given special favor and treatment in violation of the rules.

Tass is not a public news agency. It is financed, controlled, and used exclusively by the Soviets. It is nothing less than a part of the world-wide Russian Communist conspiracy. Yet its employees have the privilege of not only sitting in the press galleries of Congress but attending some briefing conferences at the Defense and State Departments and the White House.

Now either the rules of the press galleries should be enforced or they shouldn't. Surely what is good enough for American reporters in America should be good enough for Russian agents in America.

The Tass representatives are Communist agents, not newspapermen. They don't qualify for membership in the press galleries of Congress.

They should be kicked out—not as a matter of reprisal, for that would violate the principle of free flow of information between the peoples of the world and lower our own country to the cut-throat level of the despicable Czechs who have imprisoned Oatis—but rather as a matter of applying the rules of the press galleries to all alike.

It is time we stopped letting the Russian Communist agency Tass thumb its nose at the rules and get away with journalistic murder.

Forty-fifth Anniversary of Saturday Democrat, Holyoke, Mass.

EXTENSION OF REMARKS OF HON. FOSTER FURCOLO OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 19, 1951

Mr. FURCOLO. Mr. Speaker, last week the Saturday Democrat, a weekly newspaper published and circulated in Holyoke, Mass., celebrated its forty-fifth anniversary. Holyoke is not in my district, and I do not believe the Saturday Democrat has any appreciable circulation in my district, although it is widely read and circulated in Holyoke.

I know all of us are interested in freedom of the press, and we are aware of the great part the press has always played in helping to preserve our liberties and our American way of life. We all should have great respect for the publisher and editor and other employees of any newspaper who give their best efforts to that end.

The guiding light and genius of the Saturday Democrat is Lionel Boucher. He is a man of great integrity, and he has the courage of his convictions. He is a credit to the fourth estate and also to this country. I do not want to let the occasion go by without paying my tribute to him.

I think all of us, whether we be Democrats, Republicans, or Independents, can join in extending good wishes to the Saturday Democrat on its forty-fifth anniversary. Whether we agree or disagree with the viewpoint of the newspaper is

not so important as the fact that the newspaper has been true to its principles and has always courageously fought for its beliefs. Lionel Boucher has done that all his life, and I know will continue to do so.

The Ice Harbor Peril Rises Again

EXTENSION OF REMARKS OF HON. WALTER NORBLAD OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Monday, August 20, 1951

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Astorian-Budget of Astoria, Oreg., in opposition to the proposed Ice Harbor Dam:

THE ICE HARBOR PERIL RISKS AGAIN

We wonder if the Senate Appropriations Committee realizes that in allowing \$4,000,000 to start Ice Harbor Dam it commits the taxpayers of the United States to a gigantic boondoggle that would cost nearly a billion dollars.

The House Appropriations Committee realized this in its wise decision to eliminate the Ice Harbor item in its consideration of the Army civil functions bill.

One might ask how this boondoggle could cost nearly a billion dollars.

The answer is very simple.

Ice Harbor is but the first in a series of four dams on lower Snake, all of which must be built to make any one of them of any value. Proponents of Ice Harbor will admit this themselves if planned down. Estimated cost of these four dams is about \$500,000,000—half a billion dollars the taxpayers can ill-spare.

The other half billion represents the value of the commercial salmon fishery that would be destroyed plus value of public investments in protecting this fishery that would be rendered worthless.

The salmon fishery is estimated by competent Federal authorities to be worth \$400,000,000, and much of this value would be wiped out by the four lower Snake dams. Millions of additional dollars have been invested by the Federal Government and the States of Oregon and Washington in protecting and propagating the salmon runs that spawn in the Snake. This investment obviously would be wasted if Ice Harbor and its companion dams wipe out the Snake River salmon runs, as competent fisheries biologists fear they will.

We doubt that the members of the appropriations committee of the Senate have realized the consequences of that trivial-seeming \$4,000,000 to start Ice Harbor Dam. No doubt \$4,000,000 seems peanuts to them, particularly so when the proponents of this dam present it under the fictitious guise of a necessary project for the national defense.

Actually Ice Harbor Dam is not vital to national defense. Its proponents admit this indirectly when they confess that three companion dams, which would take years to complete would be necessary for Ice Harbor to be of other than negligible value, either for power or for its real purpose, subsidizing river boats and barges.

A study of the power situation in the Columbia Basin would show that projects already under way will double the power output of the basin.

Why, if the national emergency demands more power quickly, is it not common sense

to finish the power projects already under way, with their vast capacity, before throwing vital dollars into this long-range, expensive boondoggle of doubtful value?

McNary, Chief Joseph, Albeni Falls, Hungry Horse, other Federal-aid private power projects now a-building, should be rushed to completion rapidly and every dollar the Federal Government can spare should go to such projects.

In fact, Grand Coulee Dam itself is not finished until its total generator capacity is installed, and this has not yet been done.

We cannot believe that the Senate Appropriations Committee fully understands the Columbia Basin situation or the terrible cost of Ice Harbor Dam in both Federal expenditure and destruction of a resource, or it would never have approved that \$4,000,000.

Fortunately the House Appropriations Committee understood and the House itself so voted. Perhaps in House-Senate conference common sense can be made to prevail over pressure from greedy inland-empire interests who want that \$500,000,000 spent in their bailiwick and care not what the cost to the Nation and to the industry they will damage so irreparably.

The Answer to Inflation

EXTENSION OF REMARKS OF HON. DANIEL A. REED OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, September 13, 1951

Mr. REED of New York. Mr. Speaker, the price-control legislation that has been enacted by the Congress is in no sense an anti-inflation bill. So far as controlling inflation, it is a subterfuge and a fraud. I have called attention repeatedly to the fact on the floor of the House that inflation cannot be controlled until the expansion of the currency is stopped.

There can be no stability in business, no control of prices, no certainty in contracts, under our elastic and unsound currency. The importance of a sound currency has been recognized by sound statesmen in all countries, especially by our own statesmen. For instance:

There is a great impropriety, not to say injustice, in compelling a man to receive a part of his debt in discharge of the whole. (Robert Morris.)

Arguments are unnecessary to show that the scale by which everything is to be measured ought to be fixed as the nature of things permit of. (Robert Morris.)

Again:

There is scarcely any point in the economy of national affairs of greater moment than the uniform preservation of the intrinsic value of the money unit. (Alexander Hamilton.)

The money of the United States, and every kind or form of it, whether of paper, silver, or gold, must be as good as the best in the world. It must not only be current at its full face value at home, but it must be counted at par in any and every commercial center of the globe. * * * The dollar paid to the farmer, the wage earner, and the pensioner must continue forever in equal purchasing and debt paying power to the dollar paid to any government creditor. (William McKinley.)

DEFINITION OF SOUND MONEY

With reference to this question of excess of money supply as the child of inflation, I am, under leave to extend, inserting an editorial which appeared in the Wall Street Journal of September 19, 1951, as follows:

AN ANSWER FOR MR. WILSON

Speaking in defense of price controls the other day, Mobilizer Charles E. Wilson was reported by the New York Times to have posed this question: "Has anyone got another plan . . . for keeping inflation under control?"

Well, we have such a plan

But first, since so many discussions of inflation suffer from vague terminology and mixed-up definitions, perhaps we had better set forth more precisely what is this inflation we are talking about. And maybe make a guess or two at what Mr. Wilson is trying to talk about, too.

Judged by its context, Mr. Wilson's question was based on the theory that rising prices, or anyway the tendency of prices to rise, constitute inflation. What he wants to stop is rising prices, or anyway the tendency of prices to rise too rapidly. So, though he professes to dislike price controls in principle, he sees no other method of dealing with "inflation"—his concept of inflation—except to have the Government pass an edict that prices may not be higher than such and such.

If one were to accept Mr. Wilson's definition that rising prices are inflation, it's easy to see how some such direct attack on prices themselves might seem a logical remedy. But even accepting this definition and this approach some difficulties pop up.

The first difficulty of this approach is that even to make it work by its own theory all prices would have to be put under control—the prices for all goods, services, and labor, however seemingly remote or minute. For this sort of inflation obviously affects all prices. If you fix some by edict and leave others free you only twist the economy into an unmanageable shape. In short, you have to have a completely controlled economy.

The second difficulty is that after you accept the theory that what you are trying to do is just to keep prices from being "too high" you have no way of deciding what is "too high." Even at the present ceiling levels many prices are "too high" for many people. If the Government can wave its hand and reduce the price of an article from a dollar to 90 cents, why not reduce it to 85 cents, or 50 cents? If the thing can be done, it occurs to us to suggest that the present ceilings are not nearly low enough, the control rules not strict enough.

In other words, if you were to follow this approach then the thing to do would be to apply price rules to everything and roll the ceilings back to whatever level is necessary to bring all of the inflation out of the economy.

But this, of course, is not the plan we intend to suggest. It is a sidetrack which Mr. Wilson has invited us to explore; if it leads to an absurdity, it is because once you start on this approach, absurdity is the only place you can get to. Yet this is the sidetrack to which we think that the national effort to deal with a serious economic problem has been switched.

This misdirection, we think, comes about because we have to deal with a problem of inflation but have given the name to something else and then proceeded to try to deal with the something else. To get at the problem we need a clearer definition of inflation. And with it a clearer idea of what is meant by control.

Inflation is a monetary phenomenon. It stems solely from an extraordinary increase

in the supply of money. Whether that money supply is augmented by clipping coins, by printing press currency like greenbacks, or by bank deposits based on Government securities is immaterial. We have inflation only when we have the phenomenon of an increased supply of money units.

Since the basic fact of inflation is an inflated money supply, the tendency of prices to rise, as the supply of goods and services is measured in a more plentiful monetary unit, is only a symptom of inflation. Just as a rising temperature is an indication of infection, so rising prices are an indication that inflation is affecting the economy. But rising prices are by no means the inflation itself.

Once this is recognized, the whole question is put in a different light. It is then possible to devise a rational and effective approach to the problem of inflation.

On the face of it, price control can then be seen as no way to deal with inflation. It is not only an answer to inflation; it is almost irrelevant. And hence Mr. Wilson is not really asking for another plan. Because he is missing the point, what he proposes is not a plan for dealing with inflation at all.

Since inflation is a monetary matter, then nothing at all in the way of a control in nonmonetary fields can be applied as a remedy control. Indeed, it ought to be clear that control is not the desired word. What we want is prevention, or, failing that, the ending of inflation.

In our opinion, the thing to do about inflation is not to have it. Or anyway not to have any more of it.

This is not an impossible task, and although it may be politically difficult, that is nothing beside the impossibility of Mr. Wilson's way. All that is necessary is a conscientious national effort by the administration to stop financing Treasury deficits by pumping Government securities into the banking system.

We certainly agree with Mr. Wilson that inflation is an enemy possibly even more dangerous than Russia. But it is an enemy that can be conquered. If the Government will stop inflating the money supply, there will simply no longer be a problem of controlling the runaway prices which Mr. Wilson calls inflation.

knowing this, is attempting to put the responsibility on Congress and on the Republicans.

That is not where it belongs. Why are the inflationary pressures going to be so great? For one reason, because the administration is putting the emphasis on surface controls and neglecting the real and basic causes of inflation. And because, also, the administration failed to act until inflation had gained an almost unstoppable head start.

This accusation is backed by the testimony of a responsible member of the President's own party—Senator BURNETT R. MAYBANK, of South Carolina, chairman of the Committee on Banking and Currency, who told the Senate on June 25 that

"Last year the Congress approved a bill giving the administration the authority to freeze prices or to roll back prices to a base period of May 24 to June 24, 1950. The administration did not desire to do this, but apparently wished prices to rise so that increased taxes could be collected from larger incomes, and thereby attempt to balance the budget."

Senator CAPEHART asked if he understood Senator MAYBANK correctly. MAYBANK replied, "That was one of the reasons. Another was that there was an election impending."

Senator MAYBANK also said, on page 7327 of the CONGRESSIONAL RECORD of June 28

"The Congress gave the administration ample power

"I am a Democrat and I will always be a Democrat. However, in justice to the Republican members of the Senate who voted for the control bill last September, I wish to say that they joined with us in writing a strong law. It has never been used. I would suggest that the abuse of Congress results from an attempt to permit those who are responsible for the failure to act promptly under the law to avoid their own responsibility. They have not met their own responsibility to the consumers of the country. If the consumers of the country have any quarrel they have it with the way the law has been administered."

That is the record, and the President's political smoke screen cannot obscure it.

The Responsibility for Inflation

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. BROWNSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Indianapolis News of Monday, September 3, 1951, entitled "The Responsibility for Inflation":

THE RESPONSIBILITY FOR INFLATION

The exchange of letters between Senator HOMER E. CAPEHART, Republican, of Indiana, and President Truman has brought from the President an admission that he cannot guarantee that the cost of living will decline even if Congress changes the controls law to conform to the administration's wishes.

Mr. Truman concedes that the inflationary pressures are probably going to be so great that it will be hard to hold the line even with the strongest kind of law.

In other words, it is clear that prices are going to rise, regardless. And the President,

Know Your Waterways—Coastal Feeder Canals

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LARCADE. Mr. Speaker, under previous unanimous consent of the House, I wish to submit a copy of an article which was published in the Washington Post by the Marine News, of New York, N. Y., as follows:

KNOW YOUR WATERWAYS—COASTAL FEEDER CANALS

In locating plants along the coastal waterways, industry has largely chosen sites on feeder canals. As examples, the new \$50,000,000 plant of the Aluminum Co. of America is on a tributary channel at Port Lavaca, Tex., 20 miles off the main Gulf Intracoastal Waterway; United States Steel is building a \$400,000,000 plant on the Delaware at Morrisville, Pa., 26 miles above Philadelphia. Feeder channels help develop new sections, benefit and strengthen industry, and help the general welfare. The reasons are ele-

mentary and simple—water transportation is lowest cost transportation for certain bulk materials and commodities. And almost all waterside plants also have all rail transportation for bringing in certain materials and distributing finished products. For transportation completeness and economy, it is ship to rail—rail to ship. Working together they can achieve economies for the people, earn profits and good will for themselves, and aid strength to the Nation.

American Foreign Policy Has Become the Most Threatening Item of Expense the American Taxpayer Must Bear

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. VAN ZANDT. Mr. Speaker, the following editorial appeared in the September 18, 1951, issue of the Altoona (Pa.) Tribune and is of timely interest:

THEY WANT MORE

American foreign policy a few years ago was a rather abstract thing, as far as the public was concerned.

We let a few statesmen handle the problem, and nobody cared anything further about it.

We still let a few statesmen handle the problem, and still, few people care little or nothing about it.

But foreign policy has become the most threatening item of expense the American taxpayer must bear.

It has developed from an abstraction into a constantly growing, constantly grasping menace to the American system.

At this moment, secret talks are being held in Ottawa, Canada, between the principal nations of the North Atlantic alliance.

One of the major objectives of the European members, especially Britain and France, is to try to prove, according to the Wall Street Journal, that the United States is not carrying its full fair share in rearming the West against Russia.

These European sleight-of-hand artists who always find a place on the diplomatic staffs of their nations, expect to prove by charts and figures that they're doing more proportionately for Western defense than the United States.

They're going to prove that Secretary of State Acheson should go back and ask Congress for more funds for Europe, not as a gift, but rather as payment of a debt—what the United States owes to the common defense.

British and French technicians are working on a formula to determine accurately what our share should be.

That formula beyond doubt will be a masterpiece of some kind. We don't need a crystal ball to tell now that America's share is going to be much, much larger than the people of America have been told by our leaders.

One of the most outrageous frauds ever foisted upon the people of America, by our statesmen in collaboration with Western Europe, has been the old story that we owe Europe a constant debt for "absorbing the first shock of World Wars I and II."

Actually, the statesmen of old Europe owe the American people more than any apology, more than any amount of money ever may rectify, for creating two World Wars in our century, and failing utterly to do any real

and sensible thing to avert either of them or the possibility of world war III.

Now, they tell us we're not pulling our share.

We have just voted \$60,000,000,000 for defense, and \$7,000,000,000 for foreign military aid in the next year. Congress will vote another \$5,000,000,000 soon for the Korean war; we'll be paying them more billions for economic aid—as we've been doing for years—our total foreign hand-outs in the last 10 years total \$103,000,000,000.

Britain's expanded war budget calls for four and one-half billions this year, with no hand-outs to the Western European alliance. France's military budget is half of Britain's.

And, besides all this, they want continued economic aid from the United States.

These demands are becoming incredible. Unless our affairs with regard to the Russian menace are handled better than this, there will be little of America left worth defending in another decade.

We do not say this lightly. We believe that the spirit of a people can become so confused, so broken within a short time by economic and political stress, that even the insane, half-baked ideas of communism may find fertile ground, as they do in one nation after the other.

Added to all this, we read, in the U. S. News & World Report, "Americans in Europe find that dollar aid buys few friends."

"Instead of being grateful for past and present generosity Europeans are inclined to blame the United States for their troubles. Anti-American sentiment is growing among all of this country's Western European allies."

The Postal Rates

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. FURCOLO. Mr. Speaker, I am pleased to call the attention of Members of Congress to the following editorial in the Amherst (Mass.) Journal of September 14, 1951:

THE POSTAL RATES

The way in which Congress is kicking around the question of postal-rate increases leads one to believe that the problem is a difficult one. The various committees are subject to such unfair pressures from the groups with axes to grind that a clear and simple solution is proving illusive. The solving of the \$530,000,000 annual deficit has become cluttered with confusions.

The line of demarcation between justifiable subsidy and the bowing to pressure interests is proving difficult to locate. Far away from such pressures, however, the problem does not appear to be so knotty. Any analysis of the several components of the postal deficit seems to lead to some rather obvious conclusions.

It is proposed that air-mail rates be increased from 6 cents to 8 cents. No one has appeared with a really valid argument against this move. Several times during the lesser economies of the past, this 8-cent rate has prevailed, so there would seem to be nothing illogical about the move.

The proposal to increase the first-class letter from 3 cents to 4 cents is something else again. This type of mail is handled at an average cost of 28 cents per item, and is the

only class of item handled at a profit by the whole Post Office Department. To load on the burden, then, would seem to be poor judgment of the highest order.

The postal card, however, receives the same first class treatment and shares in the same costs. It thus makes sense to increase the charge for cards to 2 cents as the first step in stopping a leak. It is logical, therefore, that we bid a somewhat nostalgic good-bye to the time honored penny post card.

The division called second-class mail is a low-rate privilege which is enjoyed by newspapers, magazines and periodicals that use the mails as their delivery service. A certain amount of subsidy would seem justifiable because, in a sense, it is a subsidization of the general taxpaying public. Were the charge to be higher, some of it, at least, would be passed on to the subscribers, so the end result would be much the same.

But in all fairness, it must be stated, quietly to be sure, that the pittance which it costs to deliver the Amherst Journal to its subscribers is so low as to be beyond belief. In no possible way can it be justified and the newspaper industry in general should be ashamed if a finger is lifted in protest against an increase in the rates of this class mailing.

The third-class matter is the great transgressor. It is by way of this class postage that the enormous volume of printed advertising matter floods today's mail boxes. Most of such matter is unasked for and unwanted. The ridiculously low rate holds open the door for a Government subsidized, and definitely wasteful and bothersome type of advertising. The citizen thus makes up a deficit which was created by something he did not like in the first place.

Naturally, this type mailing occasionally contains worth-while material. Such items are so easily recognized that the sender and the receiver should each be willing to share the cost of delivery at a more reasonable rate.

The fourth and last class of postal service concerns the mailings usually called parcel post. This is the Government's small freight division, and much has been done with rate revisions in recent years to bring the charges more in line with the private freight industry. Several technical changes seem likely, but they should pass more or less unnoticed.

It is easy to be all wise at a distance and to propound a solution without sharing in the responsibility of the decision. But the answers seem so obvious that the Amherst Journal must add its small voice to a good-bye to the penny post card, to a reasonable increase in the cost of deliveries of the Journal and to a rousing increase in the rates which have tended to create the present third-class absurdity.

Congratulations to the New York Times

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of September 18, 1951:

CONGRATULATIONS TO THE NEW YORK TIMES

The Star congratulates the New York Times on its one hundredth birthday anniversary today. It is a newspaper which has

every reason to be proud of an honorable past—which is the subject of a book, *The Story of the New York Times*, reviewed elsewhere on this page. It has reason to be proud of the mere fact of survival in a century which saw the promising birth of so many newspapers now dead and gone, or whose memory has been kept alive through absorption by other newspapers. But its greatest source of pride should be that the Times is a better newspaper today than it ever was and that its success and prestige have been achieved without compromising the principles of clean and objective journalism which are a part of its tradition.

The Times is one of the good examples in the world of journalism of the proposition that freedom of the press under our Constitution carries with it the obligation of public responsibility. Its careful and thorough coverage of the day's news without conscious bias, and its reasoned and judicious editorial comment on that news reflect this consciousness of responsibility. It has been rewarded by material success and the respect of readers around the world.

There are three men—Henry J. Raymond, the founder, Adolph S. Ochs, who bought the paper in 1896 and until his death in 1935 was publisher, and Arthur Hays Sulzberger, the present publisher—whose concept of the responsibilities of proprietorship has played so important a part in molding the character of the Times. But thousands of men, over a century, have helped to build the Times, have felt the discipline of high purpose and have responded with loyal devotion to the cause of sound journalism. They are the ones who have made the Times.

Prohibition of Import of Fats and Oils

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. WILEY. Mr. President, I have received this morning, from the National Creamery Association and the American Butter Institute, an important message in which they have conveyed their opposition to proposals to weaken the restrictions on foreign butter and other dairy and fat imports, or placed in the Defense Production Act amendments of 1951, Public Law No. 96, of the Eighty-second Congress.

I, for one, have been deeply interested in this subject in my dual capacities as: (a) United States Senator from Wisconsin—famed for its creamy-rich butter and other dairy products; and (b) as ranking Republican member of the Senate Foreign Relations Committee, in which capacity I am naturally particularly interested in the promotion of world trade and economic strength of the free nations.

I believe that the letter to which I have referred presents a graphic picture of the present serious butter situation as it exists in our country today. It conveys facts worthy of the deep consideration of our tariff experts—facts which I have previously cited in connection with dairy problems. I ask unanimous consent that the text of this letter be printed in the *CONGRESSIONAL RECORD* at this point and be thereafter referred to the Senate Banking Committee.

There being no objection, the letter was ordered to be printed in the *RECORD*, as follows:

AMERICAN BUTTER INSTITUTE,
Chicago, Ill., September 17, 1951.

DEAR SENATOR, Included in the Defense Production Act of July 31, 1951, is the provision that "imports of fats and oils, including butter, cheese, and other dairy products are prohibited until June 30, 1952, if the Secretary of Agriculture determines that such imports would impair or reduce domestic production, interfere with orderly marketing or storage, or result in any unnecessary burden or expenditure under any Government price-support program. The President shall exercise the authority provided in the provision."

At present, hearings are under way on S. 2104, the request made to modify or repeal this provision. The butter industry, represented by the National Creameries Association and the American Butter Institute, and reflecting the sentiment of farmers and processors, is opposed to any weakening of the safeguards embodied in this section of the Defense Production Act.

The reasons for this position are:

Increased sales of butter to the Government. The August 15 report of the United States Department of Agriculture shows butterfat to be 94 percent of parity. Butter prices are dangerously close to the support level. Any import of foreign butter will necessitate sales of domestic stocks to the Government, under the price-support program. The August 1951 report of the dairy situation states, "Stocks of butter increased rapidly during June and July, reaching a total of about 105,000,000 pounds on July 31. The total is still below average though relation to the current rate of consumption is larger than usual." During 1950, industry storage stocks of butter amounted to approximately 38,000,000 pounds. The total storage figure, reported by United States Department of Agriculture, for the same period in 1950 was 230,652,000 pounds of which 192,000,000 pounds were owned by the Government. At present, only about 200,000 pounds of butter are now under Government ownership, through support-program sales.

Milk production will be jeopardized: Beef cattle are now 147 percent of parity. Veal calves are 148 percent of parity. In 1944 there were 25,818,000 milk cows on farms. Milk cow population has dropped steadily through the years and the estimate for 1951 is 22,668,000. These figures are taken from the Dairy Situation released by the United States Department of Agriculture on August 30, 1951. Dairy herds have historically supplied approximately 40 percent of the beef and 75 percent of the veal for the consumer's table. Many dairy herds, because of the disparity between meat and milk prices, are being slaughtered. Although population in the country has increased, milk production has decreased in 1951 over 1950 a full 1 percent. Aggravation of this condition will result from removal of import bans on butter and other manufactured dairy products to the detriment of milk production and agricultural welfare.

Return to milk production is a 3-year job. A 3-year period is needed to bring a dairy cow into efficient production. It is now more profitable to feed a dairy calf for 6 months and sell this calf for veal than to continue raising the calf to a producing milk cow. Herd replacements are necessary for sound dairy production. Further discouragement to raise calves to mature milking cows will result if imports of manufactured dairy products are permitted.

Fluid milk supply threatened: Manufactured dairy products, such as butter, cheese, evaporated and dried milk, utilize more than 50 percent of the Nation's production. During seasons of high production these products absorb the surplus to provide a

market for all milk produced. During seasons of low production, these products provide a source of supply to fluid milk consumption areas. Butter is the "balance wheel" of the dairy industry. Cows producing cream for butter manufacture in late spring and early summer months provide milk for fluid markets and other manufactured dairy products during the fall and winter months. Imports of butter, which will discourage farmers from producing cream, will dry up the supply of milk for urban markets when it is most needed.

We therefore urge retention of the provision of the Defense Production Act banning import of fats, oil, and dairy products as it affects butter.

Very truly yours,

W. A. GORDON,
Executive Secretary, National Creameries
Association, St. Paul, Minn.

RUSSELL FIFER,
Executive Secretary, American Butter
Institute, Chicago, Ill.

Washington Not Confidential

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. IVES. Mr. President, last Sunday in the Washington Star appeared an article by our beloved and distinguished Chaplain, Dr. Frederick Brown Harris, entitled "Washington Not Confidential." I feel very strongly that this article is of such a type and nature that it should be read by everyone who is interested in the Capital of our great country, and I dare say that means everyone in the country. I regret that the *CONGRESSIONAL RECORD* is not received by all the people of the United States, but I must point out at the same time that it is available to all through the libraries which exist in our country. Because of the significance of this article, and because of its timely nature, I ask unanimous consent that it be printed in the Appendix of the *RECORD*.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

WASHINGTON NOT CONFIDENTIAL

(By Frederick Brown Harris, pastor, Foundry Methodist Church, Chaplain, U. S. Senate)

Anything which blackens the Capital casts a shadow on the Nation to which it belongs and of which it is a symbol. Washington is a mirror which reflects the Republic. In that looking glass are naturally revealed telltale signs of the dangerous malady infecting the whole country whose symptoms may be summed up in two words: Moral sag. But lewd gossip, true or false, labeled "Confidential" must be seen in the perspective of what is left out; the black it paints must be measured with the good ignored.

There is faith there, as well as filth. There is virtue as well as vice. There is splendor as well as shame. There is nothing ever confidential about goodness. It is evil which whispers on dark corners and hides from the light of day. This is no attempt to whitewash Washington. It is by no means a cathedral of cloistered virtues. What city is? It does have its peculiar temptations in these crucial times just because it is a city set upon a hill in a fear-haunted world, where all roads lead to it. To call a perverted and

putrid trip to foul cesspools and catacombs of corruption "Seeing Washington" is to libel not only the city but the Nation to which it belongs.

Even the dirty linen which during recent months has been so conspicuously flapping on the national clothesline is not necessarily a sign of the coming collapse of our moral structure. It may indicate, as former President Hoover recently suggested, the fact that "moral stamina still survives in our people whose strength is in character and in truth and in decent living."

We must not be dominated in our mood nor dimmed in our faith, nor deceived in our appraisals by men with muckrakes who would yank up a plank even in a garden walk and holding a magnifying glass over the loathsome things that there creep and crawl, cry, "Look, here is the beautiful bower of which you boast."

St. Paul easily could have written a treatise on the underworld of those ancient cities he knew so well. Listen to the frank catalog of what lurked in the shadows. He speaks of "thieves, drunkards, extortioners, fornicators, effeminate abusers of themselves, men leaving the normal feeling for women to burn in their lust toward one another; those who have reprobate minds filled with all unrighteousness, maliciousness, envy, murder, deceit, malignity, innovators of evil things, without natural affections, whose tongues work deceit and under whose lips is the poison of asps." That is Corinth and Ephesus and Rome "confidential," as the New Testament records them. Nevertheless, Paul, who penned it, exclaimed: "There are saints even in Caesar's household." His epistles have come down the years as the chariots of the Lord, not because he tells of the moral sewers, but because he displays lives transfigured and transformed by the renewing of their minds.

It is no stop-the-press news that modern cities reek with the same disgusting abnormalities and licentiousness which have plagued humanity since long before Paul's time. But it is no wonder that, discussing a certain book exuding its phosphorescent rottenness on newsstands all over the country, a group of hard-headed, seasoned reporters in the National Press Club were heard to exclaim about this much-talked-of tome: "Where in heaven's name did they find all this putrid stuff which we have never seen in this city?" The answer is, of course, that much of it is a carbon copy of police records and of criminal blotters. As its authors confess, the pages were deliberately freighted with malodorous contamination in order to sell the book.

As an antidote to the almost total depravity a despondent reader might assume in the world city it depicts, let us page the prophet Elijah. Long, long ago, he got a very wrong notion. Evidently he had been reading some reports of confidential evil. What he saw sent him under a juniper tree praying for death. He had come to the conclusion that he was the only one who had not been defiled and debased, who had not bowed down to the altar of false gods. But he was not so lonely in his goodness as he imagined. What he needed to bring him back to sanity was a sense of proportion. His reason had been almost unsettled by disgusting evidences of decadence within the nation. To his surprise, he was shown multitudes of quiet homes where God-fearing folk were keeping the faith. God assured His prophet: "I have yet left me 7,000 in Israel, knees which have not bowed unto Baal." And so in his arithmetic of virtue Elijah was off in his calculation of the national defection from righteousness by no less than 6,999.

That suggests the utterly fallacious and unfair picture which has nothing to say of what millions of normal, decent people see and find in the entrancing city which belongs to all America. For it contains

moral and spiritual beauty which matches its cherry blossoms and its monuments and its broad, tree-lined avenues. The unfortunate impression has been given that parents allowing their daughters to venture to the Capital in Government employ, in search of learning or culture, or even to witness its architectural glories, are sending them into a modern Sodom, steeped in moral turpitude, where sordidness is the norm. Anxious parents are given to believe that concealed by the monumental buildings and glittering attractions is a slimy, evil-eyed octopus whose tentacles sweep the city to drag all purity down to the depths. Of course, the fact is that there is an underworld of debauchery; but there are also spires of the spirit.

These smut-scenting reporters passed by hundreds of spires and church portals in their quest for obscenity. There is nothing confidential in the fact that there are listed in the telephone books of the Capital, in addition to its schools and colleges, almost a thousand churches of all faiths. Through these portals an army of young men and women, who come from the cities, towns, hamlets, and countryside of America, from sea to shining sea, constantly pour, to find uplifting fellowship and inspiring programs which harness activities to whatsoever things are pure, excellent, lovely, and of good report.

Those who come from decent backgrounds and with passion to be true to worthy traditions and to wear the white flower of a blameless life will find Washington as safe a city as can be found in America, or out of it. To the parents of America we would say: Do not hesitate to send your youth to Washington, your Capital. But be sure—be very sure—to send them to the churches that wait to receive them. Send them with the prayer in your heart and in theirs which was so often on the lips of a great leader who loved Washington and thought of it as the fairest of fair cities, and who, gazing at the effulgent beauty of the illumined Capitol dome against the night sky, often was heard to exclaim: "God, make us worthy of America at its best." In the Nation's Capital that is the prayer and the goal of untold thousands pouring out their lives in character-building institutions, including the churches, tolling 7 days a week to send out influences of sweetness and light in a radiant and wholesome "Washington nonconfidential."

William N. Oatis

EXTENSION OF REMARKS OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. FURCOLO. Mr. Speaker, I am pleased to call the attention of Members of Congress to a resolution on William N. Oatis that has been presented by Aerie No. 148 of the Fraternal Order of Eagles, of Springfield, Mass.

The order is well known to be a loyal, patriotic organization. I am proud to say that the Springfield Aerie is composed of very fine citizens who are interested in civic and world affairs. They seek fair play and justice for all.

The resolution follows:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was

brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation; and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative, or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous kangaroo court, completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world, and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of government, at which often much off-the-record information is discussed. Now, therefore, be it

Resolved, That Springfield, Mass., Aerie, No. 148, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free people of the world; and be it further

Resolved, That Aerie, No. 148, of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet News Agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 5th day of September 1951.
Attest.

JACOB KOCH,
Worthy President,
JOHN J. O'SHEA, Sr.,
Secretary.

The Crime Problem in the United States

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. WILEY. Mr. President, as I got off the train this morning there were being held by the Senate Interstate and Foreign Commerce Committee hearings on the various alternatives of racing wire news service legislation, S. 1563, S. 1564, S. 1624, and S. 2116.

I am delighted that these hearings are being held and I want to express my sincere congratulations to the members of the Senate Interstate and Foreign Commerce Committee, and in particular, to its able chairman, the senior Senator from Colorado [Mr. JOHNSON] for holding these hearings.

We all recognize that in the closing weeks of a congressional session there inevitably pile up a great many complex

and important bills before each of the standing committees. I am very glad indeed, therefore, that the Senate Interstate and Foreign Commerce Committee has found the time amidst its busy schedule to take action on this particular racing wire problem.

We of the Senate Crime Committee proved during the life of our group that the organization known as Continental Press is the key to the Nation-wide multi-billion-dollar-bookie empire. Destroy Continental Press, and any successor organizations, and you have crippled not only off-the-track gambling on a nationally syndicated basis, but you have helped smash the bank roll which supports a great variety of other organized crimes.

At this time, Mr. President, I have in my hands a series of resolutions adopted by the National Association of Attorneys General at its forty-fifth annual meeting in Seattle, Wash., on August 4 through 8, 1951. Among the resolutions adopted by the National Association of Attorneys General were a series relating to crime control, including interstate gambling. These resolutions were sent to me by Mr. Frank Bane, executive director of the Council of State Governments. The present president of the National Association of Attorneys General, I might note, is the Honorable Roy H. Beeler of Tennessee, which interestingly enough is the home State of our own distinguished battler against crime, the former chairman of our special committee (Mr. KEFAUVER).

I ask unanimous consent that the text of the Attorneys General resolutions on crime control be printed in the body of the CONGRESSIONAL RECORD.

I ask that it be followed by these materials: First, the text of an editorial carried in the September 13, 1951, Janesville, Wis., Gazette, regarding my personal comments on the new pattern of American crime; second, the text of a write-up in the Christian Science Monitor of September 11, on the recommendations conveyed by the American Bar Association Commission on Organized Crime. I believe that the bar commission, headed by Judge Robert Patterson, of New York, former Secretary of War, is to be congratulated for helping to continue to throw the spotlight on this important problem. While one may not agree with all of the commission's conclusions, there is one conclusion I think every American attorney can heartily support, and that is that the commission, itself, be carried on for another year, as it recommends. Keep up the good work, Bob Patterson, and your associates. Finally, excerpts of an editorial in the Burlington, Vt., Free Press as reported in the issue of the Christian Science Monitor referred to above. This is a splendid editorial pointing up the moral responsibilities of public officials and citizens alike.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

RESOLUTIONS OF NATIONAL ASSOCIATION OF ATTORNEYS GENERAL

XII. CRIME CONTROL

Whereas organized crime has become so widespread and far-reaching, so arrogant in

its attitude, so ruthless and so menacing that it presents a test to the very existence of established government; and

Whereas the Special Committee of the United States Senate To Investigate Organized Crime, and crime commissions of State and local character have forcefully exposed the illicit and illegal operations of racketeers and hoodlums in this Nation who operate in violation of State and local laws; and

Whereas the Congress of the United States has passed certain legislation pertaining to the use of interstate commerce by such criminal operators; and

Whereas we recognize that the responsibility to suppress and control organized crime rests mainly with State and local governments but that where effective assistance can be given by the Federal Government, the Congress should take action which will prohibit the shipment, dissemination, or use in interstate commerce of all information, devices, and things which can or may be used in violation of State laws, and

Whereas much has been accomplished by the Senate investigating committee in exposing interstate operations of criminal activities throughout the country; and

Whereas these revelations and recommendations are not permanent remedies in themselves; and

Whereas the work so ably commenced by the Senate investigating committee will not be complete until the Federal, State, and local governments shall have erected more permanent safeguards against the operations of organized crime, and now is not the time to relax or abandon the committee's work; and

Whereas in further aid to the respective States and localities in their fight against organized crime, the Federal Congress should strengthen its laws in certain fields: Now, therefore, be it

Resolved by the Forty-fifth Annual Meeting of the National Association of Attorneys General:

1. That Congress should enact a wire service law to prohibit the transmission of gambling information across State lines by telephone, telegraph, radio transmission, or other means of communication, as recommended by the third interim report of the Special Senate Committee To Investigate Organized Crime in Interstate Commerce.

2. That the Congress should prohibit the use of the mails in furtherance of any and all gambling transactions and strengthen its present laws in that regard.

3. That the Congress should strengthen its internal revenue laws as recommended by the Senate investigating committee so as to require more complete reports by those operating in violation of Federal and State laws and by forbidding the charging off of expenses and losses resulting from gambling activities; and in addition thereto, to provide for the exchange of information and evidence obtained pertaining to the violation of such laws with the tax authorities of the various States for use in State courts.

4. That the Congress should strengthen the antinarcotics laws as recommended by the third interim report of the Senate investigating committee.

5. That the attorneys general approve the action of the Attorney General of the United States in setting up a racket squad in the Department of Justice with duties as set forth in the third interim report of the Senate investigating committee.

6. That the Congress strengthen Federal laws pertaining to alcohol and liquor control as recommended by the third interim report of the Senate investigating committee and, in addition thereto, to prohibit the sale of stamps or licenses of the Federal Government in those States where State laws prohibit activities and operations thus federally licensed or stamped.

7. That there be further action of the Congress or the Bureau of Internal Revenue requiring the name and address of the owners of slot machines and similar gaming devices to be listed on tax payment applications and licenses.

8. That we urge the Congress to introduce and pass legislation which will define a gambling device per se and which will make it unlawful and will prohibit the shipment in interstate commerce of all such gambling devices per se; be it further

Resolved, That copies of this resolution be forwarded to the congressional delegation of each State and to the Attorney General of the United States and to the members of the Special Crime Investigating Committee of the United States Senate.

[From the Janesville (Wis.) Gazette of September 13, 1951]

WILEY SEES CRIME IN A NEW PATTERN

As a member of the Senate crime investigating committee, Senator ALEXANDER WILEY has had opportunity to dig into the sordid facts of crime in the United States and has reached some interesting conclusions.

In his weekly newsletter he states "As fast as new laws are devised, the criminals change their habits and patterns. Back in the 1920's, the criminals made literally hundreds of millions of dollars from bootlegging. We all recall, too, the murderous gang wars of the postwar Chicago era when the rival bootlegging mobs battled it out on the streets. We remember the machine-gun massacres.

"But that situation has changed. The modern criminal has turned 'respectable' and 'polite.' He moves in the 'best of circles,' he dresses well, he lives in the best of neighborhoods, he contributes generously to charities. But if you investigate deeply enough, you will find that undercover, he meets with the same old mobsters of old. You will find that he has invested his ill-gotten moneys in legitimate business and often is using his bankroll, moreover, to finance various types of illegal operations. You will find, too, that he isn't paying his fair share of income taxes. This is the 'modern criminal,' and it is up to us to use modern tactics against him. Constantly improved laws and an ever-ready zeal to prosecute wrongdoers must be an answer to our hoodlums."

[From the Christian Science Monitor of September 11, 1950]

STIFF ANTICRIME LAW OUTLINED TO PUT I.D. ON BETTING RACKETS
(By Mary Hornaday)

Finding "obvious deficiencies" in the gambling laws of the 48 States, the American Bar Association Commission on Organized Crime has urged the preparation and submission to the States of a model antigambling law.

Established last September when Senator ESTES KEFAUVER, Democrat, of Tennessee, asked cooperation of the bar association in the work of his crime investigating committee, the commission, headed by Judge Robert P. Patterson, found the gambling laws of many States so poorly drawn and the proof demanded so unrealistic that evasion is easy. Penalties provided are frequently so slight, the commission states, as to amount to the quasi licensing of gambling.

The committee report to be submitted to the bar association's house of delegates next week says: "This code should be designed to prohibit modern forms of gambling and modern methods of conducting gambling operations."

RIGID BETTING CURBS

"It should not overlook the importance of communications to present-day bookmaking and betting operations. It should provide for rigid prohibitions of the use of telephone, telegraph, radio, and television facil-

ities for the dissemination of gambling information as well as the taking and placing of bets and wagers.

"Nor will the model code fail to include separate and effective sections on lotteries, the policy game or numbers rackets, slot machines, and gambling establishments. It should incorporate the recommendation made by the Senate committee and found in the laws of Minnesota and Wisconsin, that liquor, food, and other types of licenses of establishments which permit gambling on their premises be forfeited."

The commission also suggested:

Preparation of State statutes to make possible greater State supervision over local law enforcement agencies; the adoption of uniform law enforcement policies, and an improvement in the functioning of local law enforcement agencies.

A vigorous campaign by State and local associations to eliminate the lawyer who actively cooperates with criminals, advises them how to evade the criminal law, or otherwise participates in the activities of those violating the criminal laws.

EFFICIENT STAFFS VITAL

Appointment in each State of official crime commissions adequately financed and staffed to make thoroughgoing and continuing analyses of local problems of organized crime and the efficiency of law-enforcement agencies in combating them.

Formation of continuing independent citizens' groups in States and in metropolitan centers to keep the public advised as to crime conditions within their communities and the effectiveness of public officials in dealing with them.

State investigations cited as having provided valuable information are those conducted by the various crime study commissions appointed by Gov. Earl Warren, of California, and the five-man commission appointed by Gov. Thomas E. Dewey, of New York.

In its research on gambling, the commission found that except for pari-mutuel betting at race tracks in 27 States, and all forms of gambling in Nevada, gambling is everywhere illegal in the United States. But only half the States have specific statutes outlawing bookmaking. They make no provision for the type of bookmaking operated by agents who take bets by word of mouth or over the phone. Only five States have specific legislation directed against policy or the numbers game.

STRONGER LEGAL CHECK

In addition to recommending action to strengthen the hands of the States in dealing with organized crime, the commission also urged support for many pieces of legislation introduced in the Eighty-second Congress by the Senate Crime Investigating Committee to strengthen the powers of the Federal Government.

It especially recommends support for bills which would control the transmission in interstate commerce of sports news essential to gambling operations, prohibit transmission of bets and wages across State lines, and provide better means of reaching the income of gamblers and racketeers through Federal taxation.

The commission will ask the association to disapprove proposed Washington legislation providing mandatory penalties for narcotics offenses. In practice, the commission said, the mandatory provision and removal of the discretion from the judge actually lessens penalties instead of increasing them.

The formation of a Federal crime commission urges continuing investigation of organized crime in interstate commerce, either through a joint committee of the Senate and the House or through a subcommittee of the Senate Interstate and Foreign Commerce Committee.

[From the Burlington (Vt.) Free Press]

CRIME AND CORRUPTION

The Senate Crime Committee, under Senator KEFAUVER, has completed its 15-month investigation of crime throughout the Nation and made a final report calling for action to clean up America. The conditions which it revealed should awaken every good citizen to do something about it.

Have we become calloused to immorality, crime, and corruption, or are we just so busy with our own private affairs that we don't pay any attention to public problems?

Herbert Hoover, speaking last week in Des Moines, appealed for a return to the old virtues lest the lights go out of America. He warned of the decay of integrity and the rotting of patriotism.

Hoover showed great concern over disclosures of dishonor in high places and the frustration of Congress in groping for some sort of code of ethics which might protect the citizen from his own officials.

There is one encouraging sign, said Hoover, "Moral indignation is on the march again."

Let us hope that is true. It is not as evident as we would like to see it. There is still too much inclination to be easy going about dishonesty and covering up on the part of public officials who are concerned primarily with their own personal profit rather than with serving the public.

There is still a tendency to consider that public official smart if he feathers his own nest when he has the chance. The fact that he does it at the expense of the taxpayers doesn't seem to arouse the indignation that it should.

When politicians are willing to give protection to criminals, in return for financial support and votes, the core of our political system is rotten.

When those in places of power are willing to accept bribes for their favor, we should hang our heads in shame in this country.

For we, the people, are responsible for this sort of thing. By our votes we can remove corrupt public officials and replace them with honest men. There are still honest men who will not condone that sort of thing, even though it may sometimes seem they are rare.

The difficulty with us is that too few have the moral stamina to resist the temptations which come with money and power.

Hoover is right when he says we need to return to the old virtues. It is time to stop acting as if we had outgrown the Ten Commandments. It is time to stop and take stock of our spiritual values. Too many of us are on the verge of moral and spiritual bankruptcy without realizing it.

Just as a chain cannot be any stronger than its weakest link, so the public morality of a nation cannot be any stronger than the spiritual strength of its individual citizens.

Imprisonment of Associated Press Correspondent William N. Oatis in Czechoslovakia

EXTENSION OF REMARKS

OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. MOODY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter from the distinguished journalistic fraternity, Sigma Delta Chi, to the Department of State, regarding the William N. Oatis case. A copy of this letter,

commenting on the outrageous imprisonment of this American newspaperman without cause, was forwarded by the fraternity to the Embassy of Czechoslovakia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SIGMA DELTA CHI,

PROFESSIONAL JOURNALISTIC FRATERNITY,
Chicago, Ill., August 21, 1951.

The SECRETARY OF STATE,

State Department, Washington, D. C.

DEAR MR. SECRETARY: The executive council of Sigma Delta Chi, professional journalistic fraternity with a membership of 20,000 in all fields of American journalism, strongly condemns the imprisonment in Czechoslovakia of an American press association correspondent. We recognize the precedent set in his case as a grave threat to press freedom which is in more danger than had been heretofore realized if a journalist can be convicted of espionage for endeavoring to report the truth.

Sigma Delta Chi joins in urging that the United States Government realize a solemn obligation to be unrelenting in its efforts to bring about the release of William Oatis by every legitimate means at its command, and to obtain assurances from all nations with which we maintain diplomatic relations that the rights of American citizens abroad will be protected.

This council realizes the complexity of the problem that William Oatis presents. It does not urge hasty or impetuous action which might result in welding even tighter the iron barrier prohibiting a free flow of news between the West and the East. It commends such action as that initiated by the Department of State in terminating trade concessions heretofore granted to Czechoslovakia. And it urges most strongly that representations in behalf of the imprisoned journalist be made emphatic, and frequent enough to impress upon the Czech Government and others dominated by the Soviet Union that the United States does not consider this to be a minor incident.

This council further urges that full publicity be given to whatever efforts are made to convince the Czech Government that the imprisonment of William Oatis is an affront to all people who believe in freedom of expression and who rely on such men as Oatis for the facts that make it possible to be alert to what is going on in the world.

Finally, this council favors constant vigilance in devising and finding ways not now apparent for righting the grievous wrong done to this member of the journalistic profession.

To that end it offers whatever cooperation and support this organization can extend to the State Department and others who may be in a position to deal with the forces which have silenced an outpost of press freedom.

Most respectfully yours,

The Executive Council of Sigma Delta Chi: Carl R. Kesler, editorial writer, Chicago Daily News, chairman; John M. McClelland, Jr., editor, Longview (Wash.) Daily News; Charles C. Clayton, editorial writer, St. Louis Globe-Democrat; Lee Hills, managing editor, Miami Herald; Alden C. Waite, president and general manager, Southern California Associated Newspapers; Robert U. Brown, editor, Editor and Publisher; Lyle Wilson, Washington Bureau manager, United Press; Ted Barrett, Dallas Morning News; Mason R. Smith, editor, Tribune Press Governor, N. Y.; Ed Dooley, managing editor, the Denver Post; Prof. Clifford F. Weigle, Institute for Journalistic Studies, Stanford University; Victor E. Bludorn, executive director, Sigma Delta Chi.

One Hundredth Anniversary of the New York Times

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, September 18, 1951

Mr. KEFAUVER. Mr. President, the New York Times today, September 18, celebrates its one hundredth birthday. The story of the Times is a fascinating one, with many ups and downs and continued success since 1896, when it was purchased by Adolph Simon Ochs. Throughout its life the Times has been a paper of courage, honor, and greatness.

The people of Tennessee, and particularly those of Chattanooga, have an especial interest and pride in the growth, development, and tremendous success of the New York Times. This is true not only because we of Tennessee acclaim a remarkable newspaper, but because Adolph S. Ochs came from Chattanooga, Tenn. As a young man, he purchased the New York Times, in 1896, and, along with Mr. Sulzberger and General Adler, is responsible for its greatness today.

Mr. Ochs was founder of the Chattanooga Times, which is still owned by the Ochs family, and this newspaper, in its field, has attained and maintains the same high caliber and progressive attitude as the New York Times.

The story of Adolph S. Ochs is a legend in Tennessee, and especially in Chattanooga, and it is the story of how, as a young man, without means as the result of the panic of 1893, he came from Chattanooga to New York, secured control of the New York Times, carried it through many turbulent periods, and built it into one of the world's great newspapers. He is an inspiration to all of us.

Adolph Ochs' brother, Milton Ochs, and many members of his family, are leading citizens in Chattanooga. Adolph Ochs and his family have made great contributions to the development of Tennessee. The Lookout Mountain National Park, the Ochs Memorial Temple, the Ochs Highway up Lookout Mountain, and many other civic improvements, are testimony of the continuing interest of Adolph Ochs in his home State. We of Tennessee are proud of Adolph Ochs and the Ochs family, of the Chattanooga Times, and of the New York Times.

The story of the New York Times is accurately told in the well-written book by Meyer Berger, published this week. His article in last week's Life Magazine is an excellent summary of this fascinating episode in American history. I should like to include all of the article in the Record, but since it exceeds the two-page limit, I ask unanimous consent to include the latter part of the article, which begins with the history of the New York Times when Adolph S. Ochs came into the picture.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

DRIFT TOWARD THE ROCKS

When Jones died in 1891 the Times was on the rocks. Charles Ransom Miller, editor in chief, a learned man with no more business sense than a tree stump, got some Wall Street money, but only enough to rent the plant and to keep an ever-shrinking payroll going. As the staff decreased, news fell off in quantity as well as in quality. Miller desperately tried to stuff space with cheap fiction and assorted claptrap. The Times lumbered toward bankruptcy and extinction.

The saving day was August 13, 1896. On that day the Times was sold at receivers' auction to a group of Wall Street men headed by Spencer Trask and to a stranger to New York named Adolph Simon Ochs, a 38-year-old Tennessean who secretly, in letters to his family, had confided that he was a scared "greenhorn" in New York and that ownership of the Times had been beyond his wildest dreams.

Ochs was the son of poor German immigrants. He had had little formal schooling. He had been a barefoot newsboy in Knoxville, Tenn., then a printer's devil, a journeyman printer. In 1878, at the age of 20, he had borrowed \$250 to start as publisher of the Chattanooga Times and had converted it into one of the best papers of the South. He had lost all his profits in real-estate investment and had come to New York. Just before he got the Times he had wandered around borrowing a few thousand here, a few thousand there, trying to keep afloat. A few weeks before the sale of the Times he had invested \$5 in a bicycle suit and had studied the big city from the seat of a hired wheel. When the time for the great deal came he had \$75,000, all borrowed, to put into it.

Though he had extraordinary business genius and rare newspaper sense, the new Times boss was singularly Micawberish and occasionally a little naive. His first act after he had been formally installed in what had been Jones' office on August 18, 1896, was characteristic. He wrote to his wife, Effie, and to his infant daughter, Iphigene: "The first New York Times letter sheet I use carries my love to those who are dearer to me than the prize I have won. . . . An army of men stands ready to carry out my wishes. I have succeeded way beyond my fondest hopes, and with God's help will maintain the position with credit. I am a lucky fellow." The prize was a shabby wreck with presses shot, fixtures worn, supplies and equipment short. The army was a dispirited staff with morale all but entirely rubbed off. Joseph Pulitzer of the World and William Randolph Hearst of the Journal, who had brought the new "yellow journalism" to New York with great profit to themselves, were inclined to write Ochs off.

They didn't know the man. A master printer, he changed the hang-dog typographical look of the paper overnight. He tossed out the junk that Miller had used to stuff holes with, and used his small working capital for more news. He introduced new financial features, jacked up Wall Street coverage, and within 7 weeks had cut expenses drastically by eliminating waste. Within a month he had added a Sunday magazine supplement based on the news and a Saturday book review.

The day after Ochs took over on Park Row he ran his declaration of journalistic principle on the editorial page. He pledged that, maintaining the Raymond and Jones tradition, he would present news "in language parliamentary in good society." He prom-

ised that he would "give the news impartially, without fear or favor, regardless of any party, sect, or interest involved." In other words, the Gray Lady was not, under any circumstances, going to turn gaudy.

While Hearst and Pulitzer kept the New Yorkers emotionally high-pitched and jumpy, Ochs shrewdly accented the calm and sober viewpoint. Trade papers, clergymen, and editors began applauding the miraculous resurrection of the Times. Across the country, the editor of the San Francisco Argonaut, wrote: "Realizing that the sewer and morgue fields were fully occupied by the World and the Journal, Ochs determined to issue a clean paper for a change. Very much to the surprise of himself and New York, he is making a success of it."

The Tennessee "greenhorn" offered a \$100 prize for a Times slogan that would stress the virginal purity of the newspaper's news content. Before the contest ended he used some of his own, including, "It will not sell the breakfast linen." The prize went to D. M. Redfield, of New Haven, Conn. ("All the world news, but not a school for scandal"), but the winning slogan was junked. Ochs had made up one he liked better. He had taken a Philadelphia newspaper's "All the news" and had added "that's fit to print."

GAMBLER'S CHANCE

But the real crisis for the brash young man lay ahead. Aware that the newcomer had remarkable newspaper genius, Pulitzer tried to smother him with lanky invective. When the Spanish-American War broke, the sensation journals, spending money wildly for lavish coverage, all but overwhelmed the still impoverished Times. For a while it seemed that Ochs might have wasted his toil.

He took a desperate gambler's chance. Early in October 1898 he dropped the Times price from 3 cents to 1 cent, though the World and the Journal still sold for only 2 cents. While his friends thought him financially crazy and all suspicious onlookers cried that he was deserting his dignity to compete with the scandal sheets, a tight-lipped Ochs announced, "It is the price of the paper, not its character, that is changed."

He all but held his breath until the tide turned. It did—dramatically. Circulation tripled, and so did advertising. By 1900 he had increased readership from 9,000 to 82,000. In another year the figure had leaped to 102,000, and advertising lineage passed the 5,000,000 mark. On August 14, 1900, Spencer Trask, who had backed Ochs in the reorganization of the Times, reluctantly released the certificates that gave Ochs, by the terms of their contract, majority control of the newspaper. The Micawber strain showed through the night this deal was completed. "The contract I made in 1896," he wrote to Effie, "is ended. My title is perfect. Now I am monarch of all I survey, and none my right to dispute."

The decades from the hour when Ochs took complete control of the Times until he died in 1935 brought the happy maturing of the Gray Lady. Ochs' own success shook neither his poise nor his principle. He kept plowing back into the Times a major portion of the profits, striving for an ever better world coverage. When he had to borrow more than \$2,500,000 to raise Times Tower in what is now Times Square, he proudly refused to give banker creditors a detailed account of his finances—something to be expected, he exclaimed, only from a prospective bankrupt. As his name became known the world over, rich men and great institutions sought his friendship but never dimmed his own clear view of himself. Invited to judge a Yale-Harvard debate in 1903, he politely begged off though he stood ever in awe of anything scholarly. "I turned down the debate bid," he confided to his

sister Nannie, "on the theory that the higher a monkey climbs the more he shows his tail." Every once in a while he would get off a pun about the danger of an Ochs, trying to play up to the lions, turning out, instead, to be an ass.

The Times printed its last Park Row issue on New Year's Day in 1905. That night Ochs worked his new presses and linotypes in the Tower for the first time, without losing stride. By now this Mr. Micawber from Tennessee had real right to gloat that he, a near-bankrupt, had brought a dying newspaper to new life and housed it in the finest newspaper plant in the world—all within less than 9 years.

Working for him now as managing editor was Carr Vattel Van Ande, a remarkable man steeped in science, mathematics, and newspaper-making, whose cold, professional stare was secretly referred to as "the death ray." Ochs had hired Van Ande away from the New York Sun, and the two men made probably the keenest journalistic team in history. In April 1904, by arrangement with the Times of London, they scooped the rest of the world on the Japanese-Russian naval engagement off Port Arthur, getting the report by the first wireless war dispatch ever sent from a correspondent's craft at sea. Three years later they ran the first wireless press dispatch ever sent across the Atlantic on the Times' front page on October 18, 1907. Pioneering or keeping pace with every forward leap of wireless and radio, they were unmatched in their news pursuit of aviation and exploration—from Commodore Robert E. Peary's discovery of the North Pole in 1909 to Roald Amundsen's discovery of the South Pole.

Although the Times, like most other newspapers, missed out on the Wright brothers' flight at Kittyhawk in 1903, it made up for that lapse after Van Ande came to the paper. On May 29, 1910, he snatched the Glenn Curtiss Albany-New York flight story from under the nose of the World, which had put up \$10,000 as prize for the flight. Van Ande secretly hired a special reporter-filled train to follow the plane's progress down the Hudson, a trick the World had overlooked. The Times reported every phase of this pioneer air journey and made the most of it.

TITANIC SCOOP

Van Ande's mathematical genius and his general knack for figuring anything out by cold formula dismayed opposition. When the liner *Titanic*, on maiden voyage from England, flashed a call for help from mid-Atlantic on Sunday night, April 14, 1912, and then fell silent, the Times' news boss believed that she had gone down. Other editors, believing, as they repeatedly read and heard, that the *Titanic* was unsinkable, waited for further word from her. While they waited, Van Ande—acting on the logical conviction that the ship's silence meant she was gone, with most of her 2,180 passengers—put out a Times story that scooped the world. The story, of course, stood up. When rescue ships put into New York a few days later, his coldly calculated, leak-proof coverage gave the Times a 15-page version of the greatest sea disaster in history that no other publication even remotely matched. This achievement became part of indestructible Van Ande legend.

The managing editor's handling of World War I news was a companion piece. He studied every available military map, anticipated major campaigns, accurately shifted his correspondents to vantage points. From beginning to end he outdistanced and outguessed all competition.

Thriving under such leadership, the Times was yet almost wrecked by an event late in World War I. One Sunday night in September 1918, Charles Miller, whom Ochs had retained as editor-in-chief, wrote a piece advocating consideration of Austria's first bid

for a "nonbinding" peace discussion. Whipped by desire for the enemy's unconditional surrender, public reaction was immediate and frightening. Wrathful letters, telegrams, and cables lashed the editorial as cowardly and as pro-German. Anguished and panicky aids tried to persuade Ochs to announce that he had not seen the editorial before it got into print—which was true. Ochs refused. "I have always accepted public praise and public approval of the many great editorials Mr. Miller has written for the Times. When there is blame instead of praise I must share that too."

The public's temper tantrum passed. The Times survived and prospered with the coming of peace. By 1921 its circulation under Ochs had soared to 330,802.

The brilliant editing of Van Ande won the Times triumphs in fields usually remote from journalistic beats. It was Van Ande who first publicized Albert Einstein and who first gave newspaper readers some knowledge of the potentialities of atomic energy. In 1922 the managing editor leaped on a dispatch about the opening of Tutankhamen's tomb in the Valley of the Kings near Luxor and exploited it so deftly in the Times that it became a conversation piece across the Nation. It appears that among his other talents Van Ande numbered Egyptology. At his office desk late one night he deduced from photographs of hieroglyphics taken from the Pharaoh's tomb that Horemheb, Tutankhamen's military chief, had slain the king. The deduction was confirmed. Only the Times could have scored a scoop on a story 3,000 years old.

From a competitor's viewpoint, the Times could be just as irritatingly competent on the hottest news story. On Friday, May 13, 1927, a rising young executive in the Times organization, Arthur Hays Sulzberger, extemporaneously dictated by telephone a historic oral contract binding the Times to buy a flight story from a young pilot of whom few people had ever heard. Nine days later the newspaper had the most exciting adventure story in modern history, which it front-paged with the banner headline: "Lindbergh does it. To Paris in 33½ hours."

In the late twenties the Gray Lady kept wagging a warning finger in the paper's financial columns. Repeatedly Alexander D. Noyes, the financial editor, had glumly insisted ruin was inevitable. The Nation was, of course, in no mood for old-fashioned strictures. When the collapse came late in 1929, the newspaper itself was better equipped than most to survive the depression that followed. After his real-estate venture in Chattanooga, Ochs had never invested in anything but Government bonds, in the Times and its paper-mill holdings.

Looking to the future, Ochs had once expected that Julius Ochs Adler, one of his sister's sons, might eventually take over. His ideas had been changed in 1917, however, when his daughter had married Arthur Hays Sulzberger, then a boyish lieutenant of artillery. Ochs had not rejoiced at this: he had wanted someone with newspaper background for Iphigene, and young Sulzberger, though of distinguished ancestry—one of his forebears on the maternal side was George Washington's bodyguard—had no printer's ink in his veins. Ochs had begun putting him through a grueling apprenticeship at the Times just about the time Adler came back from the war in France—with several decorations for bravery—to resume his chores on the paper.

By the thirties Ochs was failing physically. Most of the men he had grown up with were already gone. He underwent a serious kidney operation, then lapsed into melancholia. A white mane had developed above his square face, and he was flattered when friends saw in him a likeness to George Washington. He began neglecting to read the Times each

morning. He even stopped opening his mail. He no longer appeared at his desk.

Early in April 1935, at 77 years of age, Ochs miraculously snapped out of melancholia literally overnight. He dropped into General Adler's office, astonishingly chipper, though he had wasted, and his clothes hung on his frame. He announced that he was going to Chattanooga to straighten out affairs on his Times there.

At 1 p. m. on April 8, just after he got back to the scene of his first journalistic venture, Ochs fell unconscious as he sat at luncheon with his brother Milton and R. E. Walker, a Chattanooga Times editor. He died 2 hours later in a local sanitarium, victim of a cerebral hemorrhage.

At Ochs' death, the newspaper that was virtually his creation, had achieved a daily circulation of 465,000. The wreck he had bought 40 years ago, with such brash pride, was now, in fact, the most prestigious newspaper in the world. His will left controlling interest in the Times in trust to the Sulzbergers' son and daughters.

THE LINDBERGH EXILE

The first major news beat after Sulzberger became publisher traced back more than 8 years to the hour when he had dictated the Lindbergh contract by telephone. One afternoon in December 1935, Lindbergh summoned Lauron (Deak) Lyman, the Times aviation man, to the Dwight Morrow home in Englewood, where the flyer then lived. The two men had been warm friends for years; Deak had covered the Lindbergh baby kidnapping story and the Hauptmann trial. To Deak, and to Deak alone, that wintry afternoon in the Morrow parlor, Lindbergh confided that he was taking his family into voluntary exile in Britain, because, since the death of his first son, he was constantly bothered by crank letters and threats against his wife and remaining child. The Times, by agreement with Lindbergh, broke the story on Monday morning, December 23, when the flyer was at sea with his family. The item brought international uproar. Deak's reward was a Pulitzer prize, one of the 22 now held by the Times.

In 1936 Sulzberger cleared decks for action. He shortly disposed of some minor magazine investments of the Times, discarded the rotogravure section, ran picture spreads in a greatly improved Sunday magazine, put more photographs into the daily newspaper. A News of the Week in Review feature for the Sunday paper, launched in January 1935, became instantly popular. So did new food and style pages—features that Ochs had tended to shy away from. An annual fashion show was instituted to stimulate fashion advertising. Then came Sunday, and finally daily, crossword puzzles.

The new publisher assembled a younger executive staff. Edwin James as managing editor, Charles Merz as editorial chief, Turner Catledge as executive managing editor, Lester Markel as Sunday editor. More and more women were hired for major editorial jobs—the most notable being Anne O'Hare McCormick, named to the editorial board. Both foreign and domestic news staffs were expanded. Sulzberger as publisher and General Adler as general manager assumed a closer relationship, socially and professionally, with their aides than the Victorian Ochs had allowed.

Nominally Democratic in Ochs' reign, the Times has gradually achieved complete political independence. It opposed a third term for Roosevelt in 1940 because it disliked his court-packing plan and as Sulzberger put it, "his expressed desire to send Congress home." The paper went back to supporting Roosevelt in 1944, charging Dewey with failure to repudiate isolationists in the Republican Party who were fighting lend-lease and universal military training legislation—for which the Times had consistently pleaded.

Both during and since World War II (while General Adler went to New Guinea in command of the Sixth Division) the new publisher has flown in and out of the great trouble spots of a warring world. He took just pride in the Times' first-rate coverage of the war. Two Times men—Byron Darn-ton and Robert Post—died in combat. Another Times man, William L. Laurence, was spirited away from the office by the Army one morning in 1945 to act as secret biog-rapher to the atom-bomb project, and wrote the eyewitness account of the A bomb at-tacks on Nagasaki.

In November 1944, touring the Pacific bat-tle areas, Sulzberger and Catledge saw the first B 29's take off from Saipan to batter Tokyo, and that same night came under at-tack as Japanese ships screamed down to blow up a bomb-packed B-29 on the airstrip. Snipers zinged at them later on Peleliu, but the publisher seemed to enjoy the excite-ment. Catledge, a dry-humored Mississip-plan, later confessed that through it all, he was "calm quite beyond the call of impulse." The Gray Lady plainly took the war as might be expected.

All through World War II Sulzberger had fused with plans for postwar expansion. By February 1948 the Times had a great new wing on its Forty-third Street home, giving it 50 percent greater production capacity, air conditioning, greater recreational and dining space, and the greatest press capacity in its history. On one recent Sunday it ran off more than 1,000,000 380-page papers, each weighing more than 4 pounds. This edition alone took \$265,300 worth of newsprint and \$2,635 worth of ink. At that, 30 columns of advertising were left out because the presses couldn't handle that much more.

The quest for self-improvement goes on restlessly and ceaselessly. Late at night, in his tower bedroom in the Forty-third Street building, Sulzberger keeps tuned in on radio station WQXR, which he bought for the paper. On sleepless nights he jots down endless memoranda on instructions for changes in the ways of the Times.

But, however remote the massive modern institution is from Henry Raymond's candle-light shop of a century ago, the most im-portant ways of the Times probably will never change. Recently a harassed citizen called the Times. Frenzied with anxiety over the likelihood of an atomic disaster blowing the world to pieces, he asked what the Times would do in such an awful event. The Times voice was coolly assuring: "The Times will give complete coverage."

It was really the voice of the same old Gray Lady.

Communism and Its Method of Operation

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HENDRICKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking article written by one of New Jersey's leading lawyers, Judge Fred G. Stickel, Jr., of Newark, which appeared in the Caldwell Progress on August 10 last.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE JUDGE SAYS

Justice Robert H. Jackson, of the United States Supreme Court, was the prosecutor at the famous Nuremberg trial, before an

International Court, of Nazis accused of violating international law. A realist and always in touch with the stream of life, he was never more so than when in his concur-ring opinion in *State v. Dennis*, he in beau-tiful language described communism and its method of operation. *State v. Dennis* was the case involving the Communist leaders convicted before Judge Medina of violation of the conspiracy provisions of the Smith Act, enacted by the Congress of the United States.

The Justice's words should be widely cir-culated and not merely encased in an opin-ion reaching, in the main, only lawyers. I hope my example in making it available to the readers of the Caldwell Progress will be followed by other publications. Here is what he said:

"Communism, the antithesis of anarch-ism, appears today as a closed system of thought representing Stalin's version of Lenin's version of Marxism. As an ideology, it is not one of spontaneous protest arising from American working-class experience. It is a complicated system of assumptions, based on European history and conditions, shrouded in an obscure and ambiguous vocabulary, which allures our ultrasophis-ticated intelligentsia more than our hard-headed working people. From time to time it champions all manner of causes and grievances and makes alliances that may add to its foothold in government or em-barrass the authorities.

"The Communist Party, nevertheless, does not seek its strength primarily in numbers. Its aim is a relatively small party whose strength is in selected, dedicated, indoctrinated, and rigidly disciplined members. From established policy it tolerates no deviation and no debate. It seeks members that are, or may be, secreted in strategic posts in transportation, communications, industry, government, and especially in labor unions where it can compel employers to accept and retain its members. It also seeks to infil-trate and control organizations of profes-sional and other groups. Through these placements in positions of power it seeks a leverage over society that will make up in power of coercion what it lacks in power of persuasion.

"The Communists have no scruples against sabotage, terrorism, assassination, or mob disorder, but violence is not with them, as with the anarchists, an end in itself. The Communist Party advocates force only when prudent and profitable. Their strategy of stealth precludes premature or uncoordinated outbursts of violence, except, of course, when the blame will be placed on shoulders other than their own. They resort to violence as to truth, not as a principle but as an expedient. Force or violence, as they would resort to it, may never be necessary, because infiltration and deception may be enough.

"Force would be utilized by the Com-munist Party not to destroy government but for its capture. The Communist recognizes that an established government in control of modern technology cannot be overthrown by force until it is about ready to fall of its own weight. Concerted uprising, therefore, is to await that contingency and revolution is seen, not as a sudden episode, but as the consummation of a long process.

"Communist technique in the overturn of a free government was disclosed by the coup d'etat in which they seized power in Czecho-slovakia. There the Communist Party, dur-ing its preparatory stage, claimed and re-ceived protection for its freedoms of speech, press, and assembly. Pretending to be but another political party, it eventually was conceded participation in government, where it entrenched reliable members chiefly in control of police and information services. When the Government faced a foreign and domestic crisis, the Communist Party had established a leverage strong enough to threaten civil war. In a period of confusion the Communist plan unfolded and the un-

derground organization came to the sur-face throughout the country in the form chiefly of labor action committee. Com-munist officers of the unions took over trans-portion and allowed only persons with party permits to travel. Communist printers took over the newspapers and radio and put out only party-approved versions of events. Possession was taken of telegraph and tele-phone systems and communications were cut off wherever directed by party heads. Communist unions took over the factories, and in the cities a partisan distribution of food was managed by the Communist orga-nization. A virtually bloodless abdication by the elected government admitted the Com-munists to power, whereupon they insti-tuted a reign of oppression and terror, and ruthlessly denied to all others the freedoms which had sheltered their conspiracy."

Remember the foregoing when ultraso-phisticated but dumb intelligentsia or prop-agandists in whatever guise seek to sell you communism as an agency of peace or well being or as something superior to govern-ment of, for, and by the people. It was Vishinsky, who in 1948, wrote, "In our state (the Soviet state) naturally there can be no place for freedom of speech, press, and so on for the foes of socialism."

No contract is stronger than the intention and integrity and honesty of purpose of the participants. Hence, in evaluating any pro-posal, contract, agreement, treaty, or other instrument emanating from or executed by Russia, as long as the Communist Party, very small in comparison with the popula-tion of Russia and its satellites control such countries through the ruthless men compris-ing the Politburo, bear in mind that a Com-munist resorts to truth as an expedient, not on principle, that his underlying philosophy is that the end justifies the means and that no instrument or promise is binding upon him unless it continues to serve his purpose. To be governed by this approach may well mean continued sacrifice, and for an indefi-nite time, to make and keep ourselves and the Western World strong but it is far bet-ter to make such sacrifices than to allow ourselves to be lulled into the slavery of communistic control or by inertia and tem-porary relief from sacrifice to encourage communism to strike. Eternal vigilance is the price of liberty.

Dismissal of Homer G. Richey From Faculty of University of Virginia

EXTENSION OF REMARKS

OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Post yesterday regarding action taken by the president of the University of Virginia, indicating that at that university one cannot accuse persons falsely and not be held responsible.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFESSOR RICHEY LOSES POST AT VIRGINIA UNIVERSITY

CHARLOTTESVILLE, Va., September 17.—The University of Virginia today relieved one of its professors from his assignment in the Woodrow Wilson school of foreign affairs,

The instructor, Homer G. Richey, had accused three colleagues of left-wing teachings. University President Colgate W. Darden announced the dismissal. He said the act had the unanimous recommendation of the council of deans.

In a letter to Richey, Darden said: "The manner in which you have attempted to arouse passions of people . . . against your colleagues, the school of which you are part, and the university under whose control it functions, is unworthy of one holding your position."

Richey directed his charges against John Gauge, director of the foreign affairs school, and Alfred P. Fernbach and Charles Micaud, associate professors.

A faculty committee investigated last spring and cleared the three. The board of visitors also found no evidence to substantiate the accusations.

Obligations of American Citizenship

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking editorial which appeared in the Journal-Every Evening of Wilmington, Del., last night.

The Senate will note that the editorial is based on remarks of a distinguished member of the Federal bench, Hon. Paul Leahy, who was speaking to a group of foreign citizens in the process of becoming naturalized Americans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIS AMERICANUS

The easiest way to become an American citizen is to be born one. You don't have to earn the privilege, you don't even have to want it. You aren't required to stand up before a judge, take an oath, and listen to him tell what makes a good citizen.

Maybe you should be, maybe we all should. Some of us native Americans show only the most rudimentary notions of what American citizenship implies. It wouldn't hurt us to listen in some time when a group of foreigners are being naturalized.

Here is what United States District Judge Paul Leahy told such a group that a good citizen of this country should do:

Vote at all elections.
Serve on a jury when asked.
Respect and obey the laws.
Pay taxes understandingly.
Work for peace.
Avoid all group prejudice.
Support our system of free public education.

Try to make the community better.
Practice and teach the principles of good citizenship.

That's a large order, particularly the little item reading: Pay taxes understandingly. How many of us vote at all elections? How many always respect and obey all the laws? (Don't raise your hand if you've ever received a traffic ticket—or deserved to.) How many lack prejudices against other groups, or even try to avoid them?

But Judge Leahy is right: These are important obligations of American citizenship. And another important obligation he men-

tioned to the new citizens Monday is the duty not only of practicing free speech, but of understanding it. "The price of free speech," he said, "is that you must hear unpopular statements." The good citizen pays that price willingly.

Cicero once told of how Publius Gavius, on being seized and beaten in Messina, uttered no cry of pain but after each blow spoke the words: "I am a Roman citizen." Our own country can be greater than Rome ever was if we so conduct ourselves that every American, anywhere in the world, can say with equal dignity. "Civis Americanus sum."

Progress Through Interstate Cooperation

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HENDRICKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Progress Through Interstate Cooperation," published in the New Jersey Law Journal of September 6, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROGRESS THROUGH INTERSTATE COOPERATION

Demonstrating what Governor Driscoll has on many occasions referred to as "the amazing vitality of our States," New Jersey this year adopted legislation authorizing a record number of interstate compacts. Seven such laws were enacted during the regular session of the legislature.

Supplementing New Jersey's comprehensive civil defense law, which has been described by the Council of State Governments as one of the most complete in the country, the first of these measures (Public Law 1951, c. 8) ratified, on behalf of New Jersey, the Interstate Civil Defense and Disaster Compact proposed by the Northeastern Interstate Committee on Civil Defense of the Council of State Governments. The purpose of the compact is to provide mutual aid among the States in meeting any emergency or disaster from enemy attack or other cause, natural or otherwise, including sabotage and subversive acts and direct attacks by bombs, shellfire, and atomic, radiological, chemical, bacteriological means and other weapons.

A second measure (Public Law 1951, ch. 2) approved the interstate compact between New Jersey and New York for mutual military aid and assistance in an emergency, which was agreed upon by Governor Driscoll and Governor Dewey on December 12 of last year. Pennsylvania has recently adopted legislation approving this compact. The purpose of this interstate agreement is to provide for mutual military aid and assistance by the military forces of a signatory State to the military forces of the other signatory States or of the United States, in the event of invasion or other hostile action, disaster, insurrection, or imminent danger thereof. This includes, among other military missions, the military support of civil-defense agencies and the protection of interstate bridges, tunnels, ferries, pipelines, communications facilities, and other vital installations, plants, and facilities. It also provides for fresh pursuit, in case of an emergency, by the military forces of a signatory State into another State, of insurrectionists, saboteurs, enemies, or enemy forces or persons seeking or appearing to seek to over-

throw the Government of the United States or of a signatory State. The over-all objective, clearly, is to provide a means whereby a State and its neighbors can cooperate with one another and with available Federal forces in quickly and efficiently meeting an emergency until such time as the Federal Government can bring its full strength to bear.

Four other compacts which have been authorized relate to the development of additional transportation facilities across the Delaware River. The first of these, authorized by Public Law 1951, chapter 288, expands the jurisdiction of the Delaware River Joint Commission and represents a major step forward in the Governor's program for the development and improvement of the Delaware River Port District. The commission (henceforth to be known as the Delaware River Port Authority) would, among other functions, be authorized to establish, maintain, rehabilitate, construct, and operate a rapid transit system for the transportation of passengers, express, mail, and baggage between points in New Jersey communities within the port district and within a 35-mile radius of the city of Camden and points within the city of Philadelphia. The authority would be authorized to undertake the project after it had filed with the Legislatures and Governors of New Jersey and Pennsylvania, a detailed report on the contemplated project and after the two Governors had filed with the authority their written consents to the project. The port district would include all the territory within Delaware and Philadelphia Counties in Pennsylvania and all the territory within Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Ocean, and Salem Counties in New Jersey. The supplemental compact authorized by Public Law 1951, chapter 287, would authorize this authority to construct, finance, operate, and maintain a vehicular tunnel under, or an additional bridge across, the Delaware River between Camden and Philadelphia.

An additional compact in this group, authorized by Public Law 1951, chapter 285, would permit the Pennsylvania Turnpike Commission and the New Jersey Turnpike Authority to enter into an agreement which would provide for the financing, construction, operation, and maintenance of a bridge across the Delaware River providing a connection between the Pennsylvania turnpike system and the New Jersey turnpike.

A further measure, Public Law 1951, chapter 284, authorizes a supplemental compact between New Jersey and Pennsylvania enlarging the jurisdiction and authority of the Delaware River Joint Toll Bridge Commission. The jurisdiction of this agency, with respect to the acquisition, construction, rehabilitation, improvement, maintenance, repair, and operation of bridges for vehicular or pedestrian traffic across the Delaware River, would be extended to north of the boundary line between Bucks and Philadelphia Counties in Pennsylvania, as extended across the Delaware River to the New Jersey shore of the river.

The seventh of the interstate agreements would create a Delaware River Basin Water Commission for the purpose of developing, utilizing, controlling, and conserving the water resources of the Delaware River Basin. Public Law 1951, chapter 283, authorizes the Governor, on behalf of New Jersey, to enter into such a compact with Delaware, New York, and Pennsylvania. Similar legislation has not as yet been adopted in the last two named States. The major objective of the measure is to assure an adequate water supply to meet the domestic and industrial requirements of political subdivisions and metropolitan areas within the four States.

Interstate cooperation of this kind, to provide mutual assistance, including the pooling of resources and the extension of

facilities, is firm evidence that within the framework of alert State governments and our Federal system it is possible to meet complex interstate problems without new or additional burdensome taxes and without the need for Federal intervention.

Russo-Polish Relations and the Murders in the Katyn Forest

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. ANFUSO. Mr. Speaker, the following speech made on the Voice of America program of April 25, 1951, which reached the iron-curtain countries, gives facts in support of the charge that the Russians were responsible for the murders of the 15,000 Polish officers and soldiers in the Katyn Forest:

This week, in the quiet sanctuary of the spirit which no police inquisitor can enter, the Polish people are observing a gloomy anniversary. They are remembering that fateful moment, on April 26, 1943, when the Kremlin suddenly broke off all relations with the Polish Government-in-exile, giving as pretext the fact that the Government had ventured to ask for an impartial commission of inquiry of the International Red Cross to find out how four-thousand-odd Polish officers had died in the Katyn Forest, and what had happened to an additional eleven-thousand-odd who had vanished without a trace. Because the Kremlin blocked an impartial inquiry, the name of the Soviet Government has not been cleared to this day and the mystery of the death and disappearance of 15,000 Polish officers has remained unsolved. Private committees have since been set up, notable among them being the American Committee for the Investigation of the Katyn Massacre, whose chairman, Arthur Bliss Lane, was formerly America's Ambassador in Poland. That committee has been gathering evidence for years, the official Soviet Government report, the official German Government report, the official Polish Government report, testimony from medical doctors from many lands who examined the rotting corpses in the Katyn Forest, testimony from Polish Army officers who survived the holocaust, testimony from all who have evidence to offer. Today, on the eighth anniversary of the rupture of Soviet-Polish relations, and approximately a decade after the murders in the Katyn Forest occurred, the American committee announced that it is setting up a commission of jurists and lawyers to examine all the accumulated evidence and establish the ascertainable facts for all the world to pronounce judgment.

The Polish Government with which Stalin broke off relations on April 26, 1943, was the Polish Government in exile, with public headquarters in London, and underground headquarters inside Poland. In was this Polish Government which had preserved Poland from collaboration with Hitler, which had resisted Hitler even in those terrible days of 1939, when Stalin was allied with Hitler in the partition of Poland. It was this Government which, as soon as Hitler attacked Stalin, generously agreed to forgive and forget the Russian aggression. It was this Government whose underground forces had unceasingly harried the German lines of communication that ran through Poland

into the Soviet Union. It was this Government which had led the two heroic insurrections in Warsaw which will go down in history as two of the brightest pages in man's long struggle against tyranny. But, by 1943, the tide of battle was turning in Russia, and Stalin was already laying the plans for the annexation of all his neighbor states through Soviet puppet governments. For the Poles he had set up a puppet council at Lublin, and was seeking for a pretext to break off relations with the Polish Government in exile and the Polish underground army. The pretext he chose was as sinister as the act of rupture itself.

The London Polish Government had for some time been pursuing its simple duty of trying to learn the whereabouts and fate of some 15,000 Polish officers of all ranks from generals to noncoms, who had been taken prisoner by the Red army, when it attacked Poland from the east in 1939. These officers had originally numbered 15,400, but for 18 months now only 400 continued to communicate with their families, while 15,000 had disappeared without a trace. General Sikorski, General Anders, General Berling, and Ambassador Ciechanowski had repeatedly inquired about their whereabouts and repeatedly asked for their release to officer the new Polish Army being built up under the Stalin-Sikorski agreement. Repeatedly, Stalin, Molotov, Vyshinsky had answered that these men had been released, that they were on their way to the recruiting centers, that they had crossed some remote frontier, that they would soon turn up. The answers were contradictory, but always agreed that the men had all been released. Finally, on April 13, 1943, the German Government announced that it had uncovered the corpses of 11,000 Polish officers, buried in the Katyn Forest on the east bank of the Dnieper, 10 miles from Smolensk in the German-occupied area of the U. S. S. R. Stalin, who had all along been reporting that all Polish officers had been released, now accepted the German figure of 11,000 corpses, but reported that they had been abandoned in a Russian retreat, and captured and killed by the Germans.

The world did not know what to think. Among the United Nations there was an inclination to believe the statement of the ally, Stalin, and to regard the whole exhumation of bodies as a trick of Hitler to sow dissension among the Allies. The Polish Government, pursuing an elementary duty of any government to its citizens, asked for an impartial inquiry into the fate of these men, by the International Red Cross. Instead of readily agreeing, in order to remove a horrible suspicion and brand the true perpetrator of a genocidal crime, Stalin treated the request as a pretext for breaking all relations with the Polish Government, and recognizing in its place his future iron curtain puppet government which could be counted on to ask no embarrassing questions about the fate of any of its citizens, either in prisoner-of-war camps, concentration camps, or mass graves.

Now, 8 years later, many matters still remain unclarified in this fearful episode. But slowly the evidence has accumulated and the outlines have become increasingly clear.

The first startling fact that emerged was that only 4,144 bodies were actually uncovered in the Katyn forest. Yet Generalissimo Stalin, who rejected all other claims, has repeatedly accepted the statement that over 10,000 bodies were exhumed. Only 4,144 bodies have been turned up, and the fate of the remaining 10,000-odd missing Polish officers remains a sealed mystery from that day to this. Somewhere in the Russian land they lie buried, presumably near the other two officer-prisoner camps in the Smolensk region. If the Soviet Government were anxious to clear up the mystery, it would not find it hard to locate the rest.

The second piece of evidence comes from 12 international scientists, invited by the German Government to visit the mass graves in April 1943. True, some of these scientists were from German-occupied countries like Denmark, Finland, and Belgium, and might then have been under duress. But the might of Hitler is broken, and an international court of inquiry could easily get them to talk freely now, if the Kremlin would but consent. And not all of the scientists were from German-occupied countries. For instance, there was Professor Naville of the University of Geneva, whose bona fides no one has called in question.

The third piece of evidence is an array of letters, diaries, newspaper clippings, etc., found on the bodies of the corpses, bearing dates only up to April and May 1940, when the Red Army still had possession of Smolensk. No document was found on any corpse bearing a later date than May 1940. That was the month in which each of them was shot, a bullet in the base of the brain. Stalin asserts they were shot by the Germans in August 1941. Yet they were wearing their winter issue clothing, woolen socks, scarves, and in no officer's pocket was there a scrap of paper dating later than early May 1940.

Fourth, there is the testimony of Lieutenant Colonel Van Vliet who was taken to the Katyn Forest by his German captors. An American officer, he voluntarily reported to the United States Army that he had seen convincing evidence of the Russian origin of the mass murder. Not wishing to complicate Russo-Polish relations as long as there was any hope that Stalin would permit a free Polish Government, the United States Army long delayed the release of Van Vliet's report. But it would gladly have permitted Van Vliet to testify at any impartial hearing, if the Soviet Government had shown any readiness to have this fearful mystery cleared up. On September 18, 1950, the Department of Defense finally released, or rather declassified, Lieutenant Colonel Van Vliet's report.

Fifth, there is the evidence of the Soviet Government's strange and contradictory actions at the Nuremberg war crimes trials. Surely, if this was a Nazi crime, Nuremberg was the place to clear it up. The Soviet representative, Colonel Pokrovsky, actually made the charge, and we quote: "In September 1941, 11,000 Polish officers who were prisoners of war were killed in the Katyn Forest by the German Fascist invader."

But when it became apparent that the accused prisoners at Nuremberg would be allowed to summon witnesses and documents in their defense and that a genuine investigation might take place, the Soviet prosecutor once more blocked an all-sided clarification of the mystery, and this point in the indictment was withdrawn.

Thus, 8 years have passed. The circumstantial evidence piles up. The Government which should be most interested in establishing its innocence, if it is innocent, blocks all impartial international inquiry. The only certain thing that emerges is that on April 26, 1943, the Kremlin broke off its relations with the Polish Government-in-exile for the mere request of an International Red Cross inquiry. Only four-thousand-odd bodies have been accounted for and 11,000 Polish officers are still vanished without a trace. And the setting up of the Polish Lublin puppet government began the procedure of virtual annexation of neighboring countries, "liberated" or ally, which violated every promise of the Atlantic Charter which guaranteed that there would be no sound and just peace at the immediate end of World War II. The rupture of relations with the Polish Government was fateful not only for the history of Poland. It was the first huge step in the Kremlin's aggressive expansion by occupation, which the whole world now knows as the cold war.

How to Help Your Congressman

EXTENSION OF REMARKS
OF

HON. O. K. ARMSTRONG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr ARMSTRONG. Mr. Speaker, in my opinion, our constituents make up the Nation's biggest and most effective lobby. They constitute a good lobby, working in the interests of good government, through improvement of the services rendered by our Government to all the people. They are interested in helping us to strengthen the moral fiber of the citizens in every community of the land.

With the thought in mind that our constituents can be of definite help to the Members of Congress whom they send to Washington to represent them, I have written for the Nation's Business of September 1951 an article entitled: "How To Help Your Congressman," which reads as follows:

HOW TO HELP YOUR CONGRESSMAN—YOU MAY NOT KNOW IT, BUT YOU BELONG TO THE NATION'S BIGGEST LOBBY, THE PEOPLE BACK HOME

(By O. K. ARMSTRONG)

Back in 1933, when I first entered the Missouri State Legislature, a veteran member, wise in the ways of the Ozark hills people he represented, said to me:

"Son, you'll get a lot of letters. Better read 'em all. And especially the ones written with a pencil on tablet paper."

Through several terms as a State representative, I learned the wisdom of that advice. The letters written on tablet paper, I discovered, came from farmers, housewives, laborers—the people at the grass roots. Such folk don't know much about political theory, perhaps, but they do know what they want, and in the simple, direct language that is their own they express their opinions and make known their needs. Putting these letters together, along with statements made for or against specific bills, I got an accurate cross section of opinion in my district.

Now, as a freshman Congressman, I find the rule still holds. My State assembly district covered only a part of my home town of Springfield, Mo., and the county, while my congressional district includes 11 counties. In the State legislature, we dealt with problems of education, roads, crime, social security, municipalities, and other local matters. In Washington, the problems are national and international in scope. But the task is the same—to find out how each proposal will affect the individuals and families in the local communities. For the sum total of those local communities is America.

Americans in my part of the country write L. E. and say:

"I think you ought to know how I feel about this matter," or "I want your help on this problem. I voted for you, and now I need your advice. Please send me full information."

Does a Congressman read on and find out how a constituent feels about the matter, and what help and information he needs? I'll say he does. That is, if he expects to understand the tides and cross-currents of opinion at home, and if he expects to earn his salt as a Representative of his people.

I don't mean that a Congressman can read every word of every letter. One hundred letters a day are not unusual when a specific proposal affects a local area one way or another, or when a great national issue strikes full blast.

The highly controversial subject of universal military training brought mountains of comment from the grass roots. During the hectic days after President Truman's dismissal of Gen. Douglas MacArthur, some Members received as many as 1,000 telegrams, letters, and phone calls a day. It would be physically impossible for one person to read all of them, to say nothing of doing anything else. But some member of his office staff will read each message, and inform the Congressman of its content and significance.

I checked this matter with several veteran Members of the House. The case of able and picturesque ROBERT L. DOUGHTON, of North Carolina, first elected in 1910, and now chairman of the Ways and Means Committee, is typical. DOUGHTON receives an average of from 200 to 250 communications a day.

"You bet I read my mail," DOUGHTON told me, with his genial grin. "And I answer it, too. Maybe that's one reason I've been around here so long."

Of course, the bulk of DOUGHTON's mail deals with taxation, while that of CARL VINSON, of Georgia, chairman of the Armed Services Committee, deals with national defense, and so on around the list of committee chairmen. FRANCES P. BOLTON, from Ohio, has made a specialty of legislation in behalf of hospitals and health services. Her recent bill to provide Federal funds for training nurses brings in about 60 letters daily from interested young women.

JAMES E. VAN ZANDT, of Pennsylvania, former commander in chief of the Veterans of Foreign Wars, at one time topped the list of Congressmen in volume of mail, due to the heavy correspondence from his comrades in this organization. He still averages around 125 letters a day from veterans alone, who contact him from all parts of the world. One veteran in Geneva, Switzerland, recently asked him about out-patient facilities in that part of Europe.

Contrast this state of affairs with the easy life of a Congressman half a century ago, when many Members found time to answer in longhand the half dozen or so letters a day, borrowing committee rooms for their office work.

No man on Capitol Hill would want fewer messages from constituents, but it would help if these simple rules were followed:

Be explicit, with full names, addresses, serial numbers of veterans or those in the armed services. State the exact nature of the problem or request. It isn't necessary to threaten the Congressman with defeat at the next election. And though it may sound inconsistent from a Congressman—be brief.

Why are the folks back home more vocal in their advice, requests, and demands than ever before? Why do they keep such close check on their Congressmen? There are three reasons:

1. The people today are better informed on public questions than any previous generation.

Fifty years ago, more than half the population depended on a weekly newspaper for their news. Today, they have daily newspapers, the radio, and magazines to keep them abreast of the latest developments at home and abroad. Many business and professional men and women attend civic clubs and organizations where they hear current problems discussed.

"My constituents know more about what's going on than I do," mourned one of my colleagues recently. "And why not? They've got time to read and listen to the radio—and I haven't."

2. There's the enormous expansion in the work of Congress. I did a little research along this line and was astonished to learn:

At least half the legislation before Congress today deals with subjects not even in existence four decades ago.

Social security, retirement benefits, air-mail subsidies, Federal-aid highways, Federal power projects, displaced persons, occupation costs, and the United Nations, to list a few. It's a far cry from the days of Andrew Jackson when the major interests of Congress were the sale of public lands and the fight over the Bank of the United States.

Many veterans in the present Congress remember when the sessions lasted only an average of 9 months in the 2-year term. Members spent the rest of the time at home, making speeches or attending to private business. Their mail dealt largely with free seeds, postal matters, and bills for the relief of constituents. George B. Galloway, legislative research expert in the Library of Congress, explains the heavier loads this way:

"The tremendous increase in the contacts a Congressman must maintain with his constituents began with World War I. A succession of crises in our national life, a severe depression, the recovery efforts, another world war and more crises, all imposed on Congress vast new responsibilities undreamed of in quieter days."

3. People have learned the value of teamwork in their communities, and when they want something done in Washington, they try out that teamwork on their Congressmen. Both within geographical areas, and in the like-minded group spread out over the whole country, citizens are working together as never before.

It's the same in country or city. The most powerful organization in rural Missouri is the Missouri Farmers Association. A lot of people talked about governmental reform in my home State, but little came of it until the MFA appointed a special committee to make a definite study. The committee came to the legislature with the facts and recommendations, and things began to happen—for the better.

I would not contend that all groups are unselfish and public-spirited in their requests. Many exist only to get something from the Government by organized pressure. The point is that whether good, bad, or in between, organizations interested in legislation send in the largest class of mail dumped on the Congressman's desk and their representatives form the largest number of personal visitors to his office.

"Write or see your Congressman." Any Member among the 435 on the Hill will tell you that slogan really caught on.

That brings us to the question of legislative agents. Lobbyist has a sinister sound. It should not have, for lobbying is legitimate business, useful both to the Congressman and his constituents.

I realize that there are many lobbyists in Washington, representing all sorts of interests, but I'd like to debunk the idea that Members of Congress are influenced easily by these gentry. As for pressurized stuff, after listening to the oratory of the House a Member grows immune to all high-octane talk, from colleagues or lobbyists alike. He learns to shun the mercenary, the phony, the pleader for a cause for which the lobbyist would not work unless he was well-paid.

"What's the most effective lobby known to Congress?" I put this question to TOM MURRAY of Tennessee, chairman of the Post Office and Civil Service Committee, of which I am a member. His answer was:

"The constituents back home." Representative MURRAY pointed out what every Member, whatever his party or length of service, well understands: The citizens and voters within his home district have first call on his time and services. It would be a rare secretary, indeed, who was not told: "Answer the constituents' letters first, and send me every constituent who enters the office."

I can assure you this is the normal functioning of our form of government. Under

our system of representation, each Member has the primary duty to reflect the sentiments of the people in the communities of his district.

The right to lobby lies deep in the Constitution, where the founding fathers made it clear that the right to petition the Government must never be denied. The humblest citizen can be his own lobbyist. He can try to influence legislation by informing and pleading to his heart's content. When he becomes one of a group organized to lobby, his agent must be registered to give proper recognition to his activities.

"The legitimate lobbyist performs an important function," explains Representative CHAS. HOLIFIELD, of California. "Every group in American life today faces big problems in their relationship to the Federal Government. It's easy to understand how this is true for veterans, pensioners, business and industry, professional men and women, labor unions and so on. Each group selects experts to organize facts and present them to Congress through reports, personal interviews and hearings. No Congressman has the time to dig out such facts for himself. The group's agent does it for him, and thereby does all Congress a favor."

A lot of fine organizations would get better results if they entered the field of legitimate lobbying. Particularly is that true of those that would like to reverse the trend that has swept our Nation toward steadily advancing centralization of government in the hands of the executive, corresponding loss of responsibility in States and local units, astronomical rise in Federal expenditures, mounting public debt and increasing concentration of private property and resources through taxation.

Suppose the taxpayers who foot the bills were organized down at the community level in each congressional district. Suppose their experts worked out a proposed budget, in advance of the official one, and laid it on the desks of the 435 representatives and 96 Senators. Suppose their spokesman could say, "We represent the biggest bloc of votes in your State and district. In fact, every person in your area is a taxpayer, and our organization speaks for them. Here are our recommendations for saving money and reducing taxes."

That would get action. For no Congressman would yield to the pressure of lobbyists for minority groups seeking heavier expenditures if he faced the overwhelming pressure of taxpaying constituents for sensible economies.

I've had one rude shock in this, my first session of Congress. Often I have visited and interviewed other Members, holding the illusion that they had time for statesmanlike study of the issues, great and small. But I was mistaken. Today Members must hurry from conference to committee to conference again, to lunch, to session, to office, to conference—and to a few hours of sleep.

Each Congressman must assume duties for his district comparable to those of business executives drawing \$25,000 and up—less taxes—a year. He must help make decisions involving the expenditure of billions of dollars, and shape policies that affect the lives of every person in the Nation.

I'm not suggesting that my colleagues be paid more salary, but that they be given other relief. Coming into this thing fresh from the outside, I can point to possible reforms without inhibitions that might stop more experienced and therefore more cautious men, I would recommend two things: First, that a Congressman's workload be lightened. In the last Congress, 18,328 bills were introduced and 5,716 reported to the floor. The workload of committees has more than doubled since 1946, in terms of measures considered. A large share of this load consists of private bills.

Several thousand bills to stay the deportation of aliens illegally in this country fall

on the necks of the Judiciary Committee each session. Power should be delegated to the Immigration and Naturalization Service to handle such matters. Other departments should be given authority to deal with private measures. Small claims should be adjusted by agencies involved, and large claims by the courts. Greater home rule for the city of Washington would release a lot of time and energy of the "city councilmen" on Capitol Hill.

Second, Congress could stand a few more reforms. The Legislative Reorganization Act of 1946 brought needed improvement, but there's still room to save wear and tear on the Congressmen. More adequate staffs should be provided the standing committees to assure continuous review of the activities and expenditures of executive agencies. One new worker should be added to the staff of each committee to do what no member can humanly do today—make a concise analysis of all bills, with a weather eye for their effect on each district.

We could save many hours by installing an electric voting machine. It takes about half an hour to call the roll of the 435 names, including calling a second time those not answering, and recalling Members who show up at the last minute. The automatic roll-call tabulator would do the job in less than 30 seconds.

Any steps taken to free Congressmen from the crushing burden of details will pay dividends in better service. You may have heard of the pompous fellow who, on reaching Washington and bedding down in a good hotel, phoned his Representative.

"Send over your office boy, and I shall instruct him," said the visitor.

"I, myself," wearily answered the Congressman, "am Washington's prize errand boy."

Tax Increases on Automobiles, Etc.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Compounding an Injustice To United States Auto Users," published in the Automotive News, relating to the proposed excise-tax program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPOUNDING AN INJUSTICE TO UNITED STATES AUTO USERS

We did as well as beer and garbage disposal units, but we lost out to plug tobacco and snuff.

Well might the automotive industry thus sum up its experience under the proposed excise tax program now going through Congress.

Such a travesty on justice has rarely been perpetrated on the American public.

How supposedly erudite Congressmen can justify such tax increases on automobiles, trucks, trailers, parts, and gasoline—the mainstay of the American economy—is beyond comprehension.

Does Congress still believe that autos are the luxury of the rich? That trucks and truck trailers are still only adjuncts to the railroad and waterways? That gasoline is a fluid which shouldn't be exploded in combustion engines?

Do snuff and plug tobacco, on which excise levies will be lowered under the present program, rate as more essential than automotive transportation?

Other items on which excise would be lowered are fountain pens, sporting goods, and mechanical pencils. Do any of these compare with automobiles, trucks, and gasoline?

Furthermore, we note that the congressional committees make no mention of an excise on railroad cars or water scows, yet plan to boost the levy on trucks and truck trailers from 5 to 8 percent.

We note, too, that the excise on auto parts would be upped from 5 to 8 percent. Yet we see no evidence of a levy on railroad or airplane parts.

Does Congress realize that the auto parts tax is really a levy on human misery, a levy on lower-income groups who must repair their autos since they can't afford new ones?

Even to keep the present automotive excises would be bad enough. But to increase them is compounding an already grave injustice to the workingman, the farmer, every one who uses auto transportation.

Retirement of Brig. Gen. Linus Hoban

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. MARTIN. Mr. President, I know that many Senators are now receiving letters concerning the members of the National Guard and the reserve components, because many of the members of the National Guard are being taken from their units and transferred to other outfits and to other parts of the world.

I now ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "General Hoban Retires," published in the Evening News of Harrisburg on September 14. General Hoban is a very outstanding officer of the Twenty-eighth Division. He was the deputy division commander.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GENERAL HOBAN RETIRES

An outstanding officer of the Twenty-eighth Division is about to retire from active duty, in the person of Brig. Gen. Linus Hoban, veteran of the two major wars in which he served with distinction, and recalled to duty with the Pennsylvania outfit a year ago as the National Guard division was brought back into Federal service.

General Hoban, in civil life a well known member of the bar in his beloved anthracite region, and for many years a judge of the courts in his native Lackawanna County, has been assistant division commander ever since the Twenty-eighth Division was reactivated following its return from World War II. Last September when it was again called to duty, again he gave up his peacetime pursuits and entrained for Camp Atterbury with the troops.

In the retirement of General Hoban the Army loses an experienced combat veteran, and one who has served his country long and faithfully. Even as he returns to civilian life, two more National Guard divisions have been alerted for active duty, the Thirty-seventh of Ohio and the Forty-fourth of Illinois, with the announcement that still another one will be called out in 1952.

Oil for Education

EXTENSION OF REMARKS
OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement of my own on the subject Oil for Education.

There being no objection, the statement was ordered to be printed in the Record as follows:

OIL FOR EDUCATION

On June 7 of this year I had the honor to introduce on behalf of myself and 10 other sponsors, the oil-for-education amendment to Senator O'Mahoney's bill (S. J. Res. 20) on submerged coastal lands, frequently erroneously termed "tidelands." An enormous amount of interest has been shown in this amendment. The sponsors now number 18 (the Senator from Illinois [Mr. DOUGLAS], the Senator from Oregon [Mr. MORSE], the Senator from Connecticut [Mr. BENTON], the Senator from New Hampshire [Mr. TOBEY], the Senator from West Virginia [Mr. NEELY], the Senator from Alabama [Mr. SPARKMAN], the Senator from Tennessee [Mr. KFFAUVER], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Missouri [Mr. HENNINGSEN], the Senator from New York [Mr. LEHMAN], the Senator from Montana [Mr. MURRAY], the Senator from Iowa [Mr. GILLETTE], the Senator from North Dakota [Mr. LANGER], the Senator from Vermont [Mr. ARKEN], the Senator from Michigan [Mr. MOODY], the Senator from Arkansas [Mr. FULBRIGHT], and myself).

Editorial commendation has appeared in newspapers in every section of the country, including such well-known journals as the New York Times, the Christian Science Monitor, the Atlanta Journal, the Denver Post, and the Washington Post.

Representatives of leading education, farm, labor, and public welfare organizations have expressed their interest in the proposal and have requested that hearings be held on it. Many have advised me of their active efforts in support of it.

The Supreme Court of the United States has ruled four times that these submerged lands beyond the low-tide mark are not the property of the adjoining States but belong to the Federal Government. The decision in the California case was handed down on June 23, 1947, and the decisions in the Louisiana and Texas cases were announced on June 5, 1950.

Senator O'Mahoney's bill, Senate Joint Resolution 20, to which this proposal is an amendment, undertakes, as I understand it, to continue the orderly development of oil and gas deposits in these Federal submerged lands until such time as the Congress takes action to follow up the Supreme Court decisions on this matter by determining the use to be made of the revenues deriving therefrom. Like the sponsors of our amendment, Senator O'Mahoney has stated his belief that Congress should not legislate away what the Supreme Court has said is the property of the people of the United States. The distinguished Senator is to be commended upon his efforts to protect the interest of all the people. We believe, with the Senator, that these resources should not only be developed now, but we also believe that Congress should act simultaneously to make a determination of the use to be made of the revenues therefrom.

THE PEOPLE'S PATRIMONY MUST BE RESERVED

It is inconceivable, now that the Court has adjudicated the question of title, that the Congress should deed the bulk of these vast national properties to three adjoining coastal States—California, Texas, and Louisiana—as is proposed in the so-called quitclaim bill (H. R. 4484) which recently passed the House. Congress cannot afford such generosity as to give away oil resources estimated as worth forty billion dollars or more. There may also be fabulous stores of gas under these lands. This vast national patrimony belongs to the people of the entire Nation and must be used for their benefit and the benefits of succeeding generations. Senate Joint Resolution 20 is exceedingly generous to the coastal States in allocating to them—and our amendment does not change this—37½ percent of the revenue deriving from lands under the sea within the 3-mile limit.

THE ENDOWMENT OF EDUCATION

The amendment to Senate Joint Resolution 20 which we have proposed provides that the balance of these particular royalties and all of the royalties from undersea oil beyond the 3-mile limit out to and including the great Continental Shelf shall be paid into the United States Treasury and used in all the States for educational purposes. This is the policy that the Congress followed in the Morrill Act in 1862 which provided grants of public land for the establishment of our great system of land-grant colleges. Applying the same policy to this great new public "land resource" at the bottom of the sea would be like placing an oil well on every school and college campus in America.

Our amendment proposes that during the present national emergency the royalties from these undersea oil deposits may be used for urgent national-defense purposes determined by the Congress. After the termination of the emergency these revenues shall be devoted exclusively to grants in aid of primary, secondary and higher education. A National Advisory Council on Grants in Aid of Education will be created to develop plans for the allocation and use of these royalties for educational purposes. The report and recommendations of the council will be submitted to the President and he in turn will transmit them to the Congress not later than February 1, 1953. The council will consist of 12 persons with experience in the field of education and public administration, 4 to be appointed by the President of the Senate, 4 by the Speaker of the House and 4 by the President of the United States.

A HISTORIC NATIONAL POLICY

The dedication of Federal land resources to the endowment of education is one of the oldest and wisest of our national policies. From the earliest beginnings in colonial times many of the colonies earmarked public lands for the support of schools. The earliest case was in Virginia in 1618. Colleges started with the aid of land grants in the various colonies include Harvard in Massachusetts, William and Mary in Virginia, Yale in Connecticut, Princeton in New Jersey and others in South Carolina and Georgia.

After the American Revolution we were faced with a situation which was similar in some respects to the present demands of the three coastal States for the national property in the submerged lands lying beyond the low-tide mark. Individual States laid claim to the territories west of the Appalachians. In 1780 the Congress passed a resolution containing a pledge that these western lands would be disposed of for the benefit of all States. In 1785 and 1787 ordinances were passed by the Congress which specifically set aside a portion of the public lands west of the mountains for school pur-

poses. In speaking of the ordinance of 1787 Daniel Webster declared:

"I doubt whether one single law of any lawgiver, ancient or modern, has produced effects of more distinct, marked and lasting character than the ordinance of 1787 . . . it set forth and declared it to be a high and binding duty of Government to support schools and advance the means of education."

Many of the great State universities were started with the aid of the public lands dedicated to education by the ordinances of 1785 and 1787. In the next three-quarters of a century many additional laws were passed by the Congress setting aside Federal lands or the proceeds thereof for educational purposes in the several States. None of these laws were, however, as general in effect and as important as the Morrill Act passed by Congress in 1862 and signed into law by President Abraham Lincoln. This act granted to each State 30,000 acres of Federal land or land script for each Senator and Representative in the Congress to which the State was entitled for the establishment and maintenance of colleges for the benefit of agriculture and mechanic arts. States in which there were no Federal public lands, or which did not contain a sufficient amount of public land to satisfy the grant, were issued land script which could be sold by the State and redeemed by the purchasers of the script from public lands located in other States.

FRUITS OF THE POLICY

After the land-grant colleges had become fairly well established throughout the Nation with the assistance provided by the land grants under the Morrill Act, many of the States experienced difficulty in supporting these colleges. In a number of subsequent acts the Congress provided for the further endowment, support, and extension of the services of these institutions. Thus, from a far-sighted and intelligent use of a portion of the national domain there has arisen a system of great educational institutions upon which the higher education of a major portion of our population primarily depends. No one can estimate what this wise use of public-land resources for education has meant to the development and progress of the United States. Benefits accruing to the Nation from this Federal endowment of the State land-grant colleges have been great beyond measure. These institutions of learning have contributed importantly to the rise of the United States to its present position of strength and world leadership.

The proposal embodied in the oil-for-education amendment is, therefore, entirely in accordance with our continuing national tradition of devoting the proceeds of public lands to the support of education. The adoption of this proposal would be a historical action comparable to the ordinances of 1785 and 1787 and to the Morrill Act of 1862. In fact, from the point of view of the resources involved, the oil-for-education proposal would probably in the course of time far exceed the sum total of receipts from all previous Federal grants of public lands for educational purposes.

Every teacher, every parent knows the desperate financial condition of education all over the United States—of grammar schools, high schools, and colleges.

EDUCATION'S BIG CHANCE

This oil offers education's big chance—the means provided by Providence for meeting without additional taxes a large part of education's pressing needs. It is our big chance to turn the trend away from the illiteracy and deficiency in education that has caused the rejection of over 300,000 young men by the armed services since the fighting in Korea began—the equivalent of over 17 Infantry divisions. Our potential enemies outnumber us many times in manpower. Our industrial and military superiority must

rest largely in the education and scientific training of our people.

The action of the Supreme Court in holding that the resources in these submerged lands belong to the people of the entire country presents to the Congress an opportunity and responsibility which cannot be ignored. I am sure that we will discharge this responsibility in a manner which is in keeping with the vision and statesmanship of many previous Congresses in endowing education from the proceeds of public lands.

Role of the Cooperatives

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HUMPHREY. Mr. President, as the Congress prepares to enact a tax bill, the subject of the American cooperative movement and its relationship to the economy becomes ever more important. One of the leading writers on agricultural subjects and one of the foremost experts on the cooperative effort in this country is Mr. Alfred D. Stedman, staff writer for the St. Paul Pioneer Press. Mr. Stedman, in a recent article entitled "The Co-ops' Role," has presented a reasoned and constructive argument in behalf of the cooperative program. I ask unanimous consent that Mr. Stedman's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CO-OPS' ROLE

In the world crisis, big government, big business, and the cooperatives seem cast in key roles. All three reflect the effectiveness that can come from the pooling of human efforts. Between big government and big business stand the co-ops. Though seeming weak by comparison, these can exert an important offsetting influence on both.

Abroad, the cooperatives have a key place in struggles to heal the physical and moral wounds of war. In Europe, they represent a hopeful middle way between feared extremes. There they stand—against dictatorship, against state monopoly of thought and business, and for self-help, for the freedom of people to manage their own affairs, and for the individual dignity and worth of human beings. From Scandinavia to the Mediterranean and in far-away India they are a breakwater, helping to turn back tides of communism.

At home, a great role has been played by the co-ops in checking the exploitation by organized business of unorganized farm people. The co-ops are in the markets every day, fighting agriculture's battles in the American way.

And now they are up against a new middle-way task. For here some kinds of business have become so tightly organized as to represent a new kind of monopoly—that is, monopoly of opinion. Why, for instance, were all the rural electric co-ops' generating plants everywhere in the United States stigmatized in a Nation-wide advertising by the power industry as socialistic? Do all the millions of Americans who are associated in the private power industry think that way? Certainly not. That was a monopoly of opinion talking. Why is the St. Lawrence seaway up against solid railroad opposition? Would all railroads be adversely affected? No; a few

might be, and some might be helped. But the monopoly of rail opinion is industry-wide. There are also signs of interlocking directorates of opinion on such issues. The result is a blockade of public improvements of high importance to national defense and prosperity. And to overcome that blockade, America might be pushed to extremes of public ownership or other isms, unless moderation and free opinion can prevail.

Whence can come the free expression to offset such monopolies of opinion? From the rank and file of citizens. And perhaps also from sundry organizations that, like the cooperatives, spring from the people themselves. Perhaps these can guard against the isms and strengthen the freedoms of America.

Atomic Proposal of Hon. Brien McMahon, of Connecticut

EXTENSION OF REMARKS OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in this afternoon's Washington Evening Star, in reference to the speech delivered yesterday by the distinguished senior Senator from Connecticut [Mr. McMAHON].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. McMAHON'S ATOMIC PROPOSAL

As chairman of the Joint Congressional Atomic Energy Committee, Senator McMAHON speaks from an exceptionally authoritative and well-informed position when he speaks on the subject of A-weapons. Accordingly, even with allowances for possible rhetorical exaggerations and for the debatable character of his military recommendations, there is every reason why the Nation at large—and the world at large, for that matter—should attach major significance to the address he delivered yesterday.

It is an extraordinarily revealing address. It is also, in some respects, sensationally challenging. And in its own way, although it deals with a decidedly grim and portentous field of human endeavor, it is highly reassuring, and almost optimistic, in that it lends strong confirmation to numerous past indications that the United States is making spectacular progress in the design, development and production of nuclear armaments, including the hydrogen bomb—progress of a sort that promises not merely to revolutionize warfare but to render it so terrible that the men of the Kremlin would have to be insane (which they apparently are not) to embark on full-scale armed aggression against the free world.

This progress has so impressed Mr. McMAHON that he has not hesitated to say that "the sky is the limit on the number and variety of atomic weapons which the United States can produce" if it chooses to do so on an all-out basis—a basis on which the manufacture of a single A-bomb would cost less than a single tank. As for the weapons themselves, he is convinced that they are such a deterrent to aggression and such a "paramount instrument of victory" that the Nation should decide at once to undertake their mass production. To that end he has proposed that the Government spend \$6,000,000,000 a year on them—or about six times as much as it is spending at present. At the same time he has urged that this

increase be offset by a comparable decrease in the billions being expended on "small arms, bullets, incendiaries, hand grenades, and the like." He has summed up his argument for this policy by declaring that "for every dollar spent upon atomic defense we can save \$5 on conventional defense" and that "the first important savings can come next year."

What Mr. McMAHON has emphasized throughout his address is his firm belief that with real atomic armed forces equipped with a sweeping variety of A-weapons ("one model that takes the place of a thousand bazookas, another that makes unnecessary a hundred depth charges, and yet another that would substitute for TNT stacked as high as Pike's Peak") the United States can buy security and peace at far less cost than with its present conventional defenses. And so, hinting strongly at the kind of nuclear armaments now within the Nation's reach, he has come out for the following: (1) An Army with an abundance of atomic artillery shells, short-range atomic guided missiles, radiological devices, and the support of light planes capable of hurling atomic devastation on the enemy in battle positions; (2) a Navy with nuclear-powered submarines, nuclear-powered aircraft carriers ready to launch atomic-attack planes on both strategic and tactical missions, ship-based atomic artillery, ship-based atomic-guided missiles, atomic mines, and target-seeking atomic torpedoes; and (3) an Air Force with nuclear-powered bombers, atomic missiles of every type, the hydrogen bomb, and everything else needed to destroy any enemy's industrial heart.

Quite obviously this proposal—aimed at cutting down on conventional weapons and the number of foot soldiers—is as controversial as it is novel, and its true validity can hardly be assessed until our top defense and atomic authorities are heard on the subject. Even so, at very least, Mr. McMAHON's address—which contains a sobering reminder of the Kremlin's potentialities in this deadly field—constitutes an impressive challenge to orthodox military thinking in an age when nuclear armaments unquestionably are upending all past concepts of strategic and tactical warfare. Certainly, more outspokenly than any official statement has done before, it has made clear that those armaments have revolutionary variety—so much so that the Nation may yet find it wise to spend \$6 billion yearly on them.

Moreover, in advocating such an expenditure, Mr. McMAHON has made a telling point in emphasizing the "wonderfully auspicious" fact that the atomic material in our weapons stockpile will last thousands of years and be a fabulous asset for peace if war is averted. His own belief is that the course he proposes—which includes parallel action in the propaganda field and in the United Nations in an effort to detach the Russian people from the Kremlin and bring about universal disarmament—will avert war, or at least insure the survival of the free world if war comes. He may be wrong, but still his views deserve the most careful attention.

Credit for the San Francisco Conference on the Japanese Peace Treaty

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HUMPHREY. Mr. President, the Minneapolis Morning Tribune on Sep-

tember 10 carried a splendid editorial concerning the San Francisco Peace Conference. This editorial pays appropriate and deserving tribute to two great Americans, our Secretary of State, Dean Acheson, and our Ambassador, John Foster Dulles. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE CREDIT IS DUE

The San Francisco conference was a crucial battle in the cold war with Russia. The Conference resulted in a tremendous gain for the United States and those making common cause with it and a tremendous set-back for Russia and its allies.

Two men deserve the lion's share of the credit for this happy issue. One is John Foster Dulles who by dint of 11 months of patient negotiating achieved a draft which 49 nations were willing to sign. The other is Dean Acheson who as Secretary of State was instrumental in winning support from key countries for the proposed draft and as presiding officer brilliantly prevented the Communist minority from perverting parliamentary rules for the defeat of the majority's purposes as Communists have been able to do in so many previous conferences.

For these distinguished services to their country and the cause of peace Dulles and Acheson deserve the Nation's hearty thanks.

National Political Realignment

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. MUNDT. Mr. President, since discussions of political realignment have been occurring in the United States, considerable editorial comment on that subject has appeared, particularly in the South, where the comment on that subject has been exceedingly favorable. In connection with that matter, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dispelling Political Confusion," which appeared in the Newark (N. J.) Star-Ledger on September 18. The editorial shows an admirable attitude in regard to that matter.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DISPELLING POLITICAL CONFUSION

The new committee formed in Washington to consider a national political realignment makes its primary appeal, both in its declaration of purpose and in its sponsoring personnel, to voters who resent excessive federalization and socialist trends. It makes a secondary appeal to all thoughtful citizens who believe that a political label should truthfully describe what basic political principles are behind the label.

It is not always easy to calculate whether the radicals or conservatives profit most or lose most because party labels mislead so many voters; it is certain, however, that the country as a whole suffers greatly from the fog of confusion that has enveloped both political parties.

Two outstanding Jerseyans are conspicuous among the leaders of the new movement, which evidences down-to-earth practicality in announcing as the first step toward its program a businesslike survey to apprise the voters of the latitude afforded in each State for managing and altering the legal political parties.

Former Gov. Charles A. Edison, a Democrat who served as Secretary of the Navy under President Roosevelt, and former United States Senator Albert W. Hawkes, a Republican who was also president of the United States Chamber of Commerce, are not of one mind politically, but they find the new committee broad enough to command their enthusiastic support.

It goes without saying that this committee hopes to bring about a profound change in the national political scene, presumably during the 1952 election as well as thereafter. The committee, evidently fully aware of the very real obstacles in the path of such a movement, has avoided sweeping promises and commitments. This very attitude of restraint may commend the committee to many thoughtful citizens who believe that both political parties should be more plainly identified with clear principles.

Debts of the Nations

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the September 16 issue of the Jackson (Miss.) Daily News:

DEBTS OF THE NATIONS

The United States public debt is more than twice the total of the public debts of all the nations of Europe, excepting the Soviet Union.

The United States public debt stood at \$256,676,566.707 on August 31. The population of the United States is about 154,000,000.

Much of this public debt was acquired in financing international adventures in every part of the world, but particularly in Europe, where more than \$100,000,000,000 has been poured out in loans, grants, gifts, and other aid in the last 35 years.

The public debt of European nations is less than \$125,000,000,000. The total population of the European nations is more than 325,000,000.

The Soviet Union, which has a population of about 200,000,000, does not have a public debt under its system of state finances. In 1947, Russia had an external debt of \$26,208,000,000, almost all of which the Soviets do not acknowledge because they regard it as largely a debt of czarist Russia.

The public debt of European nations as compiled from international monetary fund reports is as follows:

Country	Reported population	Public debt in United States dollars
Austria	6,755,000	1,714,700,000
Belgium	8,421,000	4,863,000,000
Denmark	4,100,000	1,113,000,000
France	41,500,000	11,808,700,000
Greece	7,740,000	190,000,000
Ireland (Eire)	2,997,000	171,300,000
Italy	45,373,000	5,812,710,000
Luxemburg	280,000	97,270,246
Netherlands	9,620,000	5,167,833,600
Norway	3,181,000	1,233,279,834
Portugal	8,402,000	300,000,000

Country	Reported population	Public debt in United States dollars
Sweden	6,833,000	2,406,180,000
United Kingdom	50,300,000	73,903,000,000
Czechoslovakia	12,916,000	1,704,428,340
Hungary	9,400,000	540,675,000
Poland	23,781,000	3,512,479,000
Rumania	16,530,000	245,402,000
Yugoslavia	15,700,000	704,402,000
Finland	3,835,000	628,725,620
Spain	27,503,000	4,395,301,820
Switzerland	4,547,000	2,016,416,650
Totals	428,025,000	124,435,215,057

¹ Communist Iron-curtain countries.

Devaluation of currency has enabled various countries to reduce the total of their debts in American dollars. The French debt is a case in point. The French debt formerly was reported at \$21,000,000,000. Devaluation of the French franc to a rate of 350 to \$1 brought the French debt down to about 12 billion in American dollars.

The public debt of Germany is uncertain. It is estimated at \$663,367,000. The finances and obligations of Germany have not been stabilized, so it is impossible to fix Germany's public debt.

The public debt of Japan is in a similar position. As of last December 31, it was \$762,360,000. Thus, the estimated public debt of the two major enemies of World War II is some 200 times smaller than that of one victor nation—the United States.

The public debt of Canada is \$16,950,000,000 for a population of 13,300,000.

Figures on the public debt of Latin-American nations are not available. These countries owe more than 1½ billion dollars in foreign dollar bonds, but information on their domestic debts is not available. Figures on public debt in Africa and Asia are fragmentary.

It is estimated the \$256,000,000,000 debt of the United States exceeds that of all the nations of the world by tens of billions of dollars.

Members of Congress have cautioned that the United States cannot long stand the drain of supporting international ventures. Members have warned in the preparations of the new tax increase bill that the Government is scraping the bottom of the taxation barrel.

Total Annual Income of the People of the United States

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. HUMPHREY. Mr. President, recently the Department of Commerce made its annual report on the total annual income. This report was prepared as a result of a study of national income and production, conducted by the Department's Office of Business Economics. A United Press dispatch of September 16, 1951, analyzes this report. It reveals that the total annual income has increased from \$87,000,000,000 in 1929 to \$239,000,000,000 in 1950, or an increase of 175 percent. Finally, the report emphasizes that—

Real product per man-hour in private industries was well over half again as large last year (1950) as in 1929.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN INCOME UP TO \$239,000,000,000 IN 1950

WASHINGTON, September 18.—The Commerce Department reported today that Americans had raised their total annual income from \$97,000,000,000 in 1929 to \$239,000,000,000 last year, an increase of 175 per cent.

The figures were in a study of national income and production conducted by the Department's Office of Business Economics.

The Department said the outstanding feature of developments during the period "was the tremendous growth of the United States economy," which was registered in the face of "a series of violent economic fluctuations."

The study showed that the Nation had increased its gross national production from \$104,000,000,000 in 1929 to \$283,000,000,000 in 1950. The Department said part of the increase was because of a gradual increase of manpower resources.

"More importantly, however, it has stemmed from sizable gains in productivity per unit of manpower utilized, owing chiefly to the technological improvements and increased amounts of capital equipment utilized by the Nation's industries," the Department statement said.

"Real product per man-hour in private industries was well over half again as large last year as in 1929."

Mr. HUMPHREY. Mr. President, in connection with the foregoing article, I also ask unanimous consent to have printed in the Appendix of the RECORD two editorials which appeared in the Minnesota Union Advocate on August 23, 1951. The editorials are entitled "Road to Ruin" and "Good Old Days?" All these relate to the studies of annual income.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

ROAD TO RUIN

To read the New York Journal of Commerce, the Wall Street Journal, the Chicago Journal of Commerce and the speeches of outstanding Republicans like Joe McCarthy, Homer Capehart, Robert A. Taft, Kenneth Wherry, and Col. Robert McCormick one is almost persuaded that this country has gone to the dogs economically. Or talk with the average businessman and he'll tell you how bad things are. The New Deal was plenty tough but the Fair Deal is worse, so they say.

The National Association of Manufacturers, the United States Chamber of Commerce and the thousands of little "me, too" fellows scattered all over the country seldom make any references to specific examples of national insolvency, and when the Home Owners' Loan Corporation closed its doors a couple weeks ago after lending billions of dollars to millions of home owners without losing a dime for Uncle Sam, very few newspapers thought it important enough to be mentioned, despite the fact that it turned back over \$8,000,000 in earnings above the cost of operation.

And now another agency of the Government has issued its annual report, and here's another new item that will appear in only a few daily newspapers. The agency in question is the Federal Deposit Insurance Corporation, set up right after the bank crash of 1933 by the late Franklin D. Roosevelt. The American Bankers' Association fought the bill from its introduction until the

President signed it; the United States Chamber of Commerce and the National Association of Manufacturers fought it tooth and nail, and columnists and editors railed against it as a socialistic venture that would wreck the economy of the Nation.

And here's the record: The agency was set up January 1, 1934, to make sure that no bank depositor would lose a penny in the event a bank had difficulties. All deposits up to \$5,000 were insured by the Corporation, and under the system of deposit guarantee the banks participating pay assessments into the deposit insurance fund. Last year the limit of insurance was raised to \$10,000—and every bank in the country boasts of this guarantee of security. And here's something to remember also. In the 17 years before the New Deal gave the bank depositors of this country a deposit insurance law there were 15,145 bank receiverships with almost incalculable losses to millions of people. In the 17 years since only 245 federally insured banks have gone into receivership; another 170 have been assisted by the insurance corporation to merge with stronger banks—and no one has lost a penny. And what is more—the last vestige of Government subsidy to the agency has been removed by payments of more than \$370,000,000 to the United States Treasury, returning capital advanced to set it up and covering interest on this capital as well.

No one should forget that the Depositors' Insurance Corporation was established over the vigorous objections of the American Bankers' Association, the National Association of Manufacturers and the United States Chamber of Commerce, but one of these days these very institutions will be claiming the honor of having originated the idea of a depositors' insurance law—just as Russia now claims to have originated the law of gravity.

GOOD OLD DAYS

People have railed against taxes ever since the system was originated and no doubt they will continue to complain until the crack of economic doom. And some delight in looking back to the good old days when taxes were more bearable and life was less harassed by world problems of rehabilitation, international relief and welfare, the Marshall plan, and point 4.

But it wouldn't be a bad idea to just think back to what other things accompanied the low-tax scale of long, long ago. And it really wasn't so long, long ago either.

In the fiscal year that ended June 30, 1933—just after the patron saint of the Republican Party went back to his Palo Alto home in California—Federal taxes totaled only \$1,600,000,000. But did this low percentage bring joy and happiness to the millions? Was life more livable for the folks who made up the great population of the United States of America? Not at all. Those were the days when "Hoovervilles" were springing up all over the land. Those were the days when returned World War I veterans sold apples on the corners close to the breadlines and the soup kitchens the Republicans have forgotten to remember.

And the total personal income of the people that year was only \$46,000,000,000 so after the United States Treasury took its annual bite out of the national personal income only \$45,000,000,000 remained to buy the necessities of life and to lay a little away for a rainy day.

In contrast to all this the national personal income of the American people is presently \$250,000,000,000 a year. On June 30, 1951, Federal taxes collected for 1950 reached an all-time record of \$50,000,000,000. Subtract this from the \$250,000,000,000 total before taxes and the people still have \$200,000,000,000 to buy the necessities of life, TV sets, new cars, giggle juice, and OPS-upped steaks, chops, and cereal-packed hamburger. And even allowing for the tre-

mendous drop in the buying power of the United States dollar, the common folks are still at least twice better off than they were the year Herbert Hoover pouted and mumbled something to the effect that prosperity is just around the corner.

The good old days when farmers burned wheat because it was cheaper than coal may seem very desirable just now from the standpoint of the Federal tax differential but no one in his right mind would want to go back to them. And the man who tries to argue that those times were better than this living moment is either dishonest, drunk, or mentally deficient.

How Good Is Our Alaskan Defense?

**EXTENSION OF REMARKS
OF**

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, September 19, 1951

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "How Good Is Our Alaskan Defense?" by Don Shannon, published in the magazine section of the Deseret News, of Salt Lake City, Utah, on September 16, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW GOOD IS OUR ALASKAN DEFENSE?

(By Don Shannon)

Westerners are looking anxiously toward the north these days—toward the huge Territory of Alaska, which sprawls across the shortest air route from Soviet Russia to the continental United States.

The object of this long-distance scrutiny is a large hunk of ice, land, tundra—one-fifth the size of the United States—and its panoply of tiny, wind-swept islands, purchased from Russia in 1867 for 2 cents an acre.

With Alaska's unpredictable former owner only 54 miles across the Bering Strait, and Salt Lake City only 2,100 air miles from Anchorage, Americans in the West are becoming acutely aware of the importance to this area of adequate Alaskan defenses.

Alaska, as military men have pointed out, can be both a vital base for enemy interception and counteroffensive measures and, if permitted to fall into enemy hands, a pistol pointed at our Nation's heart.

In these days of big, long-range bombing planes and atomic weapons, the prospects of such a pistol in enemy hands looks highly menacing to potential targets in western America.

How likely is such a situation? How good are our Alaskan defenses?

The real answers to these vital questions are locked in the security of confidential and secret files in the Pentagon. But in speculations in the public interest, at least one western Senator has stated flatly that Alaska could be cut off by a small airborne force and used as a bombing base against the United States. Military leaders, under questioning by a Senate subcommittee sent to inquire into Alaskan defenses last fall, didn't deny such a possibility too strenuously.

All concerned with the problem here in Washington agree that while Alaskan defense authorities are alert and realistic in their planning, an invasion there could be contested only in critical areas in the heartland of Alaska's 586,400 square miles. This

means that in the event of a war with a country strong in air power, enemy bombers based on the Alaskan shield, could well be a menace for America's industrial heart in the Midwest, and the population centers in the West.

Fortunately, congressional leaders are aware of the vulnerability of Alaska and its defense problems. Last fall, a three-man subcommittee, headed by Senator LESTER L. HUNT, Democrat, Wyoming, flew to Alaska and launched an intensive study of the Territory's state of preparedness.

They reported to the Nation in February that the shortage of combat troops left the Alaskan area open to attack. "It is impossible for the military to hold all of the country and the Aleutian chain," the investigating Senators reported. "Certain areas must be left undefended so far as ground troops and military installations are concerned."

Conditions are largely unchanged since the report was issued, reported Senator HUNT recently. He observed that the only positive results were measures to preserve unmanned airfields. He also predicted a speed-up in needed military housing, but no more troops. "We need all the men we can spare in the Far East," he explained.

One of the few officials in Washington who appear to be really concerned about the problem is E. L. "BOB" BARTLETT, Alaska delegate in Congress. He claims that airfields without ground protection are worse than no air bases at all, since an invader could take them over and put them to work against the continental United States immediately.

"The Air Force constitutes more of a danger than a protection under present circumstances," BARTLETT said recently.

The Alaska delegate blamed part of the lack of ground troops on inadequate housing. The housing problem received wide publicity 2 years ago when military men were reported living in hovels for which landlords charged Fifth Avenue rentals. The situation has improved some since then, BARTLETT said, but not enough.

"There is no feeling of urgency in any phase of defense planning for Alaska," BARTLETT said.

BARTLETT has some historical precedent for concern about Alaskan defense efforts. As late as 1939, the only military or naval installation in Alaska was a gold rush days infantry post of 200 men, in spite of numerous warnings by Alaskan Delegates. During World War II, the only part of the American continent to be invaded was the Aleutian chain, and enemy operations there resulted in desperate and costly defense efforts. "Today, Alaska is even more important strategically than during the Second World War," declared Alaskan Gov. Ernest Gruening in a 1948 appeal for statehood. "And it is as little defended against future eventualities as it was then."

Alaskan residents are acutely aware that Russia, as a potential enemy, is a threat of far greater magnitude than the Japanese before Pearl Harbor. In Siberia, visible from the Aleutians on a clear day, the Russians have been working assiduously for years, building up agricultural, industrial, and military installations behind an iron curtain of security. Long-range Russian snorkel submarines are based in Pacific ports, and an undisclosed number of Russian air-ports have been built in the Siberian northlands.

Gen. Nathan F. Twining, Vice Chief of Staff of the Air Force and former Alaskan commander, also knows the danger of Alaska's becoming a stepping stone to disaster.

General Twining told an Armed Forces Day gathering in Portland, Oreg., recently that too few Americans are aware that Portland is closer to the heart of Alaska than to St. Louis. He reminded his hearers that Gen. Billy Mitchell pointed out the short line to America's West 30 years ago but Mitchell's

warning that "he who holds Alaska holds the world" has been almost unheeded up to the present.

"Our northern frontier has assumed a critical importance that can only continue to increase," Twining declared. "Before World War II—more than 15 years ago—a Soviet airplane flew nonstop into southern California. For some reason that incident was conveniently forgotten. Impressive advances in the performances and ranges of aircraft have occurred since that date. And 2 years ago the Soviets achieved an atomic explosion. Despite these facts it has been very difficult to awaken public opinion to the necessity for appropriate action."

One western Senator who expressed alarm over the Alaskan situation is HERMAN WELKER, Republican, Idaho. WELKER, an Air Force veteran, visited the area during defense maneuvers last February.

"Although our troops are not too strong numerically, I think they could repel a land attack because of the tundra and ice and rugged terrain," he said.

"I am more concerned about an airborne attack which could cut off the whole Territory and put us on the defensive. Our weakness in air power there is shocking."

WELKER declared that it was "sheer stupidity" to send American troops and arms to Europe with Alaskan defenses in their present condition.

The Idaho Senator also scored the housing provided for the territory's garrison. "As of February 1951, it was wholly inadequate and disgraceful."

On the credit side, the Air Force points to the completion of most construction work on a radar warning screen by the end of this summer.

The Air Force also calls attention to "Operation Firestep," conducted this spring, in which air, ground, and naval forces held the first combined maneuver in Alaska's history. As a demonstration of how an invasion might be met, paratroopers were airlifted from Fort Bragg, N. C., to participate in mock battles.

With the aid of Eskimo National Guardsmen, defending forces pushed back three ground attacks on Elmendorf Field, near Anchorage. The "enemy" came up with a most potent psychological weapon. They offered safe passage through their lines and an airlift to a "comfort camp" at Laguna Beach, Calif., to all those surrendering.

An offer like this would look good in a real war in the far north. But the West, once comparatively secure behind its oceanic and mountain barriers, doesn't like to contemplate it, because an air war in the short polar routes above Alaska would be our war and we would be watching with real concern the progress of the fighting and the exhibition of enemy aerial strength above Alaska's frozen tundra.

Yes, westerners are coming to realize that Alaska is our real first line of defense, and all of us are hoping that a powerful shield is being constructed back of the island stepping stones of the sprawling territory, and that our powder is dry and our radar net alert.

Secretary of Finance

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. SIEMINSKI. Mr. Speaker, under leave to extend my remarks, I should like

to list below an Associated Press wire release of this date:

WASHINGTON—A proposal for the Government to place all of its financial operations under one head—the Secretary of Finance—was made today by Representative SIEMINSKI, Democrat, of New Jersey.

He introduced a bill calling for the unification of the fiscal functions of the United States.

The measure would also provide for a so-called Joint Chiefs of Staff to serve under the new Secretary.

These places would include the present Secretaries of the Treasury, Labor, Commerce, and newly created Secretaries of Industry and Credit. The latter classification would include the Federal Reserve Board, the Reconstruction Finance Corporation, and the Export-Import Bank.

SIEMINSKI told reporters such unification would guard America's financial position in the world.

I here express my thanks to the Associated Press reporters who interviewed me. I was quite honored by their courtesy and understanding in spite of their warning that, "In 20 years your idea will be adopted by some Joe Blow under his name." I asked, "Why?" "Because," they said, "it's too logical, makes too much sense, keeps pace with America's leadership in the world, and, besides, you're only a freshman."

On further thought, I am withdrawing the bill and presenting a joint resolution for the House and Senate on the proposition.

In closing, I am not unmindful of the gallant fight waged by the late Senator Borah in modernizing the Department of Commerce. However, times are such, I believe, as to merit a reappraisal of the financial functions of the United States. Since Senator Borah passed on, the Department of Defense has come into being. The Department of Finance, I trust, is ready to be born and certified.

U. N. Supporter Showing Signs of Worry

EXTENSION OF REMARKS OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, John S. Knight, publisher of the Detroit Free Press and other great dailies, is apparently beginning to doubt the wisdom of departing from the principles laid down in our Constitution. Mr. Knight, like many another great man, has been on and off, in and out, the New Deal and its policy of surrendering at least a portion of our national sovereignty to some sort of one-world organization.

In a thought-provoking editorial published in last Sunday's Detroit Free Press he points, as I did in less pleasing words, in perhaps less cogent reasoning in January of 1942, to some of the dangers of playing with the idea that so-called world statesmen of other nations know better what is good for this country and its people than did those who framed our Constitution.

Read, then reread, that editorial, which I quote:

PROTECT LIBERTIES, UNITED STATES WARNED ON ANNIVERSARY OF CONSTITUTION

Monday, September 17, is the one hundred and sixty-fourth anniversary of the ratification of our Constitution.

There will be widespread observance of the event throughout the country with churches, schools, and patriotic organizations staging programs designed to focus attention upon the importance of the Constitution to the individual citizen.

The Constitution is your and my guarantee that we cannot be deprived of our individual liberties without due process of law; that we can express ourselves freely without fear of prosecution; that we have certain inalienable rights which no budding local, State, or National dictator can strip away at his whim.

The Constitution is a moving, human document. Fifty years before latter-day reformers advocated antiprejudice laws, the Constitution was amended to forbid discrimination because of race or color.

The wise men who wrote the Constitution sought to avoid the injustices of European tyranny and thus brought into being a system of checks and balances as between the executive, legislative, and judicial branches of our Government.

They believed that such a form of government would best protect the individual against lust for power and legislative hysteria.

As Donald Richberg wrote recently in the *Freeman*: "The founders of our Republic were so fearful that the tyranny of a majority would eventually destroy our liberties that they prohibited the Government itself from making any laws that would limit free speech, a free press, freedom of religion or freedom of association, or would deny anyone time-honored protections, such as trial by jury, or would deprive anyone of essential enjoyments of life, liberty, or property."

From the start, there was much scoffing at the Constitution. The Tories, both in England and the United States, freely predicted that it would never work.

As late as May 23, 1857, Lord Macaulay wrote to an American:

"Your Constitution is all sail and no anchor. I have long been convinced that institutions purely democratic must, sooner or later, destroy liberty, or civilization, or both. Either some Caesar or Napoleon will seize the reins of government with a strong hand; or your Republic will be plundered and laid waste by barbarians in the Twentieth Century as the Roman Empire was in the fifth; with this difference; that the Huns and Vandals who ravaged the Roman Empire, came from without, and that your Huns and Vandals will have been engendered within your own country by your own institutions."

The British thought the United States could not survive the War of 1812; later they expected the Union to be torn apart and destroyed by the Civil War.

Happily, these dire forebodings did not materialize. The rulers of England underestimated the vitality of our young Republic in 1812 much as they misjudged the character and magnificent courage of the immortal Lincoln in 1861.

The Constitution has served us well; withstood many assaults and still remains the keystone to our arch of freedom.

CONSTITUTION CIRCUMVENTED

But let us not minimize the dangers which still beset us.

From the very advent of the New Deal, the Constitution was under attack from both the right and left. The thought control intellectuals considered it outmoded and inadequate to meet changing conditions: the late Gen. Hugh Johnson brushed it aside when the National Recovery Act was rammed

through a bewildered and compliant Congress.

Roosevelt tried to pack the Supreme Court by adding men who shared his beliefs and philosophies. Although this device failed, he was later to gain his objective through deaths and resignations from the Court.

Finley Peter Dunne said many years ago that the Supreme Court follows the election returns. This was never so true as when the New Deal was in full flower.

In the Roosevelt era, the American people became conditioned to government by edict; to accepting bureaucratic rulings rather than court decisions; to trusting the personal diplomacy of Roosevelt beyond constitutional limitations.

In his memoirs, Winston Churchill says that he, and not Roosevelt, drafted the Atlantic Charter. "I am glad it should be of record," said Churchill, "that the substance and spirit of what came to be called the Atlantic Charter was in its first draft a British production cast in my own words."

Churchill then tells of prevailing upon Mr. Roosevelt to make commitments that no American President had the right to undertake. He goes on to say:

"The fact alone of the United States, still technically neutral, joining with a belligerent power in making such a declaration was astonishing."

To quote Felix Morley, "It certainly was." On January 11, 1944, President Roosevelt told Congress that agreements reached at both Cairo and Tehran would be submitted to the Senate, adding that he was thoroughly conversant with the provision of our Constitution. He said also that there were no secret treaties or political or financial commitments.

The Yalta deal which gave Russia certain preeminent rights in Mongolia and Manchuria without China's knowledge was mentioned in Roosevelt's last message to Congress on March 1, 1945.

"I am aware," said Roosevelt, "of the constitutional fact" that political arrangements made at Yalta "must be approved by two-thirds of the Senate."

But, as Felix Morley says: "This scrapping of the open-door policy has never been approved by, or even submitted to, the Senate."

Thus was the Constitution circumvented.

RIGHTS OF THE MINORITY

Another constitutional protection that has largely disappeared is the famous right-to-work principle.

With widespread acceptance of what Donald Richberg calls the union closed shop, in many cases the right to earn a living is conditioned, as Richberg says, "by paying dues to a private organization and becoming practically, if not legally, subject to its laws and discipline."

"If a worker voluntarily joins and remains in a union, this is government by consent of the governed. But if he is forced to join, and forced to stay in, this is government without consent, which the Declaration of Independence denounces as tyranny."

Richberg makes the point that those who advocate the union closed shop argue very earnestly and sincerely that the rule of the majority is the American way—and the democratic way—which makes it possible for men to live and work together effectively and peaceably.

He concedes this is partly true but points out that in our democratic American way of life there are also rights of minorities and of individuals which must be maintained and which a majority is not permitted to deny and destroy.

"Is the right to work," Richberg asks, "without being compelled to join a union, one of those democratic rights?"

Actually, there is no democracy in a situation where the right to work depends upon compulsory union membership; where one cannot withdraw without sacrificing his job.

Yet few people seem concerned over the extension of this arbitrary power, nor is there any agitation to make it unlawful to compel an American citizen to join a union in order to earn a living.

Thus, the Constitution is being conveniently ignored.

TREATIES SUPERSEDE THE LAW

A third major threat to constitutional government is legislation by treaty.

How many people know that a United Nations treaty, ratified by the Senate and signed by the President, automatically becomes the law of our land?

For instance, the United Nations declaration on freedom of information and the Covenant on Human Rights contain provisions which could abolish some of our basic freedoms.

One of the United Nations conventions would restrict freedom of the press in the United States, making our own constitutional guarantees meaningless and of no effect.

This condition is at variance with that in most other countries, which reserve the right, even after a treaty has been signed, to determine to what extent, if at all, they intend to implement its provisions.

Frank Holman, former president of the American Bar Association, is making a vigorous fight to safeguard our system of representative government against the dangers of legislation by treaty.

He said recently that "article 6 of the Constitution provides that a treaty when ratified becomes the supreme law of the land, anything in the constitution or laws of any State to the contrary notwithstanding."

But, he adds, "the traditional American theory of government was and is that our basic rights are retained by the American people even as against government itself, and are not subject to change or modification unless the Constitution be changed by the people themselves."

His theory is that "since the people expressly reserved these 'retained rights' and did not grant their control to any agency of government, our governing officials have no constitutional power to take them away, or modify them, whether by treaties or otherwise."

This is interesting doctrine, but the fact remains that these "rights" can be taken away by the simple method of ratifying a U. N. treaty which is not binding upon other nations in the same sense that it is upon the United States.

The subject of "legislation by treaty" or "government by treaty" is extremely complicated but in effect it simply means this:

The well-meaning proponents of the Covenant on Human Rights or the Convention on Genocide would have the United States ratify treaties which, if enforced would give the United Nations authority over our National, State and local governments but, as George Sokolsky points out, "not to give it similar authority over the administrations of other countries."

Thus, the Constitution can be circumvented if the United States Senate and the President proceed to ratify and sign the U. N. treaties now under discussion.

U. N. SHORT OF ITS GOALS

In this country, it has become the fashion to celebrate United Nations Day and make fine speeches about the accomplishments of an organization for which there was both an idealistic and a practical need.

Without saying that the U. N. has been a failure in every field, even its most staunch supporters must concede that it has fallen far short of its most important task—that of preserving world peace.

The dangers inherent in government by treaty as proposed under U. N. procedure should cause every thoughtful and patriotic

American to reread and restudy the Constitution of the United States so that he may be sure in his own mind that in striving for a world ideal, we are not yielding some of our precious liberties to a supergovernment shaped in an Old World design.

The Constitution was written by men who understood better than we the price of liberty and the blessings of free institutions.

Let's not scrap it for something that may destroy our heritage.

JOHN S. KNIGHT.

It is encouraging, decidedly so, to find a great daily, a great editor like Knight, finally making a plea for adherence to the Constitution; to, though he probably would deny it, a more reasonable acceptance of the views of the isolationists, the nationalists, like your humble servant

United Nations makes war, American youth pays the price From the Dowagiac Daily News of September 14, 1951, comes the following article:

BURIAL SERVICE PLANNED FOR TWO WAR VICTIMS

The bodies of two local boys, killed in action in Korea, Sgt. (1c) Ted Terkos, 24, son of Mr. and Mrs. Nick Terkos of this city, and Sgt. Donald William Webber, 19, son of Mr. and Mrs. Louis H. Webber of Sumnerville, are arriving home this week-end for final interment.

Services for both boys will be held Monday, Sergeant Terkos' in Chicago Monday morning at 9 o'clock and Sergeant Webber's Monday afternoon at 2 o'clock in the Kiger Funeral Home in Niles.

Sergeant Terkos, who fought on Okinawa at the age of 18 with an infantry division, in World War II, was an Army reservist and died in Korea on February 5 of this year, less than 3 months after he was recalled to duty. He went overseas within a short time after his recall and was assigned to the Seventh Infantry Regiment of the Third Division. He died in an Army hospital in Korea from bullet wounds.

He was born in Dowagiac June 18, 1926, the third son of Nick and Beatrice Warren Terkos and was graduated from Central High School with the class of 1944. He was one of the most popular students in the high school. He was inducted into the Army on September 18, 1944, and by the end of the following April was taking part in the bitter fighting on Okinawa. He was discharged in 1946. His marriage to Patricia Healey, of Chicago, took place in September 1946. He later reenlisted in the Army, serving for 1 year after which he was placed on the inactive reserve list.

Besides his widow and parents, he leaves his little daughter, Diane Rosemary, and three brothers, Pete, James and William, all of Dowagiac. His wife lives at 8604 South Ada Street, Chicago.

The body will be at the Brady funeral home, 1018 West Seventy-ninth Street, Chicago, where services will be held at 9 a. m. Monday morning followed by solemn requiem high mass at St. Killian's Church at 9:30 a. m. Monday. The church is at Eighty-seventh and May Streets. Burial will be in St. Mary's cemetery.

Sgt. Donald W. Webber, 19, who was president of the 1949 graduating class of Central High School in this city, was killed September 26, 1950, in Korea, while fighting with the Thirty-eighth Infantry Regiment of the Second Division. He was the second Cass County boy to be killed in Korea.

He was born in Sumnerville, October 20, 1930, the son of Mr. and Mrs. Louis H. Webber, and attended the Sumnerville School before coming to Dowagiac to attend high school. He was a letter man in football, baseball, and basketball in high school and

was president of the senior class at the time of his enlistment in the Army in January 1949. His family last saw him at Christmas time of that year.

They believe that he went to Korea in July 1950, but never heard from him again after he sailed or after his arrival at the front.

Besides his parents he leaves eight brothers and sisters including a half-brother, Kenneth McLaughlin, and Robert, Carol, Mary, Betty, Beverly, Frances, and Ruth Webber, all at home; his grandparents, Mr. and Mrs. Clyde Webber and Mrs. Myrtle Canfield, of Niles.

Funeral services will be held Monday afternoon at 2 o'clock in the Kiger funeral home in Niles. Full military rites will be conducted by the VFW post of Dowagiac followed by interment in Silverbrook Cemetery.

The body is expected to arrive by train in Niles Saturday morning accompanied by a military escort.

Resolution of Geary County Flood Control Association

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. REES of Kansas. Mr. Speaker, under unanimous consent heretofore approved, I am enclosing copy of resolutions adopted by the Geary County Flood Control Association on September 11, 1951. In view of the damages incurred in the State of Kansas by reason of the recent floods, I am sure Members of the House will be interested in the views expressed in these resolutions.

GEARY COUNTY FLOOD-CONTROL ASSOCIATION RESOLUTIONS ADOPTED SEPTEMBER 11, 1951

Whereas agricultural and urban lands in Geary County, Kans., together with the improvements located thereon and the personal belongings of the residents have suffered damage by floodwaters in the major flood disasters of 1903, 1915, 1935, 1941, 1951, and also extensive damage in six other years and three times in 1951 in addition to the major flooding of July 11-13, and

Whereas these floodwaters have come from the Smoky Hill, Saline, Solomon, and Republican Rivers, and from Lyons and Chapman Creeks, and

Whereas the river channel on the Kansas and the Smoky Hill Rivers would have carried away more water from this vicinity if the Republican and the Blue Rivers were controlled; and

Whereas there are climatic conditions which cause more rainfall than it is possible for the soil to absorb and this excess runoff must be held in reservoirs if floods are to be prevented. Now, therefore, in order to prevent this frequent personal and property loss be it

Resolved by the people of Geary County, Kans. That the Congress of the United States should authorize and make appropriations for—

1. Plans contained in the Pick-Sloan plan for the Kansas River Basin covering projects of the (a) Corps of Engineers for reservoirs on the Blue River, the Republican River, and the Delaware River; and of the (b) Bureau of Reclamation for reservoirs on the Solomon and the Saline Rivers.

2. Plans contained in the Department of Agriculture Missouri River Basin plan for the

upstream phases of Federal flood-control activities including stabilization measures for small water courses; be it further

Resolved, That we consider the present reports and recommendations of the Corps of Engineers, the Bureau of Reclamation, and the Department of Agriculture dealing with flood-control measure and which reports are now before Congress as ample to deal with the situation, and that no further delays should be caused by taking time for new studies; be it further

Resolved, That we express our appreciation to the President, the Federal agencies, the Congress, and Senator FRANK CARLSON, Senator ANDREW SCHOMPPEL, Representative EDWARD H. REES, for the attention they have given the problem, and that we express our hope that they will continue their efforts until all of the protective and conservation measures are completed.

ROBT A SCHERMEHORN,
President, Geary County Flood-
Control Association.

Readjustment of Postal Rates

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. BRAY. Mr. Speaker, I am vigorously opposed to a 60-percent increase in postal rates for newspapers and magazines. There seems to be a great misconception as to the real purposes of our postal system. The purpose of the postal system is to serve the needs of all of the American people. It should not be confused with a profit-making enterprise or a project to benefit only a certain locality for such is not the purpose of the postal service. Neither should we accept the theory that this increase will merely be paid by the publishers; in the end, it must be passed down to the recipients of that mail.

Perhaps no single factor has contributed so much to the education, culture, and freedom of the American people as has the ready dissemination of news to all the people, not just the wealthy and privileged. Wealth in America has never been, and should never be, a requisite to the obtaining of information as furnished so adequately by the press of America. I fear that certain people in high places have allowed their antagonism to the press of America to influence their judgment when they advocate such an enormous increase in postal rates.

The attempt to stop this free flow in information shows a fear on the part of those who would do this. The American people, rich and poor alike, should have ready access to the news on all sides of every question. Freedom of the press can be curtailed in more ways than one; censorship may be accomplished directly or indirectly. One of the indirect methods of censorship is to make the transmission of newspapers and other periodicals so expensive that they are beyond the financial grasp of the people of low income.

Since the postal service is a service to all the people it cannot be considered in

the same light as the construction of a great dam or irrigation project, or as the donation of aid to foreign countries, for these appropriations benefit only certain segments of the people. The postal service benefits us all. Certainly there are indirect subsidies in the postal service. No one denies that our postal service has subsidized air mail, but this subsidy has benefited us all, and has benefited national defense through the rapid growth and development of aviation.

Our rural free delivery system in America has been of inestimable value in making and keeping us a free, united people. Not one thinking person in America would want to do away with it. Yet it has never paid its way. Each year our Government bureaus and departments and the Congress send billions of pieces of mail free through the postal system. While some of this mail may be of doubtful value, the postal service must transport and deliver it without compensation and as a public service.

We know that more expensive buildings are built and maintained by the Postal Department than are really necessary, but local pride demands it. In a sense, this is a subsidy to the community in which they are built and operated.

I am in no way objecting to these various direct and indirect subsidies by our Post Office Department; on the whole, they are operated for the good of America. The citizens of the United States demand these services and subsidies. Since the Government is the people, such subsidies and services are proper, but let us not blame the Postal Department for their expenses.

The statement that there is a \$550,000,000 deficit in the Post Office Department is certainly erroneous and misleading, and is an unjust criticism of the efficiency of the postal system. If the proponents of this absurdly large increase in the rates of newspapers and magazines would sincerely make an accounting and show how much of this money is spent in subsidies directly or indirectly, all for the benefit of the American people, we would have an entirely different picture. But apparently their desire to force through this 60-percent increase has so prejudiced them that they have not given us the full and correct picture.

Although some increase may be justified, I will not vote for this large increase in postal rates that will in many instances prevent the poor people, especially those in isolated areas, from receiving their newspapers and magazines, and also wreck certain small publications.

To eliminate some of the confusion surrounding the postal deficit, it might be wise to make each department pay an approximate sum for the use it makes of free and privileged mail. This sum would be added to the appropriation of each department. This would not reduce the cost of this service, but it would show what agency was spending the money. It would also help to show what the real deficit is.

I suggest that some nonpartisan and unbiased commission study the postal

system to determine exactly how much we are spending for these various subsidies so that the American people can know exactly what they are getting and what they are paying for. When we have that information, we will then be able to find just what increases are necessary in the postal system. And the people will then know what they are getting for their money and can decide whether it is worth the price.

Escape From Tyranny

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MULTER. Mr. Speaker, the following article which appeared in the New York Herald Tribune of September 17, 1951, demonstrates that the time may not be too far distant when freedom will be reestablished in the totalitarian states:

ESCAPE FROM TYRANNY—THE STORY OF A YOUNG COUPLE WHO MADE IT THROUGH THE IRON CURTAIN

(By Donald P. Knodel)

With all Russian propaganda organs blaring full blast, refugees continue to slip through the iron curtain into Western Germany. Many motives drive them to seek escape, but basically there is always the affront to human dignity suffered at the hands of tyranny, compounded with economic and physical hardship.

Such a case was that of Ivan Petrov and his pretty wife, Natalie, who, thanks to the efforts of the American Embassy in Tehran, recently arrived in Munich. Petrov had been wounded and decorated during the war, but now after a struggle with Soviet politics and economy he found his pockets empty, his career ruined (he and his wife had been teachers), his sister forced to work hopelessly in a labor camp far from home, and his self-respect rapidly diminishing. He decided that BBC and Voice of America broadcasts could not be entirely wrong about the west, and he began to make plans looking in that direction.

After the decision had been made, the question became one of method. Travelling through Czechoslovakia and Poland into Germany, he would be forced to cross three borders, all mined and patrolled. The fact that his wife would accompany him seemed to eliminate such a route, and he applied, the before, for leave to visit one of the rest camps on the Caspian Sea. After packing small suitcases and an ordinary lunch, they waved good-by to their smiling friends at the station. They had not dared tell them their real purpose.

In the early hours of the morning the train reached a water stop on the Turkestan steppes. Ivan and his wife waited until the train began to move, then jumped off and disappeared into the night.

Their lunch was their only source of food—one kilogram of chocolate, two kilograms of bread and a half liter of vodka. Guided by a compass and an ordinary map, they struck out in the direction of the Azerbaijanian border. It was winter, and the night wind across the steppe went through their cotton clothing like a knife. As dawn approached they hid themselves in a ravine, then as the sun beat down upon them from overhead they suffered from its

heat. The second evening, without food and 20 hours without water, they struck out again. Natalie was weak, and the cheap Soviet ersatz shoes they wore no longer protected their feet, but they managed to walk more than 25 miles before daylight forced them once more to go into hiding. On this high plateau where they now traveled a walking man could be seen for miles.

When nightfall made it safe for them to continue Natalie had lost strength to the point that she felt she could not go on. Ivan promised, threatened, and through the use of various ruses finally persuaded her to try walking with her arm over his shoulder. Finishing the last of the vodka and praying that their compass was not inaccurate, they hobbled along slowly and painfully. It began to rain, but, although it soaked their clothing, they were overjoyed to see it freeze on the low shrubbery about them. By breaking off branches and sucking them they obtained their first water in more than 50 hours.

During the third day they slept as if dead, and when they awoke found their mouths swollen and blistered. Natalie cried and begged to be left, but as the sun set and the chill wind began to carry small flakes of snow hope was reborn. Half-carried, half-walking Natalie accompanied her husband through the darkness for what must have been a minimum of 20 miles. During the night, at a point Ivan calculated as close to the border, they saw fresh tracks of men and dogs on the ground now lightly covered with snow. In spite of their condition, their discovery drove them on at a run until they dropped exhausted. Had they been seen they would have been shot.

In the morning a horseman passed near by. He was an Afghan. Petrov raised his head to shout, but no sound would come from his swollen throat and mouth. Hours later, after following the horse's tracks into a small village, the two refugees fainted as Afghan women and children crowded around them. The only common word in the two vocabularies they spoke was "Bolshevik." As soon as Petrov uttered it a rider was dispatched for a government official. Two days later, nursed back to normal strength with bread and a strange tea, they were on their way in rattling luxury by automobile over tortuous roads to the district police headquarters. From there they were sent to Tehran where they were given opportunity to tell their story to American officials at the Embassy. Two months later they were flown to Western Germany.

Petrov has told stories of terrorism affecting many people, including close acquaintances and his own family. Soviet officials seem to have a fixed rule not to allow Russians who have been in the west full liberties, once they have returned to the homeland. It applies to both soldiers and civilians. If they are allowed to mingle freely with the citizenry in western Russia, it is feared their "stories of prosperity" in the defeated countries of Austria and Germany will cause widespread dissatisfaction with the Soviet standard of living. Petrov's sister was shipped to Germany by the Germans in 1941. After 1945 she remained in the same camp in Eastern Germany under the government of the MVD. One day in 1947 the inmates were told to get together food and clothing for a 3-day journey. Hopes were high that at last they would be returned as free citizens, but they were doomed to disappointment. Their criminal status had not been changed, and to this day she has been held as a prisoner. She now works on a canal project in the Middle East, whence she is permitted to write to her relatives, but her letters, either because of censorship or as a result of her condition, are those of a woman with a broken spirit.

Petrov feels that the peasantry is 100 percent against the Communists and that 85

percent of the entire population is dissatisfied but helpless under the police system. He suggests that the United States adopt more aggressive radio propaganda. Appeals coming from private individuals in the United States are more effective than those under Government auspices, but by far the best method of agitation, he believes, is to make arrangements for broadcasts to their native country by recently escaped Russians. Appeals by such people under such circumstances would arouse quick and warm response.

Undermining of Constitution Imperils Liberty

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. SHEEHAN. Mr. Speaker, Monday, September 17, was the one hundred and sixty-fourth anniversary of the ratification of our Constitution and appropriate ceremonies were held in the Library of Congress commemorating this event.

It seems to me that in talking to a great many of the residents of my congressional district, they appear to be concerned about the gradual drifting away from the principles laid down in the Constitution.

The remarks of Mr. John S. Knight in his Editor's Notebook column of Saturday, September 15, in the Chicago Daily News is a very thought-provoking article on our Constitution. The editorial entitled "Undermining of Constitution Imperils Liberty," is as follows:

Monday, September 17, is the one hundred and sixty-fourth anniversary of the ratification of our Constitution.

There will be widespread observance of the event throughout the country, with churches, schools, and patriotic organizations staging programs designed to focus attention upon the importance of the Constitution to the individual citizen.

The Constitution is your and my guaranty that we cannot be deprived of our individual liberties without due process of law; that we can express ourselves freely without fear of prosecution; that we have certain inalienable rights which no budding local, State, or National dictator can strip away at his whim.

The Constitution is a moving, human document. Fifty years before latter-day reformers advocated antiprejudice laws, the Constitution was amended to forbid discrimination because of race or color.

The wise men who wrote the Constitution sought to avoid the injustices of European tyranny and thus brought into being a system of checks and balances as between the executive, legislative, and judicial branches of our Government.

They believed that such a form of government would best protect the individual against lust for power and legislative hysteria.

As Donald Richberg wrote recently in the Freeman:

"The founders of our Republic were so fearful that the 'tyranny of a majority' would eventually destroy our liberties that they prohibited the Government itself from making any laws that would limit free

speech, a free press, freedom of religion, or freedom of association, or would deny anyone time-honored protections, such as trial by jury, or would deprive anyone of essential enjoyments of 'life, liberty, or property.'"

From the start, there was much scoffing at the Constitution. The Tories, both in England and the United States, freely predicted that it would never work.

As late as May 23, 1857, Lord Macaulay wrote to an American:

"Your Constitution is all sail and no anchor . . . I have long been convinced that institutions purely democratic must, sooner or later, destroy liberty, or civilization, or both . . . Either some Caesar or Napoleon will seize the reins of government with a strong hand; or your Republic will be plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth, with this difference, that the Huns and Vandals who ravaged the Roman Empire, came from without, and that your Huns and Vandals will have been engendered within your own country by your own institutions."

The British thought the United States could not survive the War of 1812, later they expected the Union to be torn apart and destroyed by the Civil War.

Happily, these dire forebodings did not materialize. The rulers of England underestimated the vitality of our young Republic in 1812 much as they misjudged the character and magnificent courage of the immortal Lincoln in 1861.

The Constitution has served us well withstood many assaults and still remains the keystone to our arch of freedom.

BOTH RIGHT AND LEFT ATTACK OUR BASIC LAW

But let us not minimize the dangers which still beset us.

From the very advent of the New Deal, the Constitution was under attack from both the Right and the Left. The "thought control" intellectuals considered it outmoded and inadequate to meet changing conditions, the late Gen. Hugh Johnson brushed it aside when the National Recovery Act was rammed through a bewildered and compliant Congress.

Roosevelt tried to pack the Supreme Court by adding men who shared his beliefs and philosophies. Although this device failed, he was later to gain his objective through deaths and resignations from the Court.

Finley Peter Dunne said many years ago that the Supreme Court follows the election returns. This was never so true as when the New Deal was in full flower.

In the Roosevelt era, the American people became conditioned to government by edict; to accepting bureaucratic rulings rather than court decisions; to trusting the personal diplomacy of Roosevelt beyond constitutional limitations.

In his memoirs, Winston Churchill says that he, and not Roosevelt, drafted the Atlantic Charter. "I am glad it should be of record," says Churchill, "that the substance and spirit of what came to be called the Atlantic Charter was in its first draft a British production cast in my own words."

Churchill then tells of prevailing upon Mr. Roosevelt to make "commitments" that no American President had the right to undertake. He goes on to say: "The fact alone of the United States, still technically neutral, joining with a belligerent power in making such a declaration was astonishing."

To quote Felix Morley: "It certainly was."

On January 11, 1944, President Roosevelt told Congress that agreements reached at both Cairo and Tehran would be submitted to the Senate, adding that he was "thoroughly conversant with the provisions of our Constitution." He said also that "there were no secret treaties or political or financial commitments."

The Yalta deal which gave Russia certain preeminent rights in Mongolia and Manchuria without China's knowledge was mentioned in Roosevelt's last message to Congress on March 1, 1945.

"I am aware," said Roosevelt, "of the constitutional fact" that political arrangements made at Yalta "must be approved by two-thirds of the Senate."

But, as Felix Morley says: "This scrapping of the open-door policy has never been approved by, or even submitted to, the Senate."

Thus was the Constitution circumvented.

RIGHT TO HOLD JOB NOW BEING QUALIFIED

Another constitutional protection that has largely disappeared is the famous "right to work" principle.

With widespread acceptance of what Donald Richberg calls the union closed shop, in many cases the right to earn a living is conditioned, as Richberg says, "by paying dues to a private organization and becoming practically, if not legally, subject to its laws and discipline."

"If a worker voluntarily joins and remains in a union, this is 'government by consent of the governed.' But if he is forced to join, and forced to stay in, this is government without consent, which the Declaration of Independence denounces as tyranny."

Richberg makes the point that those who advocate the "union closed shop" argue very earnestly and sincerely that the "rule of the majority" is the "American way"—and the "democratic way"—which makes it possible for men to live and work together effectively and peaceably.

He concedes this is partly true but points out that in our democratic American way of life there are also rights of minorities and of individuals which must be maintained and which a majority is not permitted to deny and destroy.

"Is the right to work," Richberg asks, "without being compelled to join a union, one of those 'democratic' rights?"

Actually, there is no democracy in a situation where the "right to work" depends upon compulsory union membership, where one cannot withdraw without sacrificing his job.

Yet few people seem concerned over the extension of this arbitrary power, nor is there any agitation to make it unlawful to compel an American citizen to join a union in order to earn a living.

Thus, the Constitution is being conveniently ignored.

U. N. TREATIES COULD LIMIT UNITED STATES FREEDOM

A third major threat to constitutional government is legislation by treaty.

How many people know that a United Nations treaty, ratified by the Senate and signed by the President, automatically becomes the law of our land?

For instance, the U. N. Declaration on Freedom of Information and the Covenant on Human Rights contain provisions which could abolish some of our basic freedoms.

One of the U. N. conventions would restrict freedom of the press in the United States, making our own constitutional guarantees meaningless and of no effect.

This condition is at variance with that in most other countries, which reserve the right, even after a treaty has been signed, to determine to what extent, if at all, they intend to implement its provisions.

Frank Holman, former president of the American Bar Association, is making a vigorous fight to safeguard our system of representative government against the dangers of legislation by treaty.

He said recently that "article 6 of the Constitution provides that a treaty when ratified becomes the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding."

But, he adds, "the traditional American theory of government was and is that our

basic rights are retained by the American people even as against Government itself, and are not subject to change or modification unless the Constitution be changed by the people themselves."

His theory is that since the people expressly reserved these retained rights and did not grant their control to any agency of Government, our governing officials have no constitutional power to take them away or modify them, whether by treaties or otherwise.

This is interesting doctrine, but the fact remains that these rights can be taken away by the simple method of ratifying a U. N. treaty which is not binding upon other nations in the same sense that it is upon the United States.

The subject of legislation by treaty or government by treaty is extremely complicated but in effect it simply means this:

The well-meaning proponents of the Covenant on Human Rights or the Convention on Genocide would have the United States ratify treaties which, if enforced, would give the United Nations authority over our national, State, and local governments but, as George Sokolsky points out, "not to give it similar authority over the administrations of other countries."

Thus, the Constitution can be circumvented if the United States Senate and the President proceed to ratify and sign the U. N. treaties now under discussion.

LIBERTY MORE IMPORTANT THAN ONE-WORLD SCHEMES

In this country, it has become the fashion to celebrate United Nations Day and make fine speeches about the accomplishments of an organization for which there was both an idealistic and a practical need.

Without saying that the U. N. has been a failure in every field, even its most staunch supporters must concede that it has fallen far short of its most important task—that of preserving world peace.

The dangers inherent in government by treaty as proposed under U. N. procedure should cause every thoughtful and patriotic American to reread and restudy the Constitution of the United States so that he may be sure in his own mind that in striving for a world ideal, we are not yielding some of our precious liberties to a supergovernment shaped in an old-world design.

The Constitution was written by men who understood better than we the price of liberty and the blessings of free institutions.

Let's not scrap it for something that may destroy our heritage.

JOHN S. KNIGHT.

The Proposed Aluminum Industry for Montana

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. MANSFIELD. Mr. Speaker, I am today requesting the Department of Justice to investigate charges which have been made concerning the proposed Government loan of \$46,000,000 to the Harvey Machine Co., of California.

I am also introducing a bill today, Mr. Speaker, which seeks to provide for the establishment of a clearinghouse of information in the Department of Justice, to furnish agencies of the Federal Gov-

ernment with information concerning the qualifications of Government contractors. My purpose in doing this is to make available to all Government agencies the qualifications and standings of any individual, partnership, corporation, or business seeking to do business with the Government.

A copy of the bill follows:

A bill to provide for the establishment of a clearinghouse of information in the Department of Justice, to furnish agencies of the Federal Government with information concerning the qualifications of Government contractors

Be it enacted, etc., That in order to provide all agencies of the Federal Government with full, complete, and accessible information concerning certain persons who have heretofore contracted or may hereafter contract with the Federal Government, the Attorney General is authorized and directed to establish and maintain within the Department of Justice clearinghouse of information as hereinafter provided.

SEC. 2. (a) The clearinghouse established pursuant to the first section of this act shall contain such information (including information with respect to credit, integrity, loyalty, efficiency, and performance) concerning each person who contracts with an agency of the Federal Government as the Attorney General shall deem appropriate.

(b) Each agency of the Federal Government shall, from time to time, submit to the Attorney General such information concerning persons who contract with such agency on or after the date of the enactment of this act as the Attorney General may require in accordance with subsection (a).

(c) Within 30 days after the date of the enactment of this act, the Attorney General shall submit to each agency of the Federal Government a request for such information as he deems appropriate in accordance with subsection (a) concerning persons who have contracted with such agency within the 10-year period immediately prior to the date of the enactment of this act, and each such agency shall within 60 days after the date of the enactment of this act furnish to the Attorney General the information so requested.

SEC. 3. (a) Upon the request of the head of any agency of the Federal Government for information concerning any person who has contracted or may contract with such agency, the Attorney General shall furnish to such agency any information concerning such person which is available in the clearinghouse established pursuant to section 2 (a).

(b) If any information requested by the head of any agency of the Federal Government pursuant to subsection (a) is not available in the clearinghouse established pursuant to section 2 (a), the Attorney General, upon the further request of the head of the agency, shall conduct such investigation as may be necessary to secure the information requested and shall furnish such information to the agency.

SEC. 4 For the purposes of this act—

(1) the term "person" includes an individual, partnership, corporation, and any other business entity; and

(2) the term "agency of the Federal Government" means any department, agency, or independent establishment in the executive branch of the Government, and any corporation wholly owned by the United States.

SEC. 5 The Attorney General shall prescribe such regulations as may be necessary to carry out the purposes of this act.

To the best of my knowledge, the Harvey Co. is the only company which

has made a firm commitment to the Bonneville Power Administration to locate in the Flathead Valley of Montana in the vicinity of the Hungry Horse Dam. Furthermore, this industry was to be a permanent addition to Montana's economic structure and would furnish employment to Montana people on a year-round basis.

On July 18, 1950, I asked Dr. Paul Raver, Administrator of the Bonneville Power Administration, the following question:

What is your opinion of the Harvey outfit?

Dr. Raver answered:

I have been sizing them up * * * they are a typical small business. As I see it I think we ought to do everything we can to encourage this company to keep its head above water and I think they have a whale of a lot of initiative.

I had assumed that in considering the application of the Harvey Machine Co. that the Department of the Interior would conduct a complete investigation before arriving at an agreement. I made very plain and unmistakable what my position was in meetings with Secretary Chapman on July 31, 1951, and with Mr. Charles Wilson, Defense Mobilization Administrator, on August 22, 1951, when I stated to both, in the presence of witnesses, that I was exerting no political pressure but that any agreement entered into with the Harvey Co. must be on a strictly business basis; that all the cards should be laid on the table; that any agreement must be able to withstand a congressional investigation; and that the Government's interests must be fully protected. I also stated that I wanted a decision as to whether the Harvey Co. was in or out so that the people of Montana would know where they stood on this company coming into our State.

Ever since I have been able to secure the authorization and the funds for the construction of the Hungry Horse Dam in my district, I have been doing all I could to see that new industries would come into our State to use the power which will be available in 1952 when the Hungry Horse Dam is completed. When it was brought to my attention that an independent company was interested in constructing an aluminum plant in the Flathead Valley, I urged that it be given every consideration not only because I wanted new industries in Montana but also to further independent and small businesses.

For months there have been one decision after another on the acceptance of this company's proposal and finally on July 31, I told Secretary Chapman that this matter must be settled one way or another; that I wanted to see a final decision made immediately because we needed aluminum and I wanted to see an aluminum plant started in the Flathead Valley this summer. If a decision was not reached soon, I felt that construction could not start this year because of winter weather setting in. At no time during these past months has there been any reference to the allegations made by Mr. Pearson.

Mr. Speaker, I am inserting at this point in my remarks copies of letters I

have sent to the Secretary of the Interior Oscar Chapman; Stuart Symington, Administrator of the Reconstruction Finance Corporation; Howard McGrath, Attorney General; and Congressman PORTER HARDY, chairman of the Subcommittee on Government Operations of the House Committee on Expenditures in the Executive Departments.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 17, 1951.
Hon. OSCAR CHAPMAN,
Secretary of Interior,
Interior Department.

DEAR OSCAR: It is my understanding that Mr. Drew Pearson in his broadcast of Sunday, September 16, made a statement to the effect that there were some questions about the status of the Harvey Machine Company, its proposed loan to build an alumina plant in the State of Washington, and an aluminum plant in the vicinity of Kalispell, Mont., and that this loan would not be granted.

You will recall, Oscar, at the final meeting in your office on July 31, 1951, and in the presence of Under Secretary Searles, Senator Murray, Congressman Jackson of Washington and King of California, Mr. Don Treloar of Kalispell, Mont., that I stated that any agreement entered into between the Harvey Machine Company and the Government should be on a strictly business basis; that all the cards be laid on the table; and that any agreement made must be able to withstand the light of any Congressional investigation or scrutiny. In other words, any agreement should be able to stand on its own feet with the Government's interests fully protected. With this, you wholeheartedly agreed as well as did every other person present.

You will recall also that at that time you made the statement that if the Harvey Machine Company did not go into Montana, there were other aluminum companies interested in moving into the Flathead area and they would be given immediate consideration. In other words, this power from Hungry Horse Dam was to be used in Montana for the development of industry within the State and particularly in the Flathead area. The people of Montana and I are still relying on the promises made by you and Dr. Paul Raver, Administrator of the Bonneville Power Administration, that this is still the case and that this power from Hungry Horse will be used in Montana for Montana development.

In the light of the statement made by Mr. Pearson, I am, as you can readily comprehend, very much disturbed. Will you please send me a letter at your earliest convenience stating just what Mr. Pearson had in mind and just what is the status of the Harvey proposed aluminum plant in the Flathead area at the present time.

Must close now, but with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

(Copies to: Hon. Stuart Symington, RFC Administrator; Hon. Charles Wilson, Defense Mobilization Administrator; Hon. James E. Murray, United States Senate; Hon. Henry Jackson, House of Representatives; Dr. Paul Raver, Administrator of Bonneville Power Administration; Mr. Don Treloar, KGEZ, Kalispell, Mont.; Hon. Richard Searles, Under Secretary of Interior; Mr. Melvin Ruder, Hungry Horse News, Columbia Falls, Mont.; Mr. Perry Melton, Treasure State Labor Journal, Kalispell, Mont.; Mr. Frank Trippett, Kalispell News, Kalispell, Mont.; Mr. Malcolm Glover, Daily Interlake, Kalispell, Mont.; Mr. Alex Warden, Great Falls Tribune, Great Falls, Mont.; Mr. G. M. Moss, Whitefish Pilot, Whitefish, Mont.; Mr. Howard Miller, Times-Monitor, Kalispell, Mont.)

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 17, 1951.
Hon. STUART SYMINGTON,
Administrator of the RFC,
Washington, D. C.

DEAR STUART: It has come to my attention that Mr. Drew Pearson on Sunday, September 16, made a statement in his weekly broadcast to the effect that there was something questionable about the Harvey Machine Co. and that the \$46,000,000 loan for an alumina plant in the State of Washington and an aluminum plant in Montana, would not be granted. This comes as a surprise to me and I am writing to you for definite information as to the truth or the inaccuracy of Mr. Pearson's statement.

I have made it very plain in meetings with Under Secretary of Interior Searles, Secretary Chapman and Mr. Charles Wilson, Defense Mobilization Administrator, that any agreement entered into between the Harvey Machine Co. and the Government must be on a strictly business basis, that all the cards should be laid on the table, and that the Government's interests must be fully protected. These statements were made in the office of Secretary Chapman on July 31, 1951, and in the presence of Senator Murray, Congressman Jackson of Washington, King of California, and Mr. Don Treloar of Kalispell, Mont., and they were in full agreement with me. These statements were repeated by me to Mr. Charles Wilson in his office on August 22, 1951, in the presence of Senator Murray, his administrative assistant, Charles Murray, and my secretary, James Sullivan.

I am deeply perturbed about this statement by Mr. Pearson and I am writing to you to request that you give me at your earliest convenience an answer to the allegations made by Mr. Pearson last Sunday.

With best personal wishes, I am

Sincerely yours,

MIKE MANSFIELD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 19, 1951.
Hon. PORTER HARDY,
Chairman, Subcommittee on Government Operations, Committee on Expenditures in the Executive Departments, House of Representatives.

DEAR PORTER: I am very much perturbed by certain allegations which have been made in the press and in the CONGRESSIONAL RECORD relative to the proposed awarding of a contract to the Harvey Machine Co. of California. This company has been interested in the building of an aluminum plant in the Flathead Valley of Montana and has been seeking a \$46,000,000 loan.

Because of allegations made, which I had no knowledge of, I feel very strongly that your committee should investigate this matter early so that the truth may be unearthed and the facts given to the Congress and the public.

I therefore request that your committee start an immediate investigation and that you go into the allegations made in the greatest possible detail.

Must close now but with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 19, 1951.
Hon. HOWARD McGRATH,
Attorney General,
Justice Department.

DEAR HOWARD: I am enclosing herewith copies of letters I have sent to Secretary Chapman and Stuart Symington, Adminis-

trator of the RFC, relative to allegations made by Drew Pearson in his radio broadcast of Sunday, September 16, as well as in his newspaper articles of September 18 and 19. My letters to Secretary Chapman and Mr. Symington are self-explanatory.

I am therefore requesting that you conduct a complete investigation of these allegations and that a public report be made immediately on the same so that all the facts in this will be made known not only to the people of the United States but to the Congress as well.

Enclosed herewith also is copy of a speech made by Congressman SAYLOR, of Pennsylvania, contained in the Appendix to the CONGRESSIONAL RECORD, on pages A5658-A5660 with reference to the Harvey Machine Co. I would like to request that you also conduct a complete investigation of the statements made by Congressman SAYLOR and that the answers to the same be made known to the public.

My impression of Mr. Pearson's article is that any one department of the Government is restricted in getting files from another; therefore, I am this afternoon introducing a bill in Congress to give authority to the Justice Department to be a clearinghouse for all individuals, corporations, companies, etc., who have had, or will have contracts with any Government agency so that if one department wants to find out anything respecting such, they can get such information from the Justice Department. In view of these statements, it is my intention to press for immediate action on this bill so that not only this company's record can be made known but all other companies who may have had any dealings with the Government.

Congressman HENRY JACKSON of Washington, joins with me in requesting a full and complete investigation.

May I hear from you at your earliest convenience on this. With best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

In my letters to the Attorney General and Congressman HARDY, I am requesting a full and complete investigation of this matter:

Mr. Speaker, I am also inserting at this point in the RECORD two columns by Mr. Drew Pearson covering this matter. They appeared in Mr. Pearson's column in the Washington Post of September 18 and 19, 1951:

[From the Washington Post of September 18, 1951]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

CHAPMAN FLAGS DOWN RFC LOAN

The United States Government last week was on the verge of lending \$46,000,000 of the taxpayers' money to the Harvey Machine Co. to set it up in business as a bigtime aluminum producer.

Suddenly alert Secretary of the Interior Oscar Chapman raised a red flag. He sent hasty letters to Stuart Symington, of the RFC, and Manly Fleischmann, head of Defense Production, withdrawing his approval of the \$46,000,000 until he could examine certain new facts.

Inside reason was a mass of evidence which this column placed on Chapman's desk. The Navy turned this evidence over to the Justice Department for prosecution at one time.

Justice never prosecuted, on the grounds of "inability to prove to a jury that the Navy Department was seriously injured." However, these and other facts in the long and secret record of the Harvey Co. more than justified Secretary Chapman's hasty stop

order against one of the biggest Government loans of the present era.

What will amaze the taxpayers is that Government investigators, who presumably can read the newspapers and knew of the proposed \$46,000,000 loan to Harvey, did not turn over their files to other branches of the Government. It's also amazing that some system hasn't been set up inside the Government whereby different bureaus can compare notes regarding prospective recipients of loans and war contracts.

If such a system existed, here are the facts they would have found without having a private newspaperman dig them out:

Strange gage

In early 1943, M. M. Suddock, a thread-grinder operator working for the Harvey Co. which was then making Navy shells, reported to Navy inspectors that he had been instructed to make an off-size testing gage for 20 mm shells. He consulted other thread grinders and they agreed that the size of the thread was unusual.

On the strength of this, the Navy launched a thorough probe both through its own agents and FBI Agent K. A. Vosburgh. This disclosed a number of irregularities. In May 1943, the records were turned over to James E. Harrington, Chief of the Justice Department's War Fraud Section.

The probe centered around Herbert Harvey, brother of Leo Harvey, president of the firm. The Navy report states that he denied any knowledge of the order to make off-sized testing gages.

Finally Navy inspectors showed Harvey the original instructions for the manufacture of the faulty gage. In Herbert Harvey's own handwriting was penciled the notation: "Make five more like this one."

[From The Washington Post of September 19, 1951]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

LOAN BLOCKED

In these days of multi-billion-dollar defense budgets, forty-six millions may not seem a lot, but several hundred thousand little fellows have to chip in their withholding taxes every week to raise it. Furthermore, the proposed \$46,000,000 loan to the Harvey Machine Co. of Los Angeles, by the RFC to make aluminum is one of the largest loans considered in the present cold-war period.

Despite this, such a bonanza to Harvey was officially recommended August 28, and has only now been held up because of new information unearthed by this column.

Aforesaid information shows that the Harvey company was criticized by the Navy during the war, and was in constant hot water with the Air Force. The Navy complaint was based on Harvey's alleged making of oversized shell gages.

The full story of how the Harvey family came within a hair's breadth of getting this huge Government loan is one of the most amazing stories of this amazing Capital.

It began shortly after World War II, when by systematic contributions to the Democratic Party, the Harveys "bought in" first in California, later on the National Committee. They also played up local demand for war factories, thus got Congressmen from California, Washington, and Montana all throwing their weight around for the Harvey loan.

California Congressmen were for the Harveys because their plant was located near Los Angeles, Montanans because the new aluminum plant was to be near Hungry Horse Dam in that State. And Washington Congressmen were for them because another plant was to be near Everett.

With this backing, the Harveys camped out in California Congressman King's office as if they owned it, became so insolent with War Assets Administrator Jess Larson that he almost threw Leo Harvey out of the office, and so riled Secretary of the Interior Chapman that he described Harvey as "impossible."

However, each time a Government bureau balked at Harvey's terms, he would unloose the congressional wolves, which came swarming down on the executive branch of the Government yelling monopoly and claiming that all Government orders were going to three aluminum firms—Alcoa, Reynolds, and Kaiser.

To help little business

This desire to help little business and broaden the present semimonopoly of aluminum was the chief and justifiable reason why men like Larson and Chapman stuck with the deal.

But the most amazing feature of these many months of dickering was that no one inside the Government ever thought to check with the Army, Navy, and Air Force regarding Harvey's wartime performance. Nor did the armed services take the trouble to warn the RFC, Interior Department, or Defense Mobilization.

Mr. Speaker, I am inserting at this point in my remarks a statement by my colleague, the Honorable JOHN P. SAYLOR, of Pennsylvania, which appeared in the CONGRESSIONAL RECORD for September 18, 1951:

SECRETARY CHAPMAN ENGINEERS ANOTHER GREAT RFC SCANDAL FOR HARVEY MACHINE Co.

(Extension of remarks of Hon. JOHN P. SAYLOR, of Pennsylvania, in the House of Representatives, Tuesday, September 18, 1951)

Mr. SAYLOR. Mr. Speaker, a vicious new scandal, involving another great RFC loan and perpetrated by high officials and politicians of the administration, is spreading its unhealthy tentacles throughout the United States. For the sake of the American taxpayers, who have all they can bear of these scurrilous burdens, I hope we can expose this case quickly enough to stop it.

Many a surprise package has been opened lately in Washington. Out of some of them have come mink coats, deep freezes, gratuitous jobs, and neat bottles of influence bearing the administration label. They are insignificant compared to the iniquitous deal which is my subject here.

We cannot be certain yet just what all will be found when we complete the unwrapping of this newest package, but a variety of things already have popped out.

These include:

First. The Harvey Machine Co. of Los Angeles.

Second. Leo—or Lawrence—Harvey, president of the firm, of Russian descent, whose name may not be Harvey.

Third. A \$46,000,000 loan approved by Secretary of the Interior Oscar Chapman, to the Harvey Co. for a new aluminum plant in Montana.

Fourth. An attempt by the Interior Department and its Bureau of Reclamation to create a great power shortage in Idaho, Montana, Washington, and Oregon for the purpose of getting control of power and water in those States and establishing new authority for Secretary Chapman and Reclamation Commissioner Michael Straus.

Fifth. Suspicious circumstances under which strange-gage Navy shell testers were found in the Harvey Co. plant when that company was working on war contracts.

Sixth. Employment of a former Assistant Secretary of Interior and legal counsel for

the Bonneville Power Administration by the Harvey Co.

Seventh. Employment of a member of the California State Legislature as public-relations counsel by the Harvey Co.

Eighth. The rise of Lawrence Harvey—or Leo—as a Democrat leader.

Ninth. How Harvey suddenly was offered a gigantic loan to make him the fourth largest aluminum producer in the country, yet he had no working capital, was not a big industrialist, and knew little or nothing about aluminum.

These are only a few of the ingredients which are contained in the disgraceful mess. I shall include many others as I unfold the story.

Like many other foreigners, including the Russians, the United States gave the Harvey brothers a golden opportunity. They worked, and schemed, and prospered. Their machine company in Los Angeles grew, and when the war came along they received lucrative contracts.

Lawrence Harvey was observing, and in his frequent visits to Washington he saw how loyal supporters and contributors to the administration were favored. He set out to become a prominent member of the Democratic Party and to become friends with those who could do favors for him. He worked hard at it and gave money, and he soon began to be known as a good Democrat.

The Government had spent \$8,200,000 to construct an aluminum plant near the Harvey Co. After the war, Los Angeles power authorities did not want a large block of the available power of the area to be used in operating the plant. It became war surplus.

Harvey went after it, and he got it for \$1,503,000.

Meanwhile, Harvey's background had begun to interest some State and Federal agencies from another standpoint. The report of the California Committee on Un-American Affairs might be interesting reading to any of my colleagues who wish to look further into this situation.

Harvey became a member of the Los Angeles County Democratic Central Committee, and it was widely known that he was active in supporting candidates financially. He took an active part in committee activities.

With money he made off war contracts he was able to finance a deal to purchase an office building in Los Angeles. It was called the Subway Terminal Building. Although downtown, it had not been a financial success, because it was a little out of the path of development of the new Los Angeles business area.

Soon after Harvey purchased the building, however, it was filled with Federal Government departments and a large new post office.

It was after the war that reports began to come out about some strange occurrences which had taken place in the Harvey Machine Co. during the time it was working on Navy contracts.

One day in 1943, a machinist in the company told Navy inspectors that he had been ordered to make an off-size testing gage for Navy shells. The Navy and the FBI both investigated. Evidence discovered was turned over to the Justice Department. The evidence included an order written by Herbert Harvey for the off-size testing gages. The Justice Department never prosecuted the company or Harvey's.

Lawrence Harvey's political career continued to progress. He employed a member of the California State Legislature to help him with such things as purchasing the aluminum plant and getting favors from both the State and Federal Governments.

Now, with the big aluminum plant in his possession, a legislator-publicity man on his payroll, steadily improving connections in Washington, Harvey was in a position to try

for a really big favor. Meanwhile, he had not neglected his political duties, or his contributions, and he was being mentioned in the newspapers as a leading candidate for Democratic national committeeman from California. With this prestige, he figured he could make real headway.

By this time, Harvey had learned that influence was necessary, and that it had to be bought. He looked around for a good man to advise and assist him in this undertaking. Harvey thought he saw a chance to become a big aluminum operator, but what he knew about making aluminum could be put in a very small aluminum thimble. But he had a plant, and even though it was making no aluminum it qualified him, and he had political connections that were getting better all the time. In his case, the know-how didn't have to do with making aluminum. It had to do with political influence.

Harvey engaged the service of C. Girard Davidson to help him become an aluminum mogul. Davidson was formerly with the legal division of the Bonneville Power Administration and was an Assistant Secretary of Interior. He was an old pal of Chapman and Straus, an ardent New Dealer and Fair Dealer and a social planner par excellence.

When he and Harvey got their heads together, Davidson had left the Interior Department and had moved out to Portland, Oreg., to practice law. It was announced in the press that his first client would be his old favored employer, the Bonneville Power Administration.

I believe, Mr. Speaker, that the picture begins to take shape here. I shall complete it.

Here I think is a good place to mention Robert R. Rose, of Casper, Wyo. He recently was appointed Assistant Secretary of Interior, supposedly to direct the mining activities of the Department. Rose is a good Democrat. He has political ambitions. Wyoming's lone Congressman, William H. Harrison, is a Republican. Oscar Chapman doesn't like Republicans, he doesn't like Republican Congressmen especially, and he knew that Rose could get a lot of good publicity as an Assistant Secretary, dealing with mining and metals in this time of emergency.

Lawrence Harvey was willing and anxious to back Democratic candidates with good dollars. Harvey was interested in being a big aluminum producer. Aluminum was metal. Rose had to do with metals for the Interior Department. It would be interesting to know how much Rose understood about Harvey's ambition to promote an immense steal from the taxpayers. Did Rose take office knowing he would receive substantial financial backing from Harvey when he ran against Harrison next year in Wyoming? The continuance of this investigation might well disclose very interesting matters along this line.

Meanwhile, Harvey and Davidson were working hard to get a big loan for an aluminum plant in Montana, near the town of Kalspell. And up in Kalspell, Harvey had a strong supporter. This was Don Treloar, a radio-station operator. Treloar is a good friend of Democratic incumbents in Montana, especially one of them who has burning aspirations to be a Senator from Montana. They do not like Republican Congressmen, either, and to beat the Republicans they would need heavy cash contributions. Harvey was a good prospect. Thus, it would be interesting if this investigation were carried into that field. Just what understanding was there between Chapman, Treloar, Harvey, and the ambitious Montana Democrats?

The stage was set.

On August 28, this year, the Associated Press sent the following story out of Washington:

"The Defense Production Administration Tuesday approved a loan of \$46,000,000 to the Harvey Machine Co., to build an aluminum plant at Kalspell, Mont., and an aluminum producing plant near Everett, Wash.

"The agency said that \$32,000,000 of the credit will be used to set up a three-line aluminum-reduction plant at Kalspell with 54,000,000 tons annual capacity.

"Of the remaining money, \$3,000,000 was advanced for the purchase of ore boats and \$11,000,000 for the facilities to produce alumina—the next-to-final stage in the production of aluminum from bauxite ore. The Everett plant will produce 108,000 tons annually.

"The loan was recommended early this month by Secretary of the Interior Chapman. It was approved by DPA after agreement by the Harvey Machine Co. of Kalspell to the Government's terms and conditions. The firm is a subsidiary of the Harvey Co. of California.

"The terms of the loan, which will be made by the Reconstruction Finance Corporation as the agent of DPA, call for maturity in 20 years and interest at 4½ percent.

"The note is payable in equal quarterly installments starting a year after completion of the new facilities.

"The company is obligated to provide an equity of \$8,000,000, as follows: \$2,500,000 to be raised before any of the RFC credit is drawn; another \$3,500,000 to be raised within 18 months, and \$2,000,000 in working capital to be available on completion.

"The DPA also will require a \$1,000,000 personal-performance bond to be signed by the head of the firm, Leon Harvey, Sr.

"Other conditions provide that no dividends are to be paid by the company until the loan is paid off; the Government is to receive through RFC any savings from tax benefits which may be granted, and the Government is to receive half of the net income after taxes from both the subsidiary and parent companies.

"One factor influencing the making of the loan, DPA said, was an understanding that Harvey would reserve a substantial part of its aluminum-ingot output for sale to independent aluminum fabricators who lack their own sources of supply.

"The agency also commented that the project will provide an important competitive influence in the primary aluminum industry."

It is interesting to note that Oscar Chapman, probably the biggest political power in the administration, and President Truman's right-hand political aide, was the first to approve the proposed loan, and in fact, initiated the proposal.

It is also interesting to note that Chapman and Straus have been having a hard time getting the control they want of the power—in this case hydroelectric and not political—in the Northwest. There is need for more power, and the people of the Northwest have formulated sound programs for developing it. But these programs would not make Chapman and Straus dictators and they are fighting them.

Chapman and Straus have been attempting to force unsound projects down the throats of the Northwest people, and having been rebuffed, they have schemed to override the will of the people, and even the will of Congress.

Their scheme is this: They are doing all they can to make the power shortage worse. If it gets bad enough, they have a chance of getting the projects they want and the control they crave under the stress of the defense emergency.

The Harvey loan comes under this scheme, as well as under the political machinations of the administration. The Harvey aluminum plant would create electric power-eating potlines at the very time when the DPA

and the BPA are most seriously concerned about the Northwest power shortage.

Many publications, including *Fortune* magazine, have charged that this power shortage is being deliberately created through allocation of electricity to the aluminum industry simply to provide the lever for the building of more dams. It would also put Chapman and Straus in a position to dictate terms of power development in the Northwest.

The Harvey loan was a two-sided weapon in the hands of the Interior Department—for politics and electric power.

Chapman had a tough time getting the Harvey Co. qualified to receive the loan.

It was late last July that Chapman reported the Harvey Co. had notified him it could not provide the necessary capital to take the loan. The company did not have the money, seven or eight million. Chapman, ably assisted by Davidson, found a way.

Chapman produced a proposal whereby Harvey would put up \$3,500,000 and the balance would be raised by selling stock to independent aluminum fabricators.

John Corlett, a reporter for the *Boise Statesman*, has done an excellent job of exposing details of Chapman's and Harvey's joint endeavors, assisted by Davidson. Much of my information comes from Corlett.

The Harvey's contribution, under the Chapman plan, would be provided in cash, equipment, land, and engineering. Here, that old aluminum plant Harvey got for a few cents on the dollar down in Los Angeles came in handy. It gave him some equipment, land, and engineering, the quality of which is decidedly suspect.

August 23 was the deadline for Harvey to accept the Chapman plan and the terms of the loan. Harvey was not to be found. However, the DPA said it was keeping the door open, and if Harvey was a day late it would not matter.

On August 25, Harvey accepted. Reluctantly, of course. But he was talked into it by Chapman, Davidson et al.

Three days later, on August 28, the DPA approved the loan.

One of the things about the loan that most pleased Harvey was that 85 percent of it would be amortized through taxes.

Davidson had not been heard from much during all the negotiations, but now he popped up in Portland. He told the press that providing he and Harvey didn't get bogged down in paper work, the new plant would be operating within a year.

The plant would draw its power from the Bonneville Power Administration, another Davidson client, and spearhead of the Chapman-Straus drive in the Northwest. Of course, Davidson has long been their spokesman for a Columbia Valley Authority.

Obviously the loan would help that cause, as well as help the Democrat candidates in the Northwest.

It looked until a day or two ago that Chapman had got his way, that Harvey was on the way to the big league, that political money would flow into the Democratic coffers in the Northwest, and the taxpayers would be swindled again.

But, Mr. Speaker, something happened.

An unidentified person made a formal complaint about the loan to the RFC. The RFC, remembering its recent unhappy experiences, held up the loan papers.

Hasty letters regarding the loan suddenly went from Chapman to Stuart Symington, RFC head, and Manly Fleischmann, chief of the DPA. Chapman suddenly had withdrawn his approval of the loan. He used the excuse that he wanted to study it some more.

Just what will happen, Mr. Speaker, has not been determined. But I repeat that for the sake of the taxpayers I hope this scandalous deal will not be consummated.

Equally as strongly, I hope that a thorough investigation will be made of this matter, and that it will be explained how a politician

can walk into the Federal Treasury and take out \$46,000,000 with little or no security.

Mr. Speaker, I want all the facts known about the Harvey Co. and any and all other companies having dealings with the Government of the United States. I want this done at once by the FBI, the RFC, the Department of the Interior, and by the proper congressional committees.

The Future of the Republican Party

EXTENSION OF REMARKS OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Record, I include an interesting and challenging editorial appearing in the New York Herald Tribune, September 19:

A HYBRID CREATURE

Senator KARL E. MUNDT, Republican, of South Dakota, has been busy for many months promoting the idea of a coalition between southern Democrats and Republicans, he has now got his idea off the ground to the extent of organizing the Committee To Explore Political Realignment. Meeting at a week-end conference, a hundred like-minded Americans from 17 different States are reported to have canvassed the possibility of building up fresh voting strength to stop the encroachment of socialism and the all-inclusive centralized superstate. That is an admirable objective. We doubt very much, however, that Mr. MUNDT's procedures are the way to achieve it. Alliance with southern Democrats seems to us as impractical as it is unprincipled.

Let us deal with the practical aspects first. The assumption of the would-be Republican joiners is that in the South they could pick up enough electoral votes to swing the balance in their favor. Thus in 1948 Governor Dewey lacked 77 electoral votes to gain a majority, and the States of the solid South provided a potential 127 votes. What is forgotten is that Governor Dewey would not have been the candidate of a Republican-Dixiecrat coalition, whoever would have been the standard-bearer of this strange amalgamation would hardly have carried such industrial States as New York, Pennsylvania, Michigan, New Jersey, or Connecticut—all of which, with their 25 electoral votes, Governor Dewey brought into the Republican column. If the Republican Party, following Mr. MUNDT's tactics, were to win the South, it would lose much of the North. What is more, it would lose its soul.

For the alliance, obviously, could only be sealed at the price of a complete abandonment of the traditional Republican stand on civil rights. The Dixiecrats with whom Mr. MUNDT seeks an accord are not just southerners who happen to favor a restriction on governmental power, they are, by and large, those who hold an extreme position on the Negro question and who for this reason assail Federal authority. Any agreement between Republicans and Democrats of this ilk would either be so much a matter of expediency as to be meaningless or would involve so complete a betrayal of principle as to be scandalous. As Representative CLIFFORD CASE, of New Jersey, has recently said, "This is indeed a sorry mess of pottage for

which the party of Abraham Lincoln is asked to sell its birthright."

To say all this is not to imply that centralization and bureaucracy cannot be checked. It is not to imply that the Republican Party cannot win or even that it cannot amass very considerable voting strength in the South. A vigorous party, vigorously led, presenting a program that appeals to forward-looking elements in all parts of the country for its soundness and practical wisdom, will do infinitely more to thwart socialism than the hybrid creature that Mr. MUNDT is trying to bring to birth. The people are looking for character, integrity, statesmanship in the party which they call to lead them. A clever maneuver is certainly no substitute for these

GOP Has Three-Way Chance To Defeat

Truman

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. SHEEHAN. Mr. Speaker, one of the most talked about questions before the public today concerns the problem of who are going to be the candidates for President of each of the major parties.

Mr. John S. Knight, publisher and editor of the Chicago Daily News, has analyzed in a complete and illuminating manner the chances of the Republican Party to win in 1952.

His editorial entitled "GOP Has Three-Way Chance To Defeat Truman" dated Saturday, September 1, is as follows:

My old friend Herb Graffis of the Chicago Sun-Times says flatly that "Harry Truman will run for the Presidency again and he'll be reelected."

This observation deserves more than casual attention because Herb is a much better "ear to the ground" political dowsner than some of the pundits who write for his newspaper.

Herby says the President is "getting great campaigning" in all the Truman jokes. He compares them with the stories that used to be told about Henry Ford and his flivver. "You know how those stories ruined Henry," writes Herb. "They came so near to breaking him, Henry had only a few hundred million when he died. The Truman stories will do Harry just the same sort of damage."

I'll go along with Herb's contention that Truman will definitely be a candidate for reelection and even concede that, as things stand today, Harry will be tough to beat.

However, three things can happen that might upset Herb's prediction of a Truman victory:

1. If General Eisenhower gets the Republican nomination, Truman is through.

2. If the Republican party gets off its Duff, replaces some of the stone-age party hacks at the top with younger, abler and more progressive leaders, revamps its strategy and makes a fighting campaign, the GOP could win with Taft.

3. If the American people can be aroused to a high pitch of moral indignation against political fixes, graft, waste, corruption, blundering policies and the perversion of this Republic's ideals by peddling socialism as democracy, the Republicans might win with any reputable, able, forthright candidate.

IKE IS PEOPLE'S CHOICE, BUT IS Mired IN EUROPE

Of these three possibilities, the Eisenhower phenomenon is most interesting.

Even the red-hot American League pennant race and the West Point cheating episode haven't entirely replaced Ike as a topic of conversation.

Most of the professional politicians in both parties admit that Ike is the people's choice for President. But as they point out so realistically, how can Eisenhower make a success of the North Atlantic Treaty Organization and be a Presidential candidate at the same time?

With every passing day, the probability of Eisenhower's returning to the United States in time to clinch the Republican nomination appears more unlikely.

NATO is being held together only through Ike's personality, tact, drive, and enthusiasm. On this point, David Lawrence says that "if the crisis in Europe appears to be in 1952 what it is now—aggravated by Russia's hostile behavior—the chances are that General Eisenhower would feel inclined to say not only that he could not accept the nomination but that he would not serve if elected."

The Eisenhower boosters counter this argument by claiming that the general could be even more helpful in developing Allied solidarity from the White House, while calming dissident elements and furnishing the leadership for unity at home.

Of course, no one can predict with any certainty what Eisenhower will do, but the odds at this time lie in the direction of Ike's remaining in Europe until he thinks the job there has been done.

GOP TOP LEADERSHIP IS UNLIKELY TO REFORM

Possibility No. 2—that of revitalizing Republican leadership at the national level—seems even less likely than that General Eisenhower will be persuaded to be the Republican candidate.

If Ike were nominated, GOP Chairman Guy Gabrielson and his staff of antiquated thinkers could go fishing for the duration of the campaign without in any way affecting the outcome.

Ike would win because—well, just because he is Ike, and the people like him.

But if the Republicans nominate Taft, Warren, or Joe Donakes, they will need efficient organization, resourceful strategy, and a slam-bang, knock-'em-down, drag-'em-out campaign to get out the vote.

From where I sit there isn't too much indication that top-rung Republicans on the national committee have the talent to organize effectively, the ability to think clearly, the imagination to "sell" their wares, or the energy to punch their way out of a paper bag.

The other day I was talking with a young Republican Congressman who had won a surprise victory last fall over a labor-endorsed Congressman in a highly industrialized district.

He was elected where others had failed time and time again because he threw all the orthodox rules of campaigning in the ashcan and went out to meet and sell "the folks."

I asked him how much help he had received in Congress from older Members who were in a position to show him the ropes and advise him on pending legislation.

"D— little," was his reply.

It then developed that the only time party leaders seemed interested was when his vote was needed on some hotly contested policy issue.

At all other periods in his budding congressional career, he was given to understand that he was "just another" freshman Congressman.

This little incident, undoubtedly a typical experience for new Members of Congress, seemed to me to be a damning indictment of party leadership.

Whether the Republican mahouts recognize it or not, their biggest hurdle in 1952, with any candidate other than Eisenhower, is the widely held view that the Democratic Party represents the little guy while the Republicans are the party of the rich.

This impression was artfully created by Roosevelt and furthered by Truman, with the aid of some of the shrewdest smear artists in the business.

No demagogic attack or appeal to prejudice is too low for the crystal schemers who rule the Democratic high command.

Democrats HARRY BYRD and PAUL DOUGLAS can attest to that.

It would seem, therefore, that the problem facing the Republicans is not only one of perfecting a better organization, but of re-dedicating themselves to the hallowed principles of truth, courage and integrity, while exposing the shallow hypocrites of the vote panders who are selling us into socialism.

TAFT could make that type of campaign.

MORAL INDIGNATION YIELDS TO FAST BUCK

That brings us to possibility No. 3, namely, that a wave of moral indignation might sweep Mr. Truman out of the White House.

This seems even less probable than either possibilities No. 1 or No. 2.

So long as people have plenty of money to spend—and there is every evidence that the inflationary boom times will continue through 1953—somehow moral indignation always runs second to making a fast buck.

To quote Herb Graffis again, "We've gone so far in considering compromise with plain honesty as inevitable in politics that it is tough for any of us to change our ideas."

That characteristic may help to explain why Truman can insult the marines, buddy around with Harry Vaughan, write unprintable letters to his critics, have Democratic Chairman Bill Boyle involved in the RFC scandals, live with the ghost of Pendergast, and still see his popularity rating slowly moving up the scale.

Administration press agents are cleverly planting articles in various magazines to the effect that (1) Truman is really a great President, and (2) Truman can't lose in 1952.

The latest of these biographer friends is Jonathan Daniels, who says in the September issue of the American magazine that, "despite efforts of his opponents to make Mr. Truman seem still the piano player and the busted haberdasher, Mr. Truman can win the votes of those who elected him in 1948, and others besides."

While Truman doesn't have the election in the bag, as Herb Graffis and Jonathan Daniels seem to think, the Republicans can't win this one with a batch of bum Truman jokes and a campaign of platitudes.

Remember 1948?

JOHN S. KNIGHT.

California Leads the Nation

EXTENSION OF REMARKS OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial

from the Orange (Calif.) Daily News of August 22, 1951:

CALIFORNIA LEADS THE NATION

Much to the surprise of no one, but to the great satisfaction of all in California, comes the news that the Golden State once more is the farm leader. With an income last year of over \$2,300,000,000 we topped the previous year's returns by a good 6 percent and outran Iowa, our most persistent rival.

In addition to the actual value of production, California's leadership in other phases of farming are clear cut and worth noting. Wages paid on farms in this State, for example, are substantially above the national average. California farms enjoy a greater degree of mechanization than those elsewhere, and, probably most important of all, more California farms are served by electricity than those in other States. This latter fact will be highlighted during Farm Electrification Week, which opens August 26.

Certainly, the farmers of California and the entire Nation could never have achieved the enormous production of food, feed, and fibers which have sustained much of the world in peace and war without the aid of that silent servant—electricity. With farm output in our State continuing to expand there is every reason to expect that 1951 will again find California at the top of the list in farm production.

Drive for Flood Insurance

EXTENSION OF REMARKS OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the Record, I include herewith an editorial from the Kansas City Star of August 16, 1951. This article proposes a very sensible approach to the urgent problem of flood insurance. I hope to have a chance to vote for legislation which will help in providing disaster insurance. I also favor appropriations to assist the present Missouri, Kansas, and Oklahoma flood victims in their rehabilitation problems by paying for a portion of their losses.

In my opinion the Congress should immediately enact legislation which will provide for—

First, Immediate indemnity to flood victims for a portion of their losses;

Second, Liberal term loans for restoration of homes, farms, and businesses;

Third, Loans to local and State governments for assistance in rehabilitation;

Fourth, Funds to set up a system of disaster insurance; and

Fifth, An effective long-range plan for flood prevention which will give adequate consideration to the conservation and maximum use of all the resources of the entire Missouri Basin.

DRIVE FOR FLOOD INSURANCE

A workable flood insurance plan should come out of the havoc of this year. The big question, now, concerns underwriting by the Federal Government.

Private companies are looking into the possibility of offering insurance on a strictly private basis. From the recent Kansas City

flood meeting came a recommendation for a Government supported plan. The proposal, developed later, would keep insurance in private hands with the risk underwritten by the Federal Government.

The problem of flood insurance is cost. Obviously the only persons who will buy it are those exposed to flood, which leaves the companies with a high risk proposition. Unless the cost can be held to a reasonable level, there is no point in talking about flood insurance. In advance of more definite information we are guessing that this is a program requiring Federal support. So far, at least, private flood insurance rates have been wide of the mark.

If the Government is to accept responsibility for aid on major flood losses it would be good business to sponsor an insurance plan. For the future, the insurance premiums would pay at least a substantial part of the cost of major floods.

The plan for Government participation has been developed with considerable care. The job was assigned to Sam Roberts, the city director of research and budget, who worked closely with insurance men. Recommendations follow the principle of the war damage insurance of the last war but they would give much more responsibility to the private companies. Properly, flood insurance should be included with fire and all related coverage in the companies' policies. Of course Government underwriting would probably involve rules that would reduce the profits, but profit isn't the first consideration.

A vast section of American industry and population must be protected against devastating flood loss. The soundest protection is adequate flood control, but under the best circumstances that is the work of many years. In the meantime the 1951 flood has been a frightening spectacle to all the exposed people from coast to coast. Most of the larger inland cities are located on rivers.

Looking ahead to the finest flood control systems there will still be a place for flood insurance. There is no practical way to assure absolute protection against any conceivable flood. Fartetched as it may be, there is always the possibility of a flood bigger than anything seen before.

Whether an insurance program is strictly private or supported by Government, the risk will be spread wide over many river valleys. With moderate rates it should produce very large income. The high risk comes only from the occasional disaster of the 1951 type.

When you consider the part that insurance plays in our economy it is amazing that so many years have passed without adequate flood coverage. The negligence is in a class with the long failure to provide flood control.

If private companies can provide the insurance at reasonable rates, that's fine. If not, this is the time for Government to take hold.

Constitutional Amendment To Clarify Treaty-Making Power

EXTENSION OF REMARKS OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. PHILLIPS. Mr. Speaker, encroachments by the executive branch of Government upon the powers reserved to the legislative branch under the Constitution are nothing new in American history.

The process by which the Congress has abdicated many of these powers has been going on for nearly 20 years. Some of the powers thus surrendered are of the utmost significance, affecting the liberties of the American people.

Chief Executives in recent years have assumed in their essence the powers of making war and peace; powers which hitherto had rested in the Congress of the United States.

Only Congress can declare war, under the Constitution. No treaty can bind the American people, under the Constitution, until after it has been ratified by the United States Senate. Indirectly, too, the House of Representatives must approve, by reason of the fact that the House holds the purse strings of Government.

Through the years, the executive branch has found means of circumventing the specific provisions of the Constitution with respect to making war and peace. It has found ways of negotiating and implementing treaties without reference to the Congress.

More than a year ago, the present occupant of the White House declared war in Korea. He did so without consulting the Congress. He accomplished this by calling the Korean war a police action.

His predecessor in the White House found a way of negotiating international treaties in complete disregard of the Congress. He called them Executive agreements.

More than one supine Congress conceded him unilateral powers in treaty making. Collateral authority for implementing those treaties, called Executive agreements, went to him by default. Funds for vast expenditures under many of those international agreements were provided without argument.

Today the unilateral power of the Chief Executive to make war and peace, and to make treaties, is generally accepted. Even in Congress, protests are heard only from a minority. Constitutional checks and balances with respect to the conduct of foreign affairs have broken down.

Who at this late hour is so bold as to deny that most of our external troubles are the fruit of this earlier congressional weakness? Let me remind you of Cairo, Tehran, Yalta, and Potsdam.

Only a few days ago we witnessed the spectacle of the Big Three Foreign Ministers—Dean Acheson, Herbert Morrison, of England, and Robert Schuman, of France—sitting down to negotiate the terms of a treaty with Western Germany.

That treaty will not be passed upon by the Senate of the United States. Why not? Because it is not called a treaty; it is called a contract. The reason given is that Germany is not yet unified, and is not a sovereign nation. Treaties, it is said, can be negotiated only with sovereign nations.

Japan was not a sovereign nation until the peace treaty was signed at San Francisco. Japan was an occupied country, just as Western Germany is today.

Then why is the contract planned for Western Germany not a treaty in fact? Why is it not a treaty in exactly the

same sense that the Japanese peace treaty is a treaty?

The only difference I can see is that the treaty with Japan may be ratified by the Senate, while the contract with Western Germany never will reach the Senate.

All of these things point up one single fact. The check upon treaty-making powers has departed from the hands of the direct representatives of the people.

President Roosevelt started this trend toward making treaties on his own responsibility. President Truman has continued it. Treaties are now being made by the Secretary of State. The Secretary of State is an appointive officer. He is not directly responsible to the people of the United States.

The present situation is a measure of the success of those who seek to dominate the executive branch of government, in virtually every one of its departments. Whatever its background, the treaty-making power rests today in irresponsible hands. The record of the State Department proves it.

Our present freedom by no means constitutes a guaranty of our future liberties.

This power to make treaties in the form of Executive agreements is becoming an accepted fact. The time is here for the elected representatives of the people to exercise the eternal vigilance which is the price of liberty. It must be exercised in connection with a single provision of the United States Constitution. That provision was reasonable enough in the days before the breakdown of constitutional checks and balances on the treaty-making power. It says:

All treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land.

The language of this provision has been the subject of controversy among authorities on international law since the ratification of the Constitution by the Thirteen Original States.

By the plain intent of the founding fathers, the Constitution of the United States is the supreme law of the land. The Constitution is the guaranty of American liberties. If a treaty also becomes the supreme law, by some interpretation, it must hold equal status with the United States Constitution.

We have an instance directly in point. It is the Fujii case—*California State Statutes v. United Nations Charter* (1950, 217 Pacific 2d 481).

It is not my purpose to raise a question on the merits of this case. A United States district court of appeals held that provisions of the California alien land law, which restrict ownership of land by aliens ineligible for citizenship, are unenforceable under the Charter of the United Nations.

The United Nations Charter, in form and effect, is a treaty. Here was an instance in which a high Federal court held that a treaty overrides a right guaranteed by the Constitution to the people of California, as well as to those of all other States.

One agency of the United Nations already has drafted an agreement imple-

menting the Charter treaty, which in the opinion of many people would destroy the freedom of the American press. Other agreements, already made or in the making, could abridge the liberties guaranteed to all citizens by the Constitution of the United States.

In view of the situation with respect to the treaty-making power, as I have outlined it, I have introduced a House joint resolution proposing an amendment to the Constitution, to cure what has come to be a defect in that instrument of all our liberties.

The amendment is shorter and less complicated than some I have seen, and more comprehensive than some others. I believe it to be in a form easily understandable by all of the people, and yet strong and comprehensive enough to provide adequate guaranty against any abridgement of their liberties, either now or at some future time.

I have submitted the amendment in the knowledge that the present Congress will not knowingly countenance any abridgement of American liberties through abuse of the treaty-making power. I have submitted it, too, in the belief that no man can foresee what some future Congress and some future administration might do.

Wall Streeters and London Counting Houses Real Architects of Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. WOOD of Idaho. Mr. Speaker, it is pretty generally recognized on Capitol Hill that the real architects of our foreign policy are the international bankers of Wall Street and the London counting houses, including the international law firms that serve them.

It is ironical that this should occur in an administration that started out 18 years ago with the slogan of driving the money changers out of the temple. It was Wall Street and the evils practiced there that made that slogan possible; but all that has come from it is a continued harassment of business throughout the Nation which was guilty of few of the evil practices attributed to Wall Street, and itself often suffered from those practices. The farmers, miners, and industrialists have been made the goats of the New Deal-Fair Deal propaganda, while the money changers have taken over the temple.

TAKING FREE ENTERPRISE TO PROMOTE SOCIALISM

Free enterprise in the United States is being taxed to the point of confiscation to support Socialist regimes in Europe which are committed to the destruction of free enterprise everywhere; and a goodly portion of our tax money funneled to Europe under the Marshall plan

and the Atlantic Pact goes to pay interest on foreign bonds owned by the international bankers. By manipulating our currency, they are subsidizing imports from slave labor countries 60 percent, discounting the value of our exports 37½ percent, buying our choicest stocks and bonds at 37½ percent discount and selling them at 60 percent premium.

THE BOGEYMAN WILL GET YOU

Communist Russia has been deliberately built up as the bogeyman to frighten us into permitting these international racketeers to drain away our wealth, destroy our domestic economy, and shackle us with a Fascistic power state.

The tools with which our despoilers work and the vehicles on which they are riding to power are supplied by the United Nations and a debauched, manipulated, irredeemable currency. If we hope to save our country, we must get out of the United Nations and replace the Laski-Keyness-Marxist so-called managed currency with a sound, honest, dependable monetary system which will maintain and protect the solvency and integrity of the people's money and guarantee the redemption of our currency at face value, on demand.

The appended Washington News letter of September 19, 1951, shows how some of the international bankers are feathering their nests at the expense of the American taxpayers.

THIRTY-EIGHT AND FOUR-TENTHS PERCENT OF \$12,794,420,000 IN AMERICAN ECA AID WAS FUNNELED THROUGH LETTERS OF COMMITMENT TO 64 UNITED STATES BANKS AND BANKING HOUSES

Of a cumulative total in American dollar commitments for ECA aid to Europe, the Far East area, and Yugoslavia to August 31, 1951, reported at \$12,794,420,000, letters of commitment were issued to 64 American banks and financial institutions to August 30, 1951, in the cumulative total since the commencement of the ECA programs for \$4,915,186,387.

This amount represents 38 4/10 percent of all ECA commitments for American dollar aid to Europe, the Far Eastern areas and Yugoslavia.

TEN BANKS FEATHERING THEIR NESTS

There are approximately 14,500 banks and financial institutions in the United States, and the percentage of banks feathering their nests through ECA letters of commitment (which means guarantees of advances for the purchases of commodities by foreign governments) is less than one-half of one percent.

The 10 largest banks and the cumulative total of letters of commitments issued to each were:

Chase National Bank, New York, N. Y.	\$769,830,541
National City Bank of New York, N. Y.	619,109,308
Bankers Trust Co., New York	424,673,949
Guaranty Trust Co., New York	361,150,763
Bank of America, N. T. & S. A., San Francisco	352,833,264
Irving Trust Co., New York	351,522,106
J. P. Morgan & Co., Inc., New York	341,949,529
Manufacturers Trust Co., New York	301,455,805
Bank of the Manhattan Co., New York	208,565,898
French American Banking Corp., New York	206,422,885

Total to 10 banks..... 3,937,513,053

The 10 big banks here listed handled approximately 30.8 percent of the gift dollars poured into Uncle Sam's international gift shop through the Economic Cooperation Administration.

There are signs that the big banks themselves are awakening to the dangerous inflationary forces generated by giving away American dollars. The Guaranty Survey, published monthly by the Guaranty Trust Co. of New York, in the September issue said in part commenting on Secretary Acheson's revelations of plans to spend \$25,000,000,000 for foreign assistance in the next three years:

"Coming at a time when the Marshall plan, the greatest project for giving away money ever devised in time of peace, is nearing its close, the new program raises the question of whether this outpouring of billions of the American taxpayer's money is ever to end."

As an extremely small taxpayer, we wonder too.

1951 Courthouse Conferences

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. MCGREGOR. Mr. Speaker, people of the Seventeenth District are greatly disturbed over current trends in national and international affairs according to the reports received from over 600 constituents with whom I talked at my annual courthouse conferences during the past 2 weeks.

Many persons criticized the State Department for interfering in our military strategy and told me they wonder if a real all-out effort is being made by our leaders to settle the Korean dispute.

Those who met with me at the six courthouses of the present Seventeenth District and with Congressman FRANK T. Bow and myself at Millersburg asked why this Nation continues to spend money for weapons of war and yet our fighting men in Korea are not permitted to use those arms to defend themselves.

The rising cost of living and soaring taxes are also foremost in the minds of the citizens from the district. Most people said they are willing to bear the burden of higher taxes, but want to make certain their money is well spent. They insist that each expenditure by the Federal Government, both civilian and military, be carefully examined to make sure it is necessary.

OPPOSE FEDERAL CONTROLS

Increasing Government controls over our economy were opposed by the majority of those I interviewed. They object to direct controls over both individuals and industries being brought about by directives issued by executive bureaus in Washington.

Most people who discussed the subject of controls commented that the enforcement of control directives means an increasing number of special inspectors and enforcement agents on the Government payroll. Alarm was expressed at the vast number of personnel already employed by the Federal Government.

The complexity of the control program baffles many Seventeenth District businessmen and consumers alike who contend that the bulk of the regulations controlling prices and wages are not only difficult to understand but almost impossible to obey.

An interpretation of these directives was requested by some farmers and industrialists who in some instances find it almost impossible for them to continue their business.

Interest was shown in the new social-security law, new veterans' legislation and the proposed tax-increase measure. The subject of draft deferments was often brought up, and it was the consensus of opinion that a uniform rule for induction coupled with a policy of individual attention being given each case should be established for the counties of the Seventeenth District if not for the entire State.

Many personal problems were also presented to me. From the opinions expressed by the people I received much valuable information that will aid me in carrying out my congressional duties.

These opinions are valuable since they were presented without pressure and represent the thinking of loyal citizens

Government Expenditures Soar

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. MCGREGOR. Mr. Speaker, Government expenditures this year, including the cost of the foreign-aid bill, have soared to a total of \$90,000,000,000. This figure is only for the first 8 months of 1951 with several appropriations bills still being considered by Congress.

The President told the Nation in January that we could get by on a \$72,000,000,000 budget which is now exceeded by \$13,000,000,000. This proves to many of us that the budget submitted to Congress by the executive department does not tell the entire story behind Government expenditures each year.

It is becoming increasingly apparent that the Federal Government has as hard a time sticking to its budget as does the average housewife in this period of rising prices.

About \$69,000,000,000 of this total amount will be used for defense and foreign aid; \$15,000,000,000 is allotted for frozen expenditures including pensions and similar items which vary little from year to year; \$6,000,000,000 will be applied to the interest on the national debt.

KOREAN REHABILITATION

Even if the fighting stops in Korea that country will continue to be expensive to us. It has been estimated that we have already spent \$10,000,000,000 to resist Communist aggression and to this will be added future occupation costs and money needed to put Korea back on her feet.

It will cost from two to three billion dollars to repair the war damage in Korea. First, however, food, clothing and medical supplies will be sent for immediate needs, then will come housing and road building.

CONSUMER COMMITTEE CONSIDERED

Legislation has been introduced in Congress to establish a Committee on Consumer Interest, which would study and investigate all problems affecting consumers in this period of emergency.

This is a recognition by Congress of the difficulties confronting consumers, especially those on fixed incomes, who are faced with rising prices on every item they purchase.

In carrying out its duties, it is proposed that the committee shall give special attention to prices charged for food, fuel, and clothing and the costs and methods of producing, processing, and distributing these and other goods.

People Oppose Rearmament in Germany

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the way to peace is not through armed might. Reports reaching this country from the common people of Europe show very clearly that they live in fear of the rearming of Western Europe under General Eisenhower. Such fear is understandable after two devastating wars and still no peace.

Mr. Speaker, as part of my remarks I am including interesting excerpts of a letter from a lady in Germany, which appeared in the Sharon (Wis.) Reporter on August 30, and prepared by its able editor, Mr. Roy Ruchlman. It is from sources such as this the Members of Congress can really ascertain the facts about our foreign-aid programs.

Elsewhere in this issue of the Reporter is an article in which Representative LAWRENCE SMITH is quoted: "Communists promise bread and peace," he said, in effect "We give them guns for more war."

The effect this very thing has had on peace-loving peoples of Europe—Germany in particular—is brought home to Sharon in a letter received some weeks ago by Miss Louis Rota. The local Methodist ladies had helped a German family, by sending them clothing. Some correspondence has resulted from this Christian act.

Addie Saenger's outlook on life is pathetic, even now, when her family is better off than some. Her apparent misunderstanding of America's good intentions and desires for peace and world betterment are a bit startling.

"The past year passed quietly for us, we had no special sickness, enough to eat and to wear," she wrote. "Plenty of work, but when a person is well he enjoys that. We thank God for that, but we do not forget our obligation to those still in need."

After describing privation she observed in a visit to the English zone, Addie wrote: "The cursed Prussian militarism should be completely destroyed. Even children's playing with toy soldiers is considered a crime."

The children are bright and "learn well, but they are so thin and undernourished. Their clothing, in spite of all the patching, hardly holds together any more." There is hardly enough for potatoes, after the rent is paid, and it's soup from them, morning, noon, and night. Berries and mushrooms, and wood from the forests help. But the sick and aged must beg.

"What should we that now, after only 5 years there should again be rumors of war, and we be required to furnish soldiers? Is that not a crime? The Americans and their allies have changed their opinions since Nuremberg."

"Why should we fight? A soldier fights for his fatherland and his freedom. We have neither any more—and who will give it to us? Our land is torn, and bled to death. Each demolishes it and plunders, according to his own desires. Our homes are destroyed, families separated."

Here in America, we pour billions into Europe for its recovery. Yet Mrs. Saenger speaks for many of her people, perhaps, when she writes:

"The conquering troops need much money. The few divisions we have here are paid four to five million marks a year—and that is half of Germany's tax money. Where should more come from, if the western powers should send more troops? Then we should be poorer yet than the Soviet Union. Should we fight for that?"

"Victorious troops need much room. Today most of them live in our villages, with two and three rooms allotted a family. Our own people must live in barracks, 8 and 12 to the room. Our tax money goes to provide them maids, chauffeurs, bureaucrats, and luxurious home furnishings."

"Shall we help to destroy our country more? For we are living in the midst of the next battlefield. Should we consent to be put into uniform like the Russians beyond the Elbe? Shall we be forced to shoot our brothers? Shall we expose ourselves to the vengeance of the Russians when the Americans retreat?"

"Do they think the Soviets will stay at the Elbe and stand at the Rhine? They will not stand at the Channel, either, and England should beware. If war should come again, the diplomats who brought on the chaos would also have to stand in the front lines."

Addie Saenger continued: "The common man everywhere does not want war. The kind folks who helped us through our hunger years by sending packages showed it. . . . Our governments are puppets—lesser people, appointed to fill positions, influenced to act for their own advantage and for those greater diplomats. Are they the embodiment of a very active devil?"

Her spark of hope was exemplified thus: "Then there must be a spiritual power to work against him. A renewing of the world must come from within. Each individual must begin in his own heart to wrestle against the evils within. Everlasting peace cannot be produced with bombs and cannons. The unfortunate chain of wars will continue until people become rational."

Rights of Postmasters

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, Washington newspapers last evening reported a piece of news which I

read with mixed emotions—amusement, bewilderment, and a tinge of anger.

This news item concerned addresses given before sessions of the National Association of Postmasters.

I was amused because it seemed to me, reading the item, that someone had gotten their speakers mixed, resulting in somewhat conflicting statements tossed at the postmasters. Then I was bewildered by the interpretation some of the speakers placed on United States statutes. My slight tinge of anger came later, after I had had time to think about the news item.

According to one news report, Chairman Robert Ramspeck, of the Civil Service Commission, "outlined to the postmasters just what they could and could not do under the so-called Hatch Act, which bars political activity by Federal Government employees."

This quite sensible bit of information was followed by:

Joseph Lawler, Deputy Postmaster General, reminded the delegates they did not surrender all of their rights when they took their oaths as postmasters.

"There is no law," said Mr. Lawler, "which would prevent you from making a contribution to a political party. There is no law that you cannot exercise your right to vote. There is no law to prevent you from supporting the man who appointed you and wherein your loyalty lies."

Many times, in the course of his address, Mr. Lawler stressed the importance of considering the man who appointed them to their respective offices.

Therein lies my amusement and my bewilderment, Mr. Speaker.

How did it happen that Mr. Ramspeck and Mr. Lawler were scheduled as speakers at the same session of the postmasters' convention, if they were to vary so widely on what they told their audience? Here was Mr. Ramspeck telling the postmasters of the limitations imposed by the Hatch Act; and here was Mr. Lawler, in effect, telling the same postmasters to do right by our little Neil, there is no law against it.

"Wherein your loyalty lies," said Mr. Lawler. Some of those postmasters—many of whom have served long and faithfully—consider that their loyalty is due the American people, whom they were appointed to serve in their important posts.

My tinge of anger was aroused when I read for a second time the last paragraph of that news story:

Jack Redding, Assistant Postmaster General, told the postmasters that the Republicans are using vilification, libel, slander, and downright lies in an effort to promote themselves into political power. He told the delegates that the Republicans were talking about them and asked them what they were going to do about it.

What vilification, Mr. Redding? What libel, what slander and what downright lies, Mr. Redding? And just who told you that the Republicans were talking about the postmasters in any connection? Please be more specific.

There are two ways of viewing this whole business, as detailed in the news item I have been quoting—from the viewpoint of Mr. John Q. Citizen, who uses the facilities of the Post Office Department every day; and from the viewpoint of the postmasters themselves.

John Q. Citizen might say to himself: "Now look at this. The postmaster is the fellow who is responsible for the operation of the post office right here in my home town. He is the man who sees to it that the mail is delivered and sent out on time, and who is the top dog, generally, of the Post Office Department here in my town. Is he interested in me, as a customer, and in proper conduct of his business here; or is he interested in supporting the political ambitions of someone over in the next county?"

The postmaster himself, perhaps on the job for many years and doing a good job, too, might take this view: "Maybe I have been wrong all these years. Maybe I was off the beam when I did my best to hold down expenses here in my own post office, trying to do my small bit toward holding down that postal deficit. Maybe I should have been out campaigning for the guy who appointed me, and service be hanged. I owe my loyalty to the political party machine, not to the millions of Americans who use the postal system. I heard it myself, from a Deputy Postmaster General."

It is a sad day in America, Mr. Speaker, when our Post Office Department can ask the American taxpayers to ante up to offset an annual operating deficit—expected to exceed \$500,000,000 this fiscal year—then ask the American people—most of them those same taxpayers—to pay higher postal rates, and at the same time inform the local postmasters that they owe allegiance to a political machine rather than the American people.

Federal Aid to Indiana Welfare Department

EXTENSION OF REMARKS OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I wish to include a column written by Clifford B. Ward for the Fort Wayne News-Sentinel, August 22, 1951. The point of view set forth therein is certainly the attitude of the majority of Hoosier people.

Oscar Ewing's decision as an administrator to withhold Federal aid to Indiana's Welfare Department, without bothering even to get a legal opinion on his act from the United States Attorney General, is an example of bureaucracy running riot, as one of the Supreme Court Justices said a few years ago in connection with another matter. Mr. Ewing confuses himself with the Government and needs to be straightened out by a Federal court decision.

The money which Mr. Ewing is withholding from Indiana is not Mr. Ewing's money, nor the money of people from other parts of the country. It is money which came out of the pockets of Indiana persons who pay tax to the Federal Government.

Mr. Ewing, like a lot of the Washington bureaucrats, has forgotten one elementary fact about our Constitution, namely, that the Federal Government exists only as a result of the delegation of powers to it by the various State governments. Those powers not

delegated to the Federal Government are reserved to the various States. It is the States which determine what the Federal Government may do. It is not a case of the Federal Government telling States what to do, unless the right to do so has been expressly given to the Federal Government by the States.

WHY SPEND IN THE DARK?

The people of the State of Indiana have decided through their State legislature that they want welfare funds to be subject to public inspection. They do not want all the details of individual relief cases made available to everyone, but at the same time, they do not want a huge spending agency operating entirely in the dark. Actually, the secrecy of relief in individual cases is a myth in most cases. The butcher, the baker, and the candlestick maker in the relief client's neighborhood all know he is on relief and to what extent. Usually investigators thoroughly canvass a man's neighbors and friends to determine his eligibility for relief. The persons a relief client would have reason not to want to know his relief needs know them very well.

But the wisdom of Indiana's law is not for Mr. Ewing to pass upon, nor for the Federal Government to pass upon. The people of Indiana are the boss and they have spoken through their legislature. They want welfare funds made a matter of public, not private business.

CAN MR. EWING VETO?

Some welfare officials are afraid that the average citizen, earning his own way, will raise a big commotion if he finds that a person whom he doesn't know is getting relief when he seems to be undeserving of it. Well, of course, the average citizen, earning his own way, has a perfect right to raise a commotion if someone who is undeserving is getting aid. It is his money that is being spent. He worked for it and he was forced to turn it over to the Federal Government. Why shouldn't he know for what purpose his money is being spent?

The question before the people of Indiana is a legal question. Can Mr. Ewing, an individual in Washington, personally veto a law passed for Indiana's own good by the people of this State? Have we come to a pass where State governments are governed by the fiat, the ukases, memorandums, etc., of Washington bureaucrats? It is a question which the Federal courts must decide and decide quickly before the time arrives when Indiana cannot carry the whole relief load.

A Free Press Must Be Kept Free if This Republic Is To Be Perpetuated

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. BURDICK. Mr. Speaker, the framers of our Constitution knew what a suppressed press was because they were denied that right in the Colonies, and when these Colonies had won the Revolution and came to set up a government, here is what they said about a free press: The first section of the Bill of Rights is found in the first amendment to the Constitution, which reads:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the rights of the people peaceably to assemble, and to

petition the Government for redress of grievances.

For 160 years we maintained this great right of liberty. The press has brought the news to the people in every corner of the country, and in thousands of cases the newspapers and magazines have been the only means of education of our citizens. I know in my own case, living in the great West, the only printed document we had was a monthly paper, called the Farm, Home, and Fireside. It cost 25 cents annually and our whole neighborhood used the same copy.

In recent times the newspapers and magazines have performed a giant task of informing the people about their affairs. In fact a few newspapers are indispensable in order to know the many great events that are happening daily.

I do not think the American people want to muzzle this press. I think they want to keep it free and not have its freedom dispensed by a government foreign to our own. The fact is that there is a great attempt being made at this very moment to muzzle this press and make it subservient to the views of the United Nations. In the Covenant of Human Rights shortly to come before the Senate of the United States, the United Nations has given a new definition of a "free press." In the question of a free press this document reads:

Everyone shall have the right to freedom of expression, subject to such limitations as are pursuant to law or are reasonable and necessary for the protection of national security, public order, safety, health or morals, or the rights, freedoms, or reputations of others.

Under this United Nations, a perfect enemy of this republic in disguise, it is to be the sole judge of whether a newspaper has violated the law. The law was concocted by the United Nations, and if the Senate adopts this covenant as they did the Charter of this dangerous Organization, the question of whether an editor or newswriter has violated that law is not to be decided in our courts, but in a foreign court, the Court of the United Nations.

You will at once see by referring to the definition above cited that a free press is so hedged in with qualifications and exceptions and directives, that a free press will no longer exist. Do the American people want that? Well, they will get it if they complacently drift along under the guise of peace. Everyone wants peace, but what will peace amount to if to get it we must give up our liberties? Millions of good citizens of this country have been kept from thinking this United Nations action through. All they hear is that this great organization will bring peace if it is supported. That is, we will not have to go to war abroad, but will wake up and find we have to have a war here at home. American citizens who have devoted their lives to the perpetuation of our own institutions which they have built through the wars with tears, sweat, and blood are not apt to give them up when they realize they have been lulled to sleep by a false promise of peace.

Right at this moment the newspapers of the United States have a job to do, and I believe they will do it. They must

advise the people of the danger to the Republic of this organization which is seeking assiduously to place us in a world organization and surrender to that organization the sovereignty of our own Government. There are millions of good citizens of this country willing at this time to give up our sovereign power if they can have world peace. There are, however, a great many more American citizens who will fight to the last ditch before this Republic is wrecked by peace-makers and muddled-thinking directors of this world-government movement.

This United Nations has had a great head start in the crusade to build a world government. They have had the Treasury of the United States behind them to hand over \$50,000,000 annually to propagandize the churches, school children, and the people of the United States. The people are just now emerging into a renaissance from this indifference, and from now on the going of this anti-American organization is going to have rougher going. The greatest power the people have in this fight is the newspapers. My plea to the people is, Keep a free press and put up a fight for it when we can plainly see any attempt being made to muzzle it.

That same mania for peace at any price came close to stopping the Revolution here in America. Great numbers were willing to submit to the tyranny of England if they could only have peace. Fortunately for us today, who at this moment have liberty, there were a few men in 1776 who didn't want that kind of peace. Patrick Henry, of Virginia, wrecked these Tories in his great speech on liberty, and that speech now rings in the ears of this generation. It ought to be committed to memory by every citizen of this Republic. If only our Declaration of Independence and the Constitution could be circulated among the churches and our school children equal to the present circulation of the Universal Human Rights document, there would be no danger to fear from any quarter the destruction of our form of government.

Dilatory Tactics

EXTENSION OF REMARKS OF

HON. F. EDWARD HEBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HEBERT. Mr. Speaker, on this date 158 years ago, in the year 1793, George Washington laid the cornerstone of the building in which we meet, the Capitol of the United States.

The laying of that cornerstone symbolized the generous attitude of two States, Maryland and Virginia, in graciously giving up what belonged to them to the several other States of the Union into which they had been welded.

The land which formed the District of Columbia belonged to the States of Maryland and Virginia. Without force or compulsion or act of Congress and de-

cision of the Supreme Court under the theory that the power and might of the Federal Government was paramount to mere ownership, these two States delivered to the United States their own ground in order that a National Capital might be established.

It seems a rather ironic tragedy that on the exact anniversary, the exact date of that cornerstone laying, that on the very same site, at this very moment the subject of taking away from States that which belongs to them and giving the land to other States, should be discussed.

But it is a fact

Today the other body in committee is discussing the so-called tidelands issue. Before the committee is the thrice-passed House bill which gives to the States that which is already theirs. Also before the committee is another bill giving the right to the States to control their own land until the matter is settled legislatively.

It is strange that among them are others who advocate taking away from the States the land which is theirs and giving that land to the 45 other States.

It is rather in contrast to the situation 158 years ago when two States voluntarily gave their land to the several other States in the Union and today when representatives of the Federal Government are attempting to take away by force, if you please, the land of three States and then deliver that land to the several other States which have come into the Union.

Today it is Louisiana, California, and Texas. Tomorrow which State—only God knows.

The New Orleans States, which had conducted a consistent fight for constitutional government and whose editor, William H. Fitzpatrick, had been awarded the Pulitzer prize for his splendid editorials on control of government by treaty, has again enlarged on this question of tidelands, which I submit for your reading.

It tells the story poignantly.

DILATORY TACTICS

Solicitor General Philip B. Perlman is rubbing salt into the wounds of Louisiana, Texas, and California.

These States are clamoring to put their offshore oil fields to work to supply vital defense needs, but are prevented from doing so by the Federal administration and its friends in Congress.

That in itself has understandably chafed the States, but now Perlman is adding insult to injury by blaming them for sabotaging results that rightfully should be credited to Washington.

Here is a skeleton history of the offshore oil situation.

1. The States' historic claim to oil lying under their coastal waters was uncontested until the 1930's.

2. Then a controversy developed because Federal officials who previously had operated on the assumption that the oil belonged to the States had a change of heart and contended that it was the property of the Federal Government.

3. To settle the controversy, Congress enacted legislation in behalf of the States' claim in 1946, but it was vetoed by President Truman on the grounds that the matter was then before the Supreme Court to adjudicate.

4. The Court later held that oil under the offshore waters is the property of the Federal Government, but that the matter of who owns the underwater land from which the oil is taken is a matter for Congress to legislate. The Court's ruling prohibits oil explorations in the offshore area except with the approval of the Federal Government.

5. The Federal Government, in the form of the Interior Department, in all but one case has refused drilling permits in the offshore area pending the enactment of federally proposed enabling legislation which would delineate the Department's authority over offshore minerals decreed by the Court to be Federal property. There is no hope at this time that Congress can agree on such legislation. Neither House has passed on such a bill.

6. However, the House has passed and sent to the Senate a bill that would clarify the ownership status of the oil and also of the underwater coastal lands. It is called the quit-claim bill. The States would get clear ownership of both land and accompanying minerals for as far out to sea as 3 miles from the coastal low-water mark. This bill has rested for more than a month in the Senate's Interior Committee, headed by Senator O'MAHONEY, Democrat, Wyoming.

7. O'MAHONEY has sat on the House-passed bill, which is similar to the one that the Senate passed in 1946 and which was vetoed by President Truman, on the excuse that other more pressing defense matters have occupied his time.

Against this background Solicitor Perlman writes a letter to Senator O'MAHONEY saying that the States of Louisiana, Texas, and California are blocking development of the offshore oil resources through dilatory tactics.

Plentiful oil would start flowing in short order from the offshore fields if this action is taken.

If Secretary of the Interior Chapman would authorize drilling permits in the offshore area, as he did several months ago for one applicant who contended drilling was necessary to prevent wastage.

The Late Middleton Beaman

EXTENSION OF REMARKS OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the Record, I desire to pay tribute to the memory of the late Middleton Beaman, legislative counsel of the House of Representatives for 30 years. Mr. Beaman's career is briefly summarized in the following article from the September 1949 issue of the American Bar Association Journal which manifests the high regard in which the legal profession of the country held Mr. Beaman.

MIDDLETON BEAMAN DOCTOR OF LAWS
(By Harry W. Jones, editor-in-charge)

The recent retirement of Middleton Beaman, after more than 30 years of continuous service as legislative counsel to the House of Representatives, provides the occasion for a brief account of the circumstances surrounding the establishment of the Office of the Legislative Counsel of the Congress and for a few sentences in appreciation of Mr. Beaman's unique contribution to the legislative development of the law of the United

States. In this instance the man and the office seem inseparable, since the Office of the Legislative Counsel was, in a very real sense, built around Mr. Beaman and created as the direct result of work which he had been doing on an informal basis for overburdened House committees. Lawyers familiar with the work of the office, and with the traditions of devoted and resourceful public service which have come to characterize its activities, were happy to hear that the new legislative counsel to the House is Allan H. Perley, an assistant legislative counsel since 1925 and one of Mr. Beaman's closest associates in the House drafting service.

The events leading up to the establishment of the Office of the Legislative Counsel were traced in detail in an interesting 1929 law review article by Frederic P. Lee, one-time legislative counsel to the Senate (The Office of the Legislative Counsel, 28 Columbia Law Review, p. 380). The facts, in summary, are these. In 1916 the directors of the Legislative Drafting Research Fund of Columbia University undertook to give Congress a practical demonstration of the value of skilled legislative drafting in the sound development of the statute law. Middleton Beaman, then a member of the fund staff and former law librarian of the Library of Congress, was asked to take on the demonstration assignment. For 2 years Mr. Beaman furnished technical drafting assistance on this lend-lease basis, particularly for the House Committees on Merchant Marine and Fisheries and Ways and Means.

The demonstration was a complete success. A regular congressional drafting service was established by express provision in the Revenue Act of 1918, and Mr. Beaman was invited to remain as the first legislative draftsman for the House. The CONGRESSIONAL RECORD for February 2, 1949, containing tributes to Mr. Beaman from the Speaker, the majority and minority leaders, and other members of both parties, is eloquent evidence of the respect and regard which Mr. Beaman earned during his long period of distinguished legislative service.

Understandably enough, Mr. Beaman has never had the time to sit down and write anything in the nature of a systematic treatise on the science and art of legislative drafting. If his new and unaccustomed leisure gives him the opportunity to prepare such a volume, it will undoubtedly rank with such classics in the field as those of Lord Thring and Sir Courtenay Ilbert. In the meantime, the lawyer interested in the legislative development of the law will find it profitable to examine Mr. Beaman's testimony 4 years ago at the hearings of the Joint Committee on the Organization of Congress. (Hearings, pp. 413-430, April 27, 1945.)

Certain of the high lights in Mr. Beaman's informal statement to the joint committee should be required reading in these days in which many State legislatures are considering ways to extend and improve their technical bill drafting services. Legislative drafting work must be kept on an entirely nonpolitical basis. Mr. Beaman's description of his own experience in this respect will undoubtedly astound certain of the more cynical critics of congressional processes:

"Since I was appointed some 26 years ago I have never had anybody ask me my politics. I do not know the politics of any man in my office. There has been no pressure of the slightest degree to secure a job for anybody."

The effective legislative draftsman must not take it upon himself to decide the issues of policy which are before the legislative body for decision. Mr. Beaman's disclaimer of a general "policy" mission is clear and unequivocal:

"Our office has nothing to do with policy whatsoever. We try to find out what the committee wants to do and help them do it."

Here is a useful reminder that the lawyer who has a legislative committee or body as his client must be willing to accept the basic judgments of value and expediency which are compelling to the elected representatives and must act on the principle that the clear and consistent expression of legislative intention is always in the public interest, even if the objectives which the proposed statute seeks to attain do not coincide with the personal preferences of the working draftsman.

Perhaps the most instructive part of Mr. Beaman's testimony before the joint committee is his discussion of the familiar misconception that the job of the legislative draftsman is essentially a recording assignment, an exercise in English composition:

"By far the greater part of our work is not the writing down of the words on the paper; it is the analysis, the finding out in the light of the existing legal and factual situation, of what it is that is intended by the person for whom we are working. That is the reason why we feel we can function most effectively in what we call our complete job, when we have been at all the committee meetings, so we really know what it is they have decided, and so we can bring to the attention of the committee the subsidiary questions of policy which our study and analysis have brought to light, and which should be decided by the committee."

And again:

"The number of contingencies that a lawyer has to guard against in the case of a will or contract, while sometimes they are very numerous, are mere flyspecks compared with the contingencies that must be considered in the case of a statute."

The most appropriate academic ceremony of 1949 was certainly the action of Columbia University at its last commencement in conferring the degree of doctors of laws on Mr. Beaman. Universities are in the habit of granting the doctor of laws degree in recognition of achievement in many fields, few of which have anything at all to do with law or the laws. But Middleton Beaman, in a literal and unique sense, is richly entitled to the designation, doctor of laws.

Old-Age Fund Thirteen Billion in I O U's

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. ANGELL. Mr. Speaker, my colleague, the gentleman from Minnesota, Representative BLATNIK, and I have placed on the Speaker's desk Discharge Petition No. 4 to bring to the floor H. R. 2678, old-age social-security legislation so long neglected. Thousands of our elderly citizens of the United States are in dire need, yet we are spreading our tax dollars around the world, over one hundred and twelve billions since World War II ended.

The existing social-security system has proved itself wholly inadequate to meet this problem. There are now over thirteen billions in I O U's in the social-security trust fund of hard-earned dollars collected from employers and employees

for old-age security. These dollars are paid by the general public in its costs of goods the public buys. The billions collected for this purpose are spent as received by the Federal Government to meet current expenses and these I O U's put into the Treasury. If a private insurance company did this it would be prosecuted. Eventually when these trust funds are needed additional taxes will have to be levied on the public to meet the payments coming to our retired workers.

I most sincerely urge that every Member of the House interested in providing adequate security for our elderly citizens sign Petition No. 4 to bring H. R. 2678 on the floor for consideration before the House adjourns. There are already 146 signatures on the petition with only 72 needed to bring the legislation up. It will come up under an open rule permitting any germane amendment to be made.

An interesting article on the status of the present old-age security system by Earl Richert, a Scripps-Howard staff writer recently appeared in the press, a copy of which I include as part of these remarks:

OLD-AGE FUND THIRTEEN BILLION IN I O U'S—
RECEIPT USED BY FEDERAL TREASURY FOR
GENERAL EXPENSES

(By Earl Richert)

WASHINGTON, August 23—The social-security system so far has been better than a whole flock of gushing oil fields for Uncle Sam.

Since the program started on January 1, 1937, it has poured a net of \$13,000,000,000 into the Federal Treasury—that much more taken in than paid out in benefits and for administering the program.

Practically all of this money, of course, has been spent for general expenses of Government. And the social-security fund on July 31 consisted entirely of interest-bearing Government I O U's, except for \$189,000,000 in cash for immediate needs.

Counting interest which the Government has theoretically paid on the money borrowed, the social-security fund today stands at \$14,742,000,000.

Four years ago the fund's total assets were \$8,700,000,000. Thus, it has been growing lately at the rate of about \$1,500,000,000 a year.

Last fiscal year, despite a 70-percent increase in the benefit payments to individuals, the fund jumped \$1,800,000,000. This happened in part because the social-security tax rate also was increased. It's now 1½ percent each from employee and employer on the first \$3,800 of annual income, having started at 1 percent each on the first \$3,000.

Social-security-fund receipts in the year ending June 30 totaled \$3,400,000,000, with \$3,100,000,000 coming from social-security taxes and \$300,000,000 in interest from the Government. Expenditures were \$1,400,000,000 in benefit payments to individuals and \$70,000,000 for administrative expenses, leaving a net to Uncle Sam of over \$1,800,000,000.

Government interest, as shown by last year's \$300,000,000 figure, is getting to be quite a sizable source of income for the fund. The Government by law must pay interest on money borrowed from the trust funds at a rate equivalent to the average interest it pays on all its securities. Last year the Government paid an interest rate of 2½ percent under this formula. But now the rate has gone up to 2¾ percent.

Approximately 2,600,000 persons are now drawing social security, with the average

payment to persons over 65 being \$43.32 per month. Altogether, 82,000,000 persons now have some rights to benefits from the fund.

Altogether, 82,000,000 persons now have some rights for benefits from the social-security fund

There has been considerable discussion in Congress about increasing social-security benefit payments because of the inflation of the last year. But so far nothing has been done. Senator HUBERT HUMPHREY, Democrat, Minnesota, has introduced a bill to increase benefit payments by \$5 per individual.

Meanwhile the Senate has voted to increase Federal contributions to State old-age relief programs by \$3 per person. But so far the House has not acted on the proposal.

At latest count there were 2,760,000 persons drawing old-age relief—more than are drawing social security. The average old-age relief payments are \$43.11 a month—practically the same as the average social-security payment. But the old-age payments vary widely, from a low of \$18.39 per month in Mississippi to \$67.52 in California.

How long will it be before the rapidly increasing number of old people start drawing more out of the now \$14,700,000,000 social-security fund than the below-65 people pay in? The experts have been debating that for years, with no conclusion. It all depends on economic conditions and what Congress does.

Retribution for the Katyn Forest Massacre

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. WOOD of Idaho. Mr. Speaker, House Resolution 390 to investigate the Katyn massacre of 4,000 Polish soldiers purportedly by the Russians, is just another of such ill-advised and bootless meanderings into foreign affairs which the advice of the founding fathers, the fixed policy of this country for 160 years, and the Constitution, have so urgently advised against.

Ill-advised because, after all, the internal actions of other countries are none of our business unless they directly affect our own governmental policies or the welfare of our people; and also for the reason we have no more right to investigate their murderous and wicked acts than they had to investigate our gangster killings in Chicago.

Bootless, because even if the Russians should be adjudged guilty of this atrocity, there seems to be no possibility of accomplishing any more punitive retribution than the resolution to free William Oatis, passed by the House 6 weeks ago, accomplished. After all, these wonderful and patriotic Poles are dead; William Oatis is not. Nor could a highly successful venture add much to the world consciousness of the guilt of this atavistic, barbarous, and murderous horde. The blood of untold millions of their own people and kin cries to Almighty God night and day for vengeance, not to mention the anguished cries of the murdered and displaced persons in the Russian rape of the Baltic provinces.

The minds of the Christian peoples of the world reel before the awful crimes of the Russian gangland, but one must remember that the palladium of our faith states clearly:

That whatsoever a man soweth, that shall he also reap.

Moreover, that though the mills of the gods grind slowly, they grind exceedingly fine. There is greater reason to expect that the future retribution of these sadistic and murderous hordes shall be accomplished with greater precision before the bar of Almighty God, rather than through the ineffectual processes of any House committee, and with considerably less danger of undesirable international repercussions.

Address of Rear Adm. Lamont Pugh

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein an address by Rear Adm. Lamont Pugh, Surgeon General of the Navy, delivered at the dedication ceremonies of the United States Naval Hospital in St. Albans, Long Island, N. Y., on August 15, 1951:

We have gathered here at the midway mark of the twentieth century with a background of circumstances very similar to those that tried the mettle of men and women during the days of the French Revolution. Of those days Charles Dickens wrote

"It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of light, it was the season of darkness, it was the spring of hope, it was the winter of despair."

Those words written of a former era constitute a startlingly accurate picture of today.

To rise above these uncertainties and contradictions, it is our duty to make as clear as possible where we are going and in what we believe, at least with respect to our own limited role in the drama of events, and to have faith in ourselves and in our mission. Thus we shall be able to interpret this occasion in a manner that focuses our present thoughts and gives guidance to the future.

If the formalities observed apropos the dedication of a building that is to house an institution or part of an institution conform to the conventional formula, there is almost certain to be inherent in those formalities, either explicit or implicit, or at least there should be a solemn promise to our colleagues, to ourselves, and to posterity, that our aims in the use of that institution will be of a high order and that we will seek to attain through it the highest objectives. Above all we should dedicate ourselves to a noble purpose and a noble course of action. To give a dedication definite significance and meaning requires today deep soul searching and sincere reflection.

The events which gave rise to this occasion can be retold very quickly. In World War II

we found it necessary to expand the number of hospital beds available to the Navy in this metropolitan area. When local private and municipal hospitals proved unsuitable or unavailable to meet the Navy's need, it was decided to build a new naval hospital. This site was acquired from the St. Albans Golf Club in April 1942 at a cost of \$565,000.

The firm of York & Sawyer was commissioned to prepare the architectural and engineering plans for a 1,500-bed hospital, 250 beds to be in permanent construction and the rest in temporary wards.

A shortage of steel postponed the permanent construction. However, 36 temporary ward buildings were completed, and the hospital was established November 24, 1942. When commissioned February 15, 1943, there were 1,500 beds and 1,150 patients on board. Thirty-seven ward buildings with 1,210 beds were built later.

After the war, when we knew that the Brooklyn Naval Hospital site would be required by the naval shipyard, the Federal Board of Hospitalization approved the construction of a 1,000-bed permanent hospital on this site. Funds for new permanent construction became available in fiscal year 1947 to provide 606 beds on a 1,000-bed chassis, as well as administration and subsistence buildings for a 1,000-bed hospital. Work on this new permanent construction was begun by Thompson & Starrett on October 20, 1948, and has now been completed. The total outlay of funds represented in this investment is approximately \$15,000,000. This is thus one of the largest and finest installations in the medical department of the Navy, and our wise and careful management of it must justify the cost.

Goethe once said, "Three things are to be looked to in a building, that it stand on the right spot; that it be securely founded; and that it be successfully executed." Certainly that the first two of these conditions obtain here there is no question. Fulfillment of the third condition, or that it be successfully executed, is our solemn responsibility and high privilege.

I wish to congratulate and thank the architects, York & Sawyer, who ably planned these magnificent buildings, and the firm of Thompson & Starrett, Inc., who executed the plans so competently. The fate of the architect is often a strange one. How often he expends his whole soul, his whole heart and passion, to produce buildings into which he himself will never enter. They nevertheless are, in a sense, his monument. And it may be said of many architects, as it was said of Sir Christopher Wren, "If you would see their monuments, look about you."

The Medical Department of the Navy appreciates the vitally important services rendered by its sister department, Yards and Docks, and of course the Medical Department is not unmindful nor does it lack in its appreciation of the reassuring support it has received from the line components of the Navy toward the realization of its acquisition of a new hospital here at St. Albans.

I also want to congratulate and thank the foremen and craftsmen, a part of whose life and character has been indelibly and everlastingly inscribed in these walls. Perhaps one of the most wonderful things in the world is the thrill of creating something, of seeing it grow under one's shaping hand from a mass of piled and disordered materials into a finished whole. Probably we have been too much concerned in America with obtaining dollars quickly and have tended to forget the superior satisfaction that singularly accompanies the realization of having achieved a goal by one's own efforts, the thrill of having produced something for its own sake.

This hospital is created from the best materials and has the finest equipment for the care of the sick that modern science and

ingenuity can provide. We, as well as the taxpayers who made it possible, shall always have reason to be proud of it as one of the best structures of its kind in the Nation.

But the significance of these imposing buildings is not in their architecture, their equipment, and fine appointments, but in what we do with them. When medicine was very young, Aristides said, "Not houses finely roofed, or the stones of walls well-built, nor canals and dockyards, make the city, but men able to use their opportunity."

Those who in the years that lie ahead will work here as doctors, dentists, nurses, corporals, and civilian assistants, will have the opportunity not only to provide the most enlightened scientific treatment of the sick and injured but even to achieve a certain nobility. The success of this temple of healing will rest not only on the scientific skill of those who practice medicine, surgery, and nursing here but also on their personal interest in patients and their realization that spiritual and psychological power is a valuable part of therapy; their realization that the practice of medicine is, as has been observed by Sir William Osler, an art, not a trade, a calling, not a business; a calling in which the physician's heart will be exercised equally with his head. In this sense St. Albans can become an imposing monument to the healing arts, not a great impersonal machine, but a life-preserving haven from the storms those admitted here will have faced for their country, whether their disability be in the nature of physical trauma, the ravages of infectious disease, or "the veiled sleeve of care." We therefore should dedicate ourselves to using this hospital as a means to give our fighting men courage and confidence in their fellow men as well as the benefits of scientific medicine.

Here as elsewhere in the Navy there will be challenging opportunities to practice big-league medicine. The medical problems encountered in battle aboard ship, in high-altitude planes of sonic speed, on snorkel submarines, in amphibious landing operations, and with the Marine Corps in the field, require physicians with highly developed military medical skills as well as administrative ability. I am convinced that military medicine as such should be recognized by the establishment of its own American Specialty Board. This Board would deserve professional distinction and would confer a fitting honor upon those military doctors who belong, according to Mr. Winston Churchill, to the noblest profession of man. We here dedicate ourselves to the task of practicing military medicine in a way that will render it worthy of such an honor.

To this end we should solemnly promise ourselves that we will become as proficient as we can as quickly as we can in those phases of medicine that are primarily military. Our physicians will, during their naval careers, be able to practice all phases of medicine known to civilian practice. However, under existing world conditions we must above all be able to serve especially as physicians in military combat. It must never be forgotten that our cardinal mission and reason for existence is medical support of military operations.

In the battle formations of ancient times the charioteers were in front, the physicians in the rear with the flute players and fortune tellers, and the cowards were in the middle. Today the physicians are in the front line, both in peace and in war. They must always be ready for full-scale war. At sea, of course, we are all in the same boat or boats, but with landing forces ashore, and when serving with the Marines our doctors advance right along with our hospital corpsmen, whose mission it is to render first aid and to bring the wounded to the hands of a doctor in the midst of battle and not after

the battle is over, as has in times past been the custom. The measure of efficiency and effectiveness brought to this mission by our hospital corpsmen has been such as to affix the stamp of immortality to their name, particularly in the annals of the Marine Corps.

St. Albans will be a major element in that great medical organization which seeks to support the armed services upon several important counts. I say armed services advisedly because we have now advanced to a state of unification where the hospitals of either of the three branches of the Department of Defense may admit and treat patients of a sister service in any of the hospitals coming within the sphere of administrative responsibility of a given service, regardless of the uniform the patient has elected to wear.

But to come back to the several functions performed by a military hospital, I want to say that, aside from the paramount mission of treating injured or ill patients and of returning these patients to duty as expeditiously as circumstances will permit, a vitally important purpose of these hospitals is concerned with the training of physicians, dentists, Medical Service Corps personnel, nurses, and corporals for duty with service personnel at sea or in the field. It is my contention that it is no more reasonable to think of providing this highly specialized and vitally essential type of training to personnel of the medical departments of the armed services in civilian hospitals than it is reasonable to think of training aviation personnel for combat duty by having them fly airplanes for a commercial airline. To perform these functions effectively military hospitals must remain under military control. Our medical operations must be integrated closely with the operations of the Navy and Marine Corps and be sensitive to their changing military plans. Operating bed capacity and operating staffs have to be planned and changed according to the changing military situation in the world. Patients must be distributed to our hospitals and returned to duty under military orders.

We could not efficiently manage this organization for the discharge of its specialized mission if, as has been advocated in certain quarters, our hospitals were subject to a Federal medical administration which would manage all or almost all Government hospitals. Such an administration would not be sensitive to changing combat needs. Our patients and physicians would be largely outside our military commands. This, I think, would be inimical with our bringing to our respective services the quality of medical coverage the line echelons of the several branches have come to expect from and deserve of their medical departments—indeed, the kind of service the American people have every right and reason to expect and demand of their uniformed forces.

The effectiveness of the system we have has been time and again thoroughly demonstrated by the speed and smoothness with which we have mobilized to meet various emergencies. There is no better standard by which to gage or judge the quality of an organization than by its past performance. The manner in which we arose to meet the demands of the Korean situation I think is a fair illustration. If our supply system, hospitals and personnel had been under another Federal agency there would, I believe, have been delays, false moves and a lack of coordination between the Navy's Operating Forces, as well as those of the Marine Corps, and the Medical Department upon which those forces so faithfully confidently rely for medical care and support. Our national security would, I fear, have been seriously weakened had the Medical Department been compelled to share its control with others.

It is therefore a high honor to me, as Surgeon General of the Navy, to dedicate

this hospital to the health and welfare of those privileged to wear the uniform of the United States Navy and Marine Corps, or that of our sister services the Army and Air Force, to the community of Greater New York, and finally to the support of our national security.

In a sense we are rededicating this hospital with its new permanent facilities. As an institution in different physical form it has already been dedicated by many brave men and women who fell in their country's service, those who suffered a shattering of their physical and mental health, and who here have recovered soundness of body and peace of mind.

We should moreover also rededicate ourselves to continuing the struggle to crush those aggressive forces which make this suffering and pain necessary. Although we have won a few minor battles in Korea, we cannot forget that the font and inspiration of aggression is still strong and must be resisted with unrelenting energy.

I congratulate you, Captain Walker, upon having been awarded the opportunity and privilege to command this wonderful institution after your tour of commendable duty in the Pacific theater of war. I extend best wishes to all officers, enlisted men, and civilian personnel on your most able staff. And I assure you that all of us at headquarters in Washington will extend to you the best support, guidance, cooperation, and counsel of which we are capable.

It occurs to me that the dedication of this hospital is, in a sense, comparable with the launching of a ship. Thus prompted, the thought expressed by Ella Wheeler Wilcox in the first stanza of her poem, *The Winds of Fate*, strikes me as an appropriate one to leave with you at this time, and so I quote:

"One ship drives east and another drives west

With the self-same winds that blow,
'Tis the set of the sails and not the gales
Which tell us the way to go."

PMA Promotes "Family-Type Farm" Meetings—For What?

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, there is something suspicious about the "family-type farm" meetings that are being promoted by the Department of Agriculture and sponsored by local PMA officers in the rural communities. The farmers are not being fooled as to the purposes of these meetings; they agree that it is a political move on the part of the Democrats in preparation for the 1952 Presidential campaign.

Mr. Speaker in one of my finest counties—Rock—170 farmers assembled for one of these meetings, and to the consternation of the PMA officials they voted 82 to 23 against the PMA payment checks for doing "those things which are good farm practices anyway." A very pertinent editorial on the meeting was printed in the *Janesville Gazette*, and under leave to include it, I shall insert it at this point. Members who are interested in

the New Deal farm program will find it informative.

FARMERS VOTE NO HAND-OUTS

It is to the everlasting credit of farmers in this rich dairyland that they see the writing on the wall and will rise to turn away the hand-outs being fed out from Washington. At a mass meeting of 170 Rock County farmers Thursday night they voted 82 to 23 against the present PMA payment checks for doing those things which are good farm practices anyway.

It is inherent in the man who tills the soil that he defend his independence and protect his personal freedom, yet so many in the past 20 years have sought Government aid that they have lost much of that independence. Now, taking the manna from the great white father in Washington, for a considerable period, the practice has become habit and the habit is hard to break, despite the damage it is doing.

The farmer is like the small house builder. Having turned over his rights to Government agencies for loans he now finds that he must kowtow to Washington if he is to build a home. That is where the Government checks are signed.

Many farmers are questioning, "Why these mass meetings in every county in the Nation?" The Department of Agriculture has called them "mobilization" meetings. Its directive to the Production Marketing Administration (PMA) officials told them the meeting was called to learn how the PMA and other agricultural agency programs are serving the family-type farm and what farmers themselves could suggest to improve these programs.

First off, it was granted that 98 per cent of the farms are family-type farms. Thus the object appeared to simmer down to PMA effectiveness for all farmers in this area. After listening to descriptions of PMA programs for a sleepy 45 minutes, the farmers appeared to question the need for such a meeting.

They did not mention the fact that 1952 is a presidential year and that those county meetings all over the United States can have deep political significance, but the prodding of Government men here by independent thinkers indicates that farmers generally may be very critical of the present programs.

Farmers here have plenty of suggestions for the PMA and the other agencies. They don't want a theorist in Washington deciding long in advance what price shall be placed on their produce. They want soil conservation demonstrations, accurate information on marketing prospects, visible demand and carry-over, instead of misinformation on advance crop estimates, and so forth. They want an end to abuse of present practices, including incentive payments for lime, fertilizer, grass seed, and practices that are simply good farm procedure.

With few exceptions they favor continuation of soil conservation promotion, but it is gratifying to taxpayers to learn that dirt farmers recognize the abuse that is being made of most of the sensible aids in the conservation picture. Farmers report that some Government agents actually solicit their signatures on papers guaranteeing benefit payments.

Farmers do not have to call on agencies for contour planting surveys and engineering. If they happen by accident to plow around a hill instead of over it they may be eligible for benefit payments, according to one of the agency men present at the mass meeting.

The Janesville Gazette has consistently publicized the need for good soil practices and has aided wherever possible the cause of soil conservation. On the other hand, it opposes, and will continue to oppose, the hand-outs and abuses which cost the taxpayer needless millions in taxes.

Meanwhile, in view of the 1952 campaign, one might logically ask, Why the hundreds of mass meetings? Why this campaign of purported concern over the "family-type farm," which includes all but 2 percent of the farmers? What is the "family-type farm?"

What has the defunct Brannan plan to do with this picture? Or is there to be another name for the President's persistent pet?

Why this mystery? What is Brannan aiming at? PMA appears to be due for expansion as the over-all superimposed control organization of all agricultural agencies. Does this mean more or less of the wasteful duplication of costly services to the farmer?

Washington wants to know how PMA and the other agencies are doing. The PMA agents said they were asking opinions of the farmers which would be sent to Washington to be used as a basis for establishing policy.

But when asked what plan the Agriculture Department has for the "family-type farm," the PMA agents said there is none.

Thus the meeting became more or less a voicing of fears as to how PMA would use these opinions, protests that Rock County farmers do not need or want incentive payments, and demands for realistic aid in the way of accurate information, demonstrations of soil conservation, and more logical pricing of crops.

These are all sensible projects, but from what can be read between the lines, the meetings are more concerned with some new aids, or hand-outs, to the small "family-type farm" to encourage them further.

There are services needed from Government, but continuation of the kind of thinking spelled by the duplication of PMA and other agencies means simply more hand-outs, less freedom for the individual farmer, more control of methods, planning, and prices.

The Internal Security Act

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mr. McCARRAN. Mr. President, there was delivered by Hon. Hiram Bingham, Chairman of the Loyalty Review Board of the United States Civil Service Commission, an address before the general session of the section on criminal law of the American Bar Association, at the Waldorf-Astoria Hotel, in New York City, on Tuesday, September 18 of this year. Mr. Bingham's address is one of the finest that it has been my privilege to read. I think the address is worthy of earnest consideration and review by every Member of this body and every Member of the House of Representatives, and all the citizenry of the United States. I commend it highly to their reading, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The subject of this general session—The Protection of Individual Rights and Government Security in Times of Stress—covers a very broad field. The problem of insuring the safety of the United States Government and at the same time not infringing on the

Bill of Rights in the Constitution, as amended, is difficult.

The Congress has passed a number of acts relating to the control of subversive activities. The President has appointed a commission to study this particular subject. He has also created by Executive order the Loyalty Review Board, of which I have the honor to be chairman. We are not concerned with the affairs of any individual who is not in the Government service unless he is applying for admission to that service. We have nothing to do with the problems of the Subversive Activities Control Board which was created by the Congress with the passage of the McCarran Act in 1950. We are not concerned with registration of Communists, exclusion of undesirable aliens, outlawing the Communist Party, academic freedom, or the problem of administering rules to accomplish the maintaining of national security and individual freedom outside of the administration of the civil service. We are concerned with reviewing and adjudicating cases involving the loyalty of Government employees and applicants for appointment.

The Constitution of the United States, as amended, guarantees to the individual certain rights such as freedom of religion, freedom of speech, and the right to be secure against unreasonable searches and seizures, but it does not grant the right to hold a Government job. That is a privilege—not a right. The privilege is based on the power of the President and the heads of departments to appoint Government officials. The courts have decreed that the power to appoint is also the power to dismiss.

For nearly a century after the Government was established the power to dismiss was unrestricted and the privilege of holding office depended on the unrestricted pleasure of the President and the heads of departments. When the Republicans came into power in 1861 it was possible for President Lincoln to dismiss all employees of the Government, and it was necessary for him to spend many days, weeks, and months in considering the claims of those who wished to be appointed to Government jobs. When the Democrats came back in power with the election of Grover Cleveland, most Republican officeholders lost their jobs without being given any explanation for the change. In 1912 Congress passed the La Follette Act giving employees a legal right to receive a notification of charges which might lead to dismissal and the opportunity to answer those charges in writing, but a right to ask for a hearing.

The first time an ordinary individual secured that right was by the Executive order of March 1947 which established the Loyalty Review Board. This gives the individual charged with disloyalty the right to be heard by a panel of a departmental or agency board, the right to be accompanied by counsel or other representative, the right to appeal to the head of the department or agency from an adverse decision of the lower board, and finally the right to appeal to the Loyalty Review Board. It is our duty to see that the rights granted in the Executive order of March 1947 have not been denied to the individual. It is obvious that the Loyalty Review Board is concerned with the protection of very few individual rights.

It should also be borne in mind that the Loyalty Review Board is not concerned with crime. The individuals who come before it are not being tried in a court of law; they are not accused of treason or of any criminal act; they are being charged with conduct which brings into question their loyalty and the advisability of their being employed by the Government. If their record, their statements, and the manner in which they answer questions regarding their acts cause a panel of a loyalty board to have reasonable doubt of their loyalty, the President does not wish to have them employed by the Gov-

ernment. No employer wants an employee whom he cannot trust. It is vital in these times that the United States Government should not take any unnecessary chances on the devoted loyalty of its servants. On the other hand, we must try and carry on our operations without hurting individuals any more than is unavoidable.

To protect their interests as far as possible, it is provided that all hearings shall be conducted in private; that no reporters shall be present; that no one except the individual and his counsel and one witness shall be present at any one time; and that no publicity shall be given out regarding the results of any particular hearing. Occasionally, these rules have been infringed and for one reason or another stories have appeared in the public press. Since it is our practice to permit the individual and his counsel to have a transcript of the proceedings, there is no way in which we can prevent him from giving such matters to the press if he chooses to do so. There have been occasions where the counsel of the individual concerned has published a commentary on the proceedings, generally throwing as unfair a light as possible on what took place.

Our Government was set up to establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty. In order to assure that the blessings of liberty are provided for the individual citizens the Government must be strong and secure. The history of the contemporary world shows that nations devoted to communism do not protect the liberty of the individual citizens and that the subjects of such nations do not enjoy any of the blessings of liberty which are provided in the Bill of Rights of the United States Constitution. Consequently, it is the duty of the Government to do everything in its power to keep communism from securing a foothold in the United States.

Our Government cannot be blind to the technique followed by the Communists in endeavoring to get their members into public office where they can abstract information from official records that may be useful to Russia.

We know that such information has been obtained through agents of the Communist Party in public office or who had friends in office willing to be helpful. Members of Communist-front organizations are often quite naive or innocent persons who are blind to the real enemy interests they are serving by being obliging to their friends.

There is no question that the Government of the United States, the largest employer of free labor in the world, has the right to deny employment to any who may not be either necessary or desirable. It is obvious that the Government must be the sole judge as to whether or not an applicant for employment or one already in the service meets the required standards.

The first duty of the Civil Service Commission is to determine whether an applicant is suitable, trustworthy, competent, and reliable. The name of the individual is passed over to the Federal Bureau of Investigation to see whether there is any question of the individual's loyalty. Loyalty means something more than adherence; a loyal friend is one that will go the limit in friendly service. Loyalty means more than adherence; loyalty means devotion, willingness to sacrifice. Where there is reasonable doubt as to whether an individual will put his country above his personal interest his employment constitutes a potential danger to the security of the Government.

Under the direction of the President, the Attorney General has prepared a list of more than 100 organizations whose record has caused him to believe that they are subversive and not primarily loyal to the United

States Government. If the FBI finds that an individual has been a member of one or more of these organizations, it is its duty to institute a field investigation to find out as much as possible about the individual, his friends, and his activities. When the FBI has completed the investigation it does not pass upon it but delivers the results confidentially to the department or agency concerned with the applicant. It then becomes the duty of the Regional Loyalty Board or the agency concerned to examine the FBI report and determine whether it is serious enough to warrant further action. In that case, an interrogatory is prepared and sent to the individual concerned, asking pertinent questions which have arisen in a study of the results of the field investigation. The individual is asked to answer these questions within a reasonable period and under oath. If the answers do not appear to be satisfactory or if further investigation is believed to be necessary, the individual is asked to appear before a panel of the Board accompanied by an attorney or other representative and is invited to bring witnesses to substantiate his statements. Eventually he may appeal to the Loyalty Review Board. It then becomes my duty to appoint a panel to hear the case after it has been fully studied by one of my trained and experienced examiners. I appoint a panel of 3 from among the 25 members of the Loyalty Review Board who live in different places in the United States and who have been selected from among distinguished citizens in Boston, New York, Chicago, Denver, the Pacific Coast, the Territory of Hawaii, the North, the South, the East, and West. The panel tries to hold a hearing where it is most convenient for the individual involved. We furnish the panel with transcripts of all the testimony that has been taken and with the confidential reports from the FBI. We also furnish the panel with the results of a careful study of all this evidence made by the examiner and we endeavor to make it possible for him to sit with the panel during the hearing. The panel finally presents me with a signed statement of its decision. It then becomes my duty to inform the individual of this decision and also to inform the department or agency concerned with his employment or application. Every effort is made to keep the proceedings as private as possible. No one who applies for a job with a reputable organization likes to have it known if he fails. No one likes to have his loyalty called in question. Nevertheless, since the American Bar Association has already gone on record as believing that no one who was affiliated with the Communist Party should have the privilege of practicing law, you can certainly recognize the danger to the United States of permitting Communists or those associated with them to have the opportunity of working for the Government.

You may be interested in a bit of history.

In the early days of the Second World War when it became apparent that there would be a rapid increase in the number of civilians employed by the Government, President Franklin D. Roosevelt issued an Executive order authorizing the Civil Service Commission to adopt appropriate rules and regulations providing expressly for character investigation of the applicants.

Pursuant to this order, the Civil Service Commission adopted the war service regulations which became effective March 16, 1942. One of the sections provided that an applicant may be denied examination and an eligible be denied appointment if there were reasonable doubt as to his loyalty to the Government of the United States. The regulations also provided that reasonable doubt as to loyalty was sufficient cause for removal from the service.

Under these regulations, an employee named Friedman was held ineligible because there was reasonable doubt as to his loyalty. He appealed, hearings were held, and the Commission reaffirmed its determination that he was ineligible. Friedman appealed to the courts. The district court refused to interfere with the decision of the Civil Service Commission. Appeal was then taken to the circuit court which declared that the war service regulation which permits the removal from Federal service of one concerning whose loyalty to the Government the Civil Service Commission entertains a reasonable doubt undoubtedly was reasonable and proper, and the making of it was well within the scope of the authority conferred on the Commission. The Supreme Court upheld the decision of the circuit court.

By the time the war was over there had arisen a lack of uniformity in the application of the various laws and regulations. The Congress requested the President to study the matter and a commission was appointed to make recommendations. On the basis of these recommendations, the President, on March 21, 1947, issued Executive Order 9835 setting up a procedure for establishing loyalty boards in all Government departments and agencies, providing for the FBI to furnish them with pertinent material regarding employees and applicants, giving individuals the right to appeal from loyalty board decisions to the heads of departments or agencies, and giving a further right of appeal from such decisions to the Loyalty Review Board whose duty was also to provide rules and regulations for the loyalty investigations and the determination of eligibility for Government employment. The Attorney General was directed to prepare a list of subversive organizations, membership in which might constitute one of the reasons for the ineligibility of any given individual.

The standard for ineligibility was changed from that of the war service regulations of 1942 and made to depend on reasonable grounds to believe that an individual is now disloyal. This standard has been recently changed by Executive Order 10241 dated April 28, 1951, which restores the old standard of 1942.

One of the first cases to receive public attention under Executive Order 9835 was that of Miss Dorothy Bailey in which the circuit court upheld the *modus operandi* of the Loyalty Review Board. Not long ago the Supreme Court refused to overrule the action of the circuit court.

Miss Bailey was denied employment because Government officials found reasonable grounds to believe her disloyal. She was not given a trial in any sense of the word and she does not know who informed upon her. Her situation has appealed powerfully to the American sense of what is fair, and aroused the sympathy of some editors and commentators.

However, the Constitution places upon the President and the Congress responsibility for the welfare of our country. Furthermore, the circuit court pointed out that we are now "in an adversary position to a government whose most successful recent method of contest is the infiltration of a government service by its sympathizers." This justifies the President's Executive order.

The essence of Miss Bailey's complaint is that she was denied employment without revelation by the Government of the names of those who informed against her and of the method by which her activities were detected. Concerning this, the court said: "Even in normal times and as a matter of ordinary internal operation, the ability, integrity, and loyalty of purely executive employees is exclusively for the executive branch of the Government to

determine, except insofar as the Congress has a constitutional voice in the matter. All such employees hold office at the pleasure of the appointing authority; again except only for statutory limitations. Never in our history, even under the terms of the Lloyd-La Follette Act has a Government employee been entitled as of right to the sort of hearing Miss Bailey demands in respect to dismissal from office. These well-established principles give perspective to the present problem."

Appellant did not get a trial in the judicial sense, "but," says the court "the question is not whether she had a trial, the question is whether she should have had one" * * * "We are dealing with a major clash between individual and public interests. We must ascertain with precision whether individual rights are involved, and we must then weigh the sum of those rights, if there be any, against the inextinguishable necessities of the Government." This, as a matter of fact, is what concerns this session this morning.

Let me quote further from the majority opinion of the circuit court. Justice Prettyman said: "Never in our history has a Government administrative employee been entitled to a hearing of the quasi-judicial type upon his dismissal from Government service. That record of a hundred and sixty years of Government administration is the sort of history which speaks with great force. It is pertinent to repeat in this connection with the Lloyd-La Follette Act, sponsored and enacted by advocates of a merit classified Government service, expressly denies the right to such a hearing. Moreover, in the acute and sometimes bitter historic 100-year contest over the wholesale summary dismissal of Government employees, there seems never to have been a claim that, absent congressional limitation, the President was without constitutional power to dismiss without notice, hearing, or evidence, except for the question as to officials appointed with the advice and consent of the Senate."

One of the best results of the loyalty program has been to discourage Communist sympathizers from trying to get Government jobs. In this time of stress and potential infiltration of Russian agents, we are justified in taking every precaution to protect our safety and security.

There has been considerable misrepresentation of the way in which the President's loyalty program has worked. Some critics have stated that college students are afraid to attend speeches made by well-known Communists and are afraid to join organizations of an extreme or radical nature.

Let me take this opportunity to say that, so far as I am aware, no one has been branded as disloyal or rated ineligible for Government employment simply because when he was in college he joined a radical organization or expressed radical opinion in debate. We all know cases of young men who joined organizations in college which have appeared to us to be more or less unpatriotic and tinged with disloyalty, but who, when they were a little older and wiser and had become informed as to the nature of the organization, had ceased to take any active part or interest in it.

The Loyalty Review Board has carefully followed the opinion of the Attorney General that it is only when membership in a questionable or subversive organization is clearly an informed membership and also an active membership that the weight of evidence is likely to be conclusive in raising reasonable doubt of the individual's loyalty. After a man has graduated from college and is seeking a Government job, it is fair to assume that his active membership in a

subversive organization is an informed membership.

After graduating from college an individual may be presumed to be intelligent enough to understand what he is doing. If he is then taking an active part in an organization that is affiliated with the Communist Party, there can be a very reasonable doubt as to his loyalty to the Government of the United States. The advisability of permitting him to have Government employment is very dubious.

The National Federation of Federal Employees has given its full support to our program. Its president has gone on record as approving our standard. The vast majority of Government employees know they have nothing to fear.

By discouraging Communists and Communist sympathizers from applying for Government jobs and by excluding from the Government service a considerable number of undesirables, the President's loyalty program has promoted the security of the Government in this time of stress without trampling on the rights of individuals. It has, for the first time in our history, made it possible for Government employees and applicants for Government positions to have at least two hearings before carefully selected panels while being attended themselves by attorneys or representatives of their choosing. The privilege of working for the Government has not been denied to its citizens unless a panel of impartial members of loyalty boards, after giving them a chance to be heard and to present fully their side of the case, has decided the question of eligibility and found the individual ineligible for that privilege.

In conclusion, let me once more remind you that the subject of this general session—The Protection of Individual Rights and Government Security in Times of Stress—covers a very broad field, most of which has nothing to do with the Loyalty Review Board because that Board is not concerned with the rights of any individual who is not in the Government service unless he is applying for admission to that service. The Loyalty Review Board is only concerned with the protection of those rights which have been granted to individuals by acts of Congress and Executive orders relating to the privilege of working for the Government.

Rt. Rev. Cornelius T. H. Sherlock

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News of Tuesday, September 18, 1951:

MONSIGNOR SHERLOCK IN INSPIRING SERMON
AT ANNUAL HOLY HOUR

The complete text of the inspiring sermon presented by Rt. Rev. Cornelius T. H. Sherlock, archdiocesan superintendent of schools and former curate at St. Mary's Church, at the annual holy hour of the Society of St. Vincent de Paul in the Archdiocese of Boston, held Sunday in St. Mary's Church, is printed below.

The entire discourse is being printed in today's Telegram-News because of the unusual complimentary comments made by hundreds who heard the former St. Mary's curate pre-

sent the talk at the holy hour in observance of Ozanam Sunday.

Monsignor Sherlock conducted the holy hour, the intention of which was to ask God's blessing on the efforts of all Vincentians throughout the world and to pray for the beatification of Frederic Ozanam, founder of St. Vincent de Paul Society.

In his talk Monsignor Sherlock told Vincentians that in view of the dwelling of God within their souls, they should strive to make more vivid and clear the meaning of this doctrine in their daily lives.

The complete text follows:

"Know you not that you are the temple of God, and that the Spirit of God dwelleth in you?" (I Corinthians iii. 16.)

"At this moment we are in the middle of one of the more precious hours of our lives. Our days are crowded with the demands of living. Business, the concerns of home, the demands of those projects in which we are engaged, the very exactions of our recreations, make thinking difficult while prayer and meditation take on the semblance of the impossible. This afternoon, despite the claims upon us, we have come together in this beautiful place to pause awhile, to adore God in the Blessed Sacrament and to meditate a little. We see the discrepancies between our actual lives and the pattern set for us by our Lord and Saviour Jesus Christ, and with resolution, and at least some confidence, we set ourselves to the task of making our lives conform more closely with the will of God.

"We come together also as men with a great tradition and, in a reminiscent mood, we trace our lineage back to a brilliant figure of a century ago whose zeal with tolerance, whose brilliance with understanding, whose enthusiasm, erudition, eloquence, and exactness were the handmaidens of goodness and sanctity. In the midst of our meditation we pray that the Church may, one day soon, recognize, with the splendor of beatification, the founder of our society, Antoine-Frederic Ozanam.

"The text I chose, that likens us to temples and that bluntly says that God dwells within us, is an ancient text. It claims the same antiquity as all those other quotations from St. Paul that we know and love so well and yet the words have a challenging ring. The sentence says so much that we stagger a little under its impact. We tend, in our lack of realism, to think of God at a distance yet St. Paul makes our heart a home and puts God there as its rightful tenant.

"Years ago, when we were much younger, we were bothered by a catechism question that caused our fancies to leap into images of God moving through the atmosphere around us. We were asked where God was. And with brevity that was accurate, and yet never quite satisfying, we learned to answer "God is everywhere." We thought of the mills and factories where our fathers worked and said "God is there." We thought of the streets and passageways of our city or town and said "God is there, too." We thought of fields where we played, the rivers where we swam, the air where only birds could make their way. We let our imaginations run out among the planets, through the distant vistas of sun-drenched days and the star-lit distances of mysterious nights and said, "There is no place on sea or land, in earth or in heaven but He is there."

"And yet we said 'God seems so different in different places.' We recognized that God had different ways of being. We said, in our own way, that God really was different in heaven. Throughout these limitless spaces that we knew imperfectly we felt that God was present by His power and by the things He did. His power kept us alive. His direction kept the stars in their courses.

But somehow we knew that in Heaven God's presence must be different. We made our way to the parish church and said, as we genuflected before the Tabernacle, 'God is here in a special way, veiled by the appearance of bread, but,' and we pretend the word was accurate, 'more real.'

"We saw a great difference in the way God existed. The presence that we recognized when we said 'God is everywhere' was true but a little vague. But when we said 'God is in the Blessed Sacrament,' or 'Some day I shall see God face to face in Heaven' we thought of God more intimately, as one more 'special' and, for ourselves at least, more 'real.'

"St. Paul, however, adds to our knowledge one more point. He tells us, in many ways, 'God has a special residence in the souls of those who love Him.' This is no mere figure of speech. It is not a poetic expression for some parallel truth, no 'symbol' of a spiritual condition. This Pauline doctrine is a simple truth whose implications and consequences are infinite. When we think of ourselves in the words of the text as 'Temples of God' when we repeat the words the 'Spirit of God dwells within us,' we are talking literally. What we mean is that the God whose power is responsible for the exquisite perfection of flowers and birds, whose intellect designed the rugged grandeur of the mountains and the restless movement of the sea, whose omnipotence is suggested by the far reaches of the universe, the immeasurable masses and unimaginable distances of stars—and galaxies of stars, God who sent His Divine Son from Heaven to die on a cross for our sins, this God, of Heaven and of Earth, sets up His throne within our hearts, if we but love Him.

"It is of some value to take up a few ideas, now old to us, we have been hearing them so long, and see how they look in the light of this doctrine of the indwelling of God in our souls. Let us look for a few minutes at the Sacrament of Baptism.

"We know that, on a definite day in our lives, we were brought to the church and there, in the presence of certain people called sponsors, the priest poured water on our forehead, said some words from a sacramental formula, and a tremendous change took place. We have been accustomed to thinking of this as a washing process, and indeed, so it was. The age-old figure used to explain what happened likened the soul to a garment, soiled and grimy because of original sin. When the priest poured the water and said the words 'I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost,' the soul was purified, cleaned, washed. The garment, up to now dark and dirty, was washed whiter than snow, to remain clear and spotless until, at some later date, we might stain it again by deliberate actual sin. The figure is a good one and remains in our memory for these many years.

"Actually, however, a more wonderful thing occurred. When, as tiny infants, we were brought to the church for baptism, our soul was an empty house. Due to a sin committed by our first parents and transmitted from generation to generation, the Creator of heaven and earth was, as it were, excluded from a rightful home. Just as surely as the Christ Child was shut out of the unfriendly inn at Bethlehem on the first Christmas night, so, when we were born, God was excluded from our souls by original sin. Baptism was the opening of the door that God might literally come in. More than that the Sacrament of Baptism was God moving into our souls to live there, through the years, so long as we would have Him.

"Sin, venial and mortal, takes on added meaning when we look at it with the eyes of St. Paul. Instead of thinking of sin as a blot

or, in the case of mortal sin, a total blackening of a white soul, sin becomes an action which directly affects God. Considering ourselves in a state of grace, venial sin becomes a pushing of God part way out of our souls. Never rejecting God entirely, venial sin lessens His presence in our soul. So it is that continuous venial sin never actually empties the soul of God, but can so decrease His presence there that we may picture ourselves as all but empty, a mere tenuous divinity occupying the spiritual space that should be bursting with God, His love, and His goodness. This presence of God within us is the very life of the soul and, in times of stress, its very stamina. So it is that we can picture the habitual sinner, whose sins are slight, as weakening himself so that in the face of temptation he lacks the strength actually in mortal sin. With mortal sin, we have not the mere blackening of the soul but rather the emptying of it, driving God out, leaving the soul an empty house, the most desolate sight in the world of the flesh or of the spirit.

"At this point I would pause awhile and suggest that you sum up in your minds what we have said thus far, that God lives within us in a special way, that at this moment, thinking of ourselves as individuals, God has set up a special residence within my heart, that I am never without Him, while I am in a state of grace; that He entered my soul at baptism, to remain here until I should deliberately eject Him by mortal sin; that He awaits the day when He may return at my nod of penance and contrition.

"In view of the doctrine of the dwelling of God within our souls, we should strive to make more vivid and clear the meaning of this doctrine in our daily lives. In the first conference we concluded on a solemn note, the note of sin and hoped-for sorrow.

"When we look upon the other side of this picture, when we examine the man who tries to live a holy life, the doctrine gives glorious meaning to our devotions and acts of virtue. The buoyancy that is characteristic of those who have made a good confession, is really a patent symptom of a great spiritual event. The man who, after serious sin, has unlocked the doors of his soul through penance, and has brought God back into his soul, cannot help but reflect this change from night to day, from vacuity to fullness, in the cast of his countenance and the spring of his step. God has returned home, home to this soul.

"So with the man who day by day, in his business, his leisure, his civic association, and his home life, strives to do good deeds and follow the laws and counsels of his church, he finds himself housing more and more of God. The figure fails when we think of God quantitatively, but the point is true that high saintliness consists in increasing God's presence in our souls by constantly increasing acts of virtue and sound devotion.

"I have often wondered how we might be brought to understand the reality of this doctrine more than we do. Forgetting yourself I suggest that you think of people about you in this beautiful church here today. What you are compelled to say is this: 'If the man next to me is in the state of grace, if he is free of serious sin, then God is in his soul. God is there in his soul, a few inches away from my elbow, not just in the sense in which God is everywhere, but in a special way, somewhat analogous to the way in which God resides in the blessed sacrament. When this man next to me goes out of this church this afternoon he will carry God with him along the streets of the city. God will enter his home with him when he climbs the steps and opens the door. God will be within him, in this special way, when he tells his wife about the devotions tonight. Tomorrow when he goes to work, he will be carrying God with him on the bus or the train. God will enter

with him into his office or factory. If my neighbor is a surgeon he will bring God with him to meet the patient and the nurses in the operating room. If my neighbor is a policeman God will walk the lonely streets of the city with him during the dreary hours of early morning. If the man next to me is a teacher, God will be within him as he works with children and youth in the classroom. If he is involved in the civic life of the city he will be bringing God to assist in every transaction of his busy day.'

"And this again is no pious figure. It is the literal truth because he is a temple of God, a bearer of the Holy Spirit.

"This living of God within us is so real that you would be logical, if not conventional, to genuflect before this neighbor of yours, not worshipping the man who sits beside you, but rather, adoring the God who has chosen to live within him at a tabernacle of the most high.

"When we read the history of the beginning of the church, like many another commentator through the centuries, we are astonished at what we see.

"There were a few unimportant people, a tax collector, a doctor, and a group of fishermen who gathered about a Leader in an obscure part of a Roman province in the Near East. In three centuries, a very brief time in the light of history, their religion had become the official cult of the Roman Empire, the greatest empire that had existed up to that time. Historians, with only historical learning, have said that this fact was the most impressive evidence of the church's divinity. The fact seems astounding.

"And yet in the light of this doctrine of God within us, does it seem so amazing? If you think of the first little group cherishing God in their hearts, moving through the lands that form the Mediterranean Basin, carrying God from house to house, from town to town, allowing God to speak through their tongues and through the examples of their daily lives, it is not too surprising that the religion of the empire changed from paganism to Christianity in so short a time. On the contrary, recognizing the doctrine of the indwelling, it may seem strange that the transition took so long. These saints of old did not live of themselves. They could say with St. Paul 'I live, now not I; but Christ liveth in me.'

"There is a point that follows from what we have been saying and which we must not pass over lightly. There is an old philosophical postulate that says, 'operation follows essence.' What this means is that you can tell the nature of a thing or of a person by watching how it or he behaves. Our Lord expressed it when He said you can't gather grapes from thorns or figs from thistles. We advert to this principle when we say that we expected a man to act the way he did. He was an honorable man inside, consequently he spoke with forthrightness and honesty. His operations or conduct agreed with what he was like inside.

"So it is in this matter of the indwelling. If God is within us, if we strive to be good, to increase God in our souls, then our lives must reflect that fact. The example we give to those around us is an immeasurable force, constantly moving men nearer to God or away from Him. From day to day, in the office or in the barber shop, in the factory or on the golf links, wherever we may be, we are influencing people for better or for worse. For the most part this influence is unconscious on our part. I have known a man whose whole life was changed from less than mediocrity to sainthood because of the example of a small group of children. The children are grown men and women today and yet they have no idea of the grace their example was to this older man. And they

will never know it until one day they are told it by God Himself in their own particular judgment.

"Having God in one's soul, and then living the life consistent with having God in one's soul, is our way of cooperating with God to extend His kingdom on earth. People must be better for having known us. In fact, God must enter the souls of others because we are literally God-bearers who have brought God in our souls to others. "Our own lives change miraculously if we appreciate this doctrine. I shall never be alone again. If I am marooned in the most remote wilderness I may have God with me. I need not say 'Oh, if I could only get to a church to pray close to God'.

"I need talk with no distant power but rather look within myself and find the Creator of all things there within me.

"If I face a crisis in my life, in business or in matters of the soul, I never face it alone. If I am confronted by temptation, God comes with me up to the very point where I make my decision. If I choose the temptation and the matter is serious then God leaves because I pushed Him out. If I choose the right, God remains within me, and His presence is greater than before. If the actual grace to do good is before me God within my heart helps me to increase the virtue of the deed.

"If I have been able to stir up in your minds some realization of the importance of this fact that God dwells within us, I shall be very happy. For this knowledge will affect your lives as little else can and your lives being changed, the world about you must necessarily change, too. It is a truism to say, 'You can change the world,' provided God moves with you through the highways and byways of tomorrow, seeking those for whom He died, teaching and exhorting through the example of your own Christian lives. God Himself hath said it: 'You are the temple of the living God—I will dwell in you and walk among you; and I will be your God, and you shall be my people.'"

Rural Electrification

EXTENSION OF REMARKS OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the Record, I include an address I gave to the annual meeting of the Crawford Electric Cooperative held in Bourbon, Mo., on Friday, September 7, 1951:

It is a pleasure and a privilege to meet here today with the Crawford Electric Cooperative. This annual meeting provides an excellent opportunity to take stock of what your group, the REA, and the Southwestern Power Administration have accomplished in making available electric power to millions of families previously unserved with this vital power, and it is also a good time to take a look at what remains to be done and make plans for future action.

All of you have certainly heard it said many, many times that we live in an age of electricity. This is a truism that we take for granted. We can scarcely imagine the chaos, confusion, and disaster that would result were our people suddenly to be deprived of this vital source of light, heat, and power. It is hard to believe that the incandescent electric lamp was invented only 72 years ago and that the first electric station to supply

light and power—the famous Pearl Street station in New York—started operation less than 70 years ago.

The demand for electricity has grown constantly since that date. No other source of light is even considered for modern illumination. The use of electricity for cooking has become commonplace over the last few years. More and more household appliances run by electricity are being used in American homes. American industry is constantly finding new applications for electricity and is steadily increasing its consumption. Many modern industrial processes, such as production of aluminum, would be impossible without large amounts of electric power.

This growth of the use of electricity in the past 70 years is truly phenomenal. But it should be recalled that up to 15 years ago the farmers of the Nation were almost completely bypassed in the applications of electricity. What was commonplace for many city dwellers in the way of electric appliances—lamps and tools—was unknown to the great majority of farm families who could only envy their city cousins. Light for rural families was furnished most often by kerosene lamps and lanterns. You and I well recall how they were often smoky, smelly, and a real fire hazard, particularly when set down in a barn filled with hay. All milking had to be done by hand. The hand pump, the broom, mop, and dustpan were the implements used by the farm wife to try to keep her home clean. If food was to be kept, it had to be canned; much food, indeed, was wasted for lack of refrigeration.

Such was the picture for the great majority of farms before 1935. Up until 1925 only 3 percent of all farms received the benefit of electricity. By 1935, still only 11 percent of the farms were electrified. The slow development of electrification in rural areas up to that point was due largely to the high cost charged for line construction for extension of electric power into the country, and the high rates charged to the farmers. As would be expected, private companies constructed only those lines which would be most profitable to them. The result was that, in 1935, 89 out of every 100 farms were beyond the reach of power lines. Those that had electricity found the cost distressingly high.

The change in rural living that has occurred since 1935 is astounding. While 15 years ago 89 farms out of every 100 were without electricity, today the percentage is almost exactly reversed. Nearly 90 farms out of every 100 do have electricity. Only some 10 percent of American farms still are without this great source of light and power. The annual survey of the REA on the number of farms that are electrified indicated that on June 30, 1950, a little more than a year ago, over 5,000,000 United States farms were receiving central-station service. Since then, rural electrification has kept growing. Today there are only about 800,000 farms remaining to be electrified.

From 1935 and the beginning of the REA program, more than 4,500,000 farms have received central-station service. More than half of these have obtained their electric current since the close of World War II. Nearly 60 percent of these 4,500,000 farms have received their electricity as a result of the REA program.

Every year finds new uses for electricity on the farm. More and more chores are made easier by electric power. Electric milking machines, churns, cream separators, brooders, feed grinders, wood saws, insect sprayers—these are but a few of the pieces of equipment that have become commonplace on the modern American farm. The work of the home is equally lightened by electric water pumps, refrigerators, vacuum cleaners, washing machines, and electric stoves.

In Missouri, over 70 percent of all farms are electrified. This is less than the na-

tional average but more than that of our neighboring States of Nebraska, Kansas, and Oklahoma. The challenge now is to electrify the remaining farms. With the fine example of such groups as the Crawford Electric Co-op as a guide, there is little doubt that it will be done.

What has brought about this remarkable development of rural electrification over the past 15 years? To understand this, we should look briefly at the history of the REA, one of the most successful examples of cooperative endeavor known to us.

REA was first established in 1935, first as a part of the work-relief program. It was soon discovered, however, that delays involved in starting the program, and the technical obstacles of a major electrification program made it impractical as a work-relief measure. By changing REA from a work-relief agency to a loan agency, which was done in August 1935, a much more useful and extensive electrification program could be carried out. This action established promotion of rural electrification as an orderly lending program on an interest-bearing, self-liquidating basis.

That in the beginning the program was opposed by many private power interests can be readily understood. They were not ignored, however, in the formulation of the REA program. In fact, before the program was started there had been an informal conference with representatives of commercial electric companies. These companies appointed a special committee to make a survey of the extent to which further development of rural electrification might be brought about promptly in cooperation with REA. Their report, released on July 24, 1935, suggested that there were few farms requiring electricity that were not being served—this at a time when 89 percent of American farms were without electric power—and that any additional rural customers must come largely from those using electricity for household purposes. This industry report suggested the expenditure of \$100,000,000 of Federal funds for the construction of 78,000 miles of new lines for 351,000 customers. It was also proposed that REA and other Federal agencies provide \$124,000,000 worth of credit to customers for wiring, electrical appliances, and service extensions to be paid for by the customers. Little attention was paid to rates in this report.

The REA itself took a broader view of its function. It saw its duty to be in the direction of making low-cost power available to the largest possible number of rural consumers. Thus it rejected the industry program as being too limited and not giving sufficient attention to low costs to the consumers. It concentrated on farmer organizations, municipalities, and consumer non-profit organizations as borrowers for the construction of power lines and facilities.

This procedure was supported by Congress. In 1936 REA was established as a positive 10-year program of promoting rural electrification by lending funds for the construction of rural electric systems. In 1944 REA was continued as a permanent agency.

REA serves principally as a banker to its borrowers. It operates no facilities and grants no subsidies. Its loans are repaid from the income of its borrowers. These borrowing organizations are locally owned and managed. Of course, there has been no intention to make the REA program a profit-making proposition. Its main objective has always been to extend electric service to farm families who had hitherto been without it. To this end, in addition to its lending function, the REA does give technical advice when needed in the operation of the borrower's facilities.

Let us examine the accomplishments of the REA a little more closely. By July of this year, REA had advanced a total of over \$1,827,000,000 to its borrowers. At the same time the borrowers had returned to the Gov-

ernment about \$298,000,000 in principal and interest payments. Of this amount, over \$33,000,000 represents payments made ahead of schedule. Only a single foreclosure has been made on the property of a borrower in the 16 years of REA's existence. It is significant that this one failure, which occurred at Ocooke Island in North Carolina over 10 years ago, was of a commercial company and not a co-op. The failure came as a result of storm damage which destroyed the company's facilities and the failure of the company to take any action to reestablish itself. The project has since been taken over and is being successfully operated by a rural cooperative.

Authorizations for loans have been approved for a total of nearly \$2,500,000,000 to over 1,000 borrowers. Ninety-two percent of these borrowers are cooperatives. These borrowers now have rural electrical facilities in operation which include 1,100,000 miles of line serving about 3,500,000 farms in 48 States. In Missouri, the 49 REA borrowers, all but one of which are co-ops, operate some 56,000 miles of line and serve some 182,000 farms. Of this Missouri total, the Crawford Electric Cooperative is operating over 1,500 miles of line serving over 4,000 rural consumers, and your recent plans for expansion will increase this to nearly 2,000 miles of line and service to over 5,000 consumers.

Thus far over 80 percent of the loans approved by the REA have been for electric distribution facilities, rather than for generation or transmission. It has been the policy of the REA to lend for generation and transmission facilities only when borrowers are unable to secure an adequate supply of power at a sufficiently low rate, or when a saving would result. Only 18 percent of loans have been made for this purpose.

The REA program has been so successful that it has served as a stimulus for the spread of private power to rural areas. Indeed, while about 2,700,000 farms have received electric power as a result of the REA program, a goodly 1,800,000 farm families have received electricity for the first time during these 15 years from private power. This is a far cry from the meager estimate of 351,000 potential additional rural customers made by private power companies back in 1935.

Why has the REA program been so signally successful? I should like to suggest three basic reasons. First, REA-financed cooperatives operate on a nonprofit basis. This enables them to provide electric service at cost to their members. Secondly, directors of REA-financed cooperatives are elected because of their known interest in making electric service available to rural people at reasonable rates. They service without compensation and keep operating expense at the lowest possible level consistent with good service. Thirdly, members of REA-financed cooperatives are also interested in keeping costs at a minimum. For example, they help reduce operating expense by voluntarily reporting potential causes of service interruptions such as tree limbs touching the lines. Most of them read their own meters, and many make out their own bills.

While the REA is the outstanding example of the extension of electric power to millions of our citizens as a direct consequence of conscious public policy, it is by no means the only case where the Federal Government has been concerned with the extension of electric power, as you no doubt are well aware. We need only think of the Tennessee Valley Authority, the Bonneville Power Administration, Grand Coulee, and Hoover Dam to know the contribution which Federal power projects have made. Of the total production of electrical energy in the United States, some 300,000,000 kilowatt hours in 1950, about 40,000,000,000 were derived from Federal projects, with another 20,000,000,000 from other publicly owned generating plants. This is 20 percent of the total.

In addition to the REA, one Federal power agency that is of particular importance to this area is the Southwestern Power Administration, an agency of the Interior Department. The Southwestern Power Administration is the marketing agent for electric power and energy generated at the reservoir projects of the Army Corps of Engineers in Arkansas, Louisiana, Kansas, and Missouri south of the Missouri River, and Texas and Oklahoma north of the San Antonio River.

The commendable objective of the Southwestern Power Administration has been stated as follows: "To encourage the most widespread use of the surplus electric power and energy generated at the reservoir projects in the area at the lowest possible rates to consumers consistent with sound business principles." To this end its program includes the negotiation of power sales contracts with Federal agencies, public bodies, rural electric co-ops, and, it should be particularly noted, privately owned companies. Its program also includes the construction of transmission lines, substations, and related facilities to insure and maintain reliable service to customers. At present SPA has three projects which in 1950 generated a total of 417,000,000 kilowatt-hours with sales totaling \$2,307,000. Ninety-three percent of the sales were to 4 private-utility companies and 7 percent to 8 rural electric co-ops and one municipality.

Public and private power interests can work together, although as you know by your own experience, private power has shown little willingness to cooperate in Missouri. One notable event that demonstrates the possibility and effectiveness of cooperation was the contract signed in July 1950 between the SPA and two Oklahoma private utilities for integration and interconnection of facilities. Under this 20-year contract, the utilities will distribute SPA power to Federal preference customers, namely, rural co-ops and municipal and other Government installations.

It should be recognized that the REA in itself is a good example of the way in which public and private power interests merge. The borrowers of REA funds are not Government agencies. And their entire equipment—electric wire, meters, transformers and all—are privately owned. REA itself does not own, operate, or control a single piece of electric equipment. As many persons have noted, private enterprise is flourishing under the REA program. For example, REA co-ops in 1950 paid out about \$35,000,000 for power purchased from commercial utilities in order to serve their farmer consumers. More than 60 percent of the power purchased from suppliers other than REA borrowers was obtained from commercial companies, and the remainder from public agencies. This proportion supplied by commercial companies has grown steadily in the years since the end of World War II. REA co-ops are indeed good customers of the private utilities.

In fact one of the most serious problems facing the REA borrowers today is how to get enough power to meet the ever-growing demands of their farmer customers. The demand for power on the farm has increased by leaps and bounds. For example, in the year 1949, the average farm connected to REA-financed system used 1,608 kilowatt-hours, compared to an average of 600 in 1941.

The entire country is facing a power shortage and the farmer is sharing the shortage. A survey made about a year ago showed that 22 percent of the REA co-ops did not then have enough power to meet their current needs, and another 26 percent reported that they did not have enough power in sight to meet their anticipated growth. This lack of power sources is a continuing threat to the progress of rural electrification. In fact, the 1950 report of the REA points out that growth of consumption and extension of

rural lines have been actually retarded here in Missouri as well as in Minnesota, Utah, and the Dakotas, due to inadequate power supplies.

Missouri co-ops are facing power shortages, and if the power to satisfy the growing needs of Crawford Electric and other co-ops is to be available, it will be essential that the present plans of the Sho-Mo Power Cooperative, which serves you, be carried out. These plans call for construction of an interconnecting transmission system which will make available low-cost power from the Government's Norfolk Dam in Arkansas, and from the Central Electric Power Cooperative, of Linn., Mo., of which Sho-Mo is a member. In order to get full benefit from the hydro-steam combination and from the transmission line interconnections, a lease-operating agreement has been worked out with the SPA. The SPA has agreed to operate and maintain the new transmission grid at a rental sufficient to amortize the loan. If the system can be completed as planned and the SPA agreement carried out, substantial savings in power costs will result for Crawford Electric and other co-ops.

To provide for Missouri's growing power needs, it is also essential that the SPA's program for transmission lines known as the western Missouri project be completed. This program was attacked in Congress on the grounds that the proposed lines were duplications and that the area was already adequately served. Obviously neither of these contentions are supported by the facts. The area does need additional facilities and also desperately needs a dependable source of electric energy at a reasonable cost. Despite my vigorous opposition, an amendment was adopted by the House of Representatives denying the use of funds for the completion of this project. Fortunately, this crippling amendment was rejected in the Senate and has been eliminated by the conference committee report of the bill. However, the \$1,500,000 requested to complete this project have been reduced to \$810,600. At this point, it is difficult to determine how much this drastic reduction will delay final completion of the western Missouri project.

The various electrification programs in which the Federal Government has taken part have done a great deal to strengthen the American economy, particularly, as we have seen here, American agriculture. Electricity has increased productivity tremendously. From 1935 to 1948, the index of gross production per farm worker, for example, shot up from 95 to 152, or 60 percent, an average increase of more than 4 percent per year. During the same period the manufacturing and mining index per worker rose from 93 to 121, or 30 percent. A large part of this increase must certainly be attributed to the increased availability of electric power. There are now literally hundreds of uses of electricity on the farm, only a few of which I have mentioned. Not only has electrification made farm operation more efficient, it has often resulted in better food products and more sanitary conditions. Nowhere is this more in evidence than in the dairy industry, which has benefited enormously from electrical milking machines, feed processors, butter- and cheese-making machinery, and efficient refrigeration.

The increased use of electricity due to public and cooperative power projects has done more than increase the productivity of electric power consumers. Its benefits have been far reaching. Farmers' income and wealth have been increased. The purchase of countless electric appliances, tools, and other equipment has been a boon to small-town merchants and farm-supply stores, and to manufacturers and distributors of these items as well. Little wonder that REA has received such widespread support.

The problem of rural electrification is not yet completely solved. The farms and homes not yet electrified are in many instances difficult to reach, in isolated areas. Even more remains to be done in bringing telephones to rural Missouri. The 1950 census indicated that 46.4 percent of the farms in Missouri have telephones, but in the Eighth Congressional District, only 6,675 farms, or 25 percent, had telephones at that time. REA has been authorized to undertake a rural telephone loan program to meet the great need of rural people for adequate telephone service only since 1949. But already the program is well under way and it is so be hoped that it will prove as quickly successful as the electric power program. By July of this year, three telephone loan applications have been approved in Missouri. These projects will provide telephone service to 1,700 new subscribers and improved service to over 1,600 present subscribers.

If public power agencies, cooperatives, and private utilities all work toward the goal of assuring all Americans access to reliable electric energy, there can be little doubt that this goal can be achieved in the not too distant future. Not only must electricity be spread to the more remote regions of our land, we must also make sure that the power capacity be increased sufficiently to meet not only the growing demands for electricity from well-established and new consumers alike, but also to meet the extra demands of a high-level national defense program. This demand for electricity requires the contribution of private and public power agencies alike. Together they can furnish the power needed for a sound American economy and a strong American defense.

The Key To Peace of Soul

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the Guest Editorial from the Hartford Times of September 18, written by His Excellency, the bishop of Connecticut, the Most Reverend Henry J. O'Brien.

Bishop O'Brien has known Connecticut intimately since childhood. He has not only an eloquent appreciation of its natural beauties but an objective view of its industrial life as it should be assessed against the greater panorama of man's overriding needs in today's material world. In this moving essay he reminds us, as we need each day to be reminded, that "the key to peace is the invention of God."

Mr. President, here is a thoughtful and important piece of writing that I feel should be carried far beyond Connecticut and shared among all Americans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GUEST EDITORIAL

(By the Most Reverend Henry J. O'Brien)

(Bishop O'Brien was born in New Haven and is the second Connecticut-born man to head the diocese of Hartford. He was graduated from St. Thomas' Seminary, took philosophical studies at St. Bernard's Seminary in Rochester, N. Y., and studied the-

ology at the American College in Louvain, Belgium. He was ordained there in 1923 by the late Cardinal Mercier. He was assigned to St. Mary's Church in Windsor Locks and later to St. Thomas' Seminary and became its president in 1934. In 1940 he was made auxiliary bishop. He was named bishop by Pope Pius XII, April 17, 1945, succeeding the late Bishop Maurice F. McAuliffe.)

THE KEY TO PEACE OF SOUL

Mark Twain once wrote what was intended as a bitter satire on the ignorance and superstition of the so-called Dark Ages. By the device of transplanting a Connecticut Yankee to King Arthur's court and having him bring the blessings of modern industrialism to the benighted England of the sixth century, he placed in violent contrast the supposed light and glory of the machine age and the alleged darkness and degradation of an age of faith. It was an amusing book, not particularly well based historically, but undoubtedly expressing the sincere views of the great American humorist who was an adopted son of the Nutmeg State.

Would Mark Twain change his opinions today? When he wrote A Connecticut Yankee in King Arthur's Court, it was still believed in superior intellectual circles that the human race, fortified by the discoveries of science, had entered upon an era of steady progress upward. The earthly paradise was at hand, delayed only by such hampering relics of the past as supernatural religion and faith in God. The god of the machine, the god of physics and chemistry and electrical research, would solve all problems. In a little while, there would be everlasting peace and joy upon the face of the earth. Could Mark Twain hold such beliefs in the present era of insecurity and anxiety when the words of Jeremiahs have a renewed and fateful meaning, "Thus saith the Lord: We have heard a voice of terror, there is fear and no peace?"

Anyone who wishes to witness a climax of the industrial age need not go into the laboratories or factories of our time. He need only stand at the gateways of the great Charter Oak Bridge which spans the Connecticut River at Hartford. There on a summer Sunday he will see the proudest products of the industrial age and the mass production of the industrial age, the automobiles, pass in unending procession. Forty thousand cars, powered by that marvelous exemplar of scientific genius, the internal combustion engine, will pour by him in the course of the day. He may be vastly impressed.

But if he is more interested in the souls of men than in the machines which carry them, he will ask skeptically, "What are all these drivers and riders getting out of their passage? What is in their minds and hearts as they speed along the highways?" In too many cases the answer must be that they find nothing in their aimless travel save a brief respite from the gnawing anxieties of everyday life. Shadowing their minds, they have dark forebodings of future calamity and, weighing down their hearts, the heavy pressures of lives become too complicated and insecure to be borne.

Why do so many human beings live in anxiety? Why has life become so complicated and insecure? Certainly, here in the State which we all love, it is not for lack of gifts of nature and of man. Connecticut contains within her borders fair hills and lush valleys, broad rivers and sylvan lakes, busy cities, lovely country towns and primeval wildernesses seemingly as untouched and fresh as when the Indians were the only inhabitants. She has a proud history of science and invention, of literature and art. Her factories turn out a multitude of products, ranging from the clocks of Waterbury to the airplanes of East Hartford. Her sons and daughters, descendants of many nations and possessed of many skills, stand economically in the forefront of the world. Why

then is there no peace of mind and heart for so many who are our brethren?

The answer is old and it is simple. They have lost the key to true and lasting peace. It was taken from them by the so-called wise men of the eighteenth and nineteenth centuries who rejected God and the ordered laws of God and offered to humanity for adoration the golden calf of materialism. Of the first golden calf which the Israelites adored instead of God, the prophet Osee said, "It is the invention of Israel. A workman made it and it is no God." The modern golden calf is much the same. The inventions of men are not necessarily evil in themselves. For the most part they are potentially good. But when they are made into idols, the good perishes. As the Book of Wisdom says, "The invention of idols is the corruption of life. For neither were they from the beginning, neither shall they be forever. For by the vanity of men they came into the world; and therefore they shall be found shortly to come to an end."

The key to peace, for the world and for men, is not to be found in some new idol which is the invention of men. The key to peace is the invention of God. It is Christ and the supernatural religion which Christ left on earth. "My peace I leave unto you," said the Son of God. "My peace I give unto you, not as the world giveth, do I give unto you. Let not your heart be troubled, nor let it be afraid." Only those who have been granted the grace of a strong, abiding supernatural faith in Christ and Christ's religion know what that peace really means. Too many know it not. The glitter of the golden calf still blinds them and the clamor of the world hinders their hearing His words. "These things have I spoken to you that in Me you may have peace. In the world you shall have distress. But have confidence, I have overcome the world."

The Tidelands Question

EXTENSION OF REMARKS OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a timely and informative article entitled "Federal Government Claims No Inland Waters, Tidelands, Nor Harbors; Seeks Control Only of Mineral Lands Submerged by the Open Ocean," written by the senior Senator from Wyoming [Mr. O'MAHONEY] at the request of the North American Newspaper Alliance, and widely published throughout the Nation on Sunday, September 16, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL GOVERNMENT CLAIMS NO INLAND WATERS, TIDELANDS, NOR HARBORS; SEEKS CONTROL ONLY OF MINERAL LANDS SUBMERGED BY THE OPEN OCEAN

(By JOSEPH C. O'MAHONEY, Senator from Wyoming)

There is no tidelands controversy. The Federal Government is not now and never has attempted to "grab" any lands in any State covered by the tidewaters. In other words, the Federal Government is not and never has sought to seize from any coastal State the rich oil deposits of the tidelands.

Quite the contrary, some of the coastal States are seeking to snatch from the jurisdic-

diction of the Federal Government lands which are submerged by the open ocean which now, as from the foundation of this Government, are within the jurisdiction of the Federal authority.

The issue has been consistently, and I am persuaded, deliberately misrepresented by those who seek to invade the Federal domain. This has been done in the face of the most explicit declaration of Federal policy by the spokesmen of the Government and particularly by the former Attorney General, now Justice of the Supreme Court, Tom Clark. In opening the argument of the California case before the Supreme Court, he said in simple words that the case did not involve, and was not intended to involve, lands covered by tidewaters, by the waters of any harbor, inlet, or bay, or by the waters of any rivers or lakes. Thus the issue in the California, Texas, and Louisiana cases before the Supreme Court involved only one controversy, namely, whether the States of the Federal Government had jurisdiction over lands submerged by the open ocean. The Court rules that such lands had always been within the domain of national sovereignty.

Much has been said in this argument about the State boundaries and the 3-mile limit. That the oceanward boundaries of any State or nation are an attribute of national sovereignty is demonstrated by the fact that the 3-mile limit was fixed in international law at a time when 3 miles was the distance a cannon ball could be shot from a seventeenth-century cannon. Under the Federal Constitution, the States cannot wage war. Only the United States can do that.

In our time, however, a cannon can shoot much further than 3 miles. In September 1945 President Truman issued a proclamation asserting jurisdiction for the United States and all its people over the Continental Shelf which is an area that extends beneath the open ocean in some places as far as 100 miles from shore.

That State boundaries mean nothing to those who are seeking to gain control of the wealth beneath the open ocean for certain coastal States is indicated by the fact that the so-called quitclaim bill now pending in Congress asserts that the coastal States are entitled to claim this area. It also attempts to vest in each coastal State a minimum "out" in all the revenues to be derived from the Continental Shelf.

Thus the record clearly shows that what is represented as a raid by the Federal Government on State property is in fact a raid by the coastal States upon lands which are not only within the Federal jurisdiction, but the wealth of which belongs to the people of all the interior States as well as to those of the coastal States.

This effort to persuade the Congress to give away to the coastal States lands beneath the open ocean comes at a time when all the taxpayers of all the States are digging deep into their pockets to maintain the military power, naval and air, sufficient to defend the open ocean. The \$59,000,000,000 National Defense Appropriation Act, the burden of which will be borne by people in every county and city of the United States, is a sufficient reason, it seems to me, why Congress should not permit the jurisdiction over the open ocean and the lands beneath it to be impaired.

This is particularly true since, as a matter of cold fact, the Federal Government is not now and never has sought to take away from any coastal State any producing well within any harbor. For example, every single well drilled to date by the city of Long Beach, Calif., is acknowledged by the Federal Government not to be taking oil from lands in which the Federal Government has paramount rights and the Federal Government is not claiming any such wells.

The same is true of the interim bill for administration of the submerged lands, Sen-

ate Joint Resolution 20, which I introduced on behalf of Senator ANDERSON and myself, and which has the unqualified approval of the Secretary of the Interior and the Attorney General. This bill would not take away from the city of Long Beach a single oil well. For that matter, it would not take away from any State a single well nor a foot of submerged land to which a State or any subdivision of a State has title within any bay, harbor, or inlet.

Moreover, it passed, it would enable drilling, production, and exploration to be renewed immediately.

Drive Politics Out of the Post Office

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr MEADER Mr Speaker, yesterday, the House of Representatives passed H R 2982, increasing postal rates. Today, the House begins consideration of measures to increase pay for postal employees.

The operating deficit of the Post Office Department for recent years has exceeded a half billion dollars annually. The bill we passed yesterday is expected to bring in additional postal revenue for fiscal 1952. However, the bills, which are expected to pass, raising the pay of post office employees, will increase the cost of the Post Office Department by approximately \$250,000,000.

During the debate on these post office measures, the question of efficiency and economy of operation of the Post Office Department has played a prominent part. It has been argued that the post office service should be operated in a businesslike and efficient manner. On the other hand, it has been argued that the Post Office Department should not be expected to pay its own way because it is a public service.

This is a basic question upon which the policy of the Congress has never been too clear. I believe it is important that this policy should be clarified. This is particularly so in the light of the rapidly increasing intrusion of the Government into many fields of activity hitherto left to our citizens in private enterprise in this country. If the Government is to engage in business, should not its operations be conducted in an efficient and businesslike manner?

Because of the foregoing, it seems to me extremely important that a thorough and penetrating investigation should be made by the Congress of the Post Office Department in line with the recommendation in the minority report on H R. 2982, being House Report 547 of the Eighty-second Congress, first session. However, it seems to me that recommendation does not go far enough. It urges a review of subsidies to special segments of our population, the general efficiency of the Post Office Department, and the accounting system by which costs and revenues are recorded. It seems to me that such an investigation should ex-

plore the basic and fundamental problem which underlies the foregoing and other aspects of the Post Office Department; namely, the extent to which politics controls the operation of the Post Office Department.

The country was shocked by the disclosure of the sale of post-office jobs in the State of Mississippi by the Democratic Committee of Mississippi. The Investigations Committee of the Senate condemned these practices in no uncertain terms. That committee criticized the Post Office Department for its failure to notice and take action with respect to this corrupt and illegal sale of Federal jobs. The committee, in its conclusion No. 7 contained in Senate Report 445 of the Eighty-second Congress, first session, found as follows:

7. The Post Office Department is primarily responsible for selecting applicants for post-office positions from the civil-service eligible lists. If, as in this case, the Post Office Department seeks the advice and recommendations of the Mississippi Democratic Committee or any other group or individual, it cannot avoid its responsibility for failing to appoint qualified personnel in a legal and proper manner. The testimony is in conflict as to what, if any, actual notice the Post Office Department might have had concerning the sale of post office jobs in Mississippi prior to the public disclosures in this case. However, in view of the widespread and open selling of these jobs in Mississippi over a long period of time, the Post Office Department, by the exercise of reasonable diligence, should have discovered and put an end to this illegal practice long before the matter was brought to public attention in February 1951. The Post Office Department did, however, act vigorously and promptly to uncover the sale of postal jobs after the matter was brought to its attention by Congress.

There are indications that the use of the Post Office Department for political purposes, and the exaction of contributions from applicants to postmaster-ships to political campaign funds, is not confined to the State of Mississippi. I regret to say that my own State of Michigan which has prided itself on clean politics, seems also to be besmirched with what I regard as improper activities on the part of a political committee. There has come into my hands a letter on the stationery of the Democratic State Central Committee of Michigan, addressed to an applicant for a position as postmaster, which reveals in a more subtle and less obvious way a policy on the part of the Democratic State Central Committee of Michigan to exact contributions from applicants for positions in the Post Office Department. I include that letter at this point in my remarks. For obvious reasons, I have deleted names, dates, and places which might serve as a foundation for reprisal.

DEMOCRATIC STATE CENTRAL
COMMITTEE OF MICHIGAN,
Lansing, Mich.

GEORGE S. FITZGERALD,
National Committeeman.
Mrs. MINNIE C. SCHWINGER,
National Committeewoman.

Our State chairman has just recommended your appointment as postmaster of _____, Mich., to _____. As you know, there are still several steps to be taken before

your appointment is finally confirmed, but judging from past experience you can now be reasonably sure of the final appointment.

In checking our contributor files, I do not find your name listed in our Democratic Green Book as a 1951 contributor.

Contributions to the Democratic Party are strictly voluntary and certainly your appointment is not contingent on a contribution. Yet strong party organization is essential to our American form of democratic government and we can't have such organization without a broad financial support from all members of our party.

I am sure that no lengthy argument is needed to convince you of the importance of contributing to the party of your choice. For your convenience, I enclose a pledge card and business-reply envelope and hope that you will soon join the several thousand other Democrats who now pay their party dues by this method.

Receipts for all contributions are issued by the national committee as well as the State central committee.

Sincerely,

HOWARD P. HUNT,
Finance Director

Lest it be assumed that this was an isolated instance, I include another letter from an applicant for a position as postmaster, indicating the widespread existence of a practice of issuing appointments as postmaster to those who contribute substantially to the Democratic Party campaign funds:

HON. GEORGE MEADER,

Washington, D. C.

DEAR SIR: I am writing to ask your assistance, in regard to being appointed postmaster. I received my rate from the Civil Service Commission, and was No. 1 on the list for appointment, having a 10-point preference for my service disability. The law states that a veteran with a service disability should receive the appointment, unless he has a bad record, and not eligible for the appointment for the position, which is not my case.

I have been informed that the now acting postmaster has contributed about \$200 to the Democratic committee at ——— for his appointment. If this is the way the Civil Service Commission makes its appointments, what is the sense of conducting any examinations, or allowing any service-connected veterans' preference?

The acting postmaster, I understand, was rated third on the examination.

Yours very truly,

A further indication of the moral consequences of the injection of politics into what ought to be an efficient public service is indicated by a press dispatch, under date of June 2, which appeared in the Monroe Evening News, and from which I quote:

CURIOSITY DIMS MAN'S CHANCE FOR NEWPORT POSTMASTERSHIP

Curiosity, a human frailty, got the better of Julian Zochowski's judgment, and it probably has cost him appointment as postmaster at Newport. Zochowski has been acting postmaster for the last 14 months and previously had been a substitute carrier and clerk for a year and a half, building up a reputation which made his appointment a virtual certainty when he placed third in an examination for the post in February.

Now he stands little chance to receive the appointment. It all happened this way:

Assistant United States District Attorney James S. Soltesz, of Detroit, said a complaint was made several months ago that a letter

from Senator HOMER FERGUSON to a Newport resident had been opened. It was about the time applicants were expecting information on their standings in the civil-service examination.

Official-looking decoy letters were sent through the Newport office, and Zochowski, in a hearing in Federal court at Detroit yesterday, admitted opening one of the decoy letters. He immediately revealed it, curiosity satisfied.

"I knew I was due to get the job, but when the others got those letters, my curiosity just overcame me," he told Soltesz yesterday. "I don't know why I did it."

Zochowski was asked to come to Detroit for a talk Thursday and returned yesterday for the court hearing. A misdemeanor charge of opening mail without authority was placed, and he pleaded guilty. Soltesz said He is now under bond but has not been relieved of his duties as acting postmaster.

Perhaps one of the worst effects of the injection of political considerations into the business of carrying the mail is the deterioration of morale throughout the personnel in the postal service. I have received communications, both written and oral, from postal employees who are sincere, devoted, hard-working people who love their work and wish to be proud of the institution of which they are a part. I doubt that there has been any time when the morale of the postal service has been as low as it is today. The order of the Postmaster General, curtailing delivery service, directory service, window service, and imposing increasing hardships upon postal employees, issued as everyone knows for the purpose of clubbing Congress into an increased appropriation for the Post Office Department, has had its inevitable reaction on the clerks and mail carriers who actually do the burdensome work. They are no longer proud to belong to the organization, which once had as its shining motto.

Neither snow nor rain nor heat nor gloom of night shall stay these couriers from the swift completion of their appointed rounds.

Political exhortations, such as were quoted in the RECORD yesterday, made by the Vice President in an address to the Association of Postmasters, and political pep talks by Joseph Lawler, Assistant Postmaster General, and John Redding, Assistant Postmaster General, together with the disclosures I have referred to above in Mississippi and Michigan, cannot help but make the rank and file of the post-office workers feel disheartened and discouraged in spite of their affection for the service of which they once were proud.

Mr. Speaker, an investigation of the Post Office Department should be undertaken at once, and it should be broad enough to include an examination of the injection of politics of a low order into what ought to be an example of how the people, through their Government, can render a public service with an efficiency and an economy comparable to the operation of a private enterprise.

I earnestly urge that the House of Representatives take action to explore this vital subject forthrightly and without delay.

American Young People Are Thinking

EXTENSION OF REMARKS OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mrs. SMITH of Maine. Mr. President, the young people of America are thinking these days more than most of us realize.

Evidence of this is a letter which I have received from 15-year-old Marie Genest of Waterville, Maine. I invite the attention of the Senate to her letter, and I ask unanimous consent to have it printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WATERVILLE, MAINE, September 17, 1951.

Mrs. MARGARET CHASE SMITH,
United States Senate,
Senate Office Building, Washington, D. C.

DEAR Mrs. SMITH: I am 15 years old and attend my second year at the Waterville High School.

I am also very much interested in the world of tomorrow and it's people.

I think that unfunny funny books do very much damage and little if any good to American youth.

I ask you to please bring it up before the Senate for me.

Thank you.

Yours respectfully,

(MISS) MARIE GENEST.

Weekly Domestic Round-Up

EXTENSION OF REMARKS OF

HON. HARMAR D. DENNY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. DENNY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Chester Potter:

WEEKLY DOMESTIC ROUND-UP

(By Chester Potter)

WASHINGTON—Say the word "sulfur" to the average man on a bus or housewife in the kitchen and the chances are they'll reply: "and molasses."

They probably have never taken that old-time spring tonic but have heard or read about it. And that is the limit of their knowledge of sulfur.

Yet, sulfur—one of the basic chemical elements—is an indispensable ingredient in everything we eat, wear, or use.

And it is also one of the most critically short necessities of our defense and home-front programs. Ways to increase the supply and to distribute what we have most efficiently have been the subject of top-drawer international conferences.

When you realize the extent to which sulfur figures in the everyday life of peoples, it is easy to understand why it is on the top-drawer list.

It is used in the manufacture of the paper on which this story is printed; for all kinds

of paper; the farmer is its biggest user—for fertilizer; there are 35 pounds of it in the average automobile; 18 pounds in each ton of steel, and 65 pounds in each ton of rubber. It takes a pound of sulfur to make another pound of viscose rayon and there's two-fifths of a pound in every barrel of crude oil.

Sulfur is used in the manufacture of industrial explosives, paints, and pigments, the refining of metals and in almost all chemical processing.

It is essential in the production of foodstuffs, gasoline, soaps and detergents, clothing, containers, and construction materials.

"In the United States, approximately 70 pounds of sulfur are consumed annually for each man, woman, and child," says the Freeport Sulphur Co., second largest producer in the world.

That is 2 pounds more than the per capita consumption of beef in this country annually.

This gives an idea of the relative importance of sulfur in our everyday life. Now, for the first time since World War I, there is a shortage of this vitally important basic chemical element.

Charles E. Wilson, Director of Defense Mobilization, in his second quarterly report to President Truman, reviewed the part this country has played in organizing in Washington the International Materials Conference, with 27 producing and consuming nations participating. Seven committees were set up to deal with critical materials. One of these was the "sulfur" committee.

(In Government releases, the word is spelled "sulfur" but the producing companies spell it "sulphur" and so does the dictionary.)

The committee has drawn up a proposed method for distribution and has made proposals for increasing production. Out of that came an announcement earlier this month from the International Materials Conference of a unanimous agreement to allocate the world supply to 30 countries and areas.

Early in June, the National Production Authority ordered sulfur suppliers to ship sulfur only when authorized by NPA and to limit consumers to last year's rate of consumption. NPA said "at the present rate of use there just isn't enough sulfur to go around."

Dr. James Boyd, Defense Minerals Administrator and Director of the Bureau of Mines, also says the "sulfur situation is critical." He added that the problem "is the kind that can be solved" and that private industry and not the Government can provide the solution. The industry, he said, is "doing all it can to step up production."

And while industry is "doing all it can," Freeport Sulphur has announced that "farmers this year may have to get along with about 20 percent less fertilizer because of the growing shortage." One-third of the more than 5,000,000 tons of sulfur produced in this country—about half the world production—ultimately goes into fertilizer.

The shortage first developed last year, when 350,000 tons had to be taken from reserves to meet demands. But at the first of this year, the reserve stockpiles held only 6 months' supply, which should not be touched. Freeport says "current needs will have to be met from current production."

Reasons for the shortage, says Freeport, are: Greater demands from abroad; a disproportionate increase in domestic requirements; the low price of brimstone (native sulfur), which has tended to discourage development of higher-cost sources; and the difficulty of finding new sulfur deposits.

Almost all of this country's sulfur comes from the Gulf coast. In 1897, a company looking for oil found sulfur in a salt dome.

Since then, 12 domes have been located and 5 of these have been depleted.

"Extensive explorations have failed to uncover any additional fields of sulfur similar to those from which sulfur is now being mined," NPA says.

The principal source of sulfuric acid, aside from native sulfur, is pyrites, metal sulfide minerals containing 25 to 50 percent sulfur. That was once this country's principal source and is still a major source in foreign companies.

But obtaining sulfur from pyrites is more expensive than getting it from the domes. So, NPA is now granting certificates of necessity to firms which are converting to pyrites burners and other sources of sulfuric acid, and is discouraging construction of plants which require sulfur burners.

Sulfuric acid also is being obtained from sulfur recovered from sour gas and petroleum refining. Still another source is from smelter gases and from coal.

Freeport recently announced that it is building a sulfur mining plant at Bay Ste. Elaine, in Louisiana. This project, not to be completed until late 1952, lies along a desolate and exposed stretch of coastal marsh, subject to severe storms, hurricanes, and high water.

More than half the dome is under water and the rest is in unstable marshland—floating islands of decayed grass resting on ooze. To meet these obstacles, Freeport is building its plant on barges at Grand Ecaille, 75 miles away, and will float it to the site.

A Code of Ethics for Men in Public Office?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, it is futile to write a code of ethics for men in public office when the Commander in Chief does not, by acts rather than words, hew to the line.

Note the following from the Chicago Tribune of last Monday, September 17:

CHAIRMAN BOYLE'S PRETTY STORY

William M. Boyle, who rose from Pendergast police commissioner to the chairmanship of the Democratic National Committee, recently denied that he used political influence to obtain RFC loans. Let's see:

The loans that put Boyle on the spot were those to the American Lithofold Corp., of St. Louis. Boyle was on the payroll of this company shortly before he became national chairman. Later it was disclosed that when he quit drawing money from the concern, his law partner replaced him and got \$13,000 for supposed services that an official of the company was unable to describe.

Boyle's connections with the company were brought to light in July, when a Senate committee was investigating RFC loans. Boyle admitted, but sought to minimize, his fees from the company, and at the same time entered a blanket denial that he had sought to get Government money for his clients. President Truman came to the defense of his man with a statement on August 9, in which he said, in part:

"I have examined the facts concerning William Boyle's alleged relationship to RFC loans to the American Lithofold Corp. of St. Louis. The facts I have obtained indi-

cate that Mr. Boyle had nothing to do with the approval of those loans by the RFC.

"I think it would be highly improper for the chairman of a national political committee to use his contacts with Government officials for his own private gain. I would not condone such conduct for a moment."

Last week the Senate investigations subcommittee called before it J. E. Toole, a former loan official of another Government lending agency, the Small War Plants Corporation. Toole went to work as treasurer of American Lithofold in 1944, after the SWPC had lent the company \$1,671,000 on his recommendation.

He testified that the corporation again needed money in 1949, applied to the RFC, and was turned down by both the St. Louis office of the agency and headquarters in Washington. Toole then pulled out his diary and read an entry for February 28, 1949:

"Got the bad news of the loan decline from Charlie Griffin (an RFC loan examiner) at 10.45 and went immediately to Chauncey Dodd's office and discussed ways and means to meet this second decline."

"After lunch, Cecil Green (Washington lobbyist for the firm), R. J. Blauner (president of the company), and I went to see Bill Boyle, who phoned Harley Hise, chairman of the RFC, and we (R. J. and me) were in the office at 4:30 p. m."

Toole and Blauner won a reconsideration of the loan that day. It was granted on March 3. Toole testified that nothing had happened to cause the RFC to change its previous views on the unsuitability of the loan, aside from Boyle's intervention.

That's the story, although there are some interesting details concerning intervention by other Pendergast operators to get another loan for the company, and to steer business to it from liquor companies subject to Government regulation.

Mr. Truman said in August that it would be "highly improper" for the national chairman to do what Boyle did, and that he would not condone it for a moment. What does he say now?

Flood Control

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution:

RESOLUTION REGARDING FLOOD CONTROL

The recent superflood on the Missouri River resulted in a billion dollars in damages, unprecedented loss of life, crops, and homes and property, notwithstanding the billions of Federal funds thrown into giant-size flood-control dams and levees, the billions of our topsoil wealth forever lost to Iowa, Nebraska, Missouri, and Kansas, the destruction of bridges and highways, and the wastage of our water resources.

All of these 1951 happenings should convince every person interested in our country's future, of the woeful neglect and grievous errors that have been made in regard to the control of our waterways and the general preservation of our natural resources. More and more people of the Midwest, who have not heretofore given the question a thought, are coming to the sound conclusion that our big billion-dollar dams are worth

but little as aids to flood control and comparatively little contribution to natural-resources conservation, that heretofore our Federal authorities have commenced flood-control projects at the wrong ends of our larger rivers, whereas they should have spent the larger part of the public moneys up on the hillsides where the rains first hit the earth, after which their efforts for flood control should continue downstream to the rivers' ends. That it is reliably estimated by the United States Government engineers that not less than 75 percent of the over-all flood damage in the country in 1951 occurred back on the hillsides where there were a million small floods running down in gullies and eroding our fertile hillsides and resulting in irreparable loss to the production of foodstuffs. And experience has proved that these millions of small rivulets and gullies and creeks and tributary streams can be controlled. And that floodwaters from these small rivulets and gullies and creeks and streamlets should be controlled by retarding and slowing down the water runoffs in the construction of thousands of small dams on the hillsides, by terrace farming, by retaining lakes and ponds, by grassed runoffs, by "upstream engineering" methods and improved soil-conservation practices in fields and pastures—all of which, in turn, is the best help for flood control on our larger Mississippi and Missouri Rivers. Therefore be it

Resolved by the Clarinda Kiwanis Club (representing a membership of 100 men engaged in business, professions, labor, and farming in and about the community of Clarinda, Iowa), That we oppose all acts of Congress appropriating any more funds for the construction of big dams, unless like-sized sums be appropriated for flood controls and conservation practices on the hillsides where the millions of little floods start; and be it further

Resolved, That we oppose any further so-called MVA's and CVA's on the plan of TVA; the objection to all such "valley authorities" being that they are Fascist dictatorships in their essence and deprive the various States of local democratic powers reserved to them under the Constitution.

W F STIPE, *Chairman,*

Code of Fair Conduct for Investigations

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. YORTY. Mr. Speaker, I should like to call attention to the following excellent editorial by Mr. Manchester Boddy, the distinguished editor and publisher of the Los Angeles Daily News:

CODE OF FAIR CONDUCT FOR INVESTIGATIONS

How can the fundamental rights of private citizens be protected from reckless abuse by Congressmen and Senators without, at the same time, unduly hampering the investigative power of Congress?

This is not a partisan issue that disturbs all good citizens.

Several keen students of the problem have recommended the delegation of certain types of inquiries to bodies outside of Congress. Regardless of the merits of such arguments and the numerous precedents cited for congressional delegation of the investigative function, it is clear that Congress would not abdicate its responsibility. Congress is too zealous of its power and prerogatives to consider such a new approach to the problem.

Obviously a ban on special committees is no solution. This would have no effect on minimizing abuses, assuring fairness of investigations or protecting witnesses.

Another proposed reform is the voluntary adoption of self-imposed rules by individual committees to guide their conduct, and such measures have been taken by certain committees. Such action is to be commended for its vision and pioneering in the field of committee reform.

However, it seems evident that rules imposed by individual committees themselves, while a step in the right direction, are not the final answer. No half-way measure should stand in the way of congressional action establishing rules for proper procedure for all committees.

SHOULD ADOPT CODE OF FAIR CONDUCT

A code of fair conduct for all investigating groups, adopted by House and Senate as part of their standing rules, would have the effect of avoiding confusion and promoting uniformity. It would give Congress and the country a yardstick by which to test the performance of every committee investigation. A code of procedure for administrative agencies has been established. Why not a code for congressional committees?

This is precisely the solution offered by Senator ESTES KEFAUVER, Democrat, of Tennessee in Senate Concurrent Resolutions 44 and 45.

These resolutions go directly to the core of the general criticism against congressional investigating committees which are centered around these points:

(a) Congressional investigations frequently assume the aspects of a trial of an individual without safeguards of regular court proceedings.

(b) Legislators appear in the role of judges and combine the functions of prosecuting and judging which should be separated.

(c) The witnesses may be exposed to such penalties as loss of their jobs, character assassination, or injury to their reputation, as a result of the attendant publicity.

(d) Appearances before investigative committees are not subject to procedures laid down by Congress.

(e) Legal rights of individuals guaranteed by the Bill of Rights are abridged by congressional investigations. Another objection—somewhat intangible, but of great danger to a democracy—is the fact that conformity to prevailing ideas is enforced by fear of censure before a congressional committee. In this connection the question is raised whether some investigations do not impose tyranny of the prevailing opinion and feeling which John Stuart Mill once described as tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them."

WOULD GIVE ACCUSED CHANCE TO REPLY

In brief, Resolution No. 44 provides only that insofar as practicable a member of Congress who intends to name an individual or an organization in a derogatory manner shall first notify the individual or organization of the nature of the charges to be made. The individual or organization may then file with the clerk of the House or the secretary of the Senate a sworn statement, if he

so desires, giving his side of the story—and his sworn statement shall be read on the floor and published in the CONGRESSIONAL RECORD, along with the charges.

Resolution No. 45, in substance, provides:

1. That a person or organization shall be notified of the nature of the charges against him, of the matters to be inquired into, and of the derogatory material to be presented.

2. That he be given an opportunity to present evidence in his own behalf.

3. That he be permitted counsel, who shall be entitled to question him within appropriate limits in order to bring out all pertinent facts.

4. That he be permitted to file a limited number of interrogatories to be answered by witnesses who have testified to derogatory materials.

5. That he be permitted to file at the conclusion of the evidence a rebuttal statement.

There are also outlined safeguards regarding subpoenas, safeguards for information in executive session, safeguards for the private affairs of individuals.

RESOLUTION TAKES HEED OF TELEVISION

This resolution takes heed of television, which is a new method of communication but one that is here to stay and with which we shall have to deal, just like any other method of communication. In other words, these same rules would apply, whether the hearing is conducted in executive session, covered only by the press, or covered by the press, still cameramen, radio, newsreels, television, and so on. The resolution places the responsibility upon the chairman of the committee to see to it that none of the communication devices annoy the witnesses. If the chairman decides they do, then it is his responsibility to see that the annoyance is ceased.

Senator KEFAUVER does not claim for these resolutions any finality of draftsmanship. They deal with problems that have worried everyone and the proposed resolutions are the best solutions that a number of Senators, thinking and working together, could produce as a starting point. Undoubtedly, there will be many more ideas on the subject—and Congress would do well to welcome them all as these resolutions pass through committee and floor consideration; partisanship should be kept out. The resolutions deal with matters regarding things that are very fundamental in the lives of our citizens and our country—and there is no place for partisanship in such fundamental matters.

Boston District Office, Veterans' Administration

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and memorandum:

SEPTEMBER 18, 1951.

HON. EDITH NOURSE ROGERS,
House of Representatives,

Washington, D. C.

DEAR MRS. ROGERS: With reference to our telephone conversation this morning, the following facts are submitted per your request.

While the district office was in operation here in Boston it occupied 89,183 square feet

of space. At the present time we are trying to relocate the Boston district office in Philadelphia through various consolidations into 65,000 square feet of space. This has created a tremendous problem in arranging the activity to permit working areas large enough for efficient operation. These working areas must of necessity, under the circumstances, be kept at an absolute minimum since most of the space is occupied by equipment of one type or another. As I understand it, some consideration is being given to double-decking our 5-drawer steel file cabinets which house the basic insurance records. If this is done it will mean that the file clerks will have to operate from ladders. Since the beginning of this move to Philadelphia the space assigned to the Boston district office has been reduced on three different occasions. I have no way of knowing at this time whether further reductions in space assignment will be made.

As of July 1 this district office had assigned to it 833 people. Of this 833 people 278 have transferred or are in the process of transferring to Philadelphia. Of these people transferring to Philadelphia by far the majority are doing so only because there is nothing available at the moment here in Boston and I feel sure that many will return from Philadelphia as they find jobs in this area. Of the remaining 555 employees 92 have been successful in finding other jobs. The balance, 463, are floundering badly in Boston since this has always been a very critical labor market. From talking with some of the employees who have surveyed the Philadelphia area we find that living is more expensive in that area than locally here in Boston, particularly in the matter of rents because of the number of industrial concerns in the area with their higher pay scale. It has always seemed to me that there was some move afoot to completely drain this New England area of possibilities for gainful employment for its population.

It would be difficult to try to draw to your attention any hardship cases of personnel because of this shift of activities. You must realize, of course, that we have a large number of disabled veteran employees and as I mentioned above, throwing 463 into this poor labor market will cause untold hardships to all of these people. I do not think it necessary for me to expound to any length on the less efficient service that will be rendered by the Veterans' Administration. These facts have already been proven in investigation.

I hope these facts and figures that I have set forth here, which I am submitting at your request, will prove to be beneficial.

Very truly yours,

A FRIEND

SEPTEMBER 18, 1951.

Re Veterans' Administration, Boston district office, insurance division.

DEAR CONGRESSMAN: Two young men who were employed by the Boston district office of the Veterans' Administration wanted you to know the following:

The space at the Atwater-Kent Building in Philadelphia is insufficient for the Veterans' Administration.

The addressograph unit, which was due to report to Philadelphia September 17, is not to report now until September 24, as space had to be found for this unit. This unit is to be located across the street in the Philco Building—they believe it is called.

The result will be that bills will have to be carried across the street from the above unit to another insurance division unit to be verified, then returned back to the addressograph unit to be sent out.

Strength of the Marine Corps

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LOS ANGELES, CALIF.
August 14, 1951.

HON. CARL VINSON,
Chairman, House Armed Services
Committee, House Office Building,
Washington, D. C.

DEAR MR. VINSON: You may be interested in the views of just another naval officer, although retired, relative to the action of your committee on S 677.

In my opinion, it is not only the right, but the duty of Congress to prescribe the strength of the Marine Corps. That strength should be in consonance with the duties and responsibilities which the Congress has specified. If these functions are not a duplication, the strength of the corps will not be a duplication.

In this connection, it seems to me the time has come to be realistic. We might as well recognize that there are those who have tried to abolish the corps, notwithstanding their loud claims to the contrary. The objections to S 677 are merely a continuation of that effort.

As to membership in the JCS, the Commandant has specialized training and experience, particularly through operations with the other services which are not paralleled by any other member of the JCS. Nor does any other member have the same experience or qualification in marine specialties, particularly amphibious operations. The inclusion of this officer would, in my opinion, add significantly to the sound judgment and the over-all value of the JCS.

In closing, may I say that the statesmanship and sound judgment of your committee and yourself, as evidenced, for example in Report No. 686, and Unification and Strategy, is a source of confidence and encouragement to citizens and taxpayers like myself.

Very sincerely yours,

Admiral J. W. RIVERS, Jr.,
United States Navy (Retired)

Crime on the New York-New Jersey

Water Front

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mr. WILEY. Mr. President, ever since the start of the hearings before the Special Crime Investigating Committee, I have urged a complete study of crime on the New York-New Jersey water front. Unfortunately, such a study has not been completely made up to this time. I now send to the desk a statement which I have prepared on this issue, along with certain printed ma-

terial, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the statement and material were ordered to be printed in the RECORD, as follows:

CLEAN UP THE WATER FRONT—STATEMENT BY
SENATOR WILEY

I want to commend those of my colleagues who serve on the Senate Interstate Commerce Committee who have introduced Senate Resolution 207 which would provide for \$150,000 for the Senate Interstate and Foreign Commerce Committee to continue the investigation of crime throughout the Nation. Among the sponsors of this resolution are my able associates from Indiana, Mr. CAPEHART; from Ohio, Mr. BRICKER, from Maine, Mr. BRWSTER, from Missouri, Mr. KENNEDY, and from New Hampshire, Mr. TOLSON.

To me, it seems very unfortunate that the Senate or any of its committees should even consider delaying action on a proposal of this sort. One hundred and fifty thousand dollars is a lot of money, but it is small, indeed, when one thinks of the tremendous amount of good that could be accomplished by such a sum, the amount of good in terms of increased tax revenue which could be secured for Uncle Sam from those criminals who have evaded their fair share of liability thus far. One hundred and fifty thousand dollars is small, too, when one considers that one State in the Union, New York, alone has provided a quarter of a million dollars for its State crime commission. One hundred and fifty thousand dollars is small in relation to the estimates that American gambling and affiliated crime syndicates cost us some \$20,000,000,000 a year. I repeat—\$20,000,000,000.

But you cannot reckon the cost of crime in terms of money alone. A single innocent individual whose business is muscled into by gangsters, a single individual whose life is threatened by hoodlums, a single individual who is beaten or killed by the mob—such an individual cannot have his losses reckoned in terms of money alone.

When one thinks of the hundreds of thousands of individuals, yes the millions affected by crime, one sees how inconsequential is the sum that is being asked.

WATER FRONT IS PARTICULAR KEY ISSUE

I have repeatedly pointed out that one of the worst situations in America today prevails along the New York-New Jersey water front. I have spoken to private citizens and public officials alike who have wrestled with the problem, and they have stated and restated the fact that nothing short of a complete Federal investigation can possibly meet this challenge head-on. The New York City Anticrime Commission, the New York State Anticrime Commission, public officials in New Jersey cities and at the State level in Trenton, have all pointed out that water-front crime is an interstate matter which can hardly be adequately dealt with by separate municipalities and separate States, even assuming the most complete voluntary cooperation between them. They do not have the income tax power and data that Uncle Sam possesses, they do not have the unlimited jurisdiction; they do not have the prestige.

It is Uncle Sam whose job it is to clean up the water front and then to have the job carried on by State and local officials.

The water front is an international problem, too, because obviously hundreds of millions of dollars of world shipments are involved.

Often I have stated that organized piracy alone on the water front would make Captain Kidd green with envy. I have stated

that the water front is a breeding ground for practically every known vice, whether it be the numbers racket, usury, organized prostitution, alien smuggling, dope smuggling, kick-backs, etc. Down through the years, there have been a considerable number of exposures of water-front crime. But invariably they have fallen short of the mark. Somehow, the same condition persists year after year. Somehow the unholy alliance between some questionable elements in labor and in the shipping business continue to exact a staggering toll on the ultimate American consumer.

UNCLE SAM MUST SHOW WHO IS BOSS

Well, I for one feel that the time is long overdue when the United States Government must indicate to the organized hoodlumism of the water front who is going to be boss, the big shots in water-front crime or Uncle Sam. The present situation on the water front is a cancerous one which can be suicidal for New York-New Jersey shipping if it remains unchecked. It is somewhat paradoxical that the west coast, which I have just visited in connection with the signing of the Japanese Peace Treaty, faces the problem of a Communist stranglehold on the water front, while this section of the east coast faces the problem of a criminal stranglehold.

WATER-FRONT SITUATION GETTING WORSE

Now I want to be fair to all the many honest individuals who are working on the water front, including both employers and employees. The public should not assume that every man connected with the water front is to be suspect. The greatness of that Atlantic port area is an awesome thing. At the same time, however, I am merely stating a fact when I say that aspects of the New York-New Jersey water-front situation smell. The situation smells bad. It smells very bad, and the smell is getting worse all the time. I use blunt language because the time has come for us to speak bluntly, and, more important, to act decisively on the plain facts.

NUMEROUS GROUPS HAVE EXPOSED WATER FRONT

I was tremendously interested to read in the September 12 issue of the magazine *People Today*, issued by the Hillman Publications of New York, a write-up entitled "Who Is Mr. Big?" This write-up follows a notable series of other contributions on this problem. I refer to—

(a) Mr. Malcolm Johnson, 1949 Pulitzer prize winner, whose sensational exposures of the water front set an inspiring example of what can be done by a courageous reporter, editor, and newspaper in combating crime.

(b) *Fortune Magazine's* comprehensive article on the water-front racket in the June 1951 issue was a brilliant job of reporting and analyzing.

(c) The Columbia Broadcasting System which set a new high in radio documentary features by its broadcast of tape-recorded interviews on the water front and elsewhere in its Nation's Nightmare series.

SOME CONTEND THERE IS A MR. BIG, OTHERS DOUBT IT

It is the conclusion of all of these various news-gathering and reporting organs that there is a single kingpin of water-front crime, a Mr. Big. There are others who disagree and who contend that water-front crime is so vast, so complicated, so rough that no single individual could or does control it.

I believe that the article in *People Today* was, however, an important contribution to public thinking about this issue, and so I am having it appended to my statement in the hope that it will contribute to a further awakening of public opinion and to a further complete review of this whole problem. I, for one, cannot subscribe to all that this article alleges, but I do think that the article is a courageous job.

ALL INDIVIDUALS ENTITLED TO LEGAL RIGHTS

Let me make this point quite clear: I personally have always felt that individuals accused of crimes are entitled to a fair break in a thoroughly legal and American manner, and so I am anxious that there be a thorough, careful, judicious examination of the facts about any single "Mr. Big" or any other group of individuals alleged to be in control of crime. There must be no smearing.

Now, I should like to conclude this presentation of these comments:

For all the work that has been done on the crime problem we always come back to the single conclusion that basically it is up to the individual citizen to do his part in helping to stamp out crime. In turn it is upon the individual's moral standards that the ultimate hope for victory in the crusade against crime rests.

SENATOR WILEY'S ARTICLE IN LOOKOUT MAGAZINE

It is for that reason that in the August 1951 issue of the magazine *Lookout*—a periodical of Christian education for older young people and adults, published in Cincinnati, Ohio, I was happy to contribute an article on the subject *The Christian in Public Life*. I took as my principal point of comment the recent disclosures by our Special Crime Investigating Committee, and I analyzed their meaning in terms of American morality. I ask that this article be appended to my comments following this statement.

Just yesterday I placed in the *CONGRESSIONAL RECORD*, beginning on page A5711 materials on the crime problem. I shall continue to do so because the war against crime must carry on. There can never be a let-up or else the battle can be lost.

Criminals, as I have pointed out repeatedly, are accustomed to riding out storms. They know how to lay low, so to speak, until the heat blows over. I am hoping that the heat on the water front can be continued indefinitely so as to smash the rackets there for good.

[From *People Today*]

THE REASON WHY CRIME INVESTIGATORS AND THE PRESS CAN'T EXPOSE MR. BIG BY NAME

(*People Today* is armed with information on the Nation's top racket tycoon. *People Today* doesn't dare state his identity. We are in the same position as Malcolm Johnson, New York Sun reporter who covered crime on the water front and wrote a book about it; in the same position as Dan Bell, who wrote *Fortune's* water front rackets article in the June 1951 issue; in the same position as CBS which, in its current Nation's Nightmare crime series, finds itself unable to name Mr. Big. The reason: There is not sufficient legal evidence to convict him, even though an informed circle of prominent people, including honest law-enforcement officers, well know his identity.)

THE STORY OF HOW MR. BIG GRABBED ABSOLUTE CONTROL OF NEW YORK'S CRIME-INFESTED WATER FRONT

It is frequently said that New York's water-front accounts for more murders per square yard than any other part of the United States. It also boasts of every other crime in the book—narcotics smuggling, organized theft of valuable cargo, alien smuggling, extortion, bookmaking, loan sharking, payroll padding, wage kick-backs. The New York water front unquestionably is the most concentrated single area of United States crime.

Who is the behind-the-scenes director of this gangster jungle? Who is the real boss of the water front?

Ordinary longshoremen have known his name for years. His identity also is known to newspaper reporters, water front labor experts, some city officials, the district attorney, some investigators of other law-enforcement

bodies. They know his history well, and they express no doubt that he is the kingpin. One of them has said, by way of comparison with Mr. Big, "Frank Costello is just a whipping boy. There is no doubt that Mr. Big's powers extend beyond the water front, beyond the city, beyond the State."

Yet those who know Mr. Big are convinced that he has come such a long way from his beginnings and has so shrouded himself in respectability that today he actually regards himself as a somewhat saintly character.

Mr. Big was spawned in New York's Greenwich Village, home base for the mobs around the turn of the century. He began his illustrious career as an ordinary truck driver in the days when trucks were horse-drawn vehicles. He is said to have had a police record; but if he had, it is no longer in the files. He first became a figure on the water front around 1917, when he joined a mob which controlled the piers from Fourteenth Street north to Thirty-fourth Street, where Owney Madden's mob took over. The domain controlled by Mr. Big's mob was known as *The Beef*, because the principal commodity handled on those piers was beef and other meat—a gold mine during World War I and postwar years when huge shipments were made to feed our Army and later the peoples of war-devastated countries. Shortly after Mr. Big appeared, a rival hoodlum was killed by two gunmen who, water front investigators say, were hired by Mr. Big. Some time later, one of the gunmen was killed in Hoboken. And not long after that, the mob leader was killed, and Mr. Big took over *The Beef*.

This gave him his first substantial wealth. He immediately—as gangsters today do—invested in legitimate enterprises. Mr. Big's investments brought him into close association with the late Sam Rosoff, who was engaged in city contracts. Investigators say that a deal for rubbish collection in the city was negotiated with high city officials, during the tenure of Jimmy Walker, at a club at Fourteenth Street and Eighth Avenue. In any event, Rosoff soared to prominence after Walker became mayor. His published obituaries said his city subway contracts amounted up to \$50,000,000.

Mr. Big, investigators say, has varied interests: He is reported to have been the financial backer of a former world heavyweight champion fighter. As a big truck owner, he was a rum runner during prohibition. And in the 1930's he poked his gluey finger into unions far from the waterfront, although still in Manhattan.

Today he moves in the most prominent business and social circles, frequently dines at El Morocco, lives luxuriously, far removed from his waterfront empire.

"NO CRIME ON WATER FRONT," SAYS ILA'S JOSEPH RYAN

The life of Joseph Patrick Ryan is inextricably interwoven with the New York waterfront. It has been in the past, and it undoubtedly will be in the future, for Ryan has been elected lifetime president of the International Longshoremen's Association, AFL.

Ryan has been labeled by the press as virtual dictator of the waterfront, known by investigators as the core of United States crime. But Ryan, despite his fast rise to control of the ILA, is definitely not Mr. Big. Member of a desperately poor family; he grew up in the Chelsea District of Manhattan, quit school at the age of 12 to go to work. He got his first waterfront job as a longshoreman in 1912, joined the ILA the same year. By 1918 he was an international vice president, by 1927 he was president, and by 1943 his union made it official for life, at \$20,000 annually, plus expenses of \$800 a month for which he does not have to account.

With the possible exception of John L. Lewis, Ryan has been attacked more bitterly

and more often than any labor leader in history. In 1946 a citizens' water-front committee in a published report quoted a leading stevedore operator describing management-union negotiations: "We call in Ryan once a year or so and say, 'Joe, how much of a raise do you need to keep the boys in line?' " The committee report described the ILA as undemocratic and notoriously graft and racketeer ridden. There is little doubt that the union leadership has been unable or unwilling to take the lead in . . . wiping out the grafts and rackets which sustain them.

To such charges Ryan turns a deaf ear and a blind eye. He sees no evil, hears no evil, speaks no evil of the water front. Gangsterism, rackets, organized crime? "Ridiculous," snaps Ryan.

Ryan, burly red-faced, his once bristly red hair now iron gray, likes the luxuries that come with his position and wealth. He likes good food and eats in the most fashionable restaurants. He likes expensive but conservative suits and shirts, expensive but far from conservative ties, bulky rings and cufflinks. He neither swears nor smokes, but he does drink. He is a good family man, and a church-going man.

Ryan loves to make speeches, and the one he loves best begins: "I glory in the friends I have made in high places." He isn't fooling. In 1923 the Joseph P. Ryan Association was founded as a private social club. At the annual gala dinners (\$15 a plate) he hobnobs with the very best people, even though known water front criminals also attend. Back in 1931 these names were listed as honorary chairmen of the shindig: Franklin D. Roosevelt, then Governor of New York; the late Mayor Jimmy Walker, Mayor Frank Hague of Jersey City, and William Green, president of the A. F. of L.

At this year's annual gala, the guest list was every bit as distinguished. Chairman of the arrangements committee was William J. McCormack, president of the Penn Stevedoring Co., which handles the Pennsylvania and Erie Railroad piers, and of the Transit-Mix Concrete Corp., with offices on the thirteenth floor of a building at 136 E. Fifty-seventh Street. Mr. McCormack, who is active in Democratic political circles, has been repeatedly called in by the city as an authority on the water-front ever since 1948 when then Mayor O'Dwyer appointed him to mediate the tugboat strike. Last December Mayor Impellitteri congratulated him for successfully mediating a tug contract that runs through 1953. McCormack, however, was an old and good friend of Ryan's, rating a high place on the guest list long before he became the city's favorite water-front arbitrator.

Vice chairman of arrangements was Harry M. Durning, collector of customs of the port of New York since 1933.

An almost limitless list of other guests were present, including Mayor Impellitteri; Police Commissioner Murphy; Chief Magistrate John Murtagh; John A. Coleman, governor of the New York Stock Exchange; Thomas J. Curran, president of the New York County Republican Committee; Robert F. Wagner, Jr., Manhattan Borough president.

At the same dinner there were other guests prominent in somewhat different circles: Willie Cox, an Elmira penitentiary alumnus, and Mike Clemente, boss of East River piers, also an ex-convict.

And in his own very exclusive circle—"Mr. Big."

NATION'S NIGHTMARE; CRIME

A number of staffers at CBS know who Mr. Big is. They found out in the course of gathering material for their August 16 crime-on-the-water-front broadcast, one of the hard-hitting, authentic, documentaries in the Nation's Nightmare series on crime.

Determined to pick up where the Kefauver committee left off, Hubbell Robinson, CBS

veep, conceived of the documentary as a public service—and shocked people across the Nation out of their customary apathy. CBS's vast staff went into action in six key crime fields, narcotics, casino gambling, racetrack gambling, policy and numbers, water-front crime, and sports gambling.

They came up with nightmare shockers, none more sensational than the water-front exposé. Its sparkplug was Irving Githin, 33-year-old ex-science reporter and teacher, who has produced and written the entire series. Working with him day and night were CBS reporters, among them Dave Moore, 32, a Peabody award winner, whose work with the tape recorder has largely been instrumental in shaping *Nightmare*. For days Githin and Moore were deep in the recording of the actual voices of men on the water front who named names, cited chapter and verse on crime, and told who was responsible.

For the first time in history, CBS has made it possible for people to eavesdrop on the water front, hear the sordid story of Mr. Big's rise to power. Heeding the insistent demand of listeners, CBS will repeat the water-front documentary on September 27, at 9:30.

WHO CAN NAME MR. BIG?

The crime that is bred on New York's water front, the crime that crosses State boundaries and international borders is far too complex and far too enormous for city or State law enforcement agencies. They have neither the resources nor the money to cope with the tightly knit, skillfully organized, well-heeled, politically protected, lawyer-guarded mob.

But the United States has a body of men, presumably competent to deal with the mob, and to determine the identity of Mr. Big. It is the Senate Crime Investigating Committee.

The committee, however, for reasons unknown, has not called on men of the caliber of Joseph P. Ryan and William J. McCormack. Why hasn't the committee called these men, and others equally well informed on water-front problems—men like Harry Durning, New York port customs collector; A. F. of L. President William Green; Joseph Peter Grace, president of Grace Lines. These are men whose activities have brought them in direct contact with the water front, men who must be aware, at least, of the graft and corruption that breeds on the water front and ultimately exacts a levy on every American citizen.

Surely these men have information which, if properly checked by Federal authorities, could lead to the identification, apprehension, and conviction of Mr. Big.

[From the Lookout for August 1951]

THE CHRISTIAN IN PUBLIC LIFE

"Ultimately, success in the war against crime depends on the uplifting of standards of public and private morality, a rededication to basic spiritual values, which will entail righteous indignation over crime and corruption. To this end, the committee looks with confidence to the great force of religion and morality as applied in all phases of life and to sound education of the generations which follow."

These words are found on page 188 of a committee print of the third report of the Senate Crime Investigating Committee. For over one year, we members of the committee (popularly known as the Kefauver Committee) have visited the length and breadth of this Nation, seeking out instances of crime and corruption. I personally have investigated in Washington, Kansas City, Las Vegas, Los Angeles, and some other cities. Following each of our disclosures, following all our legislative suggestions for reforms, the committee has come back to the basic point that it is upon religion that the

ultimate solution of crime and corruption depends.

This is no new conclusion. As a matter of fact, this solution—man's return to God—ever has been available to us poor mortals. What miracles we could achieve if we but realized it and made use of the dynamic force for human happiness, for peace and prosperity, that is inherent in Christianity, if we but applied spiritual principles in every phase of our daily lives.

"Sound education," such as the Crime Committee recommended, means obviously more than teaching the A B C's to the Nation's young—more than stuffing heads with geography, chemistry, grammar, etc. Sound education involves, basically, the inculcation of moral principles on the minds of our Nation's youth.

Now, there can be few greater satisfactions than the joy of helping to mold the minds of youngsters along creative, constructive lines. My own dear wife for many years taught in Sunday school, as did other members of our family. Every moment devoted to this task was in itself a blessing, a joy, a measure of personal fulfillment, a measure of service to God and to one's country. In Acts 5:28—as my readers so well know—are related the words of Peter to the council: "We ought to obey God, rather than men."

And so, I salute the tens of thousands of Sunday-school teachers throughout the Nation for their obedience to our Lord, for their inspiring contribution to the service of God and, yes, indeed, the service of their fellow men.

The more I have worked with the crime committee the more I have been convinced that if we did a better job of teaching our youngsters at mother's knee, in Sunday school, in grade school, high school, and institutions of higher learning, the dreadful problems that we face today would present themselves rarely. Problems of gambling as a \$20,000,000,000 industry, of criminals infiltrating into legitimate business, of wild teen-age youngsters arrested on narcotics jags, of scandalous basketball sell-outs, of bloody gangland slayings, of corruption of public officials, of casinos running wide open, of thousands of homes broken because the breadwinners' pay envelopes have been used to put money down on horse races, could have been kept from developing had more emphasis been placed on the right kind of teaching.

You and I and all like-minded Americans must recognize that the best way to smash crime is to stop it before it starts. How? By spiritual education of the highest order.

But this conclusion on our part need not be based solely on revelations of the Senate crime committee. You and I know from the revelations of other Federal, State, and local investigating groups that the problem of public morality is one of the most challenging problems of our age, if not the most challenging.

You have read the stories of shady practices in connection with the Reconstruction Finance Corporation. You have read of the mink-coat gifts, the deep-freezer gifts. You have read of other disclosures that indicate there has been a decay of men's spiritual core.

Well, then, I repeat, how are we to solve the problem? By a rededication to spiritual values, a personal and mass moral reinvigoration on the basic principles of the Gospel.

It is not enough for the Christian to worship his Creator in his church. There falls upon him the obligation to put his creed into his deed 7 days of the week, to let his "light so shine before men" that they may see his good works, and that they may emulate his example.

The Christian has an obligation, particularly in relation to his elective officials, to secure the finest and most honest public-spirited citizens available. Let him reject

those individuals who, unlike Caesar's wife, are not above suspicion. Let him turn out from office those individuals who have associated with gamblers and racketeers. Let him turn out those lax law-enforcement officers—sheriffs, police chiefs, district attorneys—who have winked at instances of gambling and racketeering in their midst.

Are these tasks easy? Of course not. They are difficult. They take time, energy, often financial contributions for the cause of good government. But these things must be done if you and I are to be worthy of the description "Christian" in its broadest, most ethical, most spiritual meaning.

In the face of this challenge, I am not one of those who are discouraged or disheartened. To be sure, I cannot rejoice over the appalling conditions that we of the Crime Committee have found. But I can rejoice in the certain and sure knowledge that our people will be adequate to the task of solving this problem, and that the forces of God in our country will be in the vanguard of those bent upon cleaning up that which we have exposed.

Family Farm Policy Review

EXTENSION OF REMARKS OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clovis (N. Mex.) News-Journal of September 16, 1951:

CURRY FARMERS REJECT FFPR PLAN

(EDITOR'S NOTE—The News-Journal is printing herewith the complete text of the letter concerning the Family Farm Policy Review from Curry County farmers to Agriculture Secretary Brannan. Written by Earl E. Hartley at the request of the farmers, the letter was signed by scores of county residents and turned over to the Agriculture Mobilization Committee with the request that it be submitted to the USDA along with the committee's report on a series of meetings held in the county to discuss the FFPR. Copies will be sent to the four New Mexico Members of Congress, with the request that the letter be read in both the House and Senate and placed in the CONGRESSIONAL RECORD.)

FAMILY FARM POLICY REVIEW—COMMENTS AND RECOMMENDATIONS OF THE FARMERS OF CURRY COUNTY, N. MEX.

HON. CHARLES F. BRANNAN,
Secretary of Agriculture.

DEAR MR. SECRETARY: In the past few days we have been asked to review and make recommendations concerning material contained in a USDA pamphlet of June 11, 1951, entitled "Family Farm Policy Review." This pamphlet contains 8 pages of introduction and 121 pages of other material on 12 different agencies of the Department of Agriculture. Very few of us have had an actual opportunity of reading this pamphlet, but we do feel that our local agriculture mobilization committee has made an honest and under the circumstances, an efficient review of this pamphlet for our discussion and information.

We do appreciate the opportunity to make a record of some of our opinions concerning the Department of Agriculture and the work which it is doing. In this day when we are bearing an ever-increasing tax burden, we are of the opinion that every agency of the

Government should be closely scrutinized with the idea of cutting out nonessential work and eliminate waste of manpower and waste of our tax funds. In this connection you may be interested to know that we are far more concerned with retaining our freedom than we are in any plans of security.

In order to direct our remarks to the specific problems and recommendations presented in the above-mentioned pamphlet, we are subdividing our comments and recommendations along the same line as the subdivisions in the pamphlet.

I. Agricultural Research Administration

We appreciate the need for continued research on better and more efficient farming methods and on the control of pests and plant and animal diseases. However, we feel that the field work on these projects should be channeled through the land-grant colleges and State extension services. We are also of the opinion that the USDA is now meddling in enough of our daily affairs. As a matter of fact, our present thinking is that they are doing too much meddling. Even though research and home managing, farm housing and farm family living, etc., sound good in writing, we prefer to handle these matters on a local basis. After all the folderl that we have seen coming out of Washington, D. C., we are convinced that the farmers of Curry County are far more capable in their collective thinking than are the Bureau employees in Washington, D. C.

II. Bureau of Agricultural Economics

Here, too, we find references to worthy projects and emphases on extending this Bureau's work further afield. In our opinion, the work of this Bureau and whatever it has to offer the farmers should be channeled through the land-grant colleges and the State extension services. Any suggestions, such as made on page 17, of extending field staffs curdle our blood. We feel that we cannot overemphasize the fact that we know there are entirely too many employees in the USDA.

We are aware of the socialistic thinking that is emphasizing extension of social-security provisions and other so-called social-security practices to the farms. We are also aware of the fact that social security is not worth the costs and the bookkeeping efforts that are required, and we definitely do not want any of its provisions extended to the farms. The less interference that we have from Government employees in the actual operation of the daily affairs, the better we like it; and we would be very much opposed to having any bureaucrats trying to draw our farm-lease agreements, such as suggested in paragraph 10 of page 18.

III. Cooperative Extension Service

We are satisfied with the Cooperative Extension Service as it now operates. We like to think of the county agents, home demonstration agent, and other workers of the Extension Service as being our own land-grant college. If these workers are in other places, dominated and controlled by special organizations, then we would favor releasing them from control of any special groups.

However, we are convinced that we have enough employees in this field to take care of the work. We are further convinced that they need no supervision from Washington, D. C., and any attempt of the United States Department of Agriculture to take over the control of the State extension service would be in our opinion, a reprehensible thing.

IV. The Office of Information

Surely, such an office as this should be more than a clearinghouse for the other United States Department of Agriculture agencies to avoid duplication in publications. Excessive verbiage in the pamphlet that we are discussing is demonstration enough for us that we already have too many writers,

and we are opposed to your hiring any more. Above all, we do not desire that this agency have any field employees. We are wholeheartedly in agreement with the present prohibition on maintenance of field offices by the Office of Information.

V. Production and Marketing Administration

(a) Agricultural conservation program: We of this community recognize that if we are to show good faith in our criticism of excessive Government expenditures, we must show a willingness to eliminate some of those expenditures that are being expended on behalf of the farmers. For several years we have received annual compensation checks in payment for carrying out certain annual practices. The practices for which these payments are made now recognized by the farmers of this area as being good farming practices, and we are confident that these practices will continue in use until such time, if ever, that better practices are developed. We are of the opinion that the payment which we receive for doing these annual practices is no longer necessary. We therefore recommend that all payments for annual practices be eliminated immediately. We also recommend the discharge of all United States Department of Agriculture employees whose work might be eliminated by the discontinuance of these payments.

1. We are pleased with the work of our local committeemen, but we have no desire to have any additional administrative funds provided for their work.

(b) Production adjustment programs: We note that the problem here is in connection with market quotas and acreage allotments. Although we have no particular desire to be told how much of any product we can market or how many acres that we can seed of any commodity, we recognize that if we are to retain price supports, we must also maintain quotas or acreage allotments. In this connection, we are of the opinion that grain sorghums should be added to the list of basic commodities.

1. We are not particularly interested in this area in subsidy payments on perishable commodities. However, we feel that we are helping pay the bill and that so long as we are paying the bill, we are of the opinion that any perishable commodities receiving subsidy support should be controlled under market quotas.

(c) Price support and stabilization program: Under the Government's price-support program based upon parity, the farmers have enjoyed an excellent marketing arrangement for their nonperishable products. If we were given the choice of selecting one phase of the USDA farm programs that we desired to retain, it would be price-support program. The arguments presented on page 45 favoring direct payments in lieu of price-support program are, in our opinion, without foundation in fact or practice. We are wholeheartedly in favor of retaining the present price-support program for nonperishable products and, if it were within our power to do so, we would immediately discharge all of the Government employees including the Secretary of Agriculture for even suggesting that we change to a direct subsidy payment. We note that the very next paragraph suggests a limitation upon the maximum subsidy payment that could be made to any one person. Obviously, if we were placed on direct subsidy payments without any means of controlling the market price of commodities, and then were limited by arbitrary ruling as to the amount of subsidy an individual could receive, based on his being an individual and not related to his capacity to produce, we would immediately become the most subservient group ever to exist under the symbol of a free Government. Let there be no question in your mind—we shall never favor direct subsidy payments in lieu of price supports.

1. From our experiences with the price-support program, we are convinced that the Government has not and cannot lose any money in supporting grain prices based on parity. To our way of thinking, this is the best means available to the farmers of America to secure adequate prices for their products and at the same time retain their freedom and independence.

As to the remainder of comments from pages 47 through 57, we have nothing to offer except to remind you that we are opposed to any increase in personnel and administrative expenses for the USDA.

VI. Soil Conservation Service

We recognize that the Soil Conservation Service has helped place in practice many valuable conservation practices on our farms and ranches. However, a majority of these practices have been accepted by the farmers and ranchers in the course of their own planning and, if it were necessary to cut out the Soil Conservation Service, we are of the opinion that the loss to the farms and ranches would be small.

We certainly have no need for interference from the Soil Conservation Service in the operation of our soil-conservation districts by any suggestions from them that we compel our neighbors to practice conservation features. In our opinion, if the practice has proved its worth, our neighbors are intelligent enough to adopt it without 51 percent of us being able to force them to adopt it.

One of the most reprehensible suggestions made in the entire pamphlet is contained in page 63 where the suggestion is made that the soil-conservation program use land acquisition and redistribution into so-called family farms. We sincerely hope that Congress will do nothing by way of legislation to implement such a program. In our opinion, the Federal Government owns entirely too much land in this Nation and it is our recommendation that the 7,000,000 acres now owned and operated by the Soil Conservation Service be placed on the market and resold to private owners. It is our recommendation that the practice of the Soil Conservation Service of acquiring additional land for development be discontinued immediately.

VII. Forest Service

We, upon the Great Plains, have no contact with the Forest Service. However, we seriously doubt the need or advisability of Government acquisition of forest lands as suggested on page 78.

VIII. Farm Credit Administration

In our brief study of this phase of the pamphlet in question, we find very little quarrel with this program. We have long recognized the need of special loan programs and credit programs for farm and ranch operations. Wherever those needs cannot be met by private institutions, or wherever private institutions refuse to meet those needs, we see nothing wrong in the Government meeting those needs through farm-loan programs. Our experience with these programs shows us that the loan program and its provisions are based on sound financing and that the programs are paying their own way. We do not desire a gift in the form of a loan any more than we do in the form of a subsidy payment. Our chief interest in the loan programs is that they be kept on a sound financial basis.

IX. Farmers Home Administration

Our comments concerning the Farm Credit Administration are equally applicable to this Administration. So long as the loan program is kept within the bounds of the borrower's ability to repay, we favor its extension.

X. Rural Electrification Administration

Here again it has been demonstrated that a sound Government lending program has extended the use of central-station electric

service to approximately 90 percent of the rural homes in America without loss to the Government. We believe that the same sound principles can be used in extending telephone service to those same rural homes, therefore, we recommend the continuance of this program.

XI. Federal crop insurance

We recognize that crop insurance is in the experimental stages. In our opinion, it can and should be extended over a wider area, and extended to cover other crops.

XII. Commodity exchange

Comments and recommendations under this heading concern matters with which we have had little or no experience. We prefer to leave recommendations on this item to those more directly concerned and additional legislation, if any, to the good judgment of our Congressmen.

We trust that the above comments and recommendations will be given your very careful consideration. Most of the items mentioned have to do with our field of business, and we believe that the man in the business is best qualified to know what is good for his business.

Sincerely,

CURRY COUNTY FARMERS.

What Washington Should Know: Italy Will Be a Good Ally if She Is Justly Dealt With

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. SABATH. Mr. Speaker, under unanimous consent, I include in the Record as part of my remarks the translation of a speech delivered in Italian by Mr. Nicolò LoFranco, of Chicago, Ill., the prominent editor and publisher of *L'Italia*, an Italian newspaper of wide circulation in the Middle West.

Mr. LoFranco delivered these highly informative and thought-provoking observations at a banquet held in his honor on the occasion of his return to his home city, from an extended trip abroad. Mr. LoFranco dwells upon the domestic and foreign problems confronting Italy, and the necessity of increased and better understanding with our Nation in the mutual desires of both countries to effect a lasting and enduring peace.

I direct the attention of all those who are interested in the settlement of world problems, to the remarks of Mr. LoFranco, a student of world affairs, with emphasis on the part played by Italy. These observations coming on the heels of the announcement of the future visit of Alcide De Gasperi, Premier of Italy, will throw further light on the discussion of Italo-American relations which have been most cordial and friendly, except for a brief period during World War II. Herewith follow Mr. LoFranco's remarks:

Washington political circles and the periphrastic opinion reflected in the press were shocked by the outcome of the Italian municipal elections. Surprised are many, that the Communists were not routed; that as to

numbers they were found not inferior to what they were in April 1948 elections, which decided the salvation of Europe for it was on the outcome of these elections that the United States solely depended for support of their anti-Soviet policy.

If Italy happens to fall into the hands of Stalin's commissars, home-grown and imported, then the balance of power between the West and the East is projected into the open.

With the Mediterranean area open to the Bolsheviks, the defense of world civilization will crumble and along with it world peace, the enduring peace which Washington hopes to obtain from the sacrifices which the American citizens are onerously bearing with difficulty.

After 4 years of exclusion of Communists from the government in Rome and after so much support from the Marshall plan, the candid and sincere hoped for a striking re-covering of the Italian people and for their immunization from disease and pestilence.

The recent elections demonstrate that the danger persists amid the raging of superficial judgments of the commentators who know little or nothing about which they speak or who, pretending to know some things in order to suit their own conveniences, explode the assinine anger of their sponsors who believe they have purchased Italy with cash.

Nothing is more ugly and insulting to visualize the Italian and American people as bound only in friendly ties by the dollar sign.

Nothing is more deceiving and more bitter than the disillusionment that the Government of Italy and its people, can be humiliated and degraded by the foolish talk and drivel which comes from the mouth of Winston Churchill.

Elections or no elections, propaganda or no propaganda, dollars or no dollars, poverty or not, the Italian does not know how, nor is it in his makeup to be a Communist. The Italian people are not and will not be a communistic satellite. They have suffered from injustice from the early dawn of the beginning of the postwar period, but they have delivered themselves by their own efforts from fascism.

Italy was an obstacle to communism which was then assailing Europe, she freed herself from communism which could not hold up its head in the face of events which overcame the Fatherland; I predict that she will liberate herself even now from the Communist infection which is working over a good part of its territory.

If there is thought given to an Italy which is anticommunistic on its own account, in the interests of Christian civilization and the world, there should be made an attempt to understand full well Italy and the Italians. Those who are not a part of her should become more alive and more conscious of her worth.

But it must be taken into account that there exists today an Italian nation—an Italy valued and respected just as its history makes her, just as she is a part of history and of the entire world civilization.

If the United States and basically the Congress and those leaders who are the guardians of the Constitution, think of Italy in terms of a colony and vassal state then a very rude and strange awakening will surprise the American officials who are listening to senseless statements which are swallowed whole, without investigating the motive and prejudices of the authors.

At this hour, there should be by this time greatly modified, the concept that in the second war there were victors and vanquished. In the 10 years of war and postwar there have come forth elements who condemn, others who absolve, or in one way or another, those that engulf themselves in the stormy petrel of destruction. If the second war concludes with the third, and in the third war the

future defense of the United States calls for the useful and most necessary alliance with Italy—the necessity of stopping the impending Marxist course—Italy will come back into its own and will go into aggressive action at the first encounter with communism. The real credit for having resisted communism is due Italy. She was instead fatally carried into the depths. Although the war brought about an Italy not conquered, the question is raised: Who won the war? No one. Who conquered Italy? No one.

Today the so-called victory has passed into a defensive picture projected by the so-called victors.

Italy has a formidable position in Europe—and hence is in the Atlantic Pact. It follows that in the talks which follow, the Italy of the Mediterranean and the Adriatic, because of the gift of nature—a geographic position which God gave it and which God alone can take away, must be consulted. Hence, it is clear that if Communism increases in Italy and infects it, the world is lost. The Americans engage in recrimination saying "but we have sent over to you millions and millions."

But millions are not enough. A nation does not live alone on money. It is otherwise, and Italy is a nation that wishes to be a nation whom the world must respect as a nation. Hence, let us discard the painful memory and the infamy of a lamented and fateful war.

Even during the badly administered occupation of Italy remembering only because of the arbitrary and odorous nature of a social uprising and protest, the intrusion of the United States into Italian life was, for itself most expensive and nonproductive. There was freed simply a territory which happened to be first on the map of the Atlantic and second by virtue of the story book *Four Freedoms*.

For there was imposed the unconditional surrender with the word of honor given by Eisenhower to Badoglio, that the armistice clauses would be tempered with mercy, and would be followed with formal procedure only made urgent by the then precarious allied situation. In addition too, there were provided by Italy, an important number of divisions of fighting men, but for whom, allied divisions would have suffered worse and sadder days.

Its captured fleet, in fact directed by naval chiefs, sailed into the Pacific in strong force to sustain the weakened forces of the allies. The derelicts were abandoned to a degraded condescension, to the benevolence of those who, strange to say, were the bombardiers of yesterday, cruel and severe, who continued to be but a rabble of people, for example, the German surly and the Japanese silent and puzzling.

With a mob of criminals and exiles, blood-thirsty assassins, there came a government—a monstrosity in Italy the like of which only the plotters themselves enjoyed. Not only did the liberators not liberate even a diled fig, but also a noble people heavily afflicted, was left in search of bread, with a minority that scorned laws and good morals, and pillaged private homes and public treasure. In addition, there was premeditated a civil war procured and helped with pound sterling and dollars.

Thus can Italy be pictured an Italy crippled and deformed by the Paris Pact where there was forced upon her, the infamy of confessing that she was a conquered nation, forced to sign a shameful diplomatic document which forever brands her.

No Atlantic Charter for Italy, no freedom by the dozens. Forgotten is the word of honor of Eisenhower, the proclamation of reassurance by Roosevelt, nothing, nothing, nothing.

It is sufficient to consider Italy in rags and impoverished, begging for alms. But with

alms one does not restore the soul of a people crucified. For carved out as if of granite, is a cowardly treaty that renders it a slave upon whom someone vents one's spite. Farther isolated from the society of nations, deprived of its initiative, of its preservation and salvation, deprived of light and of guidance, the Italian people were thrown madly into a civil war. Then the Russian demagog quick to see the opening, jumped into the struggle and became prominently identified with it. From the outset there went on ill-advised English-American maneuverings. Then with the threat of Moscow becoming more accentuated America asked the Italian cabinet of Rome to expel the fellow travelers; and these were thrown out. The verdict given at the polls on April 18, 1948, marks the ostracism of the Bolsheviks.

Nevertheless, abroad, in the eastern sphere where matures the conscience of self preservation, there occur the world developments of an American policy, the mold of which takes form in the fashion of the humanity of tomorrow. The Marshall plan becomes perfected into the Atlantic Pact. If Europe breaks apart economically and yields, the enemy will invade it and also the waters and reaches which lead to the American shores. The United States unconsciously passes from a protector to the one to be protected. The other nations are the ones who must run to its defense.

The war in Korea makes more manifest and more terrifying, this danger. Entering automatically into the global strategy, comes the participation of Italy and not in a minor sense but in a greater sense, because, if it becomes a question of fighting in Europe, Italy cannot stand in the position of subaltern. The Italian nation that God took to his heart from the continent opposite Africa and along the vital lines which from Gibraltar via Suez, joins up with the Indian Ocean, the Pacific, even up to the Yellow Sea which laps Korea. Thus centralized, the defense of the United States made necessary in the Mediterranean and through this into the precious Tripolitanian bases, Italy becomes her most logical and secure ally—Italy necessarily through its terrain on which it lies for the superhuman guarantees which it possesses. Italy although human—what does Italy possess, although in the chains of the Atlantic Pact, it should be a link fastened firmly to the other links in the chain.

Therefore, it is easily seen, in the contention of the English—in the proceedings of the United Nations, in the complications of the Atlantic Pact and in the Mediterranean intrigues, etc.—the possibility that in order to make the Atlantic secure, it is vitally necessary to make the British link secure. Further, that to give additional strength to this chain there must be supplied the security of Italy. The United States has much need of an Italy completely armed and voluntarily combatant. But it must be an Italy which must feel itself entirely sovereign and not uncertain as to its future.

Italy will not return as a nation of and by itself and for the world as well, unless it is given justice, if first, there is not wiped out the shame and insult inflicted at Paris.

The precarious state of affairs which has produced a low standard of living in Italy reveals to the mentally alert and to those of open heart, that Italy must be freed from the oppression of the Treaty of Paris. That treaty was imposed in a moment in which it seemed to adjust once and for all a world order including the Russian sphere.

It was contemplated, thereby, to be a treaty such that the sacrifices of Italy would only be borne temporarily, such that, soon and within a short space of time, she would be legally received into the United Nations where it was intended that equals should be numbered among equals. The signature of Italy to this infamous Treaty of Paris was illegally and unlawfully obtained, based

upon a promise that a spirit of justice would intervene to correct the harsh terms, dictated only by military necessity.

It is true that in the meantime, there came the Russian desertion followed by the progressively increasing arrogance of the Muscovite who has upset all peace efforts. It is true that Russia opposes the admission of Italy into the United Nations. Italy knows this and is deeply resentful of Russia.

But it is more resentful of its allies who are aware of the absolute necessity of wiping out, in effect, that same treaty from which Russia also obtained illicit and unjust and deceitful gains. The Allies continue in the conduct of the former cruel dictator and do not realize that their aberration is tantamount to suicide. With Russia turning everything "topsy turvy" how does it come about that the one thing that remains stable and intangible is this Treaty of Paris? Russia violates all agreements, yet the Allies in return contest and suspend every other covenant. The tyranny of the Paris Treaty should not be the only thing reflected in unbreakable laws.

The infamy of the deprivation of Italy's colonies is completed in the viciousness of the treaty. England carries on its deception and through devious ways drives back into the barbarous lands, civilized in truth by the Italian liberator.

Again, should the Italian people be grateful for the indecent and corrupt treatment received at Trieste?

The responsibility of the Americans is of transcendent importance. The United States should give thought to the necessity of having an Italian ally strong and secure, capable of protecting it from the left-handed blows of England.

Is it convenient to England and France, considering the ambiguity of their conduct, to have an Italy, a colony in subjection, unarmed and defeated such that it cannot serve with virility, in an alliance with the United States; but it cannot be admitted that it is agreeable and suitable to the United States to have an Italy mutilated, abnormal, hence superfluous and an encumbrance.

Cannot the United States raise anew an Italy to the dignity of a nation, to the power of an ally? Yes, if Washington proceeds logically. The Italian people are upset and as a result of their confusion, the Russian enemy is pleased. When the stubborn Soviet delayed the course of American diplomacy at Lake Success, we nullified the Russian veto in the Security Council with subsequent deliberations taking place in the General Assembly. Why does not the United States give thought to disarming Russia of her veto which leaves Italy waiting outside the door? The United States has now concluded a treaty of peace with Japan guaranteeing its sovereignty, its independence, its equality, its solidarity, its well-being—and why does Russia exclude herself? If she is not necessary to a Japanese peace, neither is she necessary to an Italo-American peace.

Italy has assumed the obligation of fighting under the Atlantic Pact. With what shall she fight? Exposed to disaster at its frontiers at the hands of an infuriated horde rushing down upon her, what can the weakened forces of Pacciardi's (Italian Minister of Defense) organization accomplish? There is also lacking cohesion between those already armed and those that can be armed. If the internal struggle is kept in its bitter state because of the political situation of the Government, which gives encouragement to the influx of foreign propaganda on the one hand and opens up wider disagreements on the other, what help then can Italy bring to the global defense?

Why did they take away its army? Why did they deprive it of its navy? Why did they demolish the fortifications of Italy? Why did they take away from it its confines,

its headwaters, the capacity of defending itself?

The paths of immigration are barred, and America can open so many. Population is on the increase, mouths of those needing food are increasing. Hunger is acute. The limitations of the Treaty of Paris, the weight of the reparations, the controls and the limitations coordinated to fit in with the plans of the Allies and now to the necessity of armaments have shut down or weakened industry. The harbors are deserted, the factories idle. The exports are subject to the directions of others.

The redistribution of land is impossible because in Italy, there are those who wish it and those who do not wish it. The taxes are oppressive, aggravating the inability of those that cannot pay, those who ought to pay and do not pay. All this brings about a dissolute and insolent luxury class. The Italian Government does what it can, but within the limits of the Treaty of Paris. It is forced to rely on the diplomats and on the supply of urgent moneys from abroad. What, then, do the elections indicate when we find a country with such difficulties? The problems are always there, grave and pressing, the threat of a Russian invasion is always at hand.

What is to be the result? Today Nazi Germany and Japan both uncertain and unreliable, veritable enemies of the democracies, are being rearmed and reestablished. Then why not rearm and reestablish Italy, which has demonstrated greater faith and appreciation of democratic principles? For Italy can be trusted. She can be relied upon to keep the faith.

Ansonia (Conn.) Eagles Condemn Communist Tactics

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, September 20, 1951

Mr. PATTERSON. Mr. Speaker, the case of William N. Oatis, now imprisoned in Czechoslovakia, demonstrates too vividly the impossibility of objective relationships with unscrupulous and unreasoning Communists.

The Ansonia (Conn.) Aerie of Eagles has adopted a resolution of condemnation for the tactics of the Czech Communists in the suppression of free speech and personal liberty through the imprisonment of Oatis.

This expression by the members of this wonderful fraternal organization to which I am proud to belong deserves public attention by publication in the CONGRESSIONAL RECORD:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist government of Czechoslovakia without explanation; and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative, or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court" completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action, the Communist-dominated Czech Government showed its scorn for the principles of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of Government, at which often much off-the-record information is discussed: Now, therefore, be it

Resolved, That Ansonia Aerie, No 1996, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie, No 1996, of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet News Agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 13th day of September 1951, by Aerie No. 1996, Ansonia, Conn.

Attest:

W. NEWELL QUELLISON,
Worthy President.
THOMAS HINE,
Secretary.

Need for Development of Warrior-Tombigbee Waterway

EXTENSION OF REMARKS OF

HON. EDWARD deGRAFFENRIED

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, September 20, 1951

Mr. deGRAFFENRIED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper articles, one taken from the Birmingham News of September 11, 1951; one from the Birmingham News of September 12, 1951; and one from the Birmingham Post-Herald of September 13, 1951. It was my pleasure to attend the meeting covered by these articles, which forcefully portray the acute need for development along this waterway.

[From the Birmingham (Ala.) News of September 11, 1951]

TAPPING OF VAST POTENTIAL OF BIG WATERWAY Is Aim

Creation of a vast new industrial potential from Walker County through Birmingham and on to the Port of Mobile was in process here today.

Gathered at Birmingham's Chamber of Commerce for organization and activation of the Warrior-Tombigbee Improvement Association were representatives of business and

industry from cities and towns along the water route spanning the lush valley.

Paul Cooper, secretary of the waterway committee of the chamber of commerce, said the representation included nearly 75 from out of town, together with Birmingham business and industrial interests.

What adequate development of the water system would mean in potential new industry, especially of the heavy type, is difficult to overestimate, most of its ardent advocates believe.

The plan is to put the influence and the work of the Warrior-Tombigbee Improvement Association behind a program to promote fullest development of the route and thus make available to new and existing industry, a transportation system which would create an estimated 2,000,000 tons of freight annually.

Figures show more than 2,600,000 tons moved over the system in 1950. With a 9 to 10-foot channel, uninterrupted by seasonal conditions, the movement could be multiplied and availability of such facilities would attract an influx of heavy manufacturing to the valley, it is pointed out.

Function of the association, to be financed individually and by business and industry, is promotional only.

Army engineers have estimated cost of the development program at between \$150,000,000 and \$2,000,000,000. But its value as a defense facility and in time of national emergency would be incalculable, the group here today believes.

Officers were to be elected and details of the organization perfected at the chamber of commerce meeting, Mr. Cooper said.

[From the Birmingham (Ala.) News of September 12, 1951]

AIM TO MAKE VALLEY "GARDEN SPOT"—BODY FORMED TO MAKE WARRIOR-TOMBIGBEE ATTAIN GREAT DESTINY

(By Robert W. Kinney)

Warrior-Tombigbee Improvement Association, designed to make of the valley which the combined streams traverse, "the garden spot" it was destined to be, was organized here yesterday afternoon.

DeVane Jones, Tuscaloosa attorney, was elected interim chairman.

Mr. Jones immediately called upon the sponsors, including eminent business and industrial representatives from cities and towns along the route, to elect immediately and forthwith a permanent president, preferably by October 1, to attend the incorporation details and set the ball rolling toward ultimate objectives of the association.

These are, in addition to making available a year-around navigable waterway system from Walker County to the Port of Mobile, which, it is believed, will attract fabulous new heavy industries—power production, industrial water supply, and stream antipollution, and recreational facilities, and national defense.

Revision of temporary constitution and by-laws was placed in the hands of an elected committee. The need repeatedly was stressed for quick and positive action to make a reality of an ambition long in the minds of men outstanding in business and industrial circles of the State.

Seven districts were created. Each will nominate two men for members of the executive board. The districts are Bessemer-Fairfield, Birmingham, Demopolis, Tuscaloosa, Jackson, Jasper, and Walker County, and Mobile.

Already nominated from Demopolis are Jerome Levy, temporary chairman and in charge of yesterday's meeting, and John Spight, Jr.

Nominated from Tuscaloosa were Frank Pitts and George Shook. Mr. Shook also received the nomination for vice president.

Mr. Jones, as interim chairman, gave the ball to Birmingham. It is, he said, up to the moving spirits within the State's greatest industrial city, to supply the momentum and the enthusiasm necessary to a successful conclusion of what the meeting agreed was the No. 1 project of the year.

William P. Engel, president of the Birmingham Chamber of Commerce, said he had lived in Birmingham a great many years without having understood much about or attached a great deal of significance to the waterways development program.

But now, he declared, nothing is more important than that this opportunity to contribute to the fabulous industrial expansion, the recreational opportunities, and the defense arm it will offer, be grabbed here and now.

These convictions, he said, have come after an intensive study of the possibilities of the river system which included a river trip and a survey of present and potential tonnage.

Hugh P. Bigler, executive vice president of the Birmingham Chamber of Commerce, outlined aims and objectives of the organization. Now, he said, is the time for action. And nobody, he declared, is more enthusiastic as to potentialities than he.

Mr. Bigler said studies had shown conclusively that where there is the greatest amount of deep-water traffic, there is a corresponding increase in rail and highway traffic. This is a fact that has greatly fired his enthusiasm, he said.

The proposed constitution and bylaws, subject to revision, provide that the principal office shall be in Birmingham, and that:

"This association is organized for educational and benevolent purposes, including the continued development of the Warrior-Tombigbee and Mobile waterway system, development of navigation, flood control, water conservation, and allied interests."

Major function will be promotional, which includes seeking of necessary appropriations, arousing interest and cooperation on a State-wide basis and presentation of facts and figures in support of the over-all program.

Officers will include a president, vice president, and secretary-treasurer.

From EDWARD DEGRAFFENRIED, congressional representative from the Sixth District, came the personal pledge of continuing interest and work in behalf of the project by himself and the entire Alabama delegation in the House and Senate.

From BURTON BELL, Atlanta, of the division office of the Army Corps of Engineers, came assurance of interest and cooperation from Gen. L. A. Pick, head of the Corps of Engineers, and associates.

Earlier it had been pointed out that the river system last year handled 2,602,623 total short tons of freight, and that a survey had indicated another 2,000,000-ton minimum as readily available with ample depth and non-interference because of weather conditions.

Potentialities of the development, however, from the standpoint of attracting new heavy industries, national defense, and recreation were given the most emphasis.

[From the Birmingham (Ala.) Post of September 13, 1951]

**RIVER CITIES PROMOTE DEEP CHANNEL PLAN—
OUTLET TO SEA IS KEY TO AREA GROWTH**
(By Don Cummins)

Cities along the Warrior-Tombigbee waterway yesterday proved they mean business when they say they want their river system improved all the way down to Mobile Bay.

Representatives from the cities got together at the Chamber of Commerce Building here to organize the Warrior-Tombigbee Improvement Association which will work a deep-water channel from above Birmingham to the Gulf.

"It's the project of the year," Hugh P. Bigler, executive vice president of the Birm-

ingham chamber, told the meeting. He said the future of Birmingham and the industrial growth of the entire area depend upon an outlet to the sea.

He added up the benefits of a successful program by showing that flood control, navigation, sufficient water for domestic and industrial water system expansion and pollution control would be a great boon to Alabama.

Bigler said the case of Houston, Tex., showed that where there was a heavy river traffic there was also heavy freight and truck traffic.

United States Representative EDWARD DEGRAFFENRIED, of Alabama's Sixth District, told the meeting that Alabama Congressmen in Washington were behind the development of the river system.

He pointed out that they were successful in obtaining \$24,000 for a preliminary study of the river system by the United States Corps of Engineers.

He told his listeners that flood control and navigation was a necessity but it would take a lot of work by all interested parties.

William P. Engel, president of the Birmingham chamber, explained the increasing interest of industrial firms throughout the Nation in whether the district had deep-water navigation.

Others who spoke in support of the program and the necessity for its completion were: Devane Jones, Tuscaloosa; Jerome Levy, Mobile; George Shook, Tuscaloosa; Ernest Woods, Montgomery, and Burton Bell, representing the United States engineers, Atlanta.

It was agreed that each interested community would nominate two members to the executive board who would act as trustees of the association.

Two permanent officers were elected. George Shook was elected vice president and Preston B. Ralston, secretary-treasurer. Both are from Tuscaloosa.

The permanent president will be elected by the Birmingham group before October 1.

The Power To Make War

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. SHEEHAN. Mr. Speaker, during the month of September the Illinois division of the American Legion held their annual convention in Chicago, and one of the resolutions adopted urged a constitutional amendment to forbid police actions such as the one now taking place in Korea.

The editorial comment on this resolution which appeared in the Chicago Herald-American on Thursday, September 13, is very much to the point and reflects the considered thinking of the greatest majority of Illinois residents.

The editorial in the Chicago Herald-American is as follows:

THE POWER TO MAKE WAR

The Illinois American Legion's resolution urging adoption of a constitutional amendment to forbid "police actions" such as the one in Korea is a demand from men who have fought for America that the war-making power be returned to Congress.

The Constitution clearly invests the power to declare war in Congress.

But it does not expressly forbid the President to start wars by ordering American forces to "resist aggression" or to "restore order" in troubled regions.

By taking advantage of that omission, President Truman got us into the "police action" in Korea, which already has cost us more than 80,000 battle casualties.

And so long as the omission stands any President will be able to involve the United States in war, anywhere and with anyone, at his personal whim alone.

Administration defenders of President Truman's one-man decision to fight a war in Korea have argued that it is no longer practical for Congress to decide whether the Nation shall go to war.

They say formal declarations of war are "obsolete."

It is true that in countries ruled by dictatorships wars can be started by the dictators without consulting the people or their representatives, but this country is not a dictatorship.

Under the Constitution government rests on the consent of the governed.

How can it be argued that the most fateful decision our Government can make—the decision to engage in war—can be taken by the executive department alone, without the consent of the people through their Congress, unless we are ready to abandon self-government and invest our Presidents with the personal power of life and death?

The power to plunge the Nation into war is the power to risk the Nation's destruction.

No one man should have the power, and no man should want it.

But since it has been demonstrated that one President does want it, and others after him may want it, too, then the Constitution should be amended, as the Illinois Department of the American Legion so wisely proposed, to make the assumption of such power by any President forever impossible.

Tribute to Harry Strunk

EXTENSION OF REMARKS OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. CURTIS of Nebraska. Mr. Speaker, I attended and took part in the program for the eleventh annual meeting of the Republican Valley Conservation Association held in McCook, Nebr., on August 31, 1951. The Republican Valley Conservation Association is an organization composed of representatives of most of the towns in the upper reaches of the Republican River Basin in Nebraska, Colorado, and Kansas, and as its name implies, its objective is the conservation and utilization of the natural resources of the basin. It was organized 11 years ago by my good friend, Harry D. Strunk, owner and publisher of the McCook Daily Gazette, who has been unanimously elected its president every year since the association was organized.

The Republican Valley Conservation Association is a strong organization which has been of invaluable assistance to the Bureau of Reclamation, the Corps of Engineers, and other Federal and State agencies concerned in the conservation and utilization of the natural re-

sources of the basin. Its guiding light has always been its president, Harry Strunk, whose activities in conservation work date back to long before the organization of the association—back to about 1911 when he first came to McCook to start his newspaper.

Because of his outstanding contribution to all forms of conservation over a period of many years, I was extremely happy to see Harry Strunk receive some of the recognition he so richly deserves at the meeting of the association in McCook on August 31. At the banquet climaxing the meeting, Mr. Strunk was presented the Department of the Interior Conservation Service Award by Goodrich W. Lineweaver, Assistant Commissioner of the Bureau of Reclamation. The award was the first of its kind given to any man in the Western States. It was accompanied by a letter written by Acting Secretary of the Interior R. D. Searles for Secretary of the Interior Oscar Chapman, and I would like to quote the text of this letter in its entirety:

In recognition of your lifetime of work in behalf of the conservation and utilization of the natural resources of the Republican River Basin and the entire Missouri River Basin, I take pleasure in presenting to you the Conservation Service Award of the Department of the Interior.

You richly deserve this award because of the invaluable contribution you have made to the development of the natural resources of the Missouri River Basin, particularly the Republican River Basin. Your ceaseless and untiring efforts to bring about the accomplishment of our mutual objective of controlling the waste water of the valley and using it for beneficial purposes have not gone unnoticed by us in the Department. We know something of the sacrifices you have made of your time and means to accomplish this end, and we feel that the Department, as well as the people of the valley, is deeply indebted to you for the service you have rendered. You have indeed lived up to the motto of your newspaper, the McCook Daily Gazette—"Service is the rent we pay for the space we occupy in this world."

Had it not been for your perseverance in the face of almost insurmountable difficulties, it is doubtful whether the present state of development of the Republican River Valley would have been achieved. We hope that in the not too distant future your dream of a valley in which "every drop of water that falls will be conserved and utilized for the benefit of the greatest number of people" will be realized, and we will continue to do all we can to bring it about.

Please accept the enclosed Conservation Service award in recognition of your outstanding contribution to the work of the Department of the Interior.

Mr. Speaker, under leave to extend my remarks, I include the following editorial from the McCook Daily Gazette of September 1, written by Ora Spald, managing editor of the Gazette, and a news story from the Gazette of the same date:

A TRIBUTE TO THE BOSS

Harry Strunk came into his own last night. He was awarded a conservation service award by the United States Department of the Interior. It was the first award of its kind given to any man in the Western States.

The boss doesn't know about this editorial. We didn't tell him because we knew he'd never permit it to be published. And it's from no effort to get in good with him that

we publish this. It's simply because we are proud of our boss and want him to know it.

It's high time somebody gave Harry formal recognition of his long service to the people and institutions of the Republican Valley. True, he has been commonly accepted as the man most responsible for reclamation work in our valley, and a form of recognition has come in his constant reelection—for 11 years—to the presidency of the Republican Valley Conservation Association, an organization he helped found in 1940.

But not until last night was an appreciation of his lifelong labor wrapped up in one formal package. We agree wholeheartedly with the Department of the Interior when it said he richly deserves the award. Perhaps it is because we work with him that, more than others, we can realize how much he deserves it. We know the many long hours he spends, at no profit to himself but to the detriment of his own health and welfare, constantly serving the people of this valley in the way he thinks will benefit them most—by bringing reclamation here.

We have seen many persons who acknowledge that reclamation is a good thing for this valley, but whose support of the idea, while enthusiastic, cannot begin to be as unswerving as his. We believe that the reason the Republican Valley today stands as the most outstanding example of conservation work actually completed is due largely to the single-mindedness of our boss. All great things require the endeavor and inspiration of someone who can think of little other than getting the job done, and brooks no thought of letting down.

Our boss is a controversial figure. He has come in for much criticism in his dogged attempt to get the job done. But, whatever men think of Harry Strunk, they cannot mitigate the contribution he has made. We think those who have thought unfavorably of him have not understood him as we do. They would think otherwise if they knew him well.

It is with real, down-deep feeling, then, that we say: Congratulations, boss; we're happy for you. (Ora Spald.)

STRUNK IS HONORED BY SERVICE AWARD FOR CONSERVATION

(By Ora Spald)

Harry D. Strunk, president of the Republican Valley Conservation Association and publisher of the Gazette, last night received high honor for a lifetime of work devoted to reclamation and conservation in the Republican River Basin.

At a banquet in the Keystone Hotel climaxing the eleventh annual meeting of the RVCA, Mr. Strunk was awarded the Department of Interior's Conservation Service award by G. W. Lineweaver, Assistant Reclamation Commissioner for the Bureau of Reclamation. The award is the first given to any man in the Western States.

A letter accompanying the award read by Lineweaver was abundant in praise of Mr. Strunk's "ceaseless and untiring efforts to bring about the accomplishment of . . . controlling the waste water of the valley and using it for beneficial purposes." The letter said: "You have indeed lived up to the motto of your newspaper. . . . 'Service is the rent we pay for the space we occupy in this world'."

The presentation ceremony highlighted yesterday's all-day meeting of the RVCA, which included Mr. Strunk's reelection for the eleventh year as president of the organization. All other officers and directors were also unanimously reelected.

An overflow crowd heard brief addresses by four reclamation-minded officials at the banquet last night, introduced by M. O. Ryan, national counselor for the RVCA, who was master of ceremonies.

In a report on progress in the Kansas River Basin, H. E. Robinson, district manager for the Bureau of Reclamation, revealed that yesterday appropriations had been authorized for work on new dams in the Kansas River Basin. The dams are the Kirwin, Webster, and Glen Elder on the Solomon River and the Wilson on the Saline River. Construction on at least one of the dams will begin during the current fiscal year, he said.

He also predicted negotiations for irrigation along the Driftwood and Frenchman Rivers west of McCook may begin in the next few months.

Robinson underlined the contribution of dams already constructed by the Bureau in preventing floods. The Bureau has completed four dams in the Kansas River district—Bonny Dam in Colorado, Cedar Bluffs in Kansas, and Medicine and Enders in Nebraska—with work on the Trenton Dam 50-percent completed.

Robinson told the 150 guests that without the Medicine Creek Reservoir, the city of Cambridge this year might have suffered a flood similar to the one of 1947. In describing how reservoir construction paid off, he told of the extensive indescribable destruction caused by the recent flood in Kansas and explained that the havoc might have been worse had it not been that the Cedar Bluffs Reservoir stored and stopped 275,000 acre-feet of water.

Lineweaver joined Robinson in lauding the work of the RVCA. He described the recent validation by the district court of a repayment contract between the Frenchman-Cambridge irrigation district and the Bureau after months of litigation as "a significant influence of this area on the other 17 western reclamation States." The contract has been described as a "guinea-pig document" after which other repayment contracts may be patterned.

Lineweaver described the RVCA as a "good example of cooperation in action—plus pressure" for the accomplishment of conservation work. He pointed to the amusing reality of a Democratic administration "pouring more than \$65,000,000 into the Republican Valley" as proof of cooperation.

A philosophical framework for reclamation work was provided by the remarks of C. Petrus Peterson, treasurer of the National Reclamation Association, who envisioned conservation as "man's attempt to better his environment."

The 71-year-old, white-headed Peterson said it was God's charge to man that "he be the ruler of all living things" and pictured the creation of a new race, the assimilation of all foreign peoples, in the State of Nebraska.

Representative CARL T. CURTIS, Republican, Nebraska, told his listeners he was "proud to be called a conservative" because the description fell within the meaning of conservation, which he called "the opposite of destruction and waste."

CURTIS characterized the RVCA as "great leadership" in the fight to conserve "our greatest resource—the good earth."

Know Your Waterways—Only 2½ Percent

EXTENSION OF REMARKS

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks

in the RECORD, I wish to place in the RECORD an article by the Marine News, of New York, N. Y., recently published in the Washington Post, as follows:

KNOW YOUR WATERWAYS—ONLY 2½ PERCENT

The amount provided for harbor and channel improvements in the Army civil functions bill passed on June 13 is but \$14,164,500, a little over 2½ percent of the bill's total, \$514,427,400. The remaining 97½ percent is for Nation-wide flood control, the Panama Canal, maintenance of harbors, channels and flood-control works, cemetery expenses, and some miscellaneous items. Year after year this bill is largely labeled in the press and elsewhere as the river and harbor bill, with the grossly misleading inference that the total amount is for harbor and channel improvement.

The meager \$14,164,500 would not pay for a medium-sized office building, or 20 blocks of New York City subway, yet it is all that is provided for use along the entire Atlantic, Gulf, and Pacific coasts, all the Great Lakes and all major rivers.

Much of the Nation's commercial and industrial activity and a vital part of its defense depends upon shipping. Shipping is dependent upon properly developed, integrated, and maintained harbors and channels.

When he was Secretary of Commerce, former President Herbert Hoover said, "Through the improvement of our waterways, it will be possible to distribute industry and population better, because the waterway tends to place many towns and cities upon an equality in transportation."

America is developing, expanding, and increasing its strength. It is important and logical that waterways develop and expand with the Nation. Expenditures for that purpose are not extravagance; they are an investment in the building of a nation.

(Marine News, 26 Water Street, New York, N. Y., George H. Palmer, president and publisher.)

Savings Bond Must Be Made a Truly Sound Investment

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. SHEEHAN. Mr. Speaker, the problem of savings bonds as a sound investment has been considered by many of the thinking people in America and Mr. Robert P. Vanderpoel, financial editor of the Chicago Sun Times, qualifies as an outspoken and interested writer on this subject.

His recent column entitled, "Savings Bonds Must Be Made a Truly Sound Investment" which appeared in the Chicago Sun Times on September 4 is as follows:

SAVINGS BOND MUST BE MADE A TRULY SOUND INVESTMENT

(By Robert P. Vanderpoel)

Recently I asked a man high in the council of the administration in Washington what a person like myself should do about the big Defense Bond drive which got under way Monday and is to last through October 27.

Without attempting to quote his exact words his reply was about as follows:

"Someone has to buy the Government's bonds. If individuals don't, the banks will;

if the banks don't, the Federal Reserve will. As a last resort, if the Federal Reserve won't, the Treasury itself will and will simply print the notes necessary to pay for them.

"It is highly desirable for the common good that as large a portion of the bonds as possible be in the hands of individuals. If the people don't buy the bonds, we shall simply have more inflation. There won't be any more goods. People merely will be bidding prices up.

"It seems obvious to me that you have to get behind the Defense Bond drive."

I said to this man for whom I have a high regard and who has nothing but the interest of his country at heart:

"I presume you are right as far as you go but your phrase 'the common good' begins to fall apart when examined in the light of the individual's good. What you say has been true at any time in the last 10 years and yet the facts are that the patriotic men and women who bought savings bonds and war bonds have been suckers while the less patriotic, coldly analytical men and women who invested their money in good stocks, real estate, or commodities have ridden the inflation train and found it acceleratingly profitable."

NO SOLUTION SEEN

My friend admitted the truth of this charge but hastened to add that he didn't know what he or anyone could do about it.

I told him that for my part if I saw just the slightest indication of a sincere determination on the part of the administration or of Congress to correct the fundamental situation, I, for one, would feel that I should go along, buy bonds myself and urge others to do the same, but unfortunately, the facts of the situation did not warrant taking such a position.

Congress has weakened rather than strengthened the controls necessary to hold inflation in check. Congress has trimmed appropriations only slightly and has dilly-dallied in a shameful manner over the tax bill and today promises us an admittedly inadequate revenue measure with few of the inexcusable loopholes plugged.

President Truman, for his part, has dared anyone to trim his staggering budget. He and his many departmental and agency heads have shown little appreciation of the danger of inflation, little determination to make sure that the value of savings bonds will not continue to decline.

Under such circumstances, what should, and what could be done? My own feeling is that all straws point to an eventual, inevitable crisis. "If such is the case," I told this man who advises the President, "I am convinced that the sooner it comes the better."

My friend shuddered at this thought. He rejected it completely, unwilling to agree that if something bad was coming, it is better to face it today than tomorrow.

Apparently, however, I am not alone in my views regarding savings bonds. The House Appropriations Committee recently, in turning down a request for an extra \$2,000,000 to help finance the Treasury Department's forthcoming savings bond sales campaign, declared that "some new ideas are needed to make savings bonds sell better."

DEMANDS "NEW THINKING"

Noting that sales had shown a marked drop compared with a year ago and that redemptions had been running ahead of sales by \$840,000,000, the committee commented: "It is high time for the Treasury Department to inject some new and more effective thinking into its bond sales program."

The committee reaffirmed its belief in savings bonds "as one of the major means of financing the Nation's defense program and as an effective weapon against inflation" but suggested that the success of the sales program would be "determined by its quality and not by the quantity of money poured into it."

The committee failed to explain what is meant by that remark but my own view is clear. Quality indeed is what we need. Not quality of a sales campaign but quality of the bonds. We need bonds which will not depreciate in their purchasing power a great deal more than they appreciate as a result of the rather modest interest (a maximum of 2.9 percent) paid on them.

All sorts of suggestions have been offered for making the savings bonds more attractive to individuals. Some of these may have merit, others obviously have not. But certainly first and foremost comes the necessity for protecting the value of the bonds.

The public should not be asked or expected to buy bonds for \$75 today with the promise that with interest they will return \$100 after 10 years if that \$100 is going to be worth only \$53 in 1961 purchasing power. This is exactly what happened to the bonds sold 10 years ago. (In addition, the Government takes back in taxes 20 to 31 percent—more probably under the 1951 tax act—of the \$25 earned as interest.)

Must Congress and the administration wait until the public shows very decisively that it will have no more of this raw deal before taking adequate measures to make the Federal bonds the good and sound savings medium which they should be?

Investigation of Sporting Events

EXTENSION OF REMARKS OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. CLEMENTE. Mr. Speaker, recently I introduced House Resolution 412, to create a select committee to investigate all phases of football, basketball, baseball, boxing, racing, and all other sporting events. Under leave to extend my remarks, I include in the RECORD six newspaper articles referring to conditions in various sports that warrant an investigation.

The articles follow:

[From the Keene Sentinel of September 12, 1951]

BAN ON RADIO, TV SHOWING OF FIGHT IS INSULT TO SPORTS PUBLIC

(By Justin Gallagher)

Tonight one of the most ballyhooed championship fights in years is scheduled to be held in New York between Randy Turpin of England and former middleweight titleholder, Sugar Ray Robinson.

Yet only a pitiful handful of this Nation's sum population of boxing fans will see that fight at the Polo Grounds or on theater television.

Hundreds of thousands of fans will not enjoy the time-honored privilege of hearing the bout on the radio or the more recent privilege of watching it on television.

A certain few cities will have fight televised in theaters. Everyone else around the country will have to catch the outcome on late news broadcasts or wait for their morning newspapers.

This is a body blow to the American public which has done pretty well over the years in supporting all branches of sports, including boxing.

If this practice of holding major sports events behind an iron curtain continues, we believe that the game, not the fan, will ultimately suffer most. How long can a fan be expected to remain interested in any sport

he is denied the right to hear about on the radio or watch on television?

And once a fan loses interest, newspapers will cease feeding him his daily fare of sports news he now demands. And if the newspapers ever clamp down, every money hungry sports promoter will go out of business over night.

This newspaper, along with every other, has given considerable space to the Turpin-Robinson fight. We have done so because there is a great deal of interest in the bout. It is our firm belief, however, that interest among fans will lessen appreciably with each passing boxing show they cannot hear or see.

When reader interest flags, sports publicity, at least on a reputable newspaper, will diminish accordingly.

Publicity must keep pace with reader interest, not ahead of it or behind it.

It is not the intention of this piece to become involved in the wrangle whether television and radio are good or bad for sports, though we do range ourselves alongside those who hold that those media will, in the long run, do more to benefit than hurt the game.

The issue at hand, as we see it, is the flaunting of what most sports fans consider their prerogative—privilege to hear or see the fight.

[From the New York World Telegram]

DEWEY ACTION MAKES FARCE OF RING PROBE (By Joe Williams)

Gov. Tom Dewey has directed his personally appointed boxing commissioners to investigate the circumstances surrounding the death of George Flores, the youthful prize fighter who was wounded fatally in Madison Square Garden last week.

The Governor directs the commissioners to "determine if there were any precautions that could have been taken and if it (Flores' death) was in any way avoidable." The Governor adds that the death of the young prize fighter was a "tragedy."

There are many who will agree that it was a tragedy, indeed, particularly the young prize fighter's wife and infant. There are many more who will not agree that turning this matter over to the commissioner, presumably for final disposition, is either bright or proper.

Since the formal certification of the dead youngster's physical fitness and fighting qualifications were entirely in the hands of the commissioners to begin with, it hardly seems likely these gentlemen would go to extraordinary lengths to place themselves in an embarrassing position. This is not a procedure which is uniformly practiced by the human race.

What is needed here is not an investigation by the boxing commissioners but an investigation of the boxing commissioners. What the Governor's attitude amounts to is an invitation to official whitewash and the dismissal of another ring fatality as just one of those deplorable occurrences that couldn't be helped.

If this is as far as the Governor intends to go, then the time has come to abolish prize fighting in this State, for it is a warning that conditions will get worse before they get better. It is almost a certainty that even an impartial investigation would confirm that all the routine precautions were observed, but that would tell only a part of the story. There are precautions which the book, from which the commissioners work, do not prescribe.

IS THERE A LAW AGAINST COMMON SENSE?

Despite contrary belief, there is no rule in the book which imposes a 30-day lay-off for a fighter who has been knocked out. Young Flores had been stopped twice in a month's time when he was booked into the Garden semifinal which led to his death. And he was only 20 years old. Plain com-

mon sense, if not simple humane considerations, should have been sufficient to convince the commissioners this youngster had no business fighting at that time.

In explanation of this shocking indifference, would the Governor be satisfied with the information that the book was not violated? I doubt that anybody who has regard for human life or interest in the ring as a sport (and they are many) would be. Yet this is the sort of thing that may be expected from the Governor's casual directive to his hand-picked commissioners.

A 30-day rest for knocked-out fighters can be no guaranty against ring fatalities. Actually, it is a minor safeguard. Laverne Roach, for example, laid off a full year following a brutal beating at the hands of Marcel Cerdan, yet when he returned he was knocked out and expired from the resultant injuries—or, what is more likely, from the original injuries which had never healed.

But a compulsory rest period is at least indicative of concern. Following the ring deaths of Laverne and Sonny Boy West, battered gladiators were drydocked for just such a period, this on recommendation of the medical advisers. Would the governor expect the commissioners to ask themselves why it was discontinued?

A FULL-SCALE INQUIRY IS IN ORDER

Reports that Dr. Frank Ferlaino, who headed up the medical board when it was first appointed, resigned because of obstructive tactics seem well authenticated. This is a serious matter. Who (and for what purpose) would maneuver to impede a professional man who was working to minimize injuries? Does the governor anticipate the commissioners will look into this curious matter at this late date?

What we need and should have is a full-scale investigation of the prize ring, including, or even beginning with the commissioners' conduct of the business. Their character and integrity are unquestioned. Admittedly their assignment is not a simple one. Two of them serve for free. Only Eddie Egan, the chairman, is salaried. All have other business interests. It would be reassuring in this crisis to learn that they are well qualified. Now is an excellent time to find out.

The latest medical theory is that young Flores' death was caused by the jarring impact when his head hit the ring floor. There is surely no disposition here to question scientific findings. But I have seen any number of fighters hit the floor with just as much violence and suffer no more than stunning shock, and I have to wonder if the condition of the stricken fighter at the time isn't a vital contributory cause.

Perhaps if young Flores had not been punched around in his two previous fights, both within the month, he might have been able to shake off the effects of the impact. It seems to me that if the commissioners had been more knowing and more aware they simply would not have permitted this youngster with his recent background and uncompromising reputation as a punching bag to enter the ring no matter what the medical tests showed. If there was negligence that's where it was and if the governor expects the commissioners to admit it—well, then I will finally begin to understand how he lost to Mr. Truman.

[From the New York Daily News of September 13, 1951]

MOB OF 1,500 SMASHES DOORS TO SEE TV FIGHT

CHICAGO, September 12—A riot broke out tonight at the State-Lake Theater as thousands of persons fought for seats 3 hours before the Robinson-Turpin fight was to be shown on television.

A mob of 1,500 broke three heavy glass doors and surged into the theater. Many

did not have tickets but the management made no attempt to oust them.

The fight was scheduled at 14 theaters in 11 cities.

The crowd began gathering long before sundown and became more unruly as time passed. Finally it went completely out of hand, a policeman said, crashed through a line of 10 cops, broke the inch-thick doors and streamed inside.

"I don't see how those people avoided being hurt," the policeman added. "They crawled over and under each other to get inside."

Forty minutes later the Loop area was hit by a lashing thunderstorm that forced many of those still outside to run for shelter.

The fight was a complete sell-out for the television showings at three theaters here, spokesmen said.

PITTSBURGH, September 12—Fight fans jammed the sidewalks in front of the Fulton Theater tonight 3 hours before the start of the television showing of the Robinson-Turpin fight. With the 1,700 available tickets sold out Monday, ticketless fans offered as high as \$10 for \$2.60 seats.

PHILADELPHIA, September 12—Hundreds of persons thronged tonight around two theaters which have been sold out for more than a week for TV showings of the Robinson-Turpin fight.

A dozen policemen held back crowds at the Royal Theater in south Philadelphia, where lines extended for blocks waiting for some 1,500 already-sold seats plus standing room.

At the Stanley Theater, where 2,000 seats and standing room were sold 9 days ago, scores of additional personnel were hired to cope with the throngs, officials said.

CLEVELAND, September 12—Max Mink, manager of the Palace Theater here, said tonight the televised Robinson-Turpin fight was a complete sell-out.

Mink said there was a line nearly two blocks long to get into the theater. The fight drew so much attention that excursions from as far away as Toronto, Canada, purchased blocks of tickets.

BALTIMORE, September 12—The Century Theater was packed to its 3,200 standing-room-only capacity tonight by fight fans eager to see the only local telecast of the Turpin-Robinson fight. A crowd of 8,000 formed a line around the block an hour and a half before the Century opened.

BOSTON, September 12—An orderly crowd of about 1,900 jammed the Pilgrim Theater tonight to watch the televised Robinson-Turpin fight. Several hundred milled outside as 10 policemen kept watch.

[From the Daily News of September 12, 1951]

THE POWERHOUSE (By Jimmy Powers)

I cannot understand why fans are not told in advance just who is going to referee and judge a prize fight. In baseball the chief umpire and all his assistants are revealed well ahead of the opening pitch. In the Army-Navy football game, and all other headline grid contests for that matter, the men with the candy-striped shirts and little tin whistles are identified.

Sure there is heavy betting on big baseball, basketball, tennis, international polo and football competitions. But the officials are chosen in advance. This is the healthy way.

When you cover ring appointments with secrecy and flash them on the public at the

last moment—ostensibly to circumvent "fixing"—you invite what you are trying to prevent.

If you have so little confidence in your list of referees and judges—get a new list.

In England, where only one man—the referee—decides the winner of a prize fight, the officials are announced long before the first going sounds.

MAN ON HIS METTLE IF PICKED IN ADVANCE

That used to be the custom in America. George Blake was brought to Cleveland to work the Stribling-Schmeling bout. His presence was publicized almost as widely as that of the contestants. It puts a man on his mettle to be chosen in advance. If you wish to "fix" a judge or an official under current cloak-and-dagger conditions you merely pick a weak man and then use political clubhouse pressure to get the appointment through an acquiescent boxing commission.

Blake, incidentally, received what I believe is the largest fee ever paid a referee—\$2,500. I covered the fight and, as I recall, Blake stopped it with less than a half minute to go in the 15th and final round. He gave it to Schmeling on a TKO. It was the correct move.

A judge in New York gets \$10 and a referee \$25 when receipts are \$600 or under. The scale jumps to \$25 for the judge and \$50 for the referee when the receipts range from \$2,000 to \$7,500.

Up to \$15,000, the main event referee receives \$75 and the referee for supporting bouts, \$50. The normal top pay for a referee is \$200 in a show drawing between \$100,000 and \$200,000.

For the Turpin-Robinson middleweight bout tonight the commission is empowered to make special rates for officials. Based on past custom, the referee tonight probably will receive \$250. That is the pay given in all world heavyweight title bouts.

Good officials should be selected, those who have flawless records. And their names should be given out long in advance.

I am Boy Scout enough to believe that the average official is honest. Some come up with weird decisions because they have an anti-sluggish fixation, or are unconsciously prejudiced against cutie boxers. Others are fooled by the great roar of the crowd rooting for a favorite. Still others, for all their experience, get panicky.

I'll never forget Ruby Goldstein, a highly competent man, going all to pieces in the last round of the Fusari-Graziano fight. Rocky pushed Fusari into a ring corner, jammed his head under the top strand, practically sat on Fusari's knees horseback style, choked him by pinching his Adam's apple between his thumb and mitt, and flogged him with his right hand.

Goldstein, instead of pulling off Graziano and penalizing him for his multiple fouls, stopped the fight and gave it to Graziano. That was nothing short of sheer panic. Next day, when Ruby saw the photos and Graziano astride his struggling victim, he shook his head. "I wouldn't believe it happened until I saw the pictures," he muttered.

I think the referee of the second Pepsadler fight succumbed to stage fright. I prefer to think that's what happened. As for the recent Gavilan-Graham affair, here again is a referee, Mark Conn, who is absolutely honest. I think he made a wrong guess on the winner. He seems to be one of those officials who put a high premium on spectacular light punches and discount unspectacular but damaging body blows.

FIGHTS THAT TESTED REFEREE'S NERVE

I often wonder what some of our starry-eyed, hysterical, points-conscious, Egan-briefed babies would do if they were in the ring when Mike O'Dowd knocked out Al McCoy after flooring him seven times; when

Jess Willard was floored seven times in the first round by Jack Dempsey; when Louis Firpo was floored seven times in the first round and twice in the second with Dempsey spilling through the ropes into the press row as an added charge; when Carnera was on the canvas 12 times before Baer knocked him out in the eleventh?

I am aware of modern knockdown rules but nevertheless there have been exciting modern bouts with the tension mounting until every man in the house seems charged with 100,000 volts of electricity. All this calls for a calm, judicial mind, a referee who will not be fooled by a Fancy Dan laying back to fight the last 10 seconds of each round as Willie Pep does. It calls for steel nerves, sharp eyes and the knack of closing the ears to the roar of a crowd shrieking at every move of its favorite and ignoring the point scoring of the rival boxer.

A referee should be discreet. He should be cautious and keen and full of good old-fashioned horse sense.

Hey, you know what? A guy like that probably doesn't hang around just any old street corner.

[From the New York Daily Mirror of September 6, 1951]

BLAME FOR FLORES' DEATH SHOULD BE EASY TO TRACE

(By Dan Parker)

It should be easy for the district attorney's office and the boxing commission to establish responsibility for the death of boxer George Flores in the investigations these agencies propose to make.

Everyone concerned, of course, was aware that the commission had gone on record last year as favoring a month's lay-off for boxers after a knock-out—a recommendation that was ignored twice in the case of Flores, who died from injuries received in a bout at Madison Square Garden August 29. This premise being correct, the agent who booked Flores for the ill-fated bout, the IBC matchmaker who signed him, any physician who passed him, and the boxing commission representatives who approved of the match would all seem to be culpable.

The frantic attempts to cover up trails that might lead to the guilty ones would be ludicrous if the whole affair wasn't so sordid. The boxing commission says Flores had no manager of record. In boxing circles, Lippy Breitbart was spoken of as his manager, but was said to be fronting for a Coney Island gambler. None of the several seconds who worked behind Flores will admit he was the one who berated the victim for his poor showing as he sat dazed in his corner after being counted out. Responsibility for making the match is also clouded in a buck-passing duel. Billy Brown, the assistant matchmaker, reputedly put in this post by Frankie Carbo and Eddie Coco, closed the match, but Al Weill is the head matchmaker and it is reasonable to assume that he approves of all pairings made by his department. One story is that Weill sought this match to win support from the "amateur managers' bloc" in the Fight Managers Guild, which is seeking to have him ousted by the IBC. There are four subordinate officials on the commission, Executive Secretary Dan Dowd and Deputy Commissioners Jack Duberstein, Tony Durso, and Ralph Halpern, who are empowered to approve bouts and one of them must have sanctioned the hasty return match with Roger Donohue, who had knocked out Flores at White Plains on August 15.

The story is that Dr. Vincent Nardiello, noting irregularities in the process of examining Flores for the Garden match, demanded that his record card be produced as is required. This would have established immediately that Flores was ineligible for the Garden match because he had been knocked

out, not once, but twice within a period of a month. When the card wasn't forthcoming, it is reported that Dr. Nardiello expressed the opinion that Flores should not be allowed to fight until he had rested for a month. But the medical advisory board, its personnel now reduced to Dr. Charles Muzzicato, an instructor in radiology in the Goldwater Memorial Hospital, passed on the boxer as physically fit because an encephalograph showed no evidence of a brain injury. The final link in the chain of responsibility seems to have been forged by the boxing commission itself which approved of the match. Of course, no responsibility attaches to Jim Norris, head of the I. B. C., since he is a millionaire sportsman and in the business strictly for aesthetic reasons.

Dr. Muzzicato said yesterday that Flores was a perfect specimen when he entered the ring for the fatal bout. Practically every fighter who is killed in the ring looks like a perfect physical specimen going in, but rippling muscles and a slim waistline are all too often camouflage for a brain that has been damaged by repeated head blows which this delicate organ wasn't built to absorb. No one should know better than Dr. Muzzicato that a fighter's physical appearance has nothing to do with the condition of tiny blood vessels in his brain that have been ruptured by punches to the head and this would be particularly true of a boxer knocked out 2 weeks previously. Another point that should be obvious is that Dr. Muzzicato isn't able to function all by himself as a medical advisory board. Governor Dewey should either reappoint the eight other members whose terms have run out and guarantee them against interference by boxing racketeers, boxing commission personnel and promoters, or abolish the board.

Now, if someone will pour all the white-wash into the East River, which needs it badly, the investigations may proceed and, for once, come up with a finding other than the stereotyped "No negligence indicated."

Washington and Baltimore papers report that several influential racing men have approached George Mahoney, former chairman of the Maryland State Racing Commission, and sounded him out on his availability for the post of "Turf Czar." The story is that recent revelations about jockey rings, added to what the Kefauver investigations brought out about tieups between racing and the underworld, have alarmed some of the turf's important people and they have decided that what the dear old game needs is a czar who will make everyone toe the mark. I thought George's name was anathema to all race-track owners because he had committed the unforgivable sin of taking action against horse doping instead of following the time-honored procedure of refusing to acknowledge its existence or covering up any cases that accidentally came to light.

If racing fans were permitted to elect a czar, Mahoney would probably win unanimously, as he is the only racing commissioner I've ever encountered who had their interests, rather than those of the track owners and influential operators, at heart. Racing has more supervising bodies than our own bureaucratic Government, all of them engaged in fulsomely praising the game and themselves, and berating anyone who doesn't agree that a pari-mutuel machine is God's greatest gift to humanity. If the sport is threatened by adverse legislation—and I can't imagine the States which are partners in this fat racket passing laws that would cut down their sucker money revenue—the various mutual admiration groups which now rule the turf wouldn't be of much help, since they always proceed on the theory that there's nothing wrong with racing; that the fault is with those who criticize it.

In such a situation, George Mahoney, who stands for turf reform and who has entree

to the White House as the Democratic National committeeman from Maryland, would be a handy man for the breed improvers to have around as a chestnut saver. But he'd certainly make a strange bedfellow for them in view of their intense hatred of him for giving the public the most revealing look it has ever had at how the racket is operated from the inside.

[From the New York World-Telegram and Sun, September 7, 1951]

STOP MURDER IN BOXING, EX-RING MD DEMANDS

A former chairman of the State athletic commission's medical advisory board today made a fervent plea to the public to "stop the slaughter in boxing."

Dr. Frank R. Ferlino told the World-Telegram and Sun by telephone from Naples, Maine: "The public must decide whether boxing is to be sport or slaughter, skill or kill."

For the first time Dr. Ferlino revealed the recommendations to safeguard boxers the medical board had urged on the State athletic commission in 1949 and 1950. Dr. Ferlino also admitted he resigned because of the commission's "lack of cooperation."

DIES AFTER KNOCKOUT

Dr. Ferlino's appeal came amid continued indignation stirred by the death of George Flores, 20-year-old welterweight who died after being knocked out in last Wednesday night's semifinal at Madison Square Garden.

Dr. Ferlino was appointed to head the newly created medical board in late 1948. With the eight other members, he worked out a set of recommendations to save lives and reduce injuries. These included improvements in boxing gloves, ring mats, mouthpieces and taping of hands.

Also, the board urged that boxers who were knocked out should be given a 6- to 8-week rest period, then thorough neurological and brain examinations. (Flores met his death just 2 weeks after a previous knockout.)

RESIGNED IN 1950

Dr. Ferlino resigned in July 1950, convinced most of these proposals had been shelved or acted on only half-heartedly by the commission, headed by Lt. Col. Edward P. Egan.

"If our recommendations were followed," the 50-year-old physician declared, "boxing would become safer. That might mean less knockouts and perhaps a little slower footwork. But it would also mean that fewer men would die."

Dr. Ferlino was seconded immediately by Dr. Henry K. Kenwell, a surgeon who also resigned from the MAB. Reached by telephone at his home in Buffalo, Dr. Kenwell expressed "sympathy with what Dr. Ferlino was trying to do."

However, Dr. Kenwell warned it might be difficult to reconcile the public's boxing taste with necessary precautions.

"How are you going to accomplish these ends if someone has to be beaten badly to please the crowd?" Dr. Kenwell asked.

RESEARCH ASKED

These are the recommendations as explained by Dr. Ferlino today:

1. Intensive research to improve gloves through padding or structural changes to prevent lacerations or unusual contusions caused by fists rather than blows.

2. Similar study to replace the felt mats under the canvas. We felt some composition rubber might give more protection to heads striking the canvas.

(The back of Flores' head hit the ring floor solidly when he fell.)

3. New mouthpieces designed to protect teeth, mouth, and lip tissues and reduce the impact of the all-important chin-knock-out punch. This is the most lethal of all

blows because power is directed backward to vital structures at the base of the brain.

WOULD LESSEN BLOW

4. Taping of hands from well below the knuckle points to the wrists (as in foreign countries and certain States) instead of ending the taping just above the knuckles. This would lessen the power of the blow.

5. A system that keeps detailed medical histories and accident reports on each boxer—to detect previous injuries that might prove fatal if the boxer fought again. Examining doctors would make a thorough and detailed check of all boxers, emphasizing neurology, to detect early or latent brain injuries, to nip in the bud the punch-drunk fighters.

6. Any boxer who's been knocked unconscious should be given a mandatory rest period of from 6 to 8 weeks. Then he should get a neurological examination and clearance, together with an electroencephalogram (a picture that indicates whether brain waves are normal). Together, these two are better than either alone.

Watch This Committee

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include an editorial appearing in today's Washington Times-Herald.

Mr. Speaker, the present meeting of postmasters in our Nation's Capital has proved beyond any shadow of doubt that these offices should be taken out of politics once and for all.

The present meeting has degenerated into a political rally for the present administration.

The low point was reached when an Assistant Postmaster General attacked former President Hoover. Of course, such an attack cannot affect President Hoover in any way, but it certainly points up the small-mindedness and vituperative skill of some administration appointees.

WATCH THIS COMMITTEE

Whether some 22,000 postmasters in this country are to be taken out of politics and given a chance to go ahead on merit depends pretty largely on the action of the Senate Committee on Post Office and Civil Service within the next day or two.

The committee has finished suspiciously brief (one day) hearings on a bill, to remove postmasterships from political flinching, and now is preparing its report. We have it the committee will try to kill the bill largely owing to the usual prejudices of JOHNSTON of South Carolina, McKellar of Tennessee and Langer of North Dakota.

By way of background, the recommendation to clean up postmaster appointments came from the Citizens Committee for the Hoover report. It has the backing of the Post Office Department itself, the Civil Service Commission, and, of course, ex-President Hoover. The bill covering this recommendation and including other post-office reforms was introduced by Senator AIKEN, Republican, of Vermont.

The total aim of the bill is simply to put the United States Post Office, now losing

incredible sums, on a basis comparable to commercial enterprises.

Most important to employee morale, however, is the provision covering appointment of postmasters. Candidates now take civil service exams, and the names of the three highest are sent to the Postmaster General. He selects one name, sends it to the Senate for confirmation. And that's where the politics comes in. Unless that name is connected with the party in power, the Senate usually refuses to confirm and asks Civil Service for another name.

The Hoover Commission, with milkop mildness, said this practice "created a political barrier to promotion within the (postal) service and thus deprived it of a great incentive to do good work."

AIKEN's bill removes Senate confirmation from the above procedure.

We recognize that politicians enjoy cleaning up politics the way small boys enjoy visits to the dentist. But let the committee recall two recent malodors in the public nostrils, the sale of postmasterships in Mississippi and the shameless post-office payroll padding in Boston; there are limits to what the public will tolerate.

Pigeon-holing or rejection of the Aiken bill may well breach that tolerance.

Need for Morality in the Internal Revenue Bureau

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. CURTIS of Nebraska. Mr. Speaker, under leave to extend and revise my remarks, I would like to include an editorial which in itself points to the need of morality in the Internal Revenue Bureau.

As a member of a Ways and Means Subcommittee investigating the Bureau's activities, I was shocked at some of the revelations we received during our recent meeting in New York. With taxes at an all-time high, the American people will not sit idly by while influence is used by our tax collectors in obtaining revenue to operate this Government. The kind of deals that have been reported to have been going on in New York, Boston, St. Louis, and San Francisco revenue offices is shameful. I warn that if all the influence peddlers are not cleaned out of these offices, we may have a taxpayers' revolt in this country and the gravity of such an act could result in a national disaster.

I include with these remarks the editorial from the Christian Science Monitor of Tuesday, September 18, 1951:

PATTERN OF SCANDAL

Hardly a day passes without new scandals touching the Bureau of Internal Revenue. Reference to it as the Bureau of Internal rotteness is unjustified. It is unfair to the majority of honest and able public servants in the agency. But the multiplying reports of irregularities, fraud, and extortion by bureau officials across the country point up the necessity for a more drastic clean-up than President Truman has yet ordered.

Indictment of Denis W. Delaney, former collector of the port of Boston, for alleged acceptance of bribes adds one more to the sorry

list. The public should not convict any of the accused before they have had a fair trial. But in several cases, even where no illegality has been proved, unethical conduct is admitted or established by strong evidence. The peddling of personal or political influence forms a pattern repeated so often as to become monotonous—and extremely ugly.

The case of William M. Boyle, chairman of the Democratic National Committee, fits into this pattern. He has admitted serving briefly as counsel for American Lithofold Corp but has denied helping it obtain a loan from Reconstruction Finance Corporation. Now an official of the firm testifies that Mr. Boyle, while unpaid vice chairman of the committee, helped arrange an interview for Lithofold officials with the RFC's Chairman.

A number of officials have been fired or suspended—since the Kefauver, Fulbright and other investigating committees got on the trail. But Mr. Truman still appears to be giving more heed to his political buddies like Chairman Boyle than to outraged citizens.

Making an appointment may or may not involve pressure. Mr. Boyle should have his day in court. Yet his connection with Lithofold throws a shadow on him as a counselor of the President. For this company's story gets more unsavory the further it is unrolled. One phase of its activities alone must set some kind of record. This is its remarkable penchant for intimate relations with employees or former employees of the Internal Revenue Bureau.

One, a former chief of the alcohol tax unit in New York, solicited orders for Lithofold from liquor firms under his jurisdiction. Another, while chief collector in St. Louis, took a lively part in Lithofold affairs and had some interesting relations with RFC. Two other bureau men became vice presidents of the printing company.

Out in California two bureau officials were indicted for selling worthless copper company stock to individuals seeking favors in connection with income taxes. A third was fired under charges of an even more smelly hold-up. Reports of other cases continue to roll in.

The latest involves one former Bureau chief and four other politicians from Missouri. Senator JOHN J. WILLIAMS declares they took American taxpayers for a ride costing \$362,000. That was the profit made out of a little deal with two Government agencies. They rented storage space from the War Assets Administration for \$20,000 and leased it to the Commodity Credit Corporation for \$382,000.

Public wrath should insure unrelenting investigation and effective prosecution of every punishable offense in this amazing chain. But more is required. The President should abandon his tolerance of laxity and root out the moral rotteness which cannot be reached by law. Some of this decay is due to long incumbency by one party. But some comes from the fact that tax collectors' jobs have too often been prize plums on the patronage tree. Both parties have had a hand in that practice; both should take a hand in ending it.

The Arab States and Israel

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. JAVITS. Mr. Speaker, the appended editorial from the New York

Times of today, September 20, 1951, should prove of interest to Members:

ISRAEL NEEDS HELP

The political difficulties of Premier Ben-Gurion in trying to form a government in Israel are matched by the economic difficulties facing the state itself. Despite a most rigid austerity regime that has banned the importation of all luxuries and even some near necessities, Israel has an overwhelmingly adverse balance of payments. This situation is due to the continuing flow of immigrants that has more or less doubled the population of Israel in the past 3 years and is still going strong.

This population growth represents a great potential asset; but for the present it constitutes a heavy drain on the country's economy because most of the immigrants nowadays are poverty-stricken refugees from the Middle East, and north Africa. Furthermore, Israel itself has been an undeveloped land for centuries and does not possess the economic strength necessary to support the newcomers until they can support themselves. Therefore, all of Israel's energy (apart from that diverted to military purposes to ward off possible Arab attack) is now being devoted to building up the capital resources of the country and to expanding its productivity, even at the cost of a sharp decline in the standard of living for the present and the immediate future.

The peculiar problems facing Israel have been recognized by the United States Congress in the Mutual Security bill that is now in conference. A special authorization of \$50,000,000 has been voted by both Houses for the relief of immigrant refugees—matching a similar sum included for Arab refugees in the countries neighboring Israel. In addition, Israel will receive a share—in the neighborhood of \$20,000,000—of the general economic aid authorized for the Middle East. The Export-Import Bank has allocated a total of \$135,000,000 to Israel, but the principal source of funds for Israel's necessary capital development is the \$500,000,000 bond issue now being floated privately in the United States. Proceeds from the sale of these bonds will go toward expansion of the potash, textile, chemical, building and other industries as well as to irrigation, transportation, communications, and electric power projects.

From the outset the United States has had a friendly feeling toward Israel as a genuinely democratic nation that can be a force for stability and progress in the Middle East. We have also proved our good will toward the Arab world many times over; and if friendliness toward Israel means hostility to the Arab states that is only because the Arabs would have it so. It is to our interest that a peaceful relationship be established between Israel and her neighbors, and there is no reason why that cannot be achieved once the neighbors realize that Israel is here to stay.

Broadcast of Boston Symphony Orchestra Concerts and Cultural Programs

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, September 20, 1951

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Boston FM Station Opens

October 6; Six Colleges and Symphony Pack It," published in the New York Times of September 20, 1951. That is the type of thing which is very encouraging by way of an educational program on the radio, and I hope the same thing may be possible on television. I have joined in a resolution with three other Senators, to try to see that a suitable frequency is held open on television to make possible the same accomplishment on television as has been realized on the radio.

There being no objection, the article was ordered to be printed in the Record, as follows:

BOSTON FM STATION OPENS OCTOBER 6; SIX COLLEGES AND SYMPHONY BACK IT

Boston, September 19—A powerful non-commercial FM radio station featuring "live" programs of Boston Symphony Orchestra concerts and of cultural programs provided by Greater Boston universities and colleges will begin broadcasting here October 6.

Ralph Lowell, trustee of Lowell Institute, announced tonight that the station, WGBH, would present on its initial broadcast the first Saturday evening performance of the Boston Symphony's seventy-first season.

The orchestra is affiliated in the new venture with Lowell Institute and the six Boston universities and colleges that have been members of the Lowell Institute Cooperative Broadcasting Council since it was organized in 1946 to promote adult education by radio and television in the New England area. The participating schools are Harvard, Boston College, Boston University, Massachusetts Institute of Technology, Northeastern University, and Tufts College.

Station WGBH, with studios in Symphony Hall, will operate at 89.7 megacycles on the FM band on channel 209, with 20,000 watts effective radiated power.

Mr. Lowell said the programs would include "regular courses recorded in the classrooms of colleges and universities, forums on world affairs * * *, comprehensive interpretation of news and events by faculty specialists; full-length drama, * * * educational programs from other colleges and universities throughout the country; and special features from the British Broadcasting Corp., Radio-diffusion Française, the Canadian Broadcasting Corp., and other international broadcasting services."

Parker Wheatley, who has been director of the Lowell Institute Cooperative Broadcasting Council since its organization, will serve as general manager of the station. Mr. Wheatley said that the Boston Symphony programs would not be fed to any FM network reaching the New York area.

Tape recordings will be made of a number of educational programs for broadcast over New York's municipally-owned station WNYC.

An Olson Who Didn't Need a Johnson

EXTENSION OF REMARKS
OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BENDER. Mr. Speaker, add one more to the long list of "get rich quick" boys who flourished under Mr. Truman's regime. In New York, a gentleman named Olson managed to get along very

well without Johnson. As district supervisor of the Alcohol Tax Unit, he managed to earn a good deal of money, about \$100,000 in a year and a half, by "doing nothing in particular."

Mr. Olson's story is an interesting case history indeed. He was first an assistant collector of internal revenue in Brooklyn. He resigned, and subsequently was appointed to the Alcohol Tax Unit post. In this pleasant spot, he permitted a gentleman who was listed in the Senate Crime Committee hearings as a buddy of Frank Costello to retain a liquor dealer's permit for months after it was to have been revoked.

No less interesting was Mr. Olson's time schedule on the job. He said that he spent only some 2 or 3 hours a day because he thought "If I put in an 8-hour day, I would just be butting in. I don't know what else I would do, except sit around."

Before he finished with his various jobs, Mr. Olson had tied up with a wine company, tried to get into a television outfit run by the Costello pal, and otherwise managed to occupy himself gainfully. Wonder if Mr. Truman would say he earned his salary.

Suspension of Import Duties on Zinc

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. PATTERSON. Mr. Speaker, by introducing a bill to provide for suspension of the import duties on zinc, I wish to call to the attention of Congress the need of this metal for the national defense.

We all realize that recent strikes resulted in a decline in domestic copper production. Copper is now in short supply because of its vast use in defense work. The strike which further cut the supply has yet to be settled finally. Yet we have every assurance that copper production will be maintained with a resultant increase in the amount available for industrial use. Copper, the main component of brass, is needed as never before. Congress has in every way encouraged its production, especially by suspending the duty on imports.

Without a corollary supply of zinc, the available copper will not be fabricated into brass products. And zinc is not now available in sufficient quantity. The domestic producers are not able to fill the need. Make inquiry of the Federal defense agencies to receive confirmation of this statement. We need then, to encourage the importation of zinc by suspending the import tax now levied. This is not proposed to be done for longer than 2 years or the duration of the national emergency.

In the processing of brass, 30 tons of zinc are needed to combine with 70 tons of copper for 100 tons of the finished brass. Without zinc, brass production will falter.

Truman Says Budget Opponents Are Ignorant

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BENDER. Mr. Speaker, Mr. Truman's latest contribution to the national welfare is a brilliant oratorical effort reciting that "Our budget is as tight and solid as we can make it," that those who criticize it are spreading misinformation out of ignorance or with malice aforethought or to frighten voters.

This species of name calling is part of the same propaganda technique which the President utilized in the famous red-herring episode, when he labeled the Whittaker Chambers-Alger Hiss revelations as nonsense. Surely, no man in public office with any real appreciation of the responsibilities involved in his position would attempt to assert that any government budget is tight and solid. No official ever submitted a budget which did not allow room for eliminating some items. Certainly, no public official since the beginning of the New Deal ever did. He would be ostracized from the society of his fellow Democrats if he dared.

This effort to silence criticism of the fantastic spending policies of the administration will fall harmlessly to the ground, of course, in the light of the Hoover Commission's factually documented data and the daily evidence of loafing in virtually every Government agency from Washington to Hawaii. But the people of our country must decide for themselves how long they will continue to permit their tax dollars to be expended by men who resent honest criticism and dismiss every effort to save government funds as malicious.

Rice Kettle and the Red Well

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. SIEMINSKI. Mr. Speaker, in Wonsan, northeast Korea, last fall, a sign read, "Communism—highest form of democracy." In a Hamhung prison yard, 75 miles farther north, the phrase was practiced as follows:

One by one, 150 Korean men and women stepped to the edge of an open well, hands tied behind back. Each in turn slumped forward, men with bullet in back of head, women with skulls crushed by stone blows. The open side of a huge bronze rice kettle sealed the red well.

The St. Lawrence Seaway

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. WILEY. Mr. President, I have in my hand a very excellent article written by the distinguished port director of the city of Milwaukee, Hon. Harry C. Brockel. This article, published in Government Service magazine in its September 1951 issue, describes briefly but clearly the case for completion of the Great Lakes-St. Lawrence seaway.

I ask unanimous consent that the text of the article be printed in the Appendix of the Record, and that it be followed by two straight-shooting editorials from the Milwaukee Journal, a long-time champion of this great project.

There being no objection, the article and editorials were ordered to be printed in the Record, as follows:

[From Government Service of August 1951]
NEW LIFE FOR MIDWEST IN ST. LAWRENCE SEAWAY—PROJECT INEVITABLE; GREAT THINGS SEEN FOR INDUSTRY, TRADE

(By H. C. Brockel)

For the last three decades, America's most distinguished statesmen, diplomats, engineers, and business leaders have emphatically answered yes to the question: Should the St. Lawrence seaway be built? Though legislation authorizing completion of the project has again apparently died in Congress, proponents are confident that the seaway will be built eventually.

President Truman, following in the tradition of every President since Taft, recommended the project urgently to Congress. Twenty distinguished Senators of both major political parties introduced legislation to authorize execution of our agreement with Canada for the seaway development.

The State Department has given the seaway high place in its international program to demonstrate to the world that nations living side by side can peacefully develop projects whose benefits transcend international boundary lines and to prove that America is sincerely determined to strengthen international relationships and achieve permanent peace, by peaceful commerce between nations.

The seaway has two great economic justifications—low cost water transportation and low cost hydroelectric power. The St. Lawrence is the greatest undeveloped source of hydroelectric power in North America. Two million two hundred thousand horsepower of electrical energy are running unused into the Atlantic because of our failure to harness this tremendous resource. President Truman has emphasized that our whole economic and military future requires further development of our power resources, including the vast potential energy of the St. Lawrence.

The States bordering the Great Lakes want the seaway as a transportation resource. By extending deep-draft ocean shipping into lake ports, Midwest farms and industries will be able to use cheap water transportation on a scale hitherto impossible. Industry in the Great Lakes basin could import raw materials in large quantities, at minimum cost, by substituting a direct water haul for a costly rail haul. Midwest agriculture and industry alike will be able to tap new markets abroad.

There is nothing new or experimental in the seaway project. For more than a century,

Great Lakes ports have been engaged in direct trade with Europe through the St. Lawrence River. Between 1920 and 1940, a substantial shipping trade developed between lake ports and northern European harbors in spite of the handicap of the present 14-foot canals in the St. Lawrence River. Briefly interrupted by World War II, direct steamship services between the Great Lakes and Europe have been resumed on a tremendously expanded scale, with six ocean steamship lines regularly engaged in the trade and with close to 100 ocean sailings scheduled for 1951.

Chicago, Milwaukee, Detroit, Cleveland, Toledo, Toronto and Montreal are now served regularly by these important services, with other ports of call included as cargo movement warrants.

The history of the now well-established shipping service between lake ports and overseas destinations proves beyond doubt the large freight savings possible by use of direct steamers, which eliminate transshipment charges at seaboard ports and costly rail hauls to and from the interior.

The St. Lawrence is not an inland waterway or an artificial waterway—it is a natural highway into the heart of the continent. It is basic in water transportation that ships will penetrate inland as far as possible before discharging cargo. This is proved by the inland location of many great seaports, and by ocean shipping operations a thousand or more miles inland on rivers such as the Yangtze and the Amazon. A single factor—the rapids in the St. Lawrence between Ogdensburg and Montreal has obstructed this principle of water transportation on the St. Lawrence. These rapids are now passable by locks only 14 feet deep and 260 feet long, which limit the size of ships using the route to those dimensions.

The project thus contemplates nothing but a modernization of an existing transportation route. Ninety-five percent of the 2,400-mile sailing distance between Milwaukee and the Atlantic is now fully available for deep-draft shipping.

The cost of the engineering works in the St. Lawrence River will be shared by Canada, the United States, and the State of New York. The net cost of the project to the National Government will be a little more than \$300,000,000, or about one average day's war expenditure during World War II. This nominal expenditure is economically justified by tremendous potential savings in freight charges and electric power rates. The Department of Commerce, as recently as December 1948, estimated that traffic through the seaway including both general cargo and bulk freight would range from 57,000,000 to 84,000,000 tons a year.

The Department of Commerce estimated that freight savings of \$7 to \$10 a ton could readily be derived on shipments moving from overseas to Lake Michigan ports, even allowing for St. Lawrence seaway tolls on the basis of \$1.25 a ton. Even on the basis of the present 14-foot draft operations, limiting ocean carriers to about 1,600 tons of cargo west of Montreal, net freight savings of \$5 to \$10 a ton have been repeatedly demonstrated by the use of existing services.

Aside from the seaway's economic value, another factor of even greater importance is the future security of the United States and Canada. Before World War II, our military leaders urged the completion of the project for the national defense. Shortly after the end of World War II, the Joint Chiefs of Staff advised Congress that, from our experience in World War II, the project is absolutely essential to the national security as a shipbuilding resource, as an additional transportation facility, and as a new source of power.

It is a national misfortune that the seaway was not developed before World War II.

With it, Midwest industry and agriculture could have made a more effective contribution to the war effort, and much money and perhaps many lives could have been saved.

Our wartime shipbuilding production approached 70,000,000 tons. Sixty-five percent of the steel, machinery, and other component parts of these ships originated in the Great Lakes area. However, only about 2 percent of the completed ships were constructed on the Lakes, although we have sheltered harbors, skilled workmen, vast industries, and great steel production. Small ships were constructed in lake ports and sent to sea through the Mississippi River at great expense. The shipbuilding potentialities of the Great Lakes have hardly been scratched. The bottleneck has been the difficulty of getting the ships to salt water.

Had the seaway been developed, we could have constructed, in lake harbors, escort carriers, cruisers, destroyers, and merchant ships. These ships could have been loaded in lake ports with foodstuffs, munitions, and materiel of war—and if this seems like mere speculation, remember that Detroit was ranked as America's No. 1 arsenal, and was closely followed in war production by Great Lakes industrial centers such as Cleveland, Chicago, and Milwaukee.

Convoys could have been assembled in lake ports and sent to Europe with an ocean crossing 1,000 miles shorter via the St. Lawrence than from Atlantic ports. The submarine hazard would have been reduced by one-third, in terms of distance, and shipping losses could have been reduced in proportion to the saving in ocean mileage by use of the St. Lawrence.

The war has depleted our natural resources. We find ourselves with rapidly dwindling supplies of iron ore, petroleum, manganese, copper, lead, and other strategic materials necessary in war and peace. A strategic stockpiling program is now planned, based upon industrial requirements and the national defense. These critical materials should be transported and stored as effectively as possible, in sheltered interior locations, where they will be used in volume. This means the industrial area surrounding the Great Lakes.

Considering the exposure of our coasts to naval and air attack, it is sound national policy to locate strategic industry in the interior and, at the same time, provide it with the advantages of ocean transportation by extending deep-draft shipping into the Lakes.

The seaway will check the drift of population from the Midwest to the seaboard. In recent years, there has been a mushroom growth of new industry along the Gulf of Mexico and the Pacific coast. The employment offered by these new industries has encouraged many people to migrate from the Middle West to the seaboard, resulting in a rapid growth of population around the sea-coasts and a gradual decline of population in the interior. Between 1930 and 1940, many Midwestern States actually lost population. This trend was accelerated during the war.

States tributary to the Great Lakes normally account for 35 percent of our national exports. The foreign trade of the United States does not originate or terminate in our great seaports but is in large measure traceable to the import requirements and the export production of the farms and factories in the heart of the country. Much of our overseas business is highly competitive and must seek the most economical transportation route.

In spite of its distinguished support, the seaway has strong opposition. The principal objectors are seacoast ports, which fear the loss of transfer business between ship

and rail; the eastern trunk-line railroads, which are hostile to Great Lakes water transportation; utility interests, which object not to the St. Lawrence power development, but to the fact that it will be publicly rather than privately controlled; and finally, the coal industry, which opposes hydroelectric developments as a threat to coal markets.

The early canal builders opposed the development of the railroads; when Edison invented the incandescent bulb, the gas industry declaimed the impossibility of electric lighting, the railroads opposed the Panama Canal bitterly, as impracticable, just as they today oppose the seaway. Nevertheless, the railroads were built, the automobile succeeded the buggy, electric lights have become commonplace, and the Panama Canal has joined the Atlantic and the Pacific. In each case benefits have exceeded expectations, and predicted disasters have not materialized.

History will prove the justification for the St. Lawrence, and its accomplishment is merely a matter of time. The case for the seaway has been proved and re-proved so often that its merit is axiomatic. It is not the St. Lawrence waterway which was on trial in Washington. The issue before Congress again was whether the national interest would prevail or whether the self-interest of certain powerful and articulate groups would determine national policy. The seaway is inevitable. The only question is—how long can delaying tactics obstruct it?

American postwar planning is geared to a philosophy of expansion—greater production, full employment, expanded foreign trade, an enlarged merchant marine. The St. Lawrence seaway will help us to obtain every one of these objectives. An expanded foreign trade will cement friendly foreign relations. We need new trade routes and new traffic to support our merchant marine, the largest in the world. Full employment and full production must be geared to a greater volume of commerce and transportation. No project before the American people today will do more to accomplish these objectives than the seaway.

Not only lake ports but the inland communities of the Middle West will share in the benefits of the improved and cheaper transportation through the seaway. Untold thousands of new jobs will be created in lake ports and throughout the Middle West due to expansion of shipping operations, shipbuilding, and the multitudinous aspects of foreign trade.

To our lake ports, the seaway will mean the movement of large volumes of new commerce with added business for railroads, truck lines, stevedores, warehousemen, brokers, banks, and all of the innumerable enterprises associated with maritime activity. The seaway will act as a magnet to bring new industry to the shores of the Great Lakes seeking the most advantageous locations, with a corresponding enhancement of property values.

The project will open a new chapter in banking history with considerable expansion of foreign trade financing in the Middle West. Above all, the seaway will mean new foreign trade opportunities for midwestern industry and new markets for midwestern farm produce.

Secretary of State Acheson has said that the seaway will increase the wealth of the United States by developing one of the greatest natural resources in the world—the Great Lakes-St. Lawrence Basin. He has pointed to the mutual benefits which will be derived by Canada and the United States in terms of new economic strength and added security for both nations. He describes the Great Lakes-St. Lawrence system as "a great highway of commerce stretching for 2,400 miles from Newfoundland into the industrial and

agricultural heart of the United States and Canada."

Secretary Acheson thus joins his powerful voice with those of his distinguished predecessors, with the Presidents of both parties, and with our greatest military leaders in the unanimous conviction that the seaway will open the Great Lakes area with its vast industrial and agricultural resources to ocean shipping; will give power-deficient areas a new low cost source of electrical energy; and will add immeasurably to the national welfare and the national security.

Gen. George Marshall, other members of the Cabinet, and the Joint Chiefs of Staff have recently urged upon Congress immediate construction of the seaway as an essential feature of the long range mobilization of the United States. Charles E. Wilson, Director of Defense Mobilization, urged that the seaway be built for navigation, for power, and for the national defense.

Wilson told a congressional committee that the seaway, in his opinion, would pay out as a private enterprise and that he would not mind developing it as a private venture. This is a remarkable statement about a Government project coming from one of the Nation's top-flight industrial leaders, and is compelling evidence of the great economic merit of the project.

The opposition to the project is powerful and well financed, and has delayed congressional action on the project for another period of time. However, the project may be approaching completion without American participation, as the Canadian Government has issued a number of strong statements indicating that if the American Congress turns its back on the project, Canada will immediately carry it to completion with Canadian financing.

Even the bitterest opponents of the project concede that it must inevitably be built. As Freeman Lincoln, writing in a recent issue of Fortune magazine, well said, "The things that are right and necessary in this world eventually are done. The seaway is one of those things."

[From the Milwaukee Journal of September 19, 1951]

ETHICS ON THE SEAWAY QUESTION

Just when it appeared that opponents of the Great Lakes-St. Lawrence seaway had exhausted every trumped up reason for opposing the project, the National St. Lawrence Project Conference came up with a new one.

Now the project is unethical. Yes, sir, that's what it is, unethical.

"At a time when the need for higher ethics in Government is being seriously discussed throughout the country," says a current letter from the Conference, which is a bitterly antiseaway group, "it is doubtful if any proposal before Congress was ever wrapped in more Machiavellian cynicism than this proposal's supporters are giving it."

What is the Machiavellian cynicism? It seems that seaway proponents are looking forward to the day when there will be enough shifts in the membership of the House Public Works Committee to give the seaway backers a majority. That, implies the Conference, is crooked politics.

It sounds good—until you realize that it comes from a group which has lobbied and wooed a House committee to keep the seaway proposal from coming to the House floor. Why? Because, by every count possible, it has been obvious all along that if the seaway project could reach the House it would get a majority vote. The same thing holds true of the Senate.

The Conference has a strange sense of ethics. It's ethical to keep the majority from voting, apparently. But it isn't ethi-

cal to break up a minority of House Members on the Public Works Committee which won't let the majority vote on the floor of the House.

[From the Milwaukee Journal of September 17, 1951]

SHORT-SIGHTED SEAWAY FOES

The St. Lawrence seaway project will be permanently postponed, if the AFL railway employees' department has its way. Michael Fox, president of the union group, has announced his organization's opposition to any effort to revive congressional consideration for the seaway.

Fear of the loss of thousands of jobs in the railroad industry motivates this obstructionist feeling, we conclude from the union president's statement.

This perpetuate-the-job philosophy of labor is outdated, short-sighted, and unprogressive. More enlightened unions are coming to see that intelligent self-interest forbids labor from opposing real progress in any form.

Labor's interests cannot be divorced from those of the whole population, and any technical improvement in manufacturing, any great transportation development which strengthens the country as a whole will, in the long run, improve the lot of labor.

What sort of living standards would the workman have today if labor had successfully blocked modern methods of mass production because the introduction of machines would result in the loss of thousands of jobs?

Temporary dislocations may follow a change in the way of doing things, it is true. It is possible that railroads will lose somewhat immediately after the seaway is opened, if it is ever built.

But if the seaway brings a great expansion and prosperity to industry in the Midwest and in other affected regions, as there is every reason to believe it will, then there will be more traffic than ever for the railroads. Many products are better suited to transportation by train than by the slower water-borne carriers. Many markets are out of reach of water transportation entirely, and must be served by rail or highway.

The big question for the railroad employees, as for other citizens, should be: Does America need the St. Lawrence seaway? The overwhelming weight of evidence says that we do.

Carolina's Clemson

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. DORN. Mr. Speaker, I am proud that Clemson A. & M. College is located in the district it is my honor to represent. Clemson ranks with the best in America in technical, agricultural, and military training. It is the largest college in South Carolina and is noted for having one of the most beautiful campuses in the country, at the foothills of the Blue Ridge Mountains. Clemson furnished more officers for the Armed Forces during World War II than any other college in America with the single exception of Texas A. & M. Clemson has contributed greatly to the recent remarkable progress of South Carolina.

Under the able leadership of Dr. R. F. Poole and a faculty unsurpassed, Clemson will continue to play an important role in the progress of the State and Nation.

It is with pleasure, Mr. Speaker, that I incorporate in my remarks a splendid article which appeared in the September-October issue of the Grace Log. This internationally respected publication is well known the world over. Published in New York City by the W. R. Grace & Co., it is widely read in export, import, and travel circles. South Carolina is grateful for this tribute by the Grace Log to an outstanding institution.

CAROLINA'S CLEMSON

Tucked away in a serene and verdant corner of South Carolina and surrounded by the gently rolling foothills of the Blue Ridge Mountains, the Clemson Agricultural College exudes that pleasant atmosphere of unhurried academic pursuit so often and appropriately characterized by the term "ivory tower." Almost 200 acres of fresh green lawns, broken here and there by clusters of giant shade trees and ivy-draped, red-brick buildings basking under the warm Carolina sun, lend further credence to the impression that here the relentless urgency of the mundane world quietly is brushed aside in favor of calm intellectual endeavor.

Nothing could be further from the truth. For Clemson College was born of the fervent desire of a practical man to impart the most practical of scientific knowledge. Throughout the 60 years of its life the college has been nurtured in the tradition of "service now" to the people of the State of South Carolina. Today it is embarked on scores of programs and experiments designed to bring a fuller and more prosperous life to those same people not only a decade hence, but next year and next month. No matter what city, hamlet, or rural hillside a South Carolinian may call home, nor how he gains his living, he cannot escape the beneficial influences of his State school of agriculture and mechanics.

Clean, sturdy beef and dairy cattle graze today on improved pastures where yesterday the rich, red earth lay barren and exposed to a baking sun. Curving rows of healthy cotton plants circle the hillsides which once were gullied and unsightly patches of stunted crops. Twenty-five years ago cotton farmers had to be content with an average of less than half a bale of lint to the acre; today they are moving steadily toward an average of a bale to the acre.

A quarter of a century ago farmers were getting about 12 percent of their total cash income from livestock—about \$15,000,000; last year the \$72,000,000 which came from livestock and their products represented about 22 percent of farmers' cash income. A few years back, South Carolina was importing milk in a vain endeavor to correct diet deficiencies, while now fine herds of Holstein, Swiss, Jersey, and Guernsey cows provide the children of the State with ample quantities of this essential food. Within the course of a few years, the practice of indiscriminately cutting and burning the forests, which cover nearly half the State, virtually was eliminated, and in its place selected cutting and replanting substituted so that forestry today is one of South Carolina's major sources of income and her estimated \$500,000,000 worth of forests a carefully protected and nurtured asset.

Once dependent upon its two major crops, cotton and tobacco, the State is on its way toward an economically healthy diversification and no longer alternately flourishes and stagnates according to the price vagaries of a single market.

The most rabid of Clemson's many enthusiastic supporters would hesitate to give the college all the credit for these and the many other revolutionary changes which have been wrought upon the physical face and basic economy of the State of South Carolina. It is enough to say that without the leadership, the trained men, and the enthusiastic cooperation of Clemson College such progress would have been made slowly, if at all. The college has served as the dependable rallying point around which progressive farmers, cooperatives, Federal and State governmental agencies, and industrial and business enterprises could join in common efforts to seek a fuller utilization of the rich natural resources of the State.

A remarkable document was responsible for the founding of Clemson College—the will of Thomas G. Clemson. A Philadelphian by birth, Mr. Clemson married the daughter of South Carolina's great statesman, John C. Calhoun, and adopted his wife's native State for his own. Benefiting from the excellent technical education he had received at a school of mines in France, Thomas G. Clemson was determined that his accumulated wealth should be poured into a similar educational institution in his own land. His will, opened after he died in 1888, began with this preamble: "Feeling a great sympathy for the farmers of the State, and the difficulties with which they have to contend in their efforts to establish the business of agriculture upon a proper basis, and believing that there can be no permanent improvement in agriculture without a knowledge of those sciences which pertain particularly thereto, I have determined to devote the bulk of my property to the establishment of an agricultural college upon the Fort Hill Place. My purpose is to establish an agricultural college which will afford useful information to the farmers and mechanics, therefore it should afford thorough instruction in agriculture and the natural sciences connected therewith, it should combine, if practicable, physical and intellectual education . . . terminating in thorough theoretic and practical instruction in those sciences and arts which bear directly upon agriculture."

The Fort Hill Place to which the Clemson will referred was the home of John C. Calhoun and the plantation house still stands in the very heart of the Clemson campus, whose classrooms and laboratories are the realization of Thomas G. Clemson's dream.

Clemson's contributions to the people, and more directly, the farmers of South Carolina, fall into three overlapping categories. The college itself offers an excellent undergraduate program in agriculture and some work on the graduate level so that its students are well prepared to farm their own lands and to serve as trained leaders in their communities. The agricultural experiment station utilizes thousands of acres on which tests are made of soils, crops, fertilizers, insecticides, irrigation, and, in brief, every phase of South Carolina farming. Through the extension service the results of these experiments and practical on-the-spot help is offered to every farmer in the State.

The Clemson agricultural student has at his disposal hundreds of acres of nearby land planted in a wide variety of crops and clovers, well-equipped laboratories, an ultra-modern dairy farm, a beautiful new agricultural engineering building—housing almost every type of farm equipment—and a faculty composed of experts.

Upon being graduated he is prepared to step off the campus and onto a farm without the usually difficult—and frequently financially painful—switch from the purely theoretic to the practical side of making the earth produce. Many of South Carolina's most progressive and prosperous farmers are

former Clemson students—the surest test of the quality of the training provided.

While still engaged in undergraduate tasks many of the students have an opportunity to work closely with the agricultural experiment station. The station is operated as a dependent branch of the college and many members of the Clemson College faculty also are listed on its staff. The main offices and laboratory of the station are located on the Clemson campus and there are five substations placed strategically throughout the State to offer each of the major soil and climatic areas an experimental station capable of adequately testing crops and soils in the particular region.

Working on the frontiers of agricultural science the several experiment stations are quick to tackle every problem which arises to plague the farmer and are constantly on the alert for wealth-producing new crops or new, money-saving agricultural methods. A recent listing of study projects of the experiment stations includes tests on corn varieties and irrigation of pastures, the flavor of milk and the yield of okra seeds, trichomoniasis of turkeys, and brown rot of peaches. Cotton and tobacco, still the major crops of South Carolina, get a lot of attention at the experiment stations but the great peach-growing and truck vegetable areas are not neglected. At the Edisto station tests were run recently on new strains of all 11 grains grown in the area. Samples of the most promising varieties of oats, wheat, and barley were then sent to 50 high schools throughout the State so that farmers and students could see the grains growing side by side and draw their own conclusions as to the advisability of sowing each.

At the truck station the Santee variety of early cucumber has been developed and consistently has produced from 30 to 40 percent more than the best standard varieties. Cantaloupes, sweetpotatoes, sesame, peppers, cabbages, and potatoes are the subject of careful scrutiny for the benefit of the Carolina farmer.

A major campaign is now under way with agricultural diversification as its goal. The emphasis is on increasing the amount of acreage in pasture, and correspondingly the numbers of livestock. The experiment stations are making many studies of various combinations of grasses and clovers. Careful tests have been run to determine seeding cost, optimum quantity of fertilizer, and yields in terms of grass and clover tonnage and also in terms of the increased weight of livestock which feeds off the pastures. Yesterday the acreage devoted to improved pastures was counted in the thousands, today in the hundreds of thousands.

Theory may help dictate the types of experiments run, but only the most practical of solutions are acceptable. The Carolina farmer, like most of his counterparts the world over, is slow to change unless overwhelmed with evidence that he is cheating himself by not doing so. Thus, the experiment station translates the results of many of its studies into dollars and cents terms: "Results from the 4-year experiment show an average increase of 33 bushels from irrigation . . . giving a return increase of \$52 per acre . . . [which] is more than twice the annual cost of . . . irrigation." Or: "The yield in treated fields [poisoned for boll weevils] averaged 1,385 pounds of seed cotton per acre as compared with 493 pounds in the untreated fields, or a gain of 892 pounds. . . . Value of gain, 892 pounds at 10 cents per pound * * * \$89.20; cost of poisoning * * * \$44.25." That's the kind of language universally understood. It produces results.

The extension service is the link between Clemson College and the experiment station on one hand, and the farmer on the other.

A county agent and usually one or more assistants are stationed in each of South Carolina's 46 counties. The agent's job is to maintain close contact with the farmer, to visit him in his fields, to make suggestions when he is confronted with a problem. County agents conduct demonstrations which give the farmer a close-up view of new processes or recently developed varieties of crops. They make soil tests and insect counts to aid the farmer in his fertilizer and insecticide program. They conduct tours so that a farmer may observe at first-hand both the good and the bad in his neighbors' fields and profit thereby. They are responsible for general supervision of the 4-H program in which thousands of young boys and girls are introduced into the art of scientific farming.

Since it is impossible for the county agent to maintain direct contact with every farmer in his territory, a system of neighborhood, community, and county committees have been created. Through these organizations the advice of the extension service is passed down the line so that no farmer need be deprived of the advice and help of the service. These committees help plan farm programs. They outline their own needs and then formulate plans for fulfilling them. This year nearly 9,000 men and women of South Carolina are giving unselfishly of their time to strengthen the extension program.

Backing up the county agents is a roster of specialists—men who have earned, through their study and its practical application, the right to speak as authorities in their particular fields. These men offer constructive help in such fields as cotton ginning, dairying, horticulture, marketing, pastures, poultry, and soil conservation. Travelling frequently throughout the State they pass on the facts they have learned and the doubts they have acquired to the farmer who can put such knowledge to work.

The need for agricultural progress—for more food and better food, and more and better raw materials for industry—becomes ever more pressing. The South Carolina triumvirate—Clemson College, and its associated agencies, the experiment station and the extension service—are meeting the challenge. They are showing how "the good earth," though long mistreated, may be made to produce again. Thomas G. Clemson, by providing for the founding of Clemson College, sowed well the seed of progress in South Carolina.

The Japanese Treaty

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Japanese Treaty," from the September 24, 1951, issue of the magazine, the Freeman.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE JAPANESE TREATY

Even though the Soviet Government did not succeed in throwing half a dozen monkey wrenches and a barrel of emery powder into the works at San Francisco, it does not follow that the Japanese Peace Treaty will

necessarily be a good one for the United States.

Why? In the first place, as Senator JENNEX, George Creel, and others have pointed out, the treaty might be used to eulchre an American-controlled anti-Soviet army out of the Japanese islands. President Truman, in his September 4 speech in San Francisco, dwelt specifically and lovingly on the necessity of bringing Japan under the principles of the United Nations. The Soviets, of course, are members of the United Nations, with full power on the Security Council to sabotage and stymie the desires of the United States. If the Japanese Peace Treaty were tied to the U. N. Charter, as the wording of the document would seem to permit, control of American troops stationed in the Japanese islands could very well pass to an international high command dominated—or at least rendered completely impotent—by the Russians and their stooges. Thus MacArthur's good work could be undone in a single moment of negligence or duplicity in the gyp joint presided over by croupier Trygve Lie.

True, the mutual-aid treaty between the United States and Japan, the text of which was released shortly after the big treaty had been signed, would seem to protect American garrison rights in the Japanese islands. But even in this mutual-aid treaty there are the vaguely deferential concessions to possible U. N. usurpation. The United States Senate had no part in the mutual-aid treaty preparation. Senator JENNEX has objected to the way the State Department insists on formulating treaties without taking the Senate into its confidence, as it should do under the Constitution. The text of the Japanese mutual-aid treaty was kept as classified material and hence unavailable to Senators.

If Senators JENNEX and CAIN have their way, the Japanese Treaty faces a good coming-over before it is ratified by the Senate. The more alert Republicans insist that Japanese bases be reserved for American, not U. N., troops until such time as the Communist menace has been dissipated in the western Pacific. They also insist that Free China should be included in any far eastern settlement. Moreover, as the more alert Republicans see it, the Japanese Treaty should not be used to validate Soviet claims to the Kuriles and South Sakhalin. There is no reason to make a treaty with Japan the engine for legalizing the dirty work of Yalta and Tehran in the eyes of an unsuspecting world.

As we go to press, the Russians have just finished howling their grievances to the skies over the Golden Gate. Their propaganda has reached to New Delhi and to other receptive ends of the earth. They may not be satisfied with the results of San Francisco, but they have gained some of their ends nonetheless. At the very least San Francisco will do its added bit to establish in the eyes of the world that the United States is a prime welsher. The absence of the Free Chinese high lights the fact that we have helped deliver Manchuria and the Chinese mainland to a totalitarian power—which was precisely what we went to war with Japan to prevent. The absence of MacArthur high lights our deplorable way of honoring heroes, patriots, and prophets. It would be a most sardonic sequel to this history of welshing if the Japanese Treaty were to be made the instrument of delivering Japan itself over to the Communists. On the record the Japanese can hardly be blamed if they secretly suspect the worst.

The main hope of the free world is not what the U. N. may do under the Japanese Treaty. The main hope is that the Japanese people, by regaining at least some measure of responsibility and autonomy, will

proceed to do something about combating the inroads of communism for themselves. If MacArthur continues to be honored at Tokyo it may not matter so much that he is treated with dishonor in Washington.

Harvey Machine Co. Investigation

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. SAYLOR. Mr. Speaker, the proposed Government loan of \$46,000,000 to the Harvey Machine Co. of California is a subject of considerable comment, both in the press and in the CONGRESSIONAL RECORD. The Honorable MIKE MANSFIELD, of Montana, placed extensive remarks in the RECORD in regard to this matter.

The Honorable WESLEY A. D'EWART, of Montana, together with the eight other Republican Members of the Interior and Insular Affairs Committee of the House, has asked the chairman, the Honorable JOHN R. MURDOCK, of Arizona, to have the Committee on Interior and Insular Affairs undertake an early investigation of this entire matter.

I am inserting at this point in the RECORD a copy of the letter from Mr. D'EWART and the other Republican members of the Committee on Interior and Insular Affairs of the House, addressed to the chairman of the committee, the Honorable JOHN R. MURDOCK:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 20, 1951.

Hon. JOHN MURDOCK,
Chairman, Committee on Interior
and Insular Affairs,
House of Representatives.

DEAR JOHN: We would like to call to your attention the remarks inserted in the RECORD of September 19 on pages A5730-A5734 by Congressman MIKE MANSFIELD concerning construction of an aluminum plant in western Montana which, it is proposed, would use power from Hungry Horse Dam, a Bureau of Reclamation project.

You will note that Congressman MANSFIELD's insertion deals with charges as to the good faith of a certain contract between the Harvey Machine Co. of California and the Federal Government, which contract, it is reported, has been approved by Secretary Chapman, but since held up. It was a member of our committee who first brought this matter to the attention of the Congress.

These charges concern a reclamation power project, construction of which was authorized by the Interior and Insular Affairs Committee of the House, and the construction of an aluminum beneficiation plant that is directly connected with development of strategic minerals and is also within the jurisdiction of your committee.

The Interior and Insular Affairs Committee is charged, under the Reorganization Act, with the responsibility of writing policy in connection with the construction of power projects undertaken by the Bureau of Reclamation, the marketing of power from these projects, and the development and beneficiation of strategic and critical

materials. The charges which are contained in the insertion by Congressman MANSFIELD deal with these matters and are wholly within the jurisdiction of your great committee. Therefore, it seems to us, considering the seriousness of the charges made, the delay in providing the strategic material that may result therefrom, and the publicity, all of great importance to Montana and the Nation, that the Committee on Interior and Insular Affairs should undertake an early investigation of the charges made in the insertion placed in the RECORD by Congressman MANSFIELD.

Very truly yours,

WESLEY A. D'EWART, WILLIAM HENRY HARRISON, FRED CRAWFORD, A. L. MILLER, FRANK BOW, HAMER H. BUDGE, NORRIS POULSON, E. H. JENISON, JOHN P. SAYLOR.

Wetback Control

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an editorial entitled "Wetback Control" which appeared in the Washington Post for Saturday, September 15, 1951, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WETBACK CONTROL

The wetback problem—the problem created by the presence in the United States and the continued entry of hundreds of thousands of farm workers who have streamed illegally across the Mexican border—continues to bedevil our relations with Mexico and our own agricultural economy. In July, when the President reluctantly signed the pathetically inadequate Ellender-Poage bill regulating the employment of farm workers from Mexico, he urged Congress to adopt additional measures necessary to control illegal immigration. Congress has not yet done so, and the Immigration and Naturalization Service finds itself helpless for want of personnel and funds to cope with the problem. It is a problem particularly acute in September, the great harvest month.

A supplemental appropriation of \$6,500,000 has been sought for the Immigration and Naturalization Service and is now pending before the Senate Appropriations Committee. At best, however, it cannot become available for some weeks. Accordingly, Senator HUMPHREY has introduced a joint resolution to provide \$600,000 as a stopgap fund for the service. Immigration officials appear to have found, for the first time, an effective way of dealing with the Mexican migrants. Last year they picked up about 510,000 of them and put them on the south side of the Rio Grande River; the sole result was that the migrants went a little way downstream and swam across again. Lately, however, the Immigration people have been putting the Mexicans into planes and flying them, with the cooperation of the Mexican Government, to points 500 or 600 miles inside Mexico, whence they find it difficult to return.

This airlift operation is an ingenious adaptation to a difficult problem. Since it

seems to be working well, it ought to be continued. The service needs money for the planes, for detention centers, for an expanded border patrol, and for finger-printing the aliens in order to determine whether they are returning. The United States has a double obligation to make this border protection effective—a treaty obligation to Mexico, both countries having pledged themselves to do everything in their power to eliminate the wetback traffic, and an obligation to American farm workers whose work opportunities and living standards are being depressed by ruthless exploitation of the poverty and helplessness of the aliens.

There is, moreover, an obvious peril to national security in the ease with which aliens can come across this country's southern border. There is very little use in all the elaborate screening of European aliens required by the McCarran Act if hostile agents can come in at will from Mexico. Senator McCARRAN, who tried not long ago to make our flesh creep by the extravagant assertion that there are some 5,000,000 illegal aliens in the United States, should know where the chief loophole lies. That loophole can and should be plugged promptly by giving the Immigration and Naturalization Service the funds it needs to do its job effectively.

Random Thoughts on World Peace

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. WILEY. Mr. President, I sent to the desk a brief statement which I have prepared regarding certain comments which have been made on the problems of taxes and world security by a distinguished businessman and world citizen who resides in Basle, Switzerland, a commander in the French Legion of Honor, and nominee for the Nobel peace prize, Mr. Emil Dreyfus. I ask unanimous consent that the text of my statement and appended material be printed in the Appendix of the RECORD.

There being no objection, the article and other matters were ordered to be printed in the RECORD, as follows:

RANDOM THOUGHTS ON WORLD PEACE

(By Hon. ALEXANDER WILEY, of Wisconsin)

From out of the land of Switzerland have come many of the finest contributions to the economic, political, social, and spiritual life of western civilization. A country small in size and in population, varied in the tongues and origins of its people, Switzerland has contributed in an inspiring degree, highly disproportionate to what one might otherwise expect of a nation of its limited resources. It has given to the world a model example of how diverse component peoples can, with industry and loyalty, make of their rugged but beautiful land an Eden of prosperity and an island of peace in a chaotic, confused, war-ridden world.

The city of Basle, in particular has contributed much to what we know as western civilization. It is, therefore, with particular interest that I call attention to the contributions made by a famous resident of Basle, Mr. Emil Dreyfus, a founder of the Celanese Corp. of America, a man experienced in the problems of industry and state, a man profound in international outlook. Mr. Dreyfus is a commander in the

French Legion of Honor, and is a nominee for the Nobel peace prize.

In his monograph entitled "Random Thoughts," published in Basle in November 1948, he compiled a number of observations which he had made during the critical 12-year period from 1936 to 1948. Mr. Dreyfus addressed himself particularly to the problem of the present world-wide distribution of raw materials as well as the matter of world stabilization of the currency.

There is much in Random Thoughts which provides a keen basis for discussion. I myself hold views different from many of the conclusions. I do believe however that this very interesting and significant collection of observations down through the years—many of them prophetic in character—makes an important contribution to thinking on the most critical of all issues—the preservation of the peace of the globe, the sparing of mankind's peoples from the horrors of both another war or another depression. Those objectives cannot be met of course unless we lay the basis for justice and equity among nations.

I am always happy to review distinguished judgment from here and abroad, whether or not it agrees with my own thoughts provided I feel that such judgment is sincere, constructive, noble in purpose, as I know these ideas of Mr. Dreyfus are.

There follow certain materials from Random Thoughts. I have selected those which I feel are particularly pertinent at the present time. I wish that it might be possible to submit some of Mr. Dreyfus' views on international organization in great detail.

The items that follow relate to:

1. The problem of high taxes, a matter affecting virtually all of our western nations, a matter peculiarly appropriate in view of the fact that the Senate is right now debating the \$5,500,000,000 tax increase bill.

2. The problem of Soviet Russia, a matter which engages my particular attention as ranking Republican on the Senate Foreign Relations Committee and conferee on the multibillion-dollar mutual-aid bill.

The quotations from Random Thoughts, by Emil Dreyfus, are as follows:

"THE TAXPAYER IS EXHAUSTED"

"Excessive taxation under certain conditions is nothing short of confiscation. The more the State intrudes into private business and private economy, the less it seems to understand it.

"It is impossible today for either industry or commerce to build up a reserve fund sufficiently large to protect the position of the enterprise. This lack of reserve could cause the ruin of many firms and leave them in the greatest distress if a business depression were to occur. This is the process of killing the hen that lays the golden eggs.

"All the individual works for today is to pay his taxes, the same goes for business, and the big taxpayer has taken on the function of a collector.

"And in addition to this excessive taxation the Government does not allow the individual to provide adequately for his heirs. The Government having taken away most of the individual's revenue and his gains, the latter may not even bequeath to his loved ones means that will adequately provide for them after he is gone, for inheritance taxes are almost prohibitive.

"We must not be surprised therefore if the individual has no more ambition or desire to improve his financial situation. His spirit of enterprise has been destroyed.

"The Government must stop exploiting the individual and do its duty, which is to protect the interests of the individual. The value of an ounce of gold passed from \$22 to \$35—showing in what times we are living. In some countries an ounce of gold went up to \$80 and \$90. Russia simply went bank-

rupt and devalued her currency at 100 rubles to 10. That was an easy way out, but let us hope that other countries won't think of doing the same. An honorable government does not resort to such methods.

"The Government is the principal partner in all private or business enterprise, it is the most important partner in all revenue, capital, or profit. Consequently, rather than destroy all these by exorbitant charges, it ought to cooperate in their preservation. Today, the Government is actually enjoying all of its prerogatives and is assuming none of its responsibilities. Whenever losses are to be sustained, the Government does not participate in these losses.

"The Government must not try to substitute itself for the businessman. It must leave the individual free to attend to his own business, to make it thrive so that by means of the taxes he pays, he may make his own share of contribution to the Government; but these taxes must be fair and reasonable.

"The Government takes everything away from the individual, and the latter must constantly start all over again to try and build up his lost assets.

"The enemy groups use other mediums: wars, revolutions, internal disorder, and chaos. They take over control wherever they can and give to this type of despotism the name of democracy.

"We must rebuild for the entire world a new democracy, honorable and sincere, with capable leaders, so that we might prove to the entire world that this system can be valued and can command national and international respect.

"During the war the government burdened the individual with very heavy taxes, and now that the war is over, it has become accustomed to all these resources and cannot get away from the habit. It disregards the fact that conditions have changed, that we are no longer at war, and that such high taxes are no longer necessary. The government continues to apply these very heavy taxes which paralyze the economic set-up as if it were a chronic disease.

"It is just as if you had a plant, your labor went on strike, and, after giving them satisfaction, they struck again, and again you satisfied their demands, and this occurred repeatedly until some day business went bad, and you, having had no opportunity of constituting a reserve for bad times, asked your labor to accept a cut in their income, and they refused. Now the result is the same, when a government refuses to cut down its tax requirements.

"The government leaves no respite to business. With its demands in taxes it does not allow business to build up a reserve for bad times, for periods of strikes and depressions, and, if these occur, they are not in a position to protect their position. And the government, not having itself built up any reserves, is not able to come to their rescue in bad times.

"The Government is making debts by the billions. Who owes all this money? And to whom is it owed? Who is the Government? Does the Government not consist of all the production and business enterprises as a whole, of their executives and their employees? We shall have to amortize these billions of debts some day. Now, when we undertake to grant billions of loans for the recovery program, when we formulate a Marshall plan, where do we get the money? Is it the Government that produces the money? Is it not rather the businessman and the working people?

"In our times, when it is customary to do everything on a large scale, we must not be led to suppose it is right to have unreasonable taxes. The taxes to-day are a quasi-confiscation of the savings of the individual—savings earned by honest and hard work.

"It is very wrong to think that it is a crime to be rich, and this attitude should be condemned. Why should an individual not be allowed to prosper and build up reserves? Does not the sum-total of all individual fortunes constitute the wealth of a country? Is it not preferable to see the citizens of this country become the heirs to these fortunes, rather than see them being dilapidated?"

"THE VETO RIGHT IN THE UN MUST BE ABOLISHED"

"The purpose of creating the United Nations Organization at its inception was to allow the nations to meet, discuss, and come to agreement on a formula for world peace. Subsequently, the five big nations, assuming certain powers which it had never been intended to give them, decided to give themselves the veto right, believing that with this right they would be in a position to stop any motion that might not suit their plans and safeguard their own private interests and their own policies.

"This was a serious mistake—not to say a crime—toward the lesser powers. But the big five pursued their own aims, thinking they would be able to control the entire world and dictate to it. Soon it was realized that such a system was unworkable and that on the contrary it could only lead to failure. Indeed, almost daily for the past 3 years the veto has been used by the Russians, and the decisions of the U. N. have been sabotaged to the detriment of the great and lesser powers. This proves that the veto right should never have been authorized, either for the great powers or for the lesser.

"In an organization such as the UN all countries, great or small, should have the same rights. Otherwise, we revert to the old power politics, parties, and policies, where nations work one against the other and where a peace program for the whole world becomes a myth. The veto right, therefore, must be abolished in the U. N.

"SOVIET RUSSIA CLAIMS TO BE DEMOCRATIC"

"As we read the diaries of certain statesmen recently published, we realize that at the meetings that were held of allied personalities in Moscow the cause of democracy was not favorably presented to the Russians. Serious mistakes were made in the economic, geographic, and military field.

"We wonder why Russia was allowed to take over such great expanses of foreign territory before her frontiers were definitely set. Was it intended to allow her to become so oversized so that communism might fall of its own weight?

"Without consulting the United Nations, Russia has seized a large number of countries against the will of the peoples of these countries. She has progressively taken over Poland, Rumania, Albania, Yugoslavia, Bulgaria, Hungary, Lithuania, Latvia, Estonia, and Czechoslovakia. We realize there is no means of satisfying her appetite under any conditions, and we ask ourselves this question again: Why were the frontiers of Russia not defined at Yalta, Moscow, or better still, Berlin?

"We of the democracies are at a great disadvantage compared with Russia. Stalin, with the help of his Politbureau, is able to make his decisions immediately. Whereas we have to discuss and deliberate for months before we can take a stand. Stalin in his sphere is the all-powerful master. All submit to his command. In his statist Russia he is the most important capitalist, the greatest industrialist, and the biggest businessman. In fact, he is the sole dealer for the whole of Russia.

"Such a unique position allows him, by means of terror and dictatorship, to conquer the smaller nations, ruthlessly dominate them and exploit them in order to extract from them every possible thing. This

method can only provoke world revolution against tyranny, a revolution in which the democracies are already morally engaged and theoretically at war, since it has been proved to them beyond doubt that the communistic system leads to a leveling down from beneath and to the debasement of civilization and the human being.

"In all her agreements Russia wants nothing but the advantages and no obligations. Stalin is like Hitler, who used to say, 'All is just that helps Nazi Germany.' Stalin acts autocratically, does nothing but what pleases him, even if it inflicts the gravest injustice on the peoples of other countries or of his own.

"When the Russians, like the western allies and with the same machines, had the occupation currency printed and exchanged this currency against merchandise and American dollars, there was no adequate control and to this day we do not know the extent of the profits they reaped from these manipulations. No one knows the exact amount of the enormous benefits they derived from them. All we know today is that the American taxpayer is bearing the consequences of it, because the currency is devalued to the advantage of the Russians and we do not know to what extent.

"The gradual seizure of the Balkan states by the Russians is a history so painful that it should be treated in a separate work. Certain ministers of these countries committed their governments in agreements of doubtful nature without regard for the will of the people of these countries which they were representing. The Russians have no consideration for the smaller nations. It has always been so even before the war, during the war, and after it. So we must not be surprised to see them falling victim to Russia's ambitions for expansion. The smaller nations have been penalized through no fault of their own. They have been gagged with all sorts of restrictions and prohibitions. Under the dictatorship of the big powers they have suffered humiliation, whether or not they had taken any part in the latest war.

"And how about the countries that hitherto have been spared the onslaught of communism? Is it not strange that in the face of all these facts they are not making any effort to guide the world into the right path? What may one deduce from such an attitude, except that they have not been able to find within their own parties and politicians leaders, impartial and in good faith, who have the courage and the will to guide the nations toward a better world.

"We do see here and there some little prophets predicting certain situations. They warn the people but do nothing that is really effective, confining themselves to words. And, no matter how good are their intentions, they are without any real experience and have no definite program. They never had in the past and have none for the future.

"Some countries made the great mistake of recognizing communism as a political party. This was due to the attitude of some of their leaders whose aims were purely personal and whose object was the getting of votes. These leaders thought that by making a lot of promises they would get more votes, be they from Communists or any others.

"Where communism is concerned one may not remain neutral; one must be for or against it. We have nothing to gain from such an element, and they cannot be reasoned with.

"We must set up a universal front against communism. To accept such a system will be the end of democracy. It is a struggle for our own existence and a fight for survival.

"The democracies have been too lenient and easy-going with communism. They were not on their guard and did not suspect the extent to which this movement would gain power. They were friendly toward the Communists, and they helped them out of their difficult conditions. The Communists have thanked them by turning against them and trying to annihilate democracy with the very weapons, material, and funds they received from them. Their conduct is criminal.

"It is quite obvious that communism and socialism are evolutions that have outlived their purpose. In all countries where these have been applied there has resulted nothing but confusion and chaos. They are radical systems that stop at nothing to achieve their aims, that cause millions and millions of innocent people to lose their lives in wars, revolutions, misery, sickness, and hunger. Russia wants her people to believe that communism is the only system that can work successfully. She blames all other systems for the misfortunes of the world. In order to avoid all counter-revolutions within her country, she conceals from her people the true conditions in all other countries. In 1917, in order to dominate the world, she put to death the elite of her own classes.

"Russia realizes that she cannot be self-sufficient. Consequently, she takes whatever she can from her neighboring countries and by terror and force she keeps her hold on them. The world should not allow such usurpation. If it does not rise up against it, the Communists will end up by destroying not one country, not several countries, but the entire world. And with the atomic bomb, the cosmic rays, the rockets, and bacterial warfare, such a destruction would strike faster than lightning.

"The democracies, therefore, must completely eliminate communism, not only within their own frontiers, but within other countries, by going to their aid whenever they are called.

"It has been positively proved that there is not room for the two theories in the same economic system. Communism cannot exist in a democracy, no more than democracy can exist in communism. Communism is civilization's worst enemy and the greatest provoker of anarchy. Its aims are quite destructive, and, if we let it gain momentum and dominate the world, there will be no more decent world.

"We must, therefore, outlaw this ideology, for there is nothing ideal about it. It is nothing but a criminal enterprise which can only end up with the annihilation of the whole world. As long as our countries are affected by it, the danger will be imminent.

"When the working people are discouraged and disappointed by events, they join the ranks of the Communists, not knowing who their real enemies are. In the democratic and liberal countries they seek to compensate their disappointment by voting for the Communists when they go to the polls.

"The question of communism is an extremely delicate matter, but it should be tackled in the interest of the entire world, if we are to have any peace. And perhaps it will be the U. N. which will finally solve this problem.

"It is a system based on immature principles and rudimentary and primitive concepts. It is quite unripe and has nothing to offer that will develop the people and allow them to progress. The peoples living under such a regime are depressed, and they cannot bear to see other peoples who are living under other systems more favorable than theirs progress, develop, and live happily. So that the Communists in their misfortune seek to debase the peoples of other systems.

"All of these utopias such as bolshevism, communism, fascism, and other unreasonable evolutions leave destruction in their wake many, many years after they are gone, and it is with the utmost difficulty that the peoples are able to recover their former condition and resume the normal mode of life of a democracy.

"With communism it is like an ant hill. All must work and no one has the right to think. It destroys a civilization which it took centuries to build. If we want to combat communism, we must give the greatest opportunities possible to the individual to use his initiative and imagination so that communism might have no attractions for him

"We must forget our internal quarrels and, united all on one front, rise up against this terror, which only demands power and only wants the spoils. At a time when danger is at our door we must endeavor to improve our own methods. We must put an end to internal corruption, for the enemy makes use of such weaknesses as this to show to its people how bad the deficiencies of our system are.

"There is no doubt but that a great part of German militarism and of the Nazis have joined their forces to those of the Communists. It is not likely that Stalin would have dared to take over the countries as he did if he had not had their support. The German motto applies here 'robbers quarrel among themselves and plot together'. The doings of Hitler and Stalin are an example of this. It would be inadmissible to allow an entire civilization to pay the price for such criminal deeds

"The Fascist elements in other countries close their eyes and pretend they see nothing. They take advantage of such situations to bolster up their own financial position and tighten their monopolistic hold on all the raw material in the world. Thus they are indirectly working for the cause of our enemy. With their vertical and horizontal trusts they have done nothing but bring about inflation in the values of merchandise and deflation in the value of currency all over the world. By so doing, they are giving to the working people weapons to be used against them; for the worker in revolt turns to communism for relief.

"Consequently, if we do not eliminate communism it will swallow us up."

One Way To Crash the Iron Curtain

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

Thursday, September 13, 1951

Mr. BENDER. Mr. Speaker, one of the most eloquent commentaries on the success of the Communists in establishing their way of life comes from the fantastic story out of Czechoslovakia. The Czech engineer who shot his train and its passengers across barricades through an unused railroad siding to enter the American zone of Western Germany bordering on the Czech frontier reached his decision because he could no longer tolerate life in Red Czechoslovakia.

As of this moment, there are no records of any one trying to reverse the procedure by ramming through the iron curtain from the west going east. If all the barriers were let down tomorrow, half the population of the "satel-

lite countries" of the Soviet Union would stream across the borders to the free world. How is Uncle Joe going to explain away the daring exploit of the Czech who would not be checked by border guards, barricades, boundaries, or fear?

A G-Man on Every Program

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "A G-Man on Every Program," by Wheeler McMillen, published in the Pathfinder news magazine for September 19, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows:

A G-MAN ON EVERY PROGRAM

(By Wheeler McMillen)

D Howard Moreau, the acute editor of the Hunterdon County Democrat at Flemington, N. J., has noted a conspicuous phase of these tax-spend-elect-and-control times that has received less remark than it deserves. Mr. Moreau publishes one of America's most distinguished local weeklies

If you go to conventions, you will be able to observe the now almost universal phenomenon of which Mr. Moreau speaks in an editorial, A G-Man on Every Program. To his editorial I gladly devote this space:

"A few years ago when Hitler was in the height of his power, we heard a lot about 'thought control' as it was conducted under the Nazi regime. We were given to understand that America would never have anything like this.

"But we are not so sure it will not come—or that in a subtle way we do not have thought control of sizable proportions already in operation, getting our people conditioned for further raids on their earnings and savings, more bureaus and bureaucrats and for the 1952 elections

"If you belong to any kind of trade or professional group, fraternity, or veterans' organization—or to a church, it might be interesting for you to study the program of the next State or national convention or conference of that organization. You can safely bet your bottom dollar that the program will carry the name of several Government men, if it is a meeting of any size or will continue more than 1 day. If it is a comparatively small meeting, it will have at least one Government man as a headline speaker.

"And this G-man speaker will be a clever fellow. He'll have a good line of stories, a pleasing personality and usually will deal with a crisis in one form or another. For our Government, ever since that charmer of all charmers sold us the New Deal, has always faced some kind of emergency. And the present aim—the aim of all Socialist regimes, is to keep us in a state of emergency, for only thereby will a free people be induced to give up their freedom and be divested of their savings in return for some kind of 'security.'

"These G-men speakers will usually put on an act to show how busy they are, how overworked their department is, and how they can ill afford the time away from Wash-

ington to make a speech. But you'll find they will eat a hearty dinner, because it won't interfere with a speech which has been delivered a good many times before. And they'll have time to shake hands and stick around to receive the glad handclaps of admiring folk who'll say: 'What a grand speaker. Ain't we fortunate to have men like this in Government service?'

"It is all part of a build-up for bigger and bigger Government, to take more and more of our weekly pay checks and the earnings of our farms and business, to support more and more speakers, who in the aggregate strip us of more and more of our rights, liberties, and privileges as Americans.

"Tommyrot?

"All right. Take a look at the program of the next convention of your favorite organization. Attend one of its meetings. Take careful notes on the speeches and see if you are not made conscious of a studied attempt to do your thinking for you, to reduce your resistance as an individual and to line you and your group up in support of big Government.

"The Nazis made no secret of their thought-control program, but Ribbentrop had no patent on the idea. Nor has Russia a monopoly on the Politburo."

Newspaper Business: The Death of a Formula

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HALE. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following article entitled "Newspaper Business: The Death of a Formula," published in Fortune magazine of September 1951:

NEWSPAPER BUSINESS: THE DEATH OF A FORMULA

(Just the other day United States newspapers were making juicy profits. They're still doing prodigious business, but the publishers are crying that they are being pushed to the wall. What happened? The soaring price of newsprint is one thing, but only one.)

As a business United States newspapering today looks healthier and actually is weaker than it has been for years. The signs of apparent vigor are everywhere. Papers by the dozens are moving into sparkling new quarters (see the Prudent Publishers, Fortune, August 1950). Circulation is at an all-time high. Not only has advertising lineage increased substantially every year for the past nine, but the newspapers are also getting a larger share of the advertising dollar at the expense of other media.

Yet newspaper costs have been rising faster than revenues since 1946, in some years very much faster. The graph on the opposite page [not reproduced] indicates how a large paper that made 15 percent net before taxes in 1946 would, if it reflected the general experience of the industry, earn less than half the dollar profit in 1950 and less than a third the percentage return on gross revenues—not to mention today's larger tax bite. These trends could mean that the large American dailies would soon be running without any profit at all. And as the manager of a large evening paper observed grimly, "It won't take any 5 years, either."

It was this cost-revenue picture that led the publishers to shriek with rage when Ca-

nadian newsprint went up \$10 on July 1, to \$116 a ton. ("The increase," said publisher John S. Knight, "is without economic justification. Politically, it's stupid. Morally, it smells.") Now newsprint is, indeed, the largest single cost item of any daily paper of, say, 25,000 circulation or over. But a closer look raises doubt whether the rising price of newsprint is truly the villain that so many publishers profess it to be. Instead, it begins to appear that the formula on which American newspapers have operated for 50 years may need to be scrapped.

There is a tinge of poetic justice about the newspaper situation today, after so many years when the publishers held the whip hand over the mills. Following an all-time price peak of \$135 a ton in 1921, an outburst of mill building both in the United States and Canada (but especially in Canada) cut the price nearly in half within 5 years and presented the industry with what looked like permanent overcapacity. For 15 years, down the sickening slope of the great depression and up the slow recovery climb, the industry sweated with that excess capacity. Six of the top seven Canadian producers were in some form of hock; over a third of United States capacity was either dismantled or converted to other types of paper on which there was a chance to make more or at least to lose less. By 1939, United States output was down from a peak of 1,700,000 tons to less than a million, while the Canadian industry limped along at about 70 percent of capacity. Indeed, one of the largest United States publishers submits that the newspapers during the 1920's and 1930's subsisted largely at the expense of the impoverished newsprint industry.

TOO GOOD TO LAST

The publishers never had it so good as during this period. In the 1930's they could buy newsprint in any quantity for \$40 to \$50 a ton simply by lifting a telephone; and one newsprint maker unkindly characterized the publishers' long-term contracts with the mills as mere "options to buy if the price went down." During World War II the OPA-controlled price rose no higher than \$61, though three further increases (to \$84) were permitted between VJ-day and the lapsing of price control. Only after the war did prices show any real climb, gradually reaching the present \$116 level for Canadian output.¹ However, as illustrated in the chart on page 166, in no year since 1939 have newsprint prices kept up with the rise of commodities in general.

On the supply side also the publishers appear to have been treated well, even during the postwar years. True, the Canadian producers built no new mills, but by technical improvement and capacity operation they managed to squeeze nearly 700,000 more tons per year—an increase of 15 percent—out of existing facilities. Furthermore, the United States has been getting an increasing share of this increasing total. Whereas before the war United States publishers imported a little over 70 percent of Canadian production, then running about 3,500,000 tons, this year they should receive approximately 90 percent of a 5,300,000-ton output.

On one thing the publishers have always agreed, that newsprint should be plentiful and cheap. The political leverage of the newspapers (which has frequently induced congressional inquiries and diplomatic negotiation), coupled with the overcapacity of the newsprint industry, served to main-

tain this happy situation until the rationing of World War II began.

But it was inevitable that newsprint prices would climb once controls were off, given both the demand situation and the tight organization of the Canadian newsprint industry. Over half the newsprint capacity of Canada (a country notably uninhibited by United States antitrust concepts) is in the hands of four companies; the smaller producers commonly quote their prices as the average of the prices of the largest two or three; and Robert M. Fowler is today alternately president of the Newsprint Association of Canada and, with a quick twist of his cap, newsprint controller for the Canadian Government.

VOLUME HAS TO BE BOUGHT

Moreover, in a booming economy it is next to impossible for a commodity to remain both plentiful and cheap unless it is in a technological revolution (which newsprint was not). For the boom will generate increased needs that require increased capacity; and the increased capacity will be provided only if prices are high enough to warrant the new investment. The efforts of the publishers to prevent newsprint price increases merely resulted in no new capacity being built. Only one new newsprint mill—the Coosa River project in Alabama, built cooperatively by a group of southern publishers—has been completed since the war; the second, a moderate-sized mill in British Columbia, will not be finished before 1952.

The main deterrent has been capital costs, which could have been overcome only by price increases earlier and larger than actually occurred. Most United States and Canadian newsprint mills were built during the 1920's at costs of \$25,000 to \$35,000 per daily ton of capacity. Allowing for depreciation on the one hand, and rebuilding and improvement on the other, a well-maintained mill might still be carried on the books at about the original figure. But a brand-new mill built today involves capital costs of around \$100,000 to \$125,000 per daily ton, or \$20,000,000 to \$25,000,000 for a 200-ton-a-day operation of minimum economic size, without even counting such possible costs as power development or the purchase of timberlands. Allowing for full 6-day three-shift operation at present newsprint prices, invested capital would turn over only once every 3 years, and it could easily take decades to recoup the investment. At today's price levels, an efficient mill built in the low-cost days can make \$35 to \$40 per ton, net before taxes; but a brand-new mill needs first of all an investor who is not only very rich but also somewhat foolish.

The paper industry, which is not foolish, has reacted to the situation by concentrating investment in other types of pulp and paper where the cost-return ratio is happier. In the postwar period the Canadian paper industry alone has put in some 800,000 tons of new pulp capacity for such products as wrapping paper, drinking cups, and frozen-food containers, most of which could have gone into newsprint but did not. Instead, the Canadians apparently decided to squeeze more newsprint production out of existing mills, while at the same time boosting the newsprint price toward what they considered a reasonable level. Hence the \$10-a-ton jump that roused the publisher's fury.

THE FORMULA PLAYS OUT

The outcries of the publishers were genuine, for the increase really hurt. Because of it the Hearst papers passed a dividend, noting that the additional cost of newsprint would almost exactly equal their net after taxes for the preceding year; and the former owner of the St. Louis Star-Times blamed rising newsprint costs for the sale of that paper to the Post-Dispatch. Some prominent papers broke into the loss column as a result

of the increase, and even the most profitable had their net drastically pared.

But the newsprint price increase is especially important because it is a certain kind of cost. For half a century the newspaper business, as a business, has operated on a formula: raise circulation, and leave advertising rates per reader alone. Many a publisher probably never recognized it as a formula, for it worked so well so long that it seemed like an order of nature. But American newspapers, usually founded to express a point of view rather than to make money, have seldom generated any distinguished economic thinking. F. M. Flynn, president of the New York Daily News, explained the Canadian reluctance to expand newsprint production by observing, "I guess they simply would rather do business with businessmen." And the progressive publisher of a prominent eastern paper added, "There hasn't been the caliber of men going into the business side of newspapering that you find in the soap business, or the steel business, or the auto business."

While it worked, the old formula did beautifully on both the revenue and the expense side. A circulation increase brought additional revenue not only from the sale of copies but also from advertising, since the advertising rate per line could on the whole be raised in proportion to the increased circulation. And some costs—editorial and composition costs are the clearest examples—did not go up at all with a rise in circulation, while others (such as distribution costs) did not go up proportionately. That is not to say that this group of costs remained stable, they have increased, and sharply, as a result of general wage levels, union organization, etc. But these increases bore little relation to a rise in circulation.

Now the formula is petering out because the "intractable" costs—of which newsprint is by far the greatest—have become so large a proportion of total expense. For this group of costs increase in ironbound proportion to the total circulation and the size of each copy. The old formula still works well for small papers of up to, say, 20,000 circulation, whose newsprint bill generally runs 15 percent of total expense or less, and whose only newsprint worry is (or should be) the problem of supply rather than price. One of the anomalies of the existing newsprint situation is that with most small papers supply comes first and price second, while with most large papers the reverse is true.

The newsprint burden of the papers mounted as they grew in circulation and size—a growth that raised total daily paper circulation from 40,000,000 to 53,000,000 since 1939, in addition to increasing the number of pages per copy. In 1950, according to Editor and Publisher, the newsprint costs of the average daily of above 100,000 circulation amounted to about 37 percent of total cost, while press running time accounted for another 4 percent. Inasmuch as newsprint prices have risen 16 percent since late in 1950, newsprint should now comprise at least 40 percent of total cost, even assuming stringent economies in the meantime. In short, the large newspapers are approaching the point, and some have already reached it, where at least half of their total costs are not benefited by any further circulation gains.

The New York Daily News serves as an extreme example. When the recent newsprint price increase is fully felt, newsprint will amount to nearly 55 percent of the cost of publishing the News. This is almost as great as a department store's cost for the average merchandise that it carries; but for its outlay the department store gets completed merchandise, the News only the rawest of raw material. To the reader, newsprint is the least important commodity in a newspaper, the humble carrier of the words and

¹ So far, only one United States mill (Crown Zellerbach) has been allowed to match the latest \$10 Canadian increase. But the fact that Canada supplies over four-fifths of United States needs makes a general United States raise appear certain.

pictures; yet in the economy of the Daily News it has become by far the most important.

TRIMMING COSTS

The publishers have reacted with a variety of stratagems. Many have tried to save newsprint by cutting waste in the pressroom, tightening up on the return of unsold papers, and slightly reducing the page size, but often some of these steps have been overlooked. For example, it is desirable that page widths should divide exactly into the width of the paper rolls used by the supplying mill, to avoid wasteful trim. A number of papers have changed their press rolls from the traditional 66 inches down to about 64, primarily to use less paper, but at times to effect an increase in newsprint supply. However, a recent study of 15 small midwestern dailies showed that none of them had done so, though it could better their newsprint supply by about 5 percent; and such a stand-out paper as the New York Times is only now considering it.

The bite has also been put on the newspaper buyer. Before World War II the usual revenue breakdown was one-fourth from circulation, three-fourths from advertising. Today, the price of most daily papers having jumped from 2 or 3 cents to 5 and Sunday papers from 10 cents to 15, the average large newspaper derives about a third of revenue from circulation.

EVERYTHING BUT ADVERTISING

The one thing that has seemed sacrosanct is the milline rate, or price of advertising per line per million readers. For example, according to the Editor and Publisher Yearbook for 1950, the milline rate for United States evening dailies actually decreased a trifle between 1939 and 1949, though other advertising media were displaying less timidity. The publishers' reluctance to recognize that it costs a great deal more to reach a given number of readers today than it did a decade ago is not confined to competitive-newspaper cities; the monopoly papers, fearing the outcry that would follow significant rate boosts, seem to prefer to exploit their advantageous position by expense trimming (e. g., fewer editions, cutting return privileges on unsold copies, and so forth).

As though the level milline rate were not enough, the publishers have a special albatross necklace in the problem of local vs. national advertising rates, the lowest rate for local advertisers generally running 35 to 40 percent less than the national. The national advertisers, who know a bargain when they see it, have responded with heavy co-operative campaigns in which the advertising is placed locally at local rates, but financed at least in part out of a company's central advertising appropriation. If the publishers are to raise the average milline rate significantly, their first point of attack must be upon this rate differential. For in the long run the cost to the newspaper of one line of advertising will not differ from that of another.

MORE DOLLARS FOR LESS SPACE

That the survival of the large daily newspaper in the United States depends on sharply increased advertising rates seems blatantly obvious. Indeed, the newspapers would be far better off if a rate increase of, say, 30 percent cut lineage enough to produce precisely the same revenue, for a lineage reduction also brings with it a significant drop in newsprint use, composition costs, etc.

Raising the rates is, for the monopoly-newspaper towns, larger a matter of nerve, plus the conviction that advertisers should not and in the long run will not expect newspaper advertising to be the one commodity that still goes at prewar bargain rates. For the competitive cities, Editor Erwin D. Canham, of the Christian Science Monitor, suggested "a little unlawful conspiracy in re-

straint of trade." Canham was concerned primarily with making more newsprint available for friendly countries whose need is far more desperate than our own—just as the London Economist was thinking of editorial problems when it accused the United States press of suffering from "a surfeit of newsprint." But both remarks apply equally to the central economic problem of United States newspapering, which is to get more money for less advertising space.

The hopelessness of the present course can be illustrated by the example of the Boston Herald-Traveler Corp., chosen here solely because it is one of the few newspaper enterprises making public financial statements. Surely it is not too much for a newspaper or any other business to have a fighting chance, even at today's tax rates, of equaling the net profit after taxes that it made 5 years ago. Yet if present operating margins and tax rates were to prevail, the Herald and Traveler would face the impossible task of raising 1950 revenue of about \$16,500,000 to over \$50,000,000, in order to make the same stockholder dollars as in 1946.

At the moment, some publishers are taking comfort from a number of hopeful, but probably illusory, signs of change in the newsprint situation. Several factors—chief among them has been the tendency toward relaxation at the apparently approaching cease fire in Korea—could easily bring a drop of 5 to 10 percent in newspaper advertising, which tends to rise and fall with general business activity. The figures for June 1951 (the latest available), already show an advertising lineage decline of about 3½ percent below June 1950. Such a drop is likely to be accompanied by an almost identical percentage decline in United States newsprint use. At the same time Canadian newsprint production is running about 200,000 tons ahead of last year, and the average publisher's inventory of newsprint on hand or in transit is creeping up toward a reasonably comfortable 40-day level. Given the present delicate balance between newsprint demand and supply, these factors might be expected to relieve the upward pressure on newsprint prices or even bring a price decline.

NOTHING TO HOPE FOR

No such happy event is likely to occur, for several reasons. In the first place, the enormous United States newsprint consumption of the past several years has been possible only because of the higher percentage of Canadian output shipped to the United States, which was in turn due to the fact that some of Canada's traditional foreign customers did not have the hard currency to spend on newsprint. Those customers, their pockets now jingling with dollars from the United States defense program, would be glad to buy perhaps 300,000 tons more Canadian newsprint annually; and the Canadians would be glad to see their United States market shrink a bit. Thus a moderate decline in United States demand could probably be offset by increased overseas takings.

Moreover, if worst came to worst the newsprint makers certainly have no compelling reasons to wreck the industry's price structure by overproduction. A slight decline in operations, now running above theoretical capacity, might even be welcome; and there is plenty of cushion underneath, since the break-even point of an efficient newsprint mill is probably around 75 percent of capacity. Furthermore, a portion of existing newsprint capacity could easily and cheaply be switched to certain other printing papers—among them so-called super-newsprint and other calendered (i. e., polished) stocks approaching book paper in finish—for which there is a strong United States demand at good prices. Hence there seems little hope for a decline in newsprint prices. If they change at all within the next year or so, the direction is still likely to be up.

The most horrid possibility, from the publishers' point of view, is by no means the most remote—that advertising revenue will falter at the same time that newsprint prices advance once more. If so, the large American newspapers as a group would go on a nonprofit basis, and failures would be numbered by dozens.

It is strange that American newspapering, on which there are so many hot and ready opinions, should have been considered so seldom by the public as part of the United States economy. In the concern that the press be free, it has been all but forgotten that it must also be self-supporting and prosperous. Bankruptcy was never the route to independence, nor faulty economics the key to vigilance and effectiveness. Economically speaking, the large American daily newspaper has reached the end of a formula and must evolve a new one.

WHAT THE NEWSPRINT INCREASE CAN MEAN

Here is the 1950 cost-revenue breakdown for a hypothetical large daily, whose showing is neither best nor poorest among papers of this size. Since the paper used 60,000 tons of newsprint in 1950 at \$100 a ton, the price increases of \$6 and \$10 last December and last July have added \$960,000 to annual costs and nearly wiped out operating net. The publisher would, of course, strain every nerve to slash costs and increase revenues, but how did the newspapers get themselves into such a fix?

Revenues (In thousands)	
Advertising.....	\$11,800
Circulation.....	5,200
Total revenues.....	17,000
COSTS	
Newsprint (including ink).....	6,000
Composition.....	1,450
Pressroom.....	675
Stereo and engraving.....	500
Editorial.....	1,900
Advertising expense.....	975
Circulation expense.....	2,200
Administration and general.....	1,375
Business office and plant.....	925
Total costs.....	16,000
Net before taxes.....	1,000
Increase in annual paper cost since Dec. 1, 1950.....	960

The Supply of Nickel

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Daisy Chain in Nickel," published in the Washington News of September 18, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows:

DAISY CHAIN IN NICKEL

As usual in times of materials shortages, a gray market is inevitable—also, elusive and tough to fight. There is always a group of shady dealers ready to take advantage of dwindling supplies and corner the mar-

ket, forcing up prices regardless of the country's needs or welfare.

This has happened to nickel. A manufacturer recently told a Senate inquiry that the nickel supply "went out like a light" soon after the Korean war started, and then began reappearing on the market at exorbitant prices.

A Senate subcommittee on gray markets, headed by Senator BARRY MOODY, of Michigan, has now exposed the vicious racket in nickel and nickel anodes. It is a shocking report.

With no more than a telephone for business equipment, the gray marketers, some of whom never saw a nickel anode until a few months ago, have all but taken over control of a substantial portion of the market. They do nothing but add to the price—with the result that nickel finally reaches the consumer at a cost nearly seven times higher than normal market value.

Nickel has thousands of industrial uses. In electroplating alone, 5,000 independent job platers employ 40,000 workers. But now these small-business men are priced out of the nickel market, with nickel selling at \$4.50 per pound when normal prices are about 67 cents.

Nickel anodes, says the report, have been slipping out of the distribution back door into a daisy chain of illegal trafficking at successively higher prices. Large companies are able to pay the premium prices, but small-business men are left desperate. They cannot afford the prohibitive prices and face bankruptcy if they try to compete with the big firms.

The report blames the situation in part on the "fuzziness" of OPS price-control rules on nickel. An OPS regulation puts a ceiling price on nickel scrap at 40.5 cents a pound. But to escape this ceiling, it is only necessary to cast the scrap into anode form. It can then be sold at the highest price at which nickel anodes were sold by the dealer during the base period.

The committee has called this to the attention of OPS officials, who have "indicated" they will close the loophole. But it will take more than that to end the abuses and racketeering in the nickel as well as other gray markets.

The big companies which have been paying racketeering prices for gray-market materials may not be wholly blameless themselves. As the committee report said, "these practices reflect credit on no one concerned." But, primarily, it might help if the names of the shady dealers and fly-by-night "brokers" were turned over to the Justice Department and Bureau of Internal Revenue.

Shortage of Electric Power in the United States

EXTENSION OF REMARKS OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "United States Official Sees Critical Lack of Power," a United Press dispatch from Absecon, N. J., published in the Christian Science Monitor of September 20, 1951. I commend the reading of the article to those in this country who are vigorously opposed to the development of power on the St. Lawrence River.

There being no objection, the article was ordered to be printed in the Record, as follows:

UNITED STATES OFFICIAL SEES CRITICAL LACK OF POWER

ABSECON, N. J.—A Government power expert said the Nation faces such a critical power shortage that "some industrial demands will be without electric service" by the end of this year.

Thomas E. Marburger said that furthermore the power shortage probably will become increasingly acute until there is "a staggering shortage of 4,000,000 kilowatts by the end of 1953."

Mr. Marburger is director of the materials and equipment division of the Defense Electric Power Administration. He made the statement in a speech prepared for the Valve Manufacturers Association.

He attributed the mounting electrical shortage to increased industrial, commercial, and domestic demands since the outbreak of the Korean war and to materials shortages. These factors, Mr. Marburger said, have been steadily whittling down the margin of power reserve which electric utilities try to maintain to protect their customers.

"By the end of 1951," he said, "the operating margins will be decreased below the danger point and some industrial demands will be without electric service."

Mr. Marburger listed several areas in which industrial customers already are having their electrical service interrupted from time to time or are likely to experience interruptions soon. Among those areas were the steel-making section of Pittsburgh, the Pacific Northwest, the Carolinas, and the Gulf coast.

"At present, we face critical power shortages," he said. "At no time during World War II did the electric power supply picture look so threatening as it now appears for the fall and winter of 1952."

He said reduced material allotments for the electric industry probably will leave the Nation with a shortage of at least 1,500,000 kilowatts in 1952 and a further shortage of another 2,500,000 kilowatts in 1953.

Add those figures together, he said, "and the result is a staggering shortage of 4,000,000 kilowatts by the end of 1953."

Danes Warn on Trade Ban

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article entitled "Danes Warn on Trade Ban, Term Cutting Relations With East Unsound, Citing Need of Polish Coal," which appeared in the New York Herald Tribune on September 9, 1951, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

DANES WARN ON TRADE BAN—TERM CUTTING RELATIONS WITH EAST UNSOUND, CITING NEED OF POLISH COAL

(By Fred M. Hechinger)

COPENHAGEN.—Danish officials and economists are disturbed over the American stand on east-west trade. To them the problem is primarily one of economic realities and

pressures, rather than of ideologies. But they also believe that cutting off trade relations with the east is politically and even strategically unsound.

Thorvald Kristensen, Danish Minister of Finance, told this reporter last week that he considers continued trade with the eastern countries "very important." He cited as the most immediate practical reason the fact that Denmark's hopes for increased coal imports from Great Britain had been disappointed. Denmark's most important supplier of coal—at the most advantageous price—is still Poland.

Mr. Kristensen added that it was not desirable politically to break off relations with the satellites. Doing so, Danish official and industrial observers feel, could easily be exploited by the Communist propaganda machine to drive the satellite populations more and more deeply into the arms of the Soviets.

In a series of interviews last week spokesmen for the economic and political sections of the Danish Foreign Office, several industrialists, and the editor of an independent newspaper agreed with that view. All of them stressed the fact that they regard the Atlantic Pact as the most powerful instrument to prevent war and not primarily as an alliance to wage war.

Meanwhile, they add, the period of tension must be expected to continue indefinitely. In the course of this uncomfortable but necessary interim phase, the argument continues, it is vital that all the Atlantic Pact countries maintain sound and expanding economies and that, at the same time, some minimum of normal contact be maintained with the eastern countries.

Trade relations are considered here the best form of such contact. Danes point out, in addition, that to deprive them of Polish coal would be likely to hinder their own defense preparations more than shipments of nonstrategic goods could assist Poland's military preparations.

One industrialist, who is an active member of the home guard, said: "Of course, we are flatly opposed to sending any war materials to the potential enemy." But he added that he saw no reason why Americans should have to insist on elaborate restrictions. "I think there should be assurance enough in the fact that we know that the nearest Soviet air base from which we can be attacked is only about 30 flying minutes away."

The coal problem is serious. Denmark gets 2,000,000 tons of its coal from Poland and only 800,000 tons from the United Kingdom and about 250,000 tons from Western Germany. Much has been said about replacing the Polish coal with shipments from the United States, but a Danish economic expert in the Foreign Office offered these facts:

Only 700,000 tons of coal are being shipped from the United States this year. The long route greatly increases the price, which even normally is above that of Poland. Payments have to be made in dollars—Marshall-plan-sponsored or otherwise—and dependence on the United States would increase, contrary to ECA aims.

All this is made more serious by the fact that Denmark is undergoing a period of some economic difficulties aside from the coal problem. Within 2 years world prices on all the goods Denmark must import have risen about 50 percent. At the same time the world prices on the items which Denmark exports have gone up only 3 percent. Denmark must buy all its raw materials and fuel while it exports mainly food and dairy products. Food prices are usually last to rise. This has left Denmark with an increasing gap in its balance of trade.

The long-range plan, Danish economic advisers say, had been for 15 percent of the country's trade to be with the east, if a sound economy was to be assured. Last year the figure reached 11 percent. But now, largely as a result of American restrictions, it

is down to 5 percent. This comes at a time when the more and more rapid build-up of the Armed Forces, construction of barracks and depots, and the resulting increased need for imported raw materials demand a firm economy

Import Controls on Cheese

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr HUMPHREY Mr President, I also ask unanimous consent to have printed in the Appendix of the RECORD two more articles relating to import curbs on cheese and fats. The first, entitled "Farm Groups Urge Repeal of Import Curbs on Chc. sc," appeared in the Minneapolis Star on September 15, 1951. The other, entitled "Repeal of Dairy Trade Curb Asked," was published in the Minneapolis Tribune on September 13, 1951.

There being no objection, the articles were ordered to be printed in the Appendix of the RECORD, as follows.

[From the Minneapolis Star of September 15, 1951]

FARM GROUPS URGE REPEAL OF IMPORT CURBS ON CHEESE

Two big organizations advocate repeal of imposing import controls on cheese and other fats and oils.

The National Farmers Union and the American Farm Bureau Federation asserted that in the end the American farmer would suffer rather than profit by the restrictions. But representatives of dairy cooperatives and domestic cheese manufacturers demanded retention of the controls. They contended that domestic cheese makers must have protection from foreign imports.

The conflicting views were presented to a Senate banking subcommittee on a proposal to eliminate an amendment to the Price Control Act. That section authorizes restrictions if imports of cheese or other fats threaten domestic output.

Interpreting the provision as mandatory, the Agriculture Department has cut imports of cheese about 40 percent.

Both the farm organizations held there is sufficient legal machinery, without the amendment, to restrict imports that actually threaten the American producer.

In addition, they stressed that the amendment runs counter to all United States policies for collaboration in a free world.

"The immediate effects of the restriction will be to seriously damage agricultural interests of friendly countries," John A. Baker, legislative secretary of the Farmers Union, declared.

E. W. Gaumnitz, executive secretary of the National Cheese Institute, argued that present legislation is inadequate.

[From the Minneapolis Tribune of September 13, 1951]

REPEAL OF DAIRY TRADE CURB ASKED

WASHINGTON.—The administration Thursday will begin an all-out fight to repeal the Andresen-Thye amendment to the controls bill on grounds it is a threat to the Nation's reciprocal trade program.

The amendment, drafted by Representative AUGUST ANDRESEN, Republican of Minnesota, and introduced in the Senate by Senator EDWARD J. THYE, Republican of Minnesota, requires import controls over dairy products, fats, and oils.

The controls must be imposed by the Secretary of Agriculture whenever imports hurt domestic production, interfere with orderly marketing or storing, or increase costs of farm price-support programs.

Under the amendment, the Secretary early in August banned imports of butter, butter oil, and nonfat dried milk and set import quotas that cut imports of both cheese and casein.

As a result of complaints from Dean Acheson, Secretary of State, and 10 foreign governments, a Senate banking subcommittee tomorrow will begin hearings on a bill repealing the controversial section.

Acheson and the complaining governments charge that the amendment violates international trade agreements.

Specific complaints have been received from Canada, Denmark, France, Italy, the Netherlands, New Zealand, Switzerland, Norway, Argentina, and Australia.

Acheson contends the restrictions will result in retaliatory restrictions by foreign countries against American agricultural products. He said many American farm products, including apples, citrus fruits, cotton, and tobacco, depend heavily on overseas markets.

Protection Against Communism

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Road to Disaster," which appeared in the September 1951, issue of the Elks magazine, the national publication of the Benevolent and Protective Order of Elks of the United States of America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROAD TO DISASTER

Much of the muddled thinking which has prevented the people of the United States from taking decisive action to protect themselves against the treasonous conspiracy of American Communists arises from a gross misapprehension of the true nature of the so-called Communist Party. It is not a party at all.

It is a conspiratorial organization. It is a military organization in discipline and methods. It is organized, led, inspired, trained, and financed by Soviet Russia for just one purpose—to destroy our political, social, and economic institutions and to set up a Communist dictatorship.

To mask this unchanging purpose, the Communists have carefully cultivated the protective coloration of a legitimate, democratic political organization in order to use democratic freedoms as a tool to destroy those same freedoms.

Many Americans have allowed themselves to be confused and deluded by this Communist line. There are many who persist

in their error despite everything that has happened in the past few years alone to put the Communist Party in its true light. Among them are those who call themselves liberals, who recognize the Communist threat but fear that if Communists are curbed it may lead to the suppression of freedom for all. Then, there are those who are so blind, so naive, that they see no danger at all from the Communists, and therefore no necessity to act against them.

We agree, without reservation, that constitutional guarantees of freedom must be preserved and respected scrupulously unto the least important citizen of the Republic. The question then is whether we are running the risk of jeopardizing the freedom of all when we silence the Communists. We don't think we are, and we believe that to think otherwise is the height not only of illogic, but also of absurdity. It is, also, the sure road to disaster.

If the Communist Party were in fact a bona fide political organization committed to reforms through orderly political action, instead of an agent of a foreign power committed to overthrow this Government by force and violence, there would be no argument about its right to exist and to try to persuade a majority of the voters to its way of thinking.

It is time that all loyal Americans who are still confused by Red propaganda took a good look at the Communist Party in its real light. It is time that the activities of the Communist Party are recognized for what they are—treason, and it is time that we acted accordingly against those who are engaged in treason.

Responsibility of Bank Directors

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. DIRKSEN Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It's the Directors' Responsibility," published in the American Banker of September 13, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S THE DIRECTORS' RESPONSIBILITY

The obvious conclusion which must be reached from the steadily recurring news of bank defalcations of major size is that too many banks are cutting corners on their auditing, or have no audit procedure worthy of the name.

In small banks, particularly "one-man shops" the lack of sound internal examination and control is all too prevalent, although it must be admitted that the large banks themselves have not solved perfectly the problem of policing the officer or employee who is tempted to embezzle. From the nature of things absolute perfection may not be possible. But the larger banks do have sufficiently large staffs to enable them to divide the responsibility of handling cash and keeping the books and to make auditing a separate function.

Where this division of work and of responsibility does not exist, it behooves bankers interested in the health and public respect of the independent banking system to take thought.

POSSIBLE APPROACHES

There are, of course, a variety of possible approaches:

By groups of banks or associations: Examination of their member banks used to be a regular function of the big city clearing houses. And the principle might be adopted under State or national association leadership of making auditing a cooperatively supported function of country groups or regional clearing houses in country bank areas.

By the surety companies: Just as boiler and safety inspection have been made a service of casualty companies in the industrial field, security inspection might be made a requirement of favorable rates in the bank surety field.

By more detailed examination procedures: National, Federal or State bank examiners might be directed toward ascertaining the validity and actual existence of a bank's "inventory" of assets and its liabilities as well as to "examination of the books."

By State and Federal banking legislation: Minimum requirements for directors' examinations or for audits by "outside" accountants might be established by statute. When New Jersey revised its banking law in 1948, it provided that the entire board of directors of a bank must be responsible for the examination, instead of a committee of them, and that they must engage an outside "public accountant" to examine the bank once a year at an unannounced date and report directly to them. The law also provided that no employee or officer of the bank or of any other bank may be engaged to assist this accountant, and that the accountant's report must be read and commented on by the entire board as to quality of assets and any adverse matter. A copy of the report and the directors' comment must be kept on file for the State bank examiner's use. The measure has worked out very well, despite some initial opposition to its requirements.

By FDIC regulation or policy: The Federal Deposit Insurance Corporation has found itself "holding the bag" in a number of defalcations which were so large as to wipe out the capital of banks or to require "shot-gun" mergers.

We are aware that the National Association of Bank Auditors and Comptrollers has declared war on fraud and is earnestly leading its members into better thinking on internal audit and control. The weak spot in the situation, however, may be the thousands of banks which are not NABAC members, or which are still unaware of the deficiencies of their procedures. The American Bankers Association also has interested itself in the problems of bank auditing. Undoubtedly, many banks have and are improving their internal protective procedures. But certainly more intensive efforts by these and other banking associations are necessary to get more action among the laggards.

INDEPENDENT BANKING PROBLEM

Independent unit banking has a very real interest in this problem of preventing defalcations. There are two reasons why. One is that frequently, when a bank closes because of a whopping big loss, it is picked up as a branch of some neighboring institution with FDIC aid and blessing since there is seldom fresh local capital to set up a reorganized bank. The other is that branch banks perforce must have their own internal examination or inspection systems which tend to discourage crookedness among employees, though cases do continue to occur.

We do not know what direction bank thinking may take in dealing with the scandalous parade of defalcations and embezzlements which are making work for the newspapers and the courts. More legislation or regulation by the governmental banking authorities is a distasteful prospect. Yet we certainly risk it unless enough, which means

all, banks singly or jointly achieve a better standard of self-examination than appears in effect today.

DIRECTORS RESPONSIBLE

Basically, it is the bank directors' responsibility. Directors' examinations are a general bank legislative provision. But these may be merely a cursory counting of cash or going over the books. Something needs to be done to establish minimum standards or alternative procedures.

The needs of the situation are best served, it appears to us, when banks make their directors' examinations the responsibility of an independent department or of outside accountants skilled in bank examination work. In each case, the auditors should be responsible to and report directly to the board of directors and be hired by them, rather than by the bank's officers. If we were the officer of a bank, we would want it that way.

And if we were the director of a bank, large or small, we would consider very carefully the financial liability of directors who fail to require sound regular examination procedure. Shareholders may not always complacently accept embezzlements and defalcations which wipe out all or part of their equities as "acts of God." It is poor economy to save a few thousand dollars over the course of the years by cutting corners on audit and examination quality, and then losing the bank (or some of its good name) in a scandal which a better auditing policy would have prevented.

Handling of Migrant Problem by Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 21, 1951

Mr. WILEY. Mr. President, I have in my hands an excellent article published in the September 1951 issue of the magazine *Wisconsin Welfare*, the official publication of the Wisconsin Welfare Council. The council is an organization of citizens, agencies, and groups concerned with social welfare, started in 1881. It is supported by memberships and Community Chest contributions.

This particular article is a most interesting treatment of the problem of humane, practical, and efficient handling of the needs of thousands of migrant workers who arrive each summer to help out with the harvesting and processing of Wisconsin's agricultural crops. The article is specific, frank, factual, and completely constructive.

Not so long ago, on August 27, our colleague the junior Senator from Minnesota [Mr. HUMPHREY] placed in the *Record* an article concerning a Minnesota town's treatment of migrant workers.

I ask unanimous consent that as a sort of companion piece, so to speak, to that article, the statement I am now presenting be printed in the Appendix of the *Record*. It was written by Mrs. Rebecca C. Barton, director of Governor Kohler's Commission on Human Rights, and co-

chairman of the Wisconsin Committee on Children and Youth.

There being no objection, the article and list were ordered to be printed in the *Record*, as follows:

HOME IS WHERE THEY FIND IT

(A report on Wisconsin migrants by Rebecca C. Barton, director, Governor's Commission on Human Rights, cochairman, Wisconsin Committee on Children and Youth.)

PAST TENSE

Migratory workers cannot remain forever in the descriptive classification of the displaced persons in American society. Many groups and organizations, ranging from local to national, are making earnest efforts to improve their lot. Wisconsin alone is taking giant steps toward adjusting the estimated 12,000 workers who arrive each summer to help with Wisconsin agriculture. This particular report tells the story from the point of view of only one of the interested groups. It does not presume to tell the whole story, but merely that part concerning which it happens to have first hand information and experience.

In the fall of 1949 the Governor's Commission on Human Rights first started functioning as a State agency with State funds and with the statutory duty to help make Wisconsin a better place in which to live. Its function was established as promoting understanding and fair play between people, regardless of race, creed, color, or national origin, and thus increasing opportunities for a full life for members of minority groups whose lives are too often circumscribed by prejudice and discrimination.

A plan for migrant welfare

In the light of these stated objectives it was natural for the Commission to concern itself with the plight of the migratory workers in Wisconsin. During the summer of 1949 some unfortunate incidents involving migrants had been publicized widely. Because it was obvious that these migrants were often regarded as economic assets but human liabilities, the Governor's Commission on Human Rights took the initiative in formulating a six point program for migrant welfare:

- 1 Study and research in order to determine the nature and extent of the problem.
- 2 An interagency migrant committee in order to coordinate the migrant work of various State departments.
- 3 Consultant service to organizations and communities desiring information and advice on setting up services for migrants.
- 4 A community demonstration project in order to explore the possibilities of providing suitable educational and recreational programs for migrants both on the adult and child level.
- 5 Use of conferences, radio and press as media for communication and education.
- 6 Remedial legislation in order to provide adequate protection for a disadvantaged group.

Although there is still much to be accomplished for migrant welfare, by way of encouragement the Commission offers a brief summary of the headway which has already been made in the last 2 years toward each of these six objectives, in turn.

Progress being made

- 1 In April 1950 the Governor's Commission on Human Rights submitted to Governor Rennebohm for his approval the text of its informational bulletin: *Migratory Agricultural Workers in Wisconsin—A Problem in Human Rights*. The edition of 3,000, published in June 1950, was exhausted in a year's time, due to widespread demand both from in-State and out-State organizations and individuals. The factual material and

recommendations were considered by the special national migrant committee set up by President Truman in June, 1950.

2 In May 1950, Governor Rennebohm established the State's first interagency migrant committee which immediately started operating as a clearing house and a medium for coordination of State services.

3 The Governor's Commission on Human Rights has worked with State-wide church and civic groups, such as the Wisconsin Council of Church Women, the Wisconsin Federation of Women's Clubs, the Wisconsin League of Women Voters, and with the University of Wisconsin in order to provide informational background and facilitate some form of State aid or service to communities. It has also acted as adviser in six communities in the process of formulating local or county committees and programs.

Waupun project

4 As early as the fall of 1949 the Commission started a concentrated piece of work with community leaders in Waupun toward establishing a pilot project for migrants for the summer of 1950. At the request of the Mayor of Waupun, the Commission helped the community organize a council on human relations and acted as liaison between this council and the various State resource groups. The resultant 1950 summer school for the Texas-Mexican migrant children was the first of its kind in Wisconsin. Two university-graduated teachers were on the staff of the Governor's Commission on Human Rights and worked under the joint guidance of the commission, the university, and the Community Council of Waupun. One of the interesting developments was the intelligence testing given to the migrant children.

At the request of the governor's commission, the school of education of the University of Wisconsin supplied two qualified testers who became so caught up in the assignment that they worked one night with the children and parents until 10 p. m. In addition, Waupun's city council authorized and financed public recreation programs for town and migrant youth and adults. On the whole, the total program was so successful that it was continued in the summer of 1951, with expanded services and sponsorship. [At the suggestion of the governor's commission, for example, the division for children and youth of the State department of public welfare was called in to do a community consultant and survey job.] Summer-school students at the University of Wisconsin raised \$500 to help finance the second summer's project.

5. As cosponsor of the Governor's Conference on Children and Youth in April of 1951, the Governor's Commission on Human Rights arranged a workshop on migrant welfare for community leaders. In addition, it presented the subject at four conferences of different State organizations.

Legislation enacted

6 Since health is basic to satisfactory living and working, and since it is dependent on adequate housing and living conditions, it seemed wise as a first step in remedial legislation to concentrate on improving the standards of migrant camps. After receiving the approval of the plan from Governor Kohler, the governor's commission worked with interested members of the interagency committee who caused the introduction of bill S 597 into the 1951 legislature, calling for the registration, inspection, and licensing of all migrant camps by the board of health. This bill passed both Houses by large majority votes, was signed by the governor on July 13, and became law on August 4.

Although several other State agencies have also done what they could with their limited staff, funds, and statutory authority, to help meet migrant problems along such lines

as have been outlined above, it is generally recognized that the most important contributions have come from the communities themselves, often at the cost of a tremendous amount of civic time and energy. While Waupun and Sturgeon Bay in Door County were the only two area focal points for migrant programs in the summer of 1950, by the summer of 1951 there was sufficient public education and concern to account for multiple activity.

PRESENT TENSE

In Racine County a migrant committee is now set up, on a broadly representative basis. It consists of both Catholics and Protestants, lay and professional workers. The county nurse, the county school supervisor, a librarian, and representatives of the Mayor's Committee on Human Rights and the Racine Mexican Club are included.

Activity in Racine County

As a first step in the summer of 1951 a member who represents the St. Vincent de Paul Society took an unofficial census which estimated that there were 130 Texas-Mexican families in the area, with 156 children of school age. Next a county school board gave permission to use a rural school; a rural school principal and a county school teacher offered their services; a Racine ninth grade girl of Mexican background served as interpreter. Ranging in age from 6 to 13, the children responded enthusiastically to their varied program of English, arithmetic, games, and singing, and made rapid progress both in learning English and in teaching it to their parents. In addition, the Catholic church has provided a new prefabricated building as a center not only for religious needs of the Mexican Catholic children but also for the teaching of English and handicraft.

Adults were not overlooked in the program plan. The bookmobile of the Racine Public Library was on the job. There were family nights with movies and singing, attended by as many as 100 people. Little doubt could remain that this particular group of migrants feels welcomed by the community.

What Sheboygan is doing

The story repeats itself in Sheboygan County which is also starting migrant projects, initiated by a county migrant committee and supported by the Sheboygan Press. When it was discovered that 80 Texas-Mexicans, hired by a large absentee sugar refining company, were living in unsanitary conditions, crowded into 19 one-room huts in two camps, appeals for improvement under the provisions of the new migrant camp bill were made to the board of health. Official investigations and recommendations followed promptly. Meanwhile, public-spirited citizens prompted by church and clubwomen visited the migrants to determine their needs and wishes. They offered friendship by means of family nights and picnics, clothing, and gifts, and a school for the children held out of doors in July and in a town hall later in the season when migrants returned for sugar-beet harvesting.

Surveys conducted

Although representative county committees are also established in Columbia County and in Wisconsin's smallest county of Pepin, the planning followed a different pattern in these cases. At planning meetings held in Portage and in Durand respectively, the committees decided that their first job was to get thoroughly informed on the status of their migrant groups, including their location, numbers, and apparent needs. First-hand surveys were then projected with the voluntary help of a variety of people, including church women of various faiths, employers, clergymen, welfare workers, and county board members. Coming as a result of such wide cooperation, these surveys are yielding valuable information as a groundwork for 1952 summer programs.

These various communities are revealing the following trends which are encouraging for future State progress in migrant welfare.

1. Emphasis on facts as the only sound basis for planning.

2. Expansion beyond town or city to county-wide organizational structure.

3. Inclusion of cross-sectional representation on committees, to encourage maximum participation and maximum skills from both lay and professional people, from employers and from church groups of various denominations and faiths.

4. Utilization of ready and willing resources, as needed, on the State level, as well as the municipal and county level. (For example, Sheboygan called on the services of the board of health; Racine and Pepin called on the Governor's commission on human rights; Columbia called on the Governor's commission and the division for children and youth of the department of public welfare.)

Aiding migrants in Door County

All these trends are reflected clearly in the dramatic progress made in Door County. In the summer of 1950 a modest beginning to a gigantic task was made by the tireless efforts of the county council of church women. But by 1951 problems of adequate aid to 7,000 cherry pickers loomed so large and offers of help came so generously that enlargement of personnel and plan seemed advisable. In addition to six workers from the home missions council, a Catholic priest and two Mexican sisters helped with the migrants. The Door-Kewaunee regional library played its part. Two schools were conducted in different parts of the county, as well as a recreation center in Sturgeon Bay and family nights at various camps. The mayor of Sturgeon Bay established a special migrant committee. In addition, a representative of the Governor's commission on Human Rights was invited to a planning meeting. At the suggestion of the Governor's commission, Door County leaders then called upon the services of the division for children and youth to help them evaluate their problems in terms of community resources and future expansion plans.

Faced with an influx and a variety of seasonal workers, including Jamaicans, Indians, and Texas-Mexicans, the residents of Door County are making remarkable strides in meeting the attendant problems with a fine mixture of common sense and humaneness. According to Door County planners, it is good business to treat the migrant decently because he is an economic asset; it is still better business to do so because he is a human being. Apparently there are a growing number of Wisconsin communities who will say "Amen" to this belief.

FUTURE TENSE

Prognosis is always risky to make. However, there are a few certainties. Generally speaking, it seems evident that the problems of welfare and human rights for migrants are large enough to enlist as many willing hands as possible. There is plenty of work—and plenty of credit—to go around. The surface has only been scratched as yet. Seven counties out of 71 doesn't make a record conducive to complacency.

Cooperation of all groups essential

Voluntary efforts have accomplished wonders but cannot be expected to carry the full burden in terms of skilled leadership and financial support. The employer needs to recognize his stake in the over-all satisfactory adjustment of the migrant. The State and the Federal Governments also have responsibilities in aiding community efforts. A straw in the wind is the fact that State school superintendents convened in Washington June 21-22 to discuss ways and means of increasing educational opportunities for migrant children during the regular school year and summer vacation period.

This Conference on the Education of Children of Migrant Farm Workers attempted to survey and gather data from States which had attempted to face realistically certain aspects of the migratory problem. The coordinating of effort on the local, State, and national level should afford the possibility of approaching the problem of the education of migratory children in a more effective manner as it relates to (a) the identification and study of procedures, practices, and projects operating in the field; (b) the recognition of barriers and obstacles inherent in the problem; (c) the utilization of local, State, and national resources, and (d) the development of a philosophy of acceptance of responsibility for education of the migratory child on the local, State, and national level.

Here in Wisconsin will come new legislative proposals and increased efforts to coordinate planning through the interagency committee. More trained social workers alerted to migrant problems are essential. Another possibility will be a State council of county migrant committees which can meet periodically to exchange ideas and information and to offer concrete proposals for State and Federal aid.

As a lay and professional planning group appointed by the Governor to prepare for and then to follow up the recommendations coming out of the White House Conference on Children and Youth, the Wisconsin Committee on Children and Youth will concern itself with migrant welfare through its county committees. As a backlog for action will come a demand for more extensive research which will not only pinpoint the needs but will provide more understanding of the migrants in relation to differences of culture, background, and language. Thus the abstraction-migrant will become a flesh-and-blood migrant.

With coordinated efforts and with increased understanding, the people of Wisconsin will come to regard their 12,000 migrant visitors as human assets as well as economic assets, and will take pride in getting their left hand to agree with their right hand. The migrant shelters will become houses, and the houses will become homes.

Proposed Modification of S. 75

EXTENSION OF REMARKS OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. MURDOCK. Mr. Speaker, the other body has enacted S. 75 making it materially different from H. R. 1500, and the act S. 75 has come over to the House Interior and Insular Affairs Committee in due course and in the usual order. Therefore, I as chairman of the committee, must call up for consideration in the committee the Senate act S. 75 instead of my own bill, H. R. 1500 upon which extensive hearings have been held, involving all matters germane to the act S. 75.

Since S. 75, the central Arizona project, was enacted by a two to one vote in the other body, in a materially different form from the House version, comity requires a consideration of the Senate measure by the House committee. Knowing the opposition which this legislation has encountered, I have sought to modify the measure in a watered-down way, hoping to make it acceptable to the

committee and the House. Members of my committee—both opponents and proponents of the original bill—have studied the modified version, and several former opponents have indicated their support of the proposed modification.

The act, S. 75, embodying the proposed amendments printed below is my proposal for action of the House committee. It does not authorize an appropriation of a dime or any other sum of money at this time for this project for any of its features. It does authorize the electrical features of the project, but prohibits any appropriation of money to be made for them during the present national emergency. In regard to the irrigation features of the project, this proposed bill prohibits the appropriation of a penny for them until after a suit in the Supreme Court of the United States, in which the United States is a party and the rights of the States in controversy have been settled. This bill prohibits any appropriation for them even after suit, unless and until the reclamation features of the project are reviewed by Congress after a court decision, and after a full consideration of the feasibility of such reclamation features in the light of the then conditions, the Congress specifically and by a future act authorizes appropriations of money for the irrigation features after water rights have been determined. In short, the purpose of this enactment is to provide a justiciable case so that the controversy over Colorado River water may be finally adjudicated, and I have it on the highest authority that there is no other method by which this case can be taken to and maintained in the Supreme Court for the greatly desired and needed judicial determination.

No one who sincerely wants a court settlement can afford to vote against the measure as herein proposed. No one who has objected to the central Arizona project because he fears that it is not economically feasible need oppose this bill on such grounds, because the irrigation features which were objected to must await action by Congress after a suit before they can be built. To summarize, if the act, S. 75, should pass the House in the form printed below, it will accomplish the following five things.

First. Authorize appropriations, only for electrical features agreed by proponents and opponents to be urgently needed, feasible, and in the national interest. But such appropriations are prohibited during the national emergency.

Second. Bar appropriations for all irrigation features until and unless Congress finds them feasible and authorizes such appropriations therefor after the termination of a lawsuit in the Supreme Court of the United States.

Third. Broaden section 12 and include all relevant compacts, contracts, and statutes.

Fourth. Create a justiciable issue by authorizing all features barring appropriations for irrigation features until after a suit, and reserving power and power revenue for operation of all features including irrigation features to be generated by the electrical features.

Fifth. Place the burden of bringing a suit on Arizona.

In my consultation with those interested in the legislation, including the Arizona Senators, I am assured that if the bill in the form printed below is enacted by the House that the two Senate sponsors, the Arizona Senators, will accept the House version in lieu of the Senate version and will not ask that dissimilar bills be sent to conference. Every thoughtful person contrasting the act S. 75 and the greatly modified proposal below will see that not only has a material change been made but the entire reclamation phase of the project has been postponed and awaits future action by Congress after the necessary High Court decision. Accordingly, the purpose of the modified proposal which I am submitting to consideration of my House committee is to furnish a justiciable issue for that necessary judicial determination.

The language of the proposed act S. 75 modified by suggested amendments is as follows.

S. 75

An act authorizing the construction, operation, and maintenance of a dam and incidental works in the main stream of the Colorado River at Bridge Canyon, together with certain appurtenant dams and canals, and for other purposes.

Be it enacted, etc. That for the purpose of controlling floods, improving navigation, and regulating the flow of the Colorado River, providing for storage and for the delivery of the stored waters to provide essential supplementary supply of water to irrigated lands, for municipal and domestic use, and for the irrigation of public and other lands within the United States, and for the generation, use, and sale of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking, and other beneficial purposes, the Secretary of the Interior, hereinafter referred to as the Secretary, subject to the terms of the Colorado River compact and the water delivery contract between the United States and the State of Arizona, executed February 9, 1944, is hereby authorized to construct, operate, and maintain (1) a dam and incidental works in the main stream of the Colorado River at Bridge Canyon, which dam shall be constructed to an elevation of not more than 1,877 feet above sea level, (2) a related system of main conduits and canals, including a main canal and pumping plants for diverting and carrying Colorado River water from Lake Havasu to the Salt River above Granite Reef Dam, a canal from the Salt River to the Gila River above the town of Florence, Ariz., and thence a canal to Picacho Reservoir, and thence a canal to the Santa Cruz River flood plain, (3) such other canals, canal improvements, laterals, pumping plants, and drainage works as may be required to effectuate the purposes of this act, (4) complete plants (other than steam plants for the production of electrical energy), transmission lines, and incidental structures suitable for the fullest economic development of electrical energy generated from water at the works constructed hereunder for use in the operation thereof and for sale in accordance with Federal reclamation laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto); and (5) such appurtenant dams and incidental works, including interconnecting lines to effectuate coordination with other Federal power projects on the Colorado River or its tributaries, flood-protection works, desilting dams, or works above Bridge Canyon and a dam on the Gila River in New Mexico and such dams on the Gila River and its tributaries in Arizona as may be necessary in the opinion of the Secretary,

for the successful operation of the undertaking herein authorized and to effect exchanges of water to insure an adequate supplemental supply to lands presently or heretofore irrigated from the Gila River including and below Cliff Valley in New Mexico and from the tributaries of the Gila River by supplying water from the main stream of the Colorado River to lower lands now receiving water from the Gila River or its tributaries, thus releasing Gila River and tributary water for use and exchange on other lands served by the Gila River and tributaries and other exchanges of water which may be agreed upon by the users affected. *Provided*, That this authorization shall not include (a) any works, dam, or reservoir at the Glen Canyon site or any other site in the Upper Colorado River Basin, or (b) any dam, reservoir, or works in the Lower Colorado River Basin which would flood the Glen Canyon site.

Sec. 2 The Secretary shall have the authority to acquire, by purchase, exchange, condemnation, or otherwise, all lands, rights-of-way, and other property necessary for said purposes. *Provided*, That anything herein contained to the contrary notwithstanding, the Secretary shall not have the authority to condemn established water rights or the water to the use of which such rights are established, or works used or necessary for the storage and delivery of such water to the use of which rights are established, or the right to substitute or exchange water without the consent of the holders of rights or those entitled to the beneficial use of such waters as may be involved in the proposed exchange.

Sec. 3 The estimated cost of the construction of the said works shall be determined by the Secretary. The Secretary shall also determine (a) the parts of said estimated cost that can be properly allocated to flood control, navigation, fish and wildlife conservation, respectively, and any other purposes served by the project which may hereafter be made nonreimbursable by law, the sums so allocated, together with the expenses of operation and maintenance attributed by him to such purposes, to be nonreimbursable, and (b) (1) the part of the estimated cost which can properly be allocated to irrigation and which shall be returned to the United States by the users of water for irrigation purposes; (2) the part of the estimated cost which can properly be allocated to irrigation and probably be returned to the United States by revenues derived from sources other than the delivery of water for irrigation purposes; (3) the part of the estimated cost which can properly be allocated to power and probably be returned to the United States in net power revenues; and (4) the part of the estimated cost which can properly be allocated to municipal water supply or other miscellaneous purposes and which shall be returned to the United States.

Before any construction work is done or contracted for, the Secretary shall first determine that costs allocated to power, municipal water supply, irrigation, or other miscellaneous purposes as herein provided shall be returned to the United States. *Provided*, That the repayment period for costs so allocated shall be such reasonable period of years, but in no event to exceed 75 years, as may be determined by the Secretary.

Sec. 4 Electric energy developed at any of the generating plants herein authorized shall be used first for the operation of pumping plants and other facilities herein authorized, and for replacement purposes, and the remainder thereof sold or exchanged to effectuate the purposes of this act. In the production, sale, exchange, and distribution of electric energy generated by any of the works herein authorized in excess of that required for the operation of said pumping plants and other facilities, the Secretary shall be governed by the provisions of this act and the Federal reclamation laws. The Secretary is authorized to supply water for municipal and

domestic purposes in accordance with the provisions of this act and said laws.

Sec. 5 Contracts for reimbursement of irrigation costs shall be such that they will provide for an identical cost per acre-foot at the several points of delivery of water from the main canals and conduits herein authorized, and from such other points of delivery as the Secretary may designate. Such contracts shall provide for equal annual payments of definite sums of money, the aggregate of which equals the allocations made pursuant to subsection (b) (1) of section 3 of this act. Such contracts shall be made with the State of Arizona or the State of New Mexico, or with public or private corporations, irrigation or other districts, municipal or other political subdivisions thereof, in accordance with the reclamation law. No person shall have or be entitled to have the use for any purpose of any water delivered hereunder except by contract made as herein stated.

Sec. 6 The works provided for by the first section of this act shall be used: First, for river regulation, improvement of navigation, and flood control, second, for irrigation and domestic uses and satisfaction of present perfected water rights, and, third, for power. The title to all works herein authorized shall forever remain in the United States and the United States shall until otherwise provided by law control, manage, and operate the same. *Provided*, That the Secretary may in his discretion enter into arrangements for the operation or use of a unit or units of said works with the States of Arizona or New Mexico or any irrigation district, reclamation project, or other subdivision or agency thereof.

Sec. 7 The rights of the United States in and to the waters of the Colorado River and its tributaries for the use of which the works herein authorized are incidental, convenient, or necessary as well as the rights of those claiming under the United States shall be subject to and controlled by the Colorado River compact.

Sec. 8 The United States in constructing, managing, and operating the works herein authorized, including the appropriation, delivery, and use of water for the generation of power, irrigation, or other uses, and all users of water thus delivered and all users and appropriators of water stored by said reservoirs or carried by said canals, including all permittees, licensees, and contractors of the United States, or any of its agencies, shall observe and be subject to and controlled, anything to the contrary herein notwithstanding, by the terms of the Colorado River compact and the water delivery contract between the United States and the State of Arizona dated February 9, 1944, and by the laws of the State of Arizona or the State of New Mexico governing water rights wherever the same may be applicable.

Sec. 9 Nothing herein shall be construed as modifying or affecting any of the provisions of the treaty between the United States of America and the United Mexican States signed at Washington, D. C., February 3, 1944, relating to the utilization of the waters of the Colorado River and other rivers as amended and supplemented by the protocol dated November 14, 1944, and the understanding recited in the Senate resolution of April 18, 1945, advising and consenting to ratification thereof.

Sec. 10 This act shall be deemed a supplement to the reclamation law, which said reclamation law shall govern the construction, operation, and management of the works herein authorized except as otherwise herein provided.

Sec. 11 Nothing herein shall be construed as interfering with such rights as the State of Arizona or any other State now has either to the waters within its borders or to adopt such policies and enact such laws as it may deem necessary with respect to the appropriation, control, and use of waters within its borders, except as modified by the Colo-

rado River compact or any other interstate agreement.

Sec. 12 If any State or States within 6 months after the effective date of this act shall begin a suit or suits in the Supreme Court of the United States to determine the right of the State of Arizona in addition to its other uses from the main stream to the use of water for diversion from the main stream of the Colorado River through aqueducts or tunnels to be constructed pursuant to this act for beneficial consumptive use in Arizona, and to adjudicate claims of right asserted by such State or States, or by any other State or States, under the Colorado River compact, the Boulder Canyon Project Act (45 Stat. 1057) and contracts made pursuant thereto, the California Self-Limitation Act (Cal. Stat. 1929, ch. 16), the Boulder Canyon Project Adjustment Act (54 Stat. 774), the Mexican Water Treaty and any and all relevant compacts, contracts, and statutes, consent is hereby given to the joinder of the United States of America as a party in such action or actions. Any State of the Colorado River Basin may intervene or be impleaded in such suit or suits. Any such claims of right affected by the project herein authorized and asserted by any defendant State, impleaded State, or intervening State under said compact and statutes, or by the United States may be adjudicated in such action. In any such suit or suits process directed against the United States shall be served upon the Attorney General of the United States.

Sec. 13 There are hereby authorized to be appropriated, out of any moneys in the Treasury not otherwise appropriated, such sums as may be necessary for the construction of (1) a dam in the Little Colorado River at the Coconino Dam site, (2) a dam with elevation as described in section 1 of this act and incidental works, including a power plant, in the main stream of the Colorado River at Bridge Canyon, and (3) transmission lines and incidental structures for the fullest economic development of electric energy generated from water at works constructed hereunder for use in the operation of the project and for sale as provided in section 1 of this act. No moneys shall be appropriated for the construction of any features of the project not named in the foregoing provisions of this section, until and unless the appropriation of such moneys is authorized by Congress, after the termination of a suit in the Supreme Court of the United States in which the United States is a party. *Provided*, That during the existence of the present national emergency, no construction of any part of the project authorized by this act shall be undertaken, no contract for any such construction shall be entered into, and no money shall be appropriated for the construction during such emergency of any such part of the project. *Provided*, That, for the purposes of this section, the present national emergency shall be deemed to have ended when the exercise of existing Government controls over wages and prices has terminated and when the exercise of mandatory controls over the allocation for domestic use of materials necessary for the construction of such project shall have ended: *And provided further*, That power sales contracts shall be made with a view to the reservation of generating capacity sufficient for the operation of all features of the project and that rates for power shall be fixed in accordance with the Federal reclamation laws; and that revenues derived from the sale of power shall be credited in accordance with the provisions of the act of May 9, 1938 (52 Stat. 291, 318).

Sec. 14 (a) In aid of the construction, operation, and maintenance of the works authorized by this act, there is hereby granted to the United States, subject to the provisions of this section, (1) all the right, title, and interest of the Indians in and to such tribal and allotted lands, including sites of agency and school buildings and related

structures, as may be designated from time to time by the Secretary in order to provide for the construction, operation, or maintenance of said works and any facilities incidental thereto, or for the relocation or reconstruction of highways, railroads, and other properties affected by said works, and (2) such easements, rights-of-way, or other interest in and to tribal and allotted Indian lands as may be designated from time to time by the Secretary in order to provide for the construction, operation, maintenance, relocation, or reconstruction of said works, facilities, and properties: *Provided*, That before designating any tribal lands, or any easements, rights-of-way, or other interests in tribal lands, the Secretary shall make every reasonable effort to negotiate a contract for the purchase of such lands or interests on reasonable terms from the tribe of Indians concerned, and that the Secretary shall proceed with the designation of lands or interests under this section only if he finds that reasonable efforts to negotiate with the tribe of Indians concerned have been made, but have not resulted in, and are not apt to result in, a mutually satisfactory agreement. The Secretary is authorized to provide in any such contract for the payment of compensation in the same forms through which compensation may be made pursuant to a designation under this section, and any tribe of Indians entering into such a contract is authorized to execute the conveyances or other instruments needed for its effectuation, notwithstanding any provision of law or of any tribal constitution or charter to the contrary.

(b) As lands or interests in lands are designated from time to time under this section, the Secretary shall determine the just and equitable compensation to be made therefor. Such compensation may be in money, property, or other assets, including rights to electric energy developed at any of the generating plants herein authorized. In fixing such rights to electric energy, including the rates and other incidents thereof, the Secretary shall not be bound by section 4 of this act. Any Indian tribe or individual Indian owning lands or interests designated under this section who is dissatisfied with the determination of compensation made by the Secretary shall have a right of action against the United States to recover such additional sums of money, if any, as may be requisite under the Constitution or laws of the United States, or under any treaty or agreement made by the United States, to provide just and equitable compensation for the taking of the lands so designated. Such action may be instituted in the United States district court for the district where the lands or interests are situated or in the Court of Claims, at the election of the plaintiff. The amounts of money determined as compensation hereunder for tribal lands shall be transferred in the Treasury of the United States from funds made available for the purposes of this act to the credit of the appropriate tribe pursuant to the provisions of the act of May 17, 1926 (44 Stat 560). The amounts due individual allottees or their heirs or devisees shall be paid from funds made available for the purposes of this act to the superintendent of the appropriate Indian agency, or such other officer as shall be designated by the Secretary, for credit on the books of such agency to the accounts of the individuals concerned.

(c) Funds deposited to the credit of allottees, their heirs or devisees, may be used, in the discretion of the Secretary, for the acquisition of other lands and improvements, or the relocation of existing improvements or the construction of new improvements on the lands so acquired for the individuals whose lands and improvements are acquired under the provisions of this section. Lands so acquired shall be held in the same status as those from which the funds were derived, and shall be nontaxable until otherwise provided by Congress.

(d) Whenever any Indian cemetery lands are required for the purposes of this act, the Secretary is authorized, in his discretion, in lieu of requiring payment therefor, to establish cemeteries on other lands that he may select and acquire for the purpose, and to remove bodies, markers, and appurtenances to the new sites. All costs incurred in connection with any such relocation shall be paid from moneys appropriated for the purposes of this act. All right, title, and interest of the Indians in the lands within any cemetery so relocated shall terminate and the grant of title under this section take effect as of the date the Secretary authorizes the relocation. Sites of the relocated cemeteries shall be held in trust by the United States for the appropriate tribe, or family, as the case may be, and shall be nontaxable.

(e) The Secretary is hereby authorized to perform any and all acts and to prescribe such regulations as he may deem appropriate to carry out the provisions of this section.

(f) Nothing in this act shall be construed as, or have the effect of, subjecting Indian water rights to the laws of any State

Celebration of First Train Order by Telegraph

EXTENSION OF REMARKS OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the cleverest and most challenging address I have ever read. As a former railroad-train dispatcher, I enjoyed it thoroughly. It was delivered yesterday in Harriman, N. Y., by Wayne Coy, Chairman of the Federal Communications Commission, at the one hundredth anniversary celebration of the sending of the first train order by telegraph.

There being no objection, the address was ordered to be printed in the Record, as follows:

This celebration of the anniversary of sending of the first train by telegraph by Charles Minot from this spot 100 years ago gives us a welcome opportunity to pay tribute to a real pioneer and to raise the curtain of time for a review of progress in railroad-ing, in communications and in our Nation. The year is 1851.

Millard Fillmore is in the White House. The agitation over slavery is moving toward its climax. The feeble and aging Daniel Webster, now Secretary of State, is at the height of his fame and of the controversy over his historical oration on behalf of Henry Clay's Compromise of 1850 designed to forestall a civil war and preserve the Union.

The echoes of the hundred-gun salutes in leading cities in joyous celebration of the compromise have barely died away before there is rioting in northern cities over the fugitive-slave law.

And more fuel is added to the flames by the installments of a serial story appearing in a Washington weekly newspaper. It is being dashed off by a little mother sitting at her kitchen table between taking care of six children. Her name is Harriet Beecher Stowe and her serial is Uncle Tom's Cabin. Despotism is causing trouble abroad.

Louis Napoleon, after serving as President of France for 3 years, makes himself Emperor Napoleon III. For approving this coup

d'état, Queen Victoria dismisses her Foreign Minister.

The Spanish consulate in New Orleans is wrecked by sympathizers with Cuban independence.

Louis Kossuth leads a revolt for the independence of Hungary from Austria. Russia intervenes. Kossuth escapes, is brought to the United States by a naval vessel and greeted by enthusiastic crowds over the Nation. There are Kossuth hats, Kossuth overcoats, Kossuth beards, Kossuth streets, and Kossuth clubs.

Secretary of State Webster prepares to send a bristling note to Austria telling her that the people of the United States always sympathize with democratic revolutions, especially with the Hungarian uprising against government imposed from without.

Cyrus McCormick receives a gold medal at the Crystal Palace exhibition in London for his reaper.

John James Audubon, James Fenimore Cooper, and J. M. W. Turner die. James Russell Lowell is traveling in Europe.

Among the books being published this year are *Child's History of England*, by Charles Dickens, the *House of Seven Gables*, by Nathaniel Hawthorne, and *Moby Dick*, by Herman Melville.

A new newspaper, the *New York Times*, edited in a windowless, candle-light building, makes its first appearance. The first issue carries four columns of foreign news which, the publisher is proud to boast, is, thanks to steamship and railroad, only 2 weeks old.

The Illinois Central & Rock Island Railroad is trying out a new lawyer—by the name of Abraham Lincoln.

The vigilantes are organized in California and Maine goes dry.

In the field of transportation, canals are connecting the East and the West and the South. The success of the Erie Canal, built 26 years ago, has led to the recent building of the Chesapeake & Ohio Canal, the Illinois and Michigan Canal, and 800 miles of canals in Ohio and many other projects.

But things are booming on the railroad front. Some people are even saying that railroads may some day supplant the canals.

It is only 25 years since the first railway corporation began to operate a railroad in the United States—a 3-mile road to haul stone from a quarry in Quincy, Mass., for the construction of the Bunker Hill Monument. It used horsepower and iron plates on wooden rails. It is only 21 years since the first common carrier railroad was started in Maryland, first powered by sails and later drawn by horses. On Christmas Day of that same year the first steam railroad began running out of Charleston.

And now in this year 1851 we have 11,000 miles of steam railroads in operation, nearly three times the number of miles of canals.

The locomotives burn wood. The more progressive railroads are substituting whale oil for candles in their lamps and headlights, although few of them travel at night. Sleeping cars are coming into use. But there are still no dining cars. In this year of 1851 a train running from Ogdensburg, N. Y., to Boston makes history by hauling the first refrigerated car carrying several tons of butter.

The second of the two lines connecting the Ohio River and Lake Erie is being completed this year.

Chicago is to be linked by rail in 2 more years.

President Fillmore, Secretary of State Webster, and other notables come from Washington in May to make the first trip on the New York & Erie Railroad linking the Atlantic Ocean and the Great Lakes, hailed as the first long-distance railroad trip ever made in the United States.

Secretary Webster in a way invents the observation car on this trip. The famous orator, wracked by rheumatism and hay

fever, and 69 years old, only a year from his death, insists on being seated in an easy chair tied onto a flat car.

Included in the party of 300 is Gen. Supt. Charles Minot, of whom more later.

It takes 2 days with a night stop-over to make the trip from Piermont, 26 miles north of New York City, to Dunkirk on Lake Erie, a distance of 446 miles. The first trip linking the Atlantic to the Great Lakes over one unbroken line of railroad is completed. The successful run is celebrated with a barbecue of oxen, sheep, fowl, and loaves of bread 10 feet long.

Agriculture and industry everywhere are calling for the iron horse to carry their produce and products to markets. The westward expansion is accelerated day by day.

In the field of communication, great strides are being made although in some parts of the world semaphores are still being used for telegraphing. Russia, for example, is operating a system out of St. Petersburg employing 220 stone towers located 5 miles apart, manned by 6 men each and costing millions of rubles. In America various semaphore systems have been in operation. A proposal to Congress to build a semaphore system from Washington to New Orleans has been abandoned mostly because of the opposition of the portrait painter, Samuel F. B. Morse, who argued for the adoption of his electric telegraph system. It is now 7 years since Morse sent his "What hath God wrought" message over the newly completed telegraph line between Washington and Baltimore on the Baltimore & Ohio right-of-way.

Already small telegraph companies are stringing up wires in many parts of the country.

The possibilities of cooperation between the railroads and the telegraph are arousing the interest of men in both fields. But no railroad man grasps these possibilities as comprehensively as Supt. Charles Minot, of the New York & Erie Railroad—now the Erie Railroad.

Minot, the son of a Massachusetts Supreme Court justice, has abandoned the law for railroading and is an expert telegrapher himself. He has persuaded the directors to build a telegraph line along the Erie right-of-way, training the depot masters and clerks to act as operators.

Now comes the great day in September when Superintendent Minot is to give his conclusive demonstration of the utility of the telegraph in railroading and is to take an action that will make his name go down in history as a most significant contributor to railroad progress.

The telegraph has been used on the Erie heretofore to facilitate freight and passenger handling and incidental business, but never in train dispatching.

Minot is riding an express train westward and is scheduled to meet an eastbound express here at Harriman, N. Y., where we are gathered today to celebrate his feat.

He waits here a few minutes. Then, apparently being an impatient man, as I understand many railroad executives are, he telegraphs up to the next stop at Goshen, 14 miles away, to ascertain if the train has arrived there. Discovering that it has not, he wires Goshen to hold up the eastbound express for further orders. This is the first telegraphic train dispatching in history. He then instructs the conductor and the engineer of his train to proceed on to Goshen regardless of the opposing train.

Now, since the advent of railroading, engineers have been running their trains according to the timetable. Whenever an emergency disrupts their schedule, they send a flagman trotting down the track ahead with a red flag. Minot's engineer has visions of a disastrous collision. He can't see committing suicide. His reply is: "Do you take me

for a damned fool? I won't run by that thing."

Whereupon Superintendent Minot takes the throttle himself and speeds ahead to Goshen.

No collision; no catastrophe.

The first train order by telegraph is a success.

So now we are here a century later to celebrate that event and the stimulus it gave to communications, to railroading, and to the general growth of our Nation.

In doing this we are only adding to the well-deserved tribute bestowed when Mrs. E. H. Harriman, the mother of W. Averell Harriman, erected a tablet to Charles Minot's memory here at Harriman in 1912.

Despite Minot's success, there was plenty of distrust of this new medium for dispatching trains. Two years later, for example, when Andrew Carnegie was a telegraph operator on a railroad, he discovered that the officials were so skeptical that they permitted only the superintendent to give a train order by telegraph.

For a long time the telegrams on the Erie began with "Dear sir" and ended with "Yours respectfully."

More than 10 years were to pass before the telegraph came into general use for dispatching.

From then on the telegraph and the railroads worked so well together that they were referred to as the Siamese Twins of Commerce.

The Iron Cord and the Iron Horse teamed up to revolutionize America.

The telegraph came to serve as the nervous system of the railroad. It virtually doubled the capacity of a single track road. It flashed time signals, storm and damage warnings over entire systems.

At the peak of telegraphy on the railroads, around 1910, 80,000 telegraphers, including station agents, were employed.

In 1882, railroads began to employ another invention—the telephone—for dispatching and other uses, and today there are 900,000 miles of telephone wire as compared to 550,000 miles of telegraph wire. The number of telegraph operators is about half the figure of the peak year. Today 70 percent of all train orders are transmitted by telephone.

In addition to serving the needs of the railroads themselves, the railroad telegraph systems were indispensable in building up the commercial telegraph industry. Even today the railroads act as agents for Western Union in 10,000 communities and transmit 4,000,000 public telegrams a year.

But perhaps railroads and telegraph have a relationship ahead of them that is far more dazzling, not to say dizzying, than anything that has gone before. Certainly a whole new world of cooperation between the two is opened up by the possibility recently advanced by Norbert Wiener, professor of mathematics at the Massachusetts Institute of Technology. In his book, *The Human Use of Human Beings*, Professor Wiener gives us a glimpse of what may be ahead:

"Let us admit that the old idea of the child that in addition to traveling by train or airplane one might conceivably travel by telegraph, is not intrinsically absurd, far as it may be from realization. . . . The difficulties are, of course, enormous. In other words, the fact that we cannot telegraph the pattern of a man from one place to another is probably due to technical difficulties, and in particular, to the difficulty of keeping an organism in being during such a radical reconstruction. It is not due to any impossibility of the idea."

Well, suppose Professor Wiener's theory works out. Presumably you would walk into a railroad station and simply be asked to be telegraphed to Chicago. If this system works, if you can telegraph a person, you can probably telegraph freight likewise. Railroads

can tear up their tracks and rely entirely on their telegraph wires. The big gun of the railroads will not be the engineer—it will be the telegrapher.

Personally I am vastly intrigued by this idea. I am wondering what I would look like in Morse code.

Suppose that the telegrapher on some occasion violates rule G and mixes up some of his dots and dashes? You might arrive in Chicago with a misplaced eyebrow, or a few teeth missing, or your hair might be brunet instead of blond. But what would that matter compared to the speed of your journey—the speed of electricity—thousands of miles a second? Certainly you can afford a few changes in your physiognomy in the light of that.

But perhaps this idea isn't any more daring than the idea of sending the human voice and the human image thousands of miles through the ether without any wires would have seemed to Supt. Charles Minot in 1851. And after all, when you get the voice and the image, what more do you want?

And we must remember, too, in considering Professor Wiener's idea that when the bill to appropriate money for Morse's telegraph line was up in Congress in 1842, 22 Members thought to ridicule it to death by voting to include experiments in mesmerism. The bill passed by a close vote of 89 to 83. Seventy Congressmen didn't vote at all, many of them leaving their seats to "avoid the responsibility of spending money for a machine they could not understand."

In pondering Professor Wiener's idea we must also remember that the Czar of Russia as late as the year of Charles Minot's feat considered the telegraph dangerous. And even some American newspapers helped spread the rumor that the newfangled telegraph lines were responsible for the cholera epidemic of 1849.

After telegraphy and telephony, the next big step for the railroads was radio.

It was in 1915 that railroads began experimenting with the use of radio which had already proved so valuable in dramatic disasters at sea.

Beginning in 1930 the trend was to carrier current or induction radio in which signals are carried on telephone lines along the tracks without physical contact. A dozen roads are using this system today.

But the real advance in radio communication on the railroads dates from 1945 when the Federal Communications Commission established the railroad radio service designed to use space radio or signals traveling through the ether without relation to wires. Very high frequency channels were allocated in the 152-182 megacycle band.

Today one-half of all the larger roads use radio. Up to date the Commission has issued authorizations for 400 land stations and 5,200 mobile units. The number of stations authorized has increased by more than 60 percent during the past year.

Radio is rapidly becoming a foremost tool for enhancing the safety and efficiency of railroad operation.

Radio can be used for communication from caboose to engine, from train to train, from train to wayside crews, from train to wayside stations to connect with an entire system over perhaps hundreds of miles. The value of radio is pointed up by the fact that some of today's trains are 2 miles long or more than twice the length of the entire routes of three American railroads.

Radio has proved particularly useful in increasing the efficiency and economy of yard and terminal operations.

Congratulations are due the Erie Railroad for its leadership in the use of radio. It is a curious historical coincidence that the railroad that first used the telegraph for dispatching should also be in the forefront in employing this new art of radio to speed

its operations. It is now using radio over its entire main line from Jersey City to Chicago. In its train service it has 62 base stations and 350 mobile units. In its yard-terminal service it has 4 base stations and 36 mobile units.

I appreciate the problems that must be solved before radio's full potentialities can be realized in railroad operation. However, the scarcity of channels in the radio spectrum makes it necessary that the widest possible use be made of them. I am sure that an industry that has solved as many difficult problems as the railroads have will soon discover the techniques for the fuller application of radio in its operations.

So important has radio become in modern life that the supply of channels isn't nearly big enough to meet the demand. Besides the railroads, other users of radio in our safety and special category now include ships, airplanes, police and fire departments, electric and gas companies, highway and forestry agencies, streetcars, taxicabs, highway trucks and busses, geologists, newspaper reporters, lumberjacks, motion-picture directors, manufacturers, distributors, and individuals.

Railroads cannot afford to let tracks or rolling stock remain idle or to get less than the maximum utilization from them. Neither can the Nation afford to let valuable and scarce electronic highways remain idle. Conservation is imperative.

Radio, like railroading, is a dynamic field and new ideas are constantly arising. I shall discuss a few of these ideas.

For example, there is the possibility of multiplexing on the mobile service frequencies allocated for railroad use—putting several voice circuits on a single radio signal. There is a possibility that such an innovation could do two things: First, provide a larger number of talking channels than the present railroad allocation under present techniques can provide; and, second, permit greater flexibility in the use of those VHF channels. This would be an especially desirable improvement in a particularly congested area. In the world's largest terminal area at Chicago, for instance, there are 200 freight yards with 8,000 miles of track which handle 40,000 cars a day. Experimentation should provide valuable information on this possibility.

Another idea attracting increasing interest is the use of microwave frequencies which are higher in the spectrum—above 1,000 megacycles. Radar operates in these frequencies. The Commission has allocated some of these frequencies for experimentation by the railroads. If such experimentation provides us with adequate information, we can greatly increase our present supply of usable frequencies.

The rapid expansion of the usable spectrum space in the last few years encourages us in these hopes. We are using frequencies now that seemed to be beyond the pale of possibility only a few years ago.

If equipment and techniques can be developed to employ channels in the as yet largely unused microwave region of the spectrum, I can foresee many new applications of radio in railroad operations.

Facsimile, to eliminate all possibility of error in the instantaneous transmission of complicated messages, tabulations, or diagrams might come into wide use.

Radio teletype so that train orders or other messages can originate at any point and be received directly on teletypewriters which will type the messages is another possibility.

Microwaves could be used to bring readings to a central point of pressure gages, speedometers, and other indicators.

Whole yards or terminal areas might be made visible to a dispatcher by television. The television cameras located at strategic points throughout the area and perhaps even along the main line would bring the operations to a battery of screens in his con-

trol room. The activities of yard crews, the freight house handlers, the track men and the signal gangs could all be observed by the appropriate executives.

Then, as the art of radio advances, since we have guided missiles and robot airplanes, why not automatic, unattended or robot freight and passenger trains? A complete push-button operation with the train traveling from coast to coast without engineer, fireman, or brakeman, but controlled all along the route by dispatchers using radio signals?

The Casey Jones of the future would not be a flesh-and-blood hero but a robot—a tiny control box of vacuum tubes and wire.

Can you imagine anybody writing a song about a contraption like that?

And how will these robot trains be powered?

Since the middle nineteenth century year of Charles Minot's first telegraphed train order we have progressed from wood-burning steam locomotives, to steam coal burners, to Diesels and to Diesel electrics.

Today with an atomic submarine already under construction and with Chairman BRIEN McMAHON of the Joint Congressional Atomic Energy Committee proposing an atomic army, an atomic navy, and an atomic air force, there can be only one answer—the atomic locomotive.

It will, of course, be equipped with radar to detect all obstructions or emergency signals ahead.

I am sure that if Charles Minot were railroading today he would look forward enthusiastically to operating such a radio-controlled, radar-equipped, and atom-powered train.

In the 100 years since Charles Minot sent the first train order by telegraph the Nation has grown from 23,000,000 to 154,000,000. The railroads have grown from 11,000 miles of road to 224,000, employ more than 1,000,000 workers and haul more than 2,000,000 freight and passenger cars.

Passengers on some trains who, unlike Daniel Webster on the Erie 100 years ago, aren't interested in the scenery can divert themselves by watching movies, listening to the radio, watching the television, or picking up a telephone and calling their friends anywhere around the globe.

Communication remains the nervous system of our railroads. Freight and passengers will move with increasing speed and safety as the art of railroad communication is developed from year to year.

We honor Superintendent Charles Minot for the impetus he gave to safer and faster railroading when he pioneered telegraphic dispatching back in 1851. He took a great forward step that redounded to the benefit of his road, of his industry, and his Nation.

We, in communications and in railroading, can continue to honor him in the future by emulating his imagination, his vision and his boldness in the application of new ideas to problems peculiar to our own time.

Dedication of the Holy Cross Diocesan Seminary in La Crosse, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. WILEY. Mr. President, I send to the desk a statement which I have prepared relative to a very important historic event which occurred in the city of

La Crosse on September 16, with the dedication of the new \$3,000,000 Holy Cross Seminary there. I ask unanimous consent that the statement be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

DEDICATION OF THE HOLY CROSS DIOCESAN SEMINARY

(Statement by Senator WILEY)

It is most fitting that, in this critical hour of the history of the world, the people of Catholic faith of Wisconsin should have in the city of La Crosse on the 16th day of September participated in ceremonies dedicating a new seminary to the service of God and man.

Thirty-four archbishops and bishops, hundreds of monsignori, priests, and religious, and thousands of members of the laity took part in the impressive program in that fine city.

This was not merely an important event in the lives of those of Catholic faith; it was a symbolic act of faith for all men and women who worship the Lord.

And so, while the news came from overseas of the new ravages of communism against religion in the iron-curtain lands, and wherever bolshevism has taken a foothold, there came the answering news from the city of La Crosse. It was good news, inspiring news: that men and women of great zeal, of great devotion, of untiring energy had sacrificed of themselves to build this beautiful, distinctive seminary for the training of ministers of the Lord.

I had hoped that it might be possible for me to be at La Crosse in person in accordance with the kind invitation which I had received, but the pressure of other legislative commitments prevented me. I was, however, very glad indeed to send my warmest personal greetings.

At this time I am appending certain items to my statement by way of sincere tribute on this noble event.

A. First is a news report from the Sunday, September 17, issue of the Milwaukee Journal regarding the dedication ceremony.

I should like to note that the news of the dedication went out on the wire services throughout America and the world. It is the type of constructive, wholesome news which we could use a lot more of.

B. The second is the text of a personal letter written by His Holiness, Pope Pius XII to His Excellency, Bishop John P. Treacy, of La Crosse. It had been my pleasure in Rome recently to confer with His Holiness in conjunction with a Foreign Relations Committee trip abroad.

C. Next is the message of President Truman to Monsignor Hayden, rector of Holy Cross Seminary.

D. Then the official invitation by Bishop Treacy to dedication ceremony.

E. I should like also to include the text of the news article published in the diocesan newspaper, La Crosse Register, conveying the greetings which my colleague, the junior Senator from Wisconsin [Mr. McCARTHY] and I were happy to convey.

I repeat, we of Wisconsin of all faiths rejoice in this new seminary which will help send forth dedicated young men to bring the word of God unto all the world.

Moscow papers, please note.

[From the Milwaukee Journal of September 17, 1951]

EIGHTEEN THOUSAND VIEW DEDICATION OF LA CROSSE SEMINARY—HIGH OFFICIALS OF CATHOLIC CHURCH PARTICIPATE IN COLORFUL CEREMONY HELD IN OPEN AIR

LA CROSSE, Wis.—Thirty-four members of the American Catholic hierarchy, hundreds

of clergy and a crowd of about 18,000 persons witnessed the dramatic dedication of the \$3,000,000 Holy Cross seminary near here Sunday.

The weather was perfect as the throng knelt in the open air on the 87-acre seminary plot on a hillside along the Mississippi River.

Archbishop Edward F. Hoban, of Cleveland, Ohio, celebrated the mass, with priests of the La Crosse diocese assisting. A choir of 1,700 youths from high schools and academies sang.

The five unit seminary, first constructed by a Midwest diocese in a decade, was dedicated by Bishop John P. Treacy, of La Crosse, as a monument to the poor. He explained that it had been made possible by the contributions and the sacrifices of the 95,000 Catholics of the diocese.

THREE-DAY PROGRAM HELD

Archbishop Richard L. Cushing, of Boston, delivered the sermon. A long procession of bishops, monsignors, priests, and Knights of Columbus in full dress preceded Bishop Treacy to the outdoor altar.

Police made the estimate of the crowd at the ceremony, which opened a 3-day celebration to mark the opening of the imposing stone-and-steel structure where 350 candidates for the priesthood may be trained at one time.

Seventeen persons of the La Crosse diocese were accorded papal honors at their services Sunday afternoon. About 20,000 persons went through the 800-foot structure on escorted tours.

Archbishop Cushing praised the American priesthood and said that its contribution to the Nation's welfare was possible because it was not politically dominated.

"The Catholic priesthood is not a department of state—priests of God are not civil functionaries. To form Christ in others is not the mission of Caesar's men," the Boston prelate said.

PATRIOTISM MORE EFFECTIVE

"It is precisely because their education in this institution will be independent of the state and of state control, that the priests who come forth from the seminary will bring to their country a patriotism more dedicated because more free, a patriotism more effective because more independent of partisanship, a patriotism more loyal to Rome than the alumni of American seminaries. No group of citizens excels them in loyalty to America."

The Most Reverend William T. Mulloy, bishop of Covington, Ky., and Francis P. Matthews, Ambassador to Ireland and former Secretary of the Navy, spoke at a solemn investiture of 11 Knights of St. Gregory and 6 women who received pro ecclesie et pontificis medals for their work in the church.

Elevated as knight commanders of the Order of St. Gregory the Great at Sunday afternoon's ceremony were W. Leo Murphy, La Crosse, and Bernard A. Kennedy, Prairie du Chien. Initiated as knights of the Order of St. Gregory the Great were Dr. Edward P. Crosby, Stevens Point; John C. Malalepsy, Wisconsin Rapids; Judge Lampert Hansen, Sparta; John E. Schnabel, Wisconsin Rapids; Rudolph B. Horschak, La Crosse; Albin J. Groves, Viroqua; Michael Bilbow, Eau Claire; Dr. Walter A. Richardson, Wausau; and Archibald F. Lelck, St. Francis.

Women honored were Mrs. Frances Andrezewski, mother of priests, La Crosse; Miss Mary M. Zimientz, La Crosse; Miss Mary M. Roach, Eau Claire; Mrs. Helen Lyga, Independence; Mrs. Emma Zimmer, Spring Valley; and Mrs. Mary McGarty, La Crosse.

MADISON BISHOP SPEAKS

William P. O'Connor, bishop of Madison, was speaker at a mass Monday, designated as youth day.

In his sermon prepared for delivery to the gathering, Bishop O'Connor said that "the

youth who has heard the call to the priesthood is aware of a deep dissatisfaction with all the objectives and ideals the world has to offer and has a persistent desire to spend his life in unselfish pursuit of what he considers the true values of human existence." He added:

"What a challenge to young men in these days of arming and fighting in a world aflame with the fires of revolution in the thought and conviction that the church whom they serve puts not her trust in political power, large armies or stupendous and fantastic armaments, or any human or material means of conquest, but trusts in and relies under God entirely, upon her bishops and priests."

"When the history of these tragic days is written, no more historic figures will stand out from its pages than the great spiritual leader of Christendom, our Holy Father, Pope Pius XII. And when the Red leaders of the enemies of God and man shall have faded into the oblivion of time, the names of the valiant heroes of Christ's army will be held in honor and veneration."

More than 10,000 women are expected to participate in Tuesday's ceremonies, which will feature a 5,000-voice women's choir from the 150 parishes in the diocese. Bishop Fulton J. Sheen, of New York, will preach.

PONTIFF GRANTS PAPAL BLESSING

To our venerable Brother JOHN T. TREACY, Bishop of La Crosse

We have been informed, venerable brother, that on the 16th day of the coming month of September, the imposing project of the establishment of Holy Cross Seminary, representing years of zealous labor on the part of bishop and clergy and the generous cooperation of the Catholic people of your diocese, will have happily come to realization with its formal dedication by our representative the apostolic delegate.

It is fitting that this important milestone in the history of diocese of La Crosse should be commemorated with solemn liturgical ceremonies and we note with pleasure that this occasion will be honored by the presence of distinguished prelates and a large participation of your clergy, religious and devoted laity. We would add our personal word of cordial congratulation to you and to your collaborators with the prayerful trust that this seminary may give a new impetus to the flourishing Catholic life of the diocese and prepare holy and zealous laborers for the vineyard of the Lord, to the ever greater increase of the Kingdom of God and the salvation of immortal souls among the flock committed to your pastoral care.

With these sentiments, honorable brother, we invoke abounding heavenly blessing upon the faculty and students of this new institution of sacerdotal formation, so appropriately placed under the patronage of the Holy Cross of Divine Redemption, and we impart from our heart to you, to the assisting prelates, and to all your beloved clergy, religious and faithful participating in the dedicatory functions, our paternal apostolic benediction.

From the Vatican, July 23, 1951.

PIUS PP. XII.

THE WHITE HOUSE.

Washington, August 30, 1951.

Very Rev. Msgr. THOMAS F. HAYDEN,
Rector, Holy Cross Seminary,

La Crosse, Wis.

DEAR MONSIGNOR HAYDEN: My hearty congratulations and warmest personal greetings to you and to all friends of Holy Cross Seminary on the notable occasion of the dedication of its new building.

It has been one of the glories of this country that wherever the pioneers went in extending our frontiers they made generous provision for the institutions of religion.

The church and the school appeared wherever the settlers made their homes.

In that noble tradition, the people of the Diocese of La Crosse have borne witness to their faith by gifts and sacrifices which have made possible the rearing of this fabric.

May I, as a dedicatory message, express the hope that Holy Cross Seminary in its new home may continue from generation to generation its magnificent work to advance the Kingdom of God through the training of young men for His ministry.

Very sincerely yours,

HARRY S. TRUMAN.

To My Beloved Clergy, Religious and Faithful:

Health and greetings in the Lord

The great days of dedication of our new seminary are at hand. May I extend to you all—clergy, religious, and devoted faithful—a most cordial invitation to join with me in these historical events wherein we solemnly dedicate to the greater honor and glory of Almighty God and the extension of His Kingdom in our diocese, our new seminary. Most sincerely do I invite you all to be present at Holy Cross Seminary in La Crosse at 11 o'clock on Sunday morning, September 16, to share in the solemn services of the blessing and dedication of the seminary. Solemn pontifical mass will be offered at the great outdoor sanctuary by Archbishop Edward F. Hoban, of Cleveland. The sermon on this occasion will be preached by Archbishop Richard J. Cushing, of Boston.

At 4 o'clock in the afternoon, you are cordially invited to be present at the conferring of papal honors on the men and women of the diocese recently honored by our Holy Father. The addresses on this occasion will be delivered by Bishop William T. Mulloy, of Covington, and Francis P. Matthews, former Secretary of the Navy.

This same cordial invitation is extended to you to accompany the children of the diocese on Monday, September 17, at 11 o'clock, when they will raise their voices in praise and thanksgiving to Almighty God at pontifical mass to be celebrated by Archbishop Moses E. Kiley, of Milwaukee, the sermon to be delivered by Bishop William P. O'Connor, of Madison.

With the same cordiality and heartfelt greetings, I extend to you an invitation to be with us on Tuesday, September 18, at Holy Cross Seminary at 11 o'clock in the morning when the third mass of dedication will be offered, the mass to be sung by the women of the diocese. The celebrant on this occasion will be Archbishop Leo Binz, coadjutor of Dubuque, and the sermon will be preached by Bishop Fulton J. Sheen, national director of the Society for the Propagation of the Faith.

After the masses and throughout the days of dedication, conducted tours will be made throughout the building. As abundant provisions have been made for the care of a vast throng on the grounds of the seminary, let no one stay away because of the fear of overcrowding. Let us all join in a great hymn of thanksgiving during these triumphal days, raising to the courts of heaven not only our hymns of praise but our petition that out of this great building, erected through the generous offerings of our devoted people, a great and noble priesthood may issue therefrom. Let us petition further that through our united prayers a lasting and Christian peace may descend upon this troubled world.

Hoping that as your bishop I may have the joy and pleasure of having you with me during the days of dedication, I am

Devotedly in Christ,

JOHN P. TREACY,
Bishop of La Crosse.

Given at the bishop's office, La Crosse, Wis., on the Feast of St. Lawrence, 1951.

This letter is to be read at each mass in every church and chapel in the diocese of

La Crosse on the seventeenth Sunday after Pentecost, September 9, 1951.

By order of the Most Reverend Bishop:

Rt. Rev. Msgr. GEORGE A. HAMMES,
Chancellor.

[From the La Crosse Register]

BOTH WISCONSIN SENATORS SEND CONGRATULATIONS ON NEW EDIFICE

The two United States Senators from Wisconsin extended warmest congratulations and praise to the builders of Holy Cross Seminary in letters addressed to all the people of this diocese.

Senator JAMES H. MCCARTHY, in his letter to Bishop Treacy, stated that the efforts of bishops, priests, and lay people of the diocese of La Crosse in constructing Holy Cross Seminary represented a major victory over atheistic communism. The text of his letter to Bishop Treacy is as follows.

"Today the very existence of Christianity is seriously threatened throughout the world by the insidious dialectical materialism of Hegel, Marx, and Lenin. Thousands of non-thinking persons are consciously or unconsciously contributing to the further spread of such doctrines. This has resulted in the mental and physical enslavement of hundreds of millions of people, especially during the last 6 or 7 years.

"In the light of such tragic facts, the valiant efforts of the bishop, priests, and lay people of the diocese of La Crosse, who have contributed so heavily of time, effort, and financial help, stand out even more as a guiding light to those of us who have dedicated ourselves to combating the anti-Christian materialism and communistic atheism which exists in the world today.

"Even though apparently outnumbered and overpowered in some sections of the social and political areas within the United States, those of us who are devoted to the principles of God can take heart that we have on our side truth, light, and God Himself. These forces of God and truth will win.

"It is with these humble thoughts in mind that I pay tribute to the achievements of those who have given the diocese of La Crosse, Wis., and the Nation this seminary."

Senator ALEXANDER WILEY, in his letter, stated that the seminary will play a tremendous role in the future religious life of the diocese. "From it will come forth the continued spiritual leadership for the Wisconsin of tomorrow." Below is the full context of Senator WILEY's letter.

"I am delighted indeed to convey my warmest congratulations to His Excellency, Bishop Treacy, and to all the devout folks in the diocese—laymen and religious alike—who have by their sacrifices and devotion brought about this monumental achievement. I know that each of the folks who contributed so long and so much toward the fulfillment of this great project will feel satisfied and repaid in more than full measure in viewing this noble edifice.

"What a tremendous inspiration it is indeed that here in this country men and women filled with the zeal of their faith should erect this seminary to the service and glory of God, while abroad in so many countries the forces of atheistic anti-religion are so bent on destroying all vestiges of man's devotion.

"This new seminary will play a tremendous role, I am sure, in the whole future religious life of the diocese. From it will come forth the continual spiritual leadership for the Wisconsin of tomorrow.

"I wish that it might be possible for me to schedule being in La Crosse to be on hand for the dedication ceremonies, along with the church dignitaries who will journey there from all over the Nation, together with members of the public. I expect to be in La Crosse

on September 6, but thereafter I am afraid I will have to be on hand continuously here in Washington. Please, however, accept my warmest felicitations to all concerned."

RFC Contracts

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. POULSON. Mr. Speaker, President Truman recently stated that the Republicans had no issues. If corruption in Government is not an issue in which the people are interested, I would like to ask the President why Rome fell. Does he mean to infer that the people are willing to let this country fall the same as Rome fell? Mr. David Lawrence has written a very good article on this subject:

TODAY IN WASHINGTON

(By David Lawrence)

TRUMAN'S ETHICS QUESTIONED IN STAND ON RFC CONTRACTS

WASHINGTON, September 20.—President Truman needs a new code of ethics if upon further reflection what he said at his press conference today isn't soon reversed.

The President declared, for instance, it was all right for the officials and workers in the Democratic National Committee to introduce people to such lending agencies as the Reconstruction Finance Corporation just so long as they didn't get any fees or payment for establishing such contacts.

But doesn't Mr. Truman realize that an introduction from the Democratic National Committee member or its personnel carries with it far more influence than an introduction to a private bank which has an altogether different attitude toward its depositors' money than RFC officials seem to have had?

For one thing, it is the rule under the Truman administration that most all important appointments have to be cleared through the office of the Democratic national chairman. So long as appointments to office are made on such a political basis, every appointee is bound to respect the wishes of at least consider with greater weight the introductions or contacts brought about through Democratic National Committee help.

ASKS FOR REPUDIATION

It has been disclosed that William M. Boyle received fees as a lawyer just before he became Democratic national chairman and that his law partner continued to receive fees after a loan was obtained from the RFC by a St. Louis printing concern. That same loan had previously been denied by the RFC three times. The Senate testimony shows that suddenly after some telephone conversations between the RFC office in St. Louis and a friend of Mr. Boyle in which reference was made to the committee, the RFC loan was granted. The friend was E. Merl Young, whose wife used to work at the White House and got a mink coat. Mr. Young admitted he was a volunteer worker on the Democratic National Committee at the time the St. Louis printing company loan was being sought.

Yet, Mr. Truman washes his hands of the whole business and says that while nobody, not even a volunteer worker, should get fees if he is a part of the Democratic National

Committee, nevertheless it is the duty of the committee personnel to help anybody who comes along and wants an introduction to Government lending agencies.

The President overlooks the fact that there are Republicans as well as Democrats paying taxes and that their money also is being loaned by the RFC. To allow a lending agency intrusted with public funds to be in any way related to a national political committee which engages in this type of political influence is something that ought to be repudiated instead of condoned.

Coming on top of the various scandals in the RFC, uncovered by the Senate investigating committee, Mr. Truman's attitude at his press conference gives an impression of casualness which is either the product of the Fendegast school of politics or the manifestation of a curious naivete.

STRONGER THAN PROSPERITY

Mr. Truman cannot seriously believe that the American people will accept his indifference to unethical conduct on the part of members of his political family and that prosperity will erase all opposition to his administration at the polls next time.

For the history of politics shows that morality is a deeper cause of concern and can wipe out the prosperity advantage of any incumbent party. To say, for example, that a mayor or governor or Democratic member of Congress can be a crook and yet if the people are prosperous he will be reelected is to reflect on the intelligence of the men and women who today compose the American electorate.

Mr. Truman's attitude toward the wrongdoing that surrounds his administration is one of bold indifference. He calls it all a sin or a misrepresentation. But the facts that are coming out of the congressional committees will be weighed by the voters. The big issue of 1952 may be reminiscent of the slogans of yesteryears when the people were asked to "turn the rascals out!"—and usually did.

The Social Sciences and the Law

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a timely and able address on the subject The Social Sciences and the Law, delivered by the junior Senator from Arkansas [Mr. FULBRIGHT] at the New York University Law School on September 15, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE SOCIAL SCIENCES AND THE LAW

May I express my appreciation to Dean Niles for the opportunity to participate in this symposium. I consider it a real honor to have been asked to take part in it. Having enjoyed for a brief period, many years ago, the privilege of teaching law, I have a keen interest in the problems of legal education. Sometimes I regret ever having left the teaching profession.

Although I have long since lost touch with the current developments in the schools of law, my experience in politics has enhanced my appreciation of the importance of a sound legal education, fortified by a thorough grounding in the social sciences. I endorse

completely the remarks of Dean Emeritus Vanderbilt regarding the objectives of legal education, especially his views concerning the lawyer and public service. Likewise, President de Kiewit's statement is an excellent analysis of the fundamental values and purposes of legal education.

Since I have spent the past 8½ years in the National Congress, an arena which few professors care to enter, it occurred to me that my observations today might properly be related to that experience. All of us, I suppose, are inclined to overemphasize the importance and the difficulties of our own activities—whatever they may be—but I shall try to be as objective as I can.

By way of justification of such an approach, I think you will all agree that when one considers the troubled state of the world today, it is quite evident that the basic difficulties arise out of our failure to solve certain problems in human relations, rather than from any lack of progress in the physical sciences. In fact, it seems to me the tremendous advances made by the physical scientists have intensified the difficulties involved in maintaining tranquillity among peoples. The pressures and imbalances arising from scientific discoveries, and their application to industry, have increased much more rapidly than our knowledge of how to resolve the friction among peoples resulting therefrom. In a word, the science of politics has not kept pace with the natural sciences.

Since first entering the Congress in 1943, I have been a member of the committee having jurisdiction of foreign relations. The overriding problem which weighs upon the minds of most of the members of the Congress, is the problem of peace among the peoples of the world. The physical scientists have succeeded in making war so destructive that our civilization threatens to destroy itself, unless we can find some solution to the problem of war. As an illustration of the significance of war in our present circumstances, more than 80 percent of our national budget this year will be expended on account of past wars and military preparations for the future. The dislocations arising from the drafting of men into the armed services and the loss of soldiers in Korea, cannot, of course, be measured.

There are some who believe that the nuclear physicists have already created, or are about to create, such powerful weapons of destruction, that no nation will ever again provoke a war. I hope that this theory may prove correct. However, it seems to me we should not rely upon such a theory, but should intensify our efforts to find a solution through the voluntary application of rules of conduct acceptable and enforceable by the community of nations. The alternative to such a solution is likely to be a solution by force, a prospect which I do not wish to accept.

The quest for a solution to the problem of war by reason, rather than by force, naturally falls within the province of the social scientists, especially the legal and political scientists. This is the principal reason why I have urged in the Congress that the social sciences should be an important object of research by the National Science Foundation. I may add that the Senate was surprisingly unresponsive to the idea of authorizing research in the social sciences and only a few days ago the Committee on Appropriations very nearly abolished the Foundation by denying it adequate funds.

If the solution of our international problem is to be through law and reason, rather than by force, the United States—as the most powerful of the free nations, and dedicated to the concept of freedom and justice through law—must assume and provide leadership in the undertaking. To a great extent, the future of the world is dependent upon the wisdom, the foresight, and the

patience of this Nation. It is when one contemplates the awful seriousness of this responsibility, that one becomes acutely conscious of the inadequacy of our preparation for the task. Nevertheless, we cannot escape the responsibility and must, therefore, set about preparing ourselves for the role. It is in this preparation that the social scientists can make their contribution.

From among the many aspects of this undertaking, there are two or three to which I should like to draw your attention. One of the foremost in importance, it seems to me, is the reluctance of the more talented and intelligent of our citizens to enter politics as a career. By politics, I mean the elective branches of the Government primarily, although I do not exclude the executive.

The young law graduate, one might think, would be attracted to politics as a career, inasmuch as his studies concern primarily the relations and institutions involved in man's existence as a member of an organized community. I should like to suggest that some competent social scientist should analyze this phenomenon and try to find a way to help us overcome the aversion that able and intelligent Americans seem to have to politics.

The founding fathers of our Nation, Washington, Jefferson, and their associates, were the outstanding men of their day. They were well educated, with great energy and imagination. They were men of ideas and they considered it an honor and a duty to serve the society which they had created. They were politicians. Why is it that today when we are the most powerful Nation of the world, with a unique opportunity for great achievement, our ablest citizens, except in time of war, are reluctant to seek or accept public office?

This problem of competent political leadership has become especially critical in recent years, because of the chaotic international situation into which unavoidably we have been drawn. During the nineteenth century, when we were in fact isolated by geographical location and were beneficiaries of the Pax Britannica, we had relatively little need of intelligent public leadership. However, now that the natural scientists have so dramatically modified our isolation and two World Wars have destroyed the power of Britain, we find ourselves thrust almost overnight, into the middle of an explosive and dangerous world revolution.

If we are to be successful in preventing the Russians from having their way with the world, it seems to me apparent that we must find a way to attract into the service of our Government the very best brains and talent we produce, the talent which, for 75 years, has devoted itself to business, to the natural sciences, and to the professions.

A further problem which arises out of these same dynamic circumstances, is the adjustment of our constitutional process to the demands of our international responsibilities. Our system of government was designed primarily for the protection of the individual from oppression by the power of the State. It was well designed for that purpose. By dividing the power of the Government among the three branches and by an intricate system of checks and balances, the individual citizen of this country has enjoyed as much, if not more, liberty and opportunity than the citizen of any other major nation of the world. With one tragic exception, we have preserved internal peace and order under law for more than a century and a half; no mean achievement in this quarrelsome world.

Again, however, this achievement was possible, largely because we were not seriously threatened by any external enemy nor concerned with exerting our influence in world affairs. Now that these favorable circumstances have changed and we find it advis-

able to use our power in foreign affairs, it becomes necessary to find a way to endow the executive branch of our Government with unusual power. In order to rearm and to negotiate with foreign nations, we are delegating power to the Executive which hitherto has been exercised by the legislature or retained by the people. This process of delegating power offends the instincts of our people and the sensibilities of our legislators and they resent it. I believe it is the subconscious suspicion and fear of arbitrary power which accounts, in part at least, for the violent criticism of the executive branch which has recently risen to dangerous heights.

That there are imperfections in our Government no one can deny. However, it seems to me that there has been generated among our people a distrust of, and resentment against, their Government far beyond that which may be warranted by the events of the last 3 years. The people exercised freely their right to elect their executive in 1948, and their representatives in the Congress in 1948 and 1950. They will have another opportunity to make their choice in 1952, but, in the meantime, the Government must go on. We cannot have a moratorium upon effective action until that decision is made. Perhaps it is too harsh a judgment, but I am afraid that to the world we appear to lack political maturity at a time when the civilized world can ill-afford such conduct on our part.

As President de Kiewit has so aptly said, "Political maturity in a people is directly dependent upon the nature and degree of its social understanding. Social knowledge is self-knowledge, and self-knowledge is the basis of maturity." Sometimes I feel that we Americans have been too successful, too quickly, in our domestic affairs, with the result that we are inclined to impatience or even petulance when confronted by complex and difficult problems in foreign relations. How to develop the political maturity necessary to enable us to exercise leadership among the nations effectively, should be a major concern of all social scientists.

In conclusion, may I indulge in an observation—speculative or intuitive perhaps—but, nevertheless, one which I believe to be sound. We all are prone to emphasize the difficulties and shortcomings of our own government, and the successes of our enemy. However, our country, in spite of some glaring mistakes, has performed reasonably well. I believe that our basic concept of society is so superior to that of the Russians that, if a total war can be avoided, time is definitely upon our side. I am convinced that if we are patient, steady, and resolute in our leadership of the free world, the Russians will not voluntarily provoke a world war. In short, I believe that the chances for success in creating a more rational and peaceful international order are good enough to warrant the utmost effort on our part to bring it about.

Two-Party Alliance

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. MUNDT. Mr. President, one of the great newspapers of America is the Commercial Appeal, published in Memphis, Tenn. Consequently, I should like to call attention of Members of Congress and other interested citizens to an edi-

torial which appeared in the September 20 issue of the Commercial Appeal in connection with the project of political realignment. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO-PARTY ALLIANCE

Conservatively minded Americans, regardless of political affiliation or place of residence, may well be interested in the move to form a two-party alliance to promote limits on the power of the Central Government. The formation of a bipartisan committee composed of able and well-known figures to explore the practical possibilities is a logical first step.

The movement, sparked to a considerable degree by Senator KARL E. MUNDT, South Dakota Republican, envisions a working coalition of citizens of similar convictions inside both major parties. It would make itself felt in both parties at their conventions and otherwise as its members endeavored to reach the same major objectives without giving up names and labels. The immediate aim would be to obtain in 1952 an administration opposed to socialism and bureaucratic domination in American life.

The proposal now in hand is better than any effort to form a third party. Third parties have never fared well in this country, for one thing, and, if one did, presumably the glib opportunists now in charge of the so-called Democratic administration would rush in, join and try to take it over. It is more feasible to organize and utilize the powerful sentiment now alive in both parties to check the present trend and reestablish limited government in and from Washington.

It is clear that the two-party alliance will face problems in connection with local issues and elections, but that would be true if there were a third party or in any other case. There is no question of the substantial dislike among millions of Democrats and Republicans, North, East, South, and West, for Fair Deal policies and programs. The fact has been illustrated time and again by a coalition of conservative Democrats and Republicans in Congress. The members of the coalition were evidently speaking the sentiments of their constituents or they would not have come back time after time.

The problem is to organize this opposition to the Fair Deal so that it can make itself felt effectively in the choice of a President and through him in the Federal Government and the administration of it. It is something new and different but something new and different is desperately needed and Americans have traditionally devised new means of meeting a need.

Investigation of Organized Crime

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. JOHNSON of Texas. Mr. President, the junior Senator from Tennessee [Mr. KEFAUVER] was present earlier, but had another engagement which he had to meet. He asked me on his behalf to request unanimous consent to have printed in the Appendix of the RECORD two addresses, one by Gov. Earl Warren before the American Bar Association on September 19, and the other

by our colleague, the Senator from Maryland [Mr. O'CONNOR] before the American Bar Association, both addresses on the subject of the investigation of organized crime.

There being no objection, the addresses were ordered to be printed in the RECORD.

The address by Gov. Earl Warren is as follows:

There need be no mystery about organized crime. It is as simple as A B C. It is nothing but criminals working a system to prey upon legitimate business or to operate illegal enterprises in defiance of laws designed to maintain decency, safety, and good order in the community.

The answer to it is equally simple. It can be wiped out any time the people desire to do so. It is neither inherent in our governmental system as now established nor in society as now constituted. On the contrary, it is merely a reflection of the public conscience of the community or State where it exists. It cannot be detached from other phases of community life or of governmental conduct. It exists on exactly the same level just as certainly as water always finds its level. It rises and falls from that level with the will of the public. I would challenge anyone to name a city that is a sink of organized crime and that has otherwise an honest and efficient city administration. The two do not mix any more than oil and water mix.

Organized crime can be prevented wherever there is a determination to do so. Where it now exists, it can be wiped out overnight. If there is a combination of public demand and simple, honest enforcement measures.

Who has not known of a wide open town closing tight as a drum overnight on a mere nod of the head of a police chief when the public becomes thoroughly aroused. And who has not known of such a place reopening as miraculously with another nod when in the jargon of the underworld "the heat is off."

If this can be done, who can argue that it cannot be done permanently for an honest purpose?

Organized crime is not just a big-city product. It is often found in small cities to a disgraceful degree. But it need not exist in any city. And in a great many cities it does not exist. It is not uncommon in metropolitan areas where a number of cities join each other without a visible boundary, that one is a cesspool of vice and crime while its neighbors are almost entirely free of it. There is but one reason for this difference.

It is a rule of thumb that organized crime does not exist anywhere unless someone is being paid off. It is not always the same public official. Sometimes, of course, it is a chief of police, a sheriff, or a prosecuting attorney, but quite as often it is someone higher in city or county government or in the political machine that dictates appointments or controls elections.

I know something about these things. I spent many years in law-enforcement work. It became my duty to send a good many faithless public officials to the penitentiary. On the other hand, I had the pleasure of knowing innumerable fine, honest, and conscientious law-enforcement officers, district attorneys, chiefs of police, and sheriffs. They are among the finest people I know. Most of them were more zealous in the enforcement of the law than the people to whom they were accountable under the law. I would say as a general rule, where policemen and other law-enforcement officers obtain their positions through an efficient merit system; where the department is adequately manned, and equipped; and where the officers are trained for their jobs, and adequately paid, they have a zeal for their work, and would

like nothing better than to be given a green light to keep the community free of rackets of all kinds. They start with self-respect and would like to retain an honorable status in the community for their wives, their children, and themselves. But they are not always permitted to do so by those higher up. I once had an experience with a chief of police in my county when I was the district attorney, which I know is repeated time and time again throughout the country. He was an honest man, but was having a difficult time dealing with vice and petty rackets because of city hall influences. I had been taking him to task for these conditions. Finally he said to me, "Earl, wouldn't it be wonderful to be chief of police if the people we work for—the mayor and councilmen—would give us hell every day for not doing a better job of law enforcement?" "But," he continued, "they don't do that. They just gripe about our picking on their racketeering friends."

This is not an uncommon thing. It goes on in numerous cities throughout the Nation every day. I am firmly of the belief that the usefulness of more chiefs of police is destroyed in this manner than through bribery. But the result is the same. Organized crime fastens itself on the community and eventually corrupts both the citizenry and the government. A chief of police usually serves 15 or 20 years in a department before becoming chief. He likes his job, of course, and he does not look forward with pleasure to the day when he must either step down or out of the department. The temptation always is to please those who have the power of appointment, even though their demands are not always in strict accord with duty. It can be said, of course, that a chief under such circumstances should resign. Perhaps he should, but even honest men sometimes temporize to hold a job that is a life ambition. From minor oversights to very bad community conditions is a natural progression. Such a state of affairs is well expressed by a homely poem called *The Down and Out*, which I learned as a boy and which says in one part:

"I started out to be honest with everything on the squire, but a man can't fool with the Golden Rule in a crowd that don't play fair. You don't go down with a short, hard fall, you just sort of shuffle along and lighten your load of the moral code, till you can't tell the right from the wrong."

You may think I am inclined to be soft on crooked police, but I am not. I despise them. They are traitors. I have sent them to jail. But I have known so many fine men in this work that I believe it to be unfair as well as unrealistic to charge them with greater responsibility for conditions than rightfully belongs to them.

Since the Federal Bureau of Investigation started the National Academy of Police Science for local law-enforcement officers, and also stimulated police training in many other ways, and since the advent of the merit system in recruitment and promotion, I believe police work is akin to a profession and with a little encouragement would actually be one. It could and should be as respected as the bar, and if so established, would perhaps do more to wipe out organized crime than any other one thing.

The American concept of law enforcement is local. I hope it will always remain so. Local law enforcement has not broken down. It just hasn't worked satisfactorily in many communities, as other functions of government have failed to work in the same places. On the other hand, there are many hundreds of cities where organized criminals would starve because they wouldn't be permitted to operate.

We don't need and don't want a national police force superimposed on our law enforcement structure. There is no particular virtue in such an institution, and there is

much to be feared in it. It would be mimicking those totalitarian states that are destroying human freedom wherever the police state lays its withering hand.

The Federal Bureau of Investigation with its jurisdiction over particular crimes of an interstate character, and with its identification bureau, its laboratories, its National Academy of Police Science, and its other educational and cooperative services, can give to local and State law enforcement all the assistance needed for the job to be done well. America is fortunate to have such a great law enforcement agency as the FBI. It has met every test that has been applied to it, and is an inspiration to every honest law enforcement officer in the Nation.

Neither should we transfer to the various State capitals the primary responsibility for law enforcement.

One of the great privileges of American citizenship is to be permitted to administer the laws of the State and to protect life, property, and human rights through community action. To relieve citizens of the responsibility of doing so would at the same time deprive them of a cherished American right.

Our system of law enforcement is based upon cooperation between local, State and Federal Government, not upon chain command. That system has served us well for 175 years. It can continue to serve us well if we preserve the rights that have insured our freedom.

On the other hand, it must be made to meet the challenge of organized crime, the menace of which is one of the major problems of contemporary political life. During the past 30 years organized criminal gangs and syndicates have emerged in many parts of the country and in some instances have gradually extended their activities throughout whole States and even larger areas. The menace involved in this development has not been generally understood by our people until comparatively recently.

People could not become excited over the danger involved in a bet with a bookmaker, the playing of a nickel slot machine, the buying of a lottery ticket or participating in the numbers racket.

The ordinary man thought of these things as the pettiest of violations. This misconception concealed the truth; that they inflicted tremendous financial loss on the American public and had become a source of corruption and political degradation in many cities of the country.

Recently, however, investigations and reports of crime study commissions, congressional investigating committees and other agencies, both official and unofficial, have served to dispel some of these popular misconceptions concerning commercialized crime. As a result of the activities of such investigating groups and agencies the general public has become increasingly aware of the great size and ugly shape of organized rackets. The underlying motives, the methods and techniques of the business of crime have become better known. Its insidious relations with Government and politics have become plainer. Public interest has become deeply roused. The public now properly expects the leaders in community life, and particularly the members of the legal profession, including the bench as well as the bar, to give serious study to those measures and reforms which may be necessary and advisable to control and eventually to eliminate organized crime. It is fitting that the legal profession should point the way to the achievement of the kind of justice and government to which we all aspire.

There is no quick or easy solution to the problem of organized crime. The only ap-

proach is through general improvement in the organization, personnel, and techniques of police and prosecution. Organized crime cannot be killed as St. George slew the dragon with the thrust of a spear. It must be starved and smothered in a thousand rat holes, which can only be accomplished by the constant effort and vigilance of honest, professionally competent public servants who are freed from the hampering influence of political interference.

We would do well to reexamine our entire law-enforcement structure in the light of historical experience and the kind of weakness which it exhibits. We should remove the obstacles of obsolescence, duplication and overlapping of authority which now impede the enforcement of law. We should reconsider the respective roles of the State and local government in the administration of justice and determine the extent and in what manner local officials should be held accountable for the discharge of their duties and their enforcement of the laws of the State. Following this course it is reasonable to expect that in due time we shall achieve the divorce of politics from crime, and improvement in the standards of personnel, professional competence and efficiency of our law enforcement and prosecuting officials, the establishment of discipline, morale, and a tradition of integrity and the development of uniform policies of enforcement and a cooperative spirit of public service in the agencies concerned with the administration of justice. The corruption in law enforcement which is so appalling cannot be eliminated in any other way, for dishonesty is not of itself the cause of the weakness in local law enforcement. Dishonesty, rather than a cause, is an inescapable incident of irresponsibility and of public neglect. It is the result of ignoring the elementary principles of sound administration.

In strengthening our defenses and meeting the menace of organized crime the crime commission has proved to be a useful and effective institution. In 1945, acting on my recommendation, the California Legislature, authorized me as Governor to appoint from time to time crime commissions for study and report upon any and all aspects of the problem of crime. Two years later the legislature appropriated the money which permitted me to finance a commission to study the subject of organized crime. This commission was in operation for nearly 2½ years and it produced remarkable results. With a modest budget, with a staff of no more than five men, without any power of subpoena or compulsory process, the commission succeeded, nevertheless, in making real headway against organized crime in our State. The commission detected and successfully broke up a bold attempt to organize the slot-machine racket on a State-wide basis. The commission seriously crippled the bookmaking racket in California by persuading the public utilities commission of the State to order all communication companies to refuse service when there is reason to believe such service is used for an illegal purpose, thus breaking up the communication network upon which syndicated bookmaking so largely depends. The commission focused public attention upon unhealthy conditions in many a community in the State with good effect. In some instances criminal prosecution resulted and a number of important racketeers and unfaithful public servants were sent to the penitentiary.

In other instances unreliable officials were dropped from the public service. Although most of its activity was necessarily limited to the territory of the State, nevertheless, the conditions encountered in the State could not be explained except by the activities of national crime syndicates with head-

quarters outside the State, and led to wider inquiry in this natural way, the information gathered by the commission on organized crime throughout the country was so complete that the commission was able to publish a report which has been confirmed at nearly every point by the subsequent and broader investigations of the Senate Crime Investigation Committee. The commission saw and pointed out the tremendously stimulating effect upon organized crime of the favoritism shown to racketeers and gangsters by the Bureau of Internal Revenue in the matter of income taxes. It reported and documented incidents of extortion perpetrated by officials in the Bureau of Internal Revenue in California and Nevada against delinquent taxpayers on which charges have now resulted in the indictment of some of the officials involved. Although the district attorneys, the peace officers of the State and I had tried repeatedly to get a measure through the legislature making slot machines subject to seizure on sight, it was the publicity given to the slot-machine racket by the commission, and the consequent rousing of public opinion, that finally got the statute passed. As a result, the racket is dead. The slot machine has virtually disappeared from California. On the commission's recommendation and on mine, the State legislature also amended the State income-tax law so as to disallow the deduction for tax purposes of the expenses incurred in carrying on a criminal business, and the legislature has authorized the franchise tax board, which formerly relied entirely on the Bureau of Internal Revenue for fraud investigation, to set up its own organization to investigate and prosecute criminal evasion of State income taxes. These enactments are calculated to cut the profits of organized crime as far as it is possible to do so by the action of State tax agents. The Senate Crime Investigating Committee made recommendations to Congress similar to many of these measures. It is indeed a matter of regret that so far none of them have been passed.

This year the legislature, at my request, has appropriated funds to finance a new commission on organized crime, and I have appointed its members this very week. As a result of a recommendation of the old commission, the legislature conferred the power of subpoena and the power to swear witnesses on the new commission. The next year is likely to prove a rough one for the organized rackets in California.

I have stated that the control of organized crime is the responsibility primarily of State and local government. It is also true that the existence of organized crime is made possible in large part by the shortcomings of local law-enforcement officials and administration. But the Federal Government also has responsibilities in the matter which are not always discharged well, either. This is not said to avoid responsibility, but when the Federal Government permits, as it has, professional criminals operating interstate rackets to so enrich themselves as to enable them to overwhelm local law enforcement and government by the sheer power of money, the Federal Government contributes materially to the situation.

One subject that needs review, if we are ever to have adequate protection against the major rackets, is the practice of fines and the sentencing procedure as administered by both State and Federal courts. In dealing with gamblers and others who are in the business of crime for profit the courts are frequently so preoccupied with what they consider to be the trivial nature of the offense that they commonly impose light fines, losing sight of the fact that the basic purpose of the criminal law, when applied to the pro-

professional criminal, is deterrence, and that there can be no deterrence if the activity remains both safe and reasonably profitable.

A case in point is that of a notorious California gambler, described by the Kefauver committee as one of the more "loathsome characters" the committee had encountered. This man is boastful of being a gambler and of having lived outside the law all his life. A few years ago he was charged in the Federal district court in our State with possessing and transferring a large number of counterfeit gasoline ration coupons of the OPA, and with a second count of obtaining a large quantity of gasoline by passing off the counterfeit coupons on a gasoline station operator. He was arrested by the marshal and released on \$1,000 bail consisting of cash which he peeled off a roll he had in his pocket. In due course he entered a plea of not guilty to both counts and his case was set for trial. Before the trial date his case was advanced and he withdrew his pleas of not guilty and entered a plea of guilty to the charge of obtaining the gasoline by means of the counterfeit ration stamps, the charge of possessing the stamps being dismissed. Thereupon the court delivered judgment, the sentence being that the gambler pay a fine of \$75 together with the cost of the action which amounted to \$28. When the case was over, the United States owed the gambler \$897 change from the \$1,000 he had posted as bail.

This case may well be compared with that of a young lady who appeared on a similar charge in the same district court only 2 months later. This girl had been a clerk in one of the OPA offices and she and her boy friend were charged with having stolen a quantity of gasoline ration stamps (genuine ones) from the OPA office where she worked and with having obtained a large amount of gasoline with the stolen stamps. Both of the defendants were required to plead guilty to both counts—stealing the stamps and obtaining the gasoline. On March 28, 1946, judgment was pronounced. The sentence for each defendant on this occasion was 5 year's imprisonment in the penitentiary on each count, the sentences to run concurrently. If 5 years in prison was necessary to deter a young lady from stealing gas stamps, one wonders how a \$75 fine would deter a wealthy, professional criminal from counterfeiting them.

There is only one way to break through the restraints that are imposed upon local enforcement agencies by the alliance of politics and crime. That is through the pressure of an informed public opinion. All of us must realize that we can no longer afford corruption in our midst or moral obtuseness in our public officials. Facing the dark and dangerous times that lie ahead for our country and for the whole world, all of us, as citizens, are becoming more and more aware that we cannot ask our young men to fight and, if need be, to die for a way of life that worships the words of our forefathers and rejects the faith that gave them substance. We have a right to expect equal courage, integrity and energy from our law enforcement officials as from our fighting men. It is plainly evident that there is a growing demand from the public that officials, and especially law enforcement officials, exhibit these qualities. It is this fact which is based upon the fundamental, moral integrity of our people, more than any other, which is the most hopeful development in meeting the menace of organized crime and which will lead eventually, I am sure, to the thorough and permanent elimination of organized rackets from our country.

Senator Albert W. Hawkes and Edward A. O'Neal Head New Political Realignment Committee

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr MUNDT. Mr President, due to the widespread interest which has been expressed in the newly organized Committee To Explore Political Realignment, I ask to have printed in the Appendix of the RECORD a press release announcing the selection of its new officers.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

COMMITTEE TO EXPLORE POLITICAL REALIGNMENT NAMES OFFICERS

Former United States Senator Albert W. Hawkes, New Jersey Republican, and former president of the United States Chamber of Commerce, and Edward A. O'Neal, of Florence, Ala., a Democrat who, for 16 years served as president of the American Farm Bureau Federation, were elected cochairmen of the recently formed Committee To Explore Political Realignment at a meeting held Saturday in the Hotel Mayflower. It was announced yesterday. Formation of the committee was announced last Monday, September 17, by United States Senator Karl Mundt, South Dakota Republican, who has been advocating political realignment for the Nation for more than a year.

At its meeting, the committee added Felix Morley, of Washington, D. C., educator and author, to its membership along with Mr. O'Neal.

In accepting the joint chairmanship of the committee, Senator Hawkes and Mr. O'Neal expressed the hope that through its activities a program will evolve for a practicable method of achieving political realignment on a national scale so that like-minded Americans, North and South, can join in supporting candidates for public office who believe in and will work for a National Government in conformity with traditional American principles.

They stated "It is the purpose of our committee to study all methods which have been suggested and others which will be brought forth whereby a genuine and long overdue political realignment can be brought about on a national basis, not by attempting to create a new party, but by welding together the conservative, traditional American segments of the existing parties in the 48 States, the parties of the voters, North and South, who have sent to Congress and kept in Congress, the Senators and Representatives who, for years, have not hesitated to cross party lines to oppose socialistic measures and to fight side by side for measures designed to strengthen the doctrine of home rule by the States and the communities as against the bureaucratic tyranny of an all-powerful Federal Government.

"Our committee has no intention of sponsoring candidates. Our job is to develop ways and means by which national political realignment on a State level can be brought about. When our task of exploration is completed we will make public the carefully considered program we hope to recommend. And when that time comes, we will be pre-

pared to go out and do our utmost as good Americans to make the plan a reality."

Other members of the Committee To Explore Political Realignment, in addition to Senator Hawkes, Mr. O'Neal, and Mr. Morley, are: Former United States Senator Edward R. Burke, Nebraska Democrat, who is chairman of the executive committee of the group; Charles Edison, of West Orange, N. J., former Secretary of the Navy, former Democrat Governor of New Jersey, past president, National Municipal League, and chairman of the board of Thomas A. Edison, Inc.; Donald J. Cowling, of Minneapolis, former president for 35 years of Carleton College, Northfield, Minn., former president, Association of American Colleges, and a member, 1937-40, of the National Republican Program Committee; Horace A. Hildreth, Lewisburg, Pa., president, Bucknell College, and former Republican Governor of Maine, and Donald R. Richberg, of Charlottesville, Va., executive director of the National Emergency Council, and later Chairman, NRA Board, both under President Roosevelt, and now professor of constitutional law, University of Virginia, and member, Washington, D. C., law firm of Davies, Richberg, Beebe, Busick, and Richardson.

President Truman's Challenge to the Bar

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in this morning's Washington Post, entitled "Challenge to the Bar," commenting upon the letter which President Truman sent to the convention of the American Bar Association in New York City, which letter I inserted in the RECORD yesterday. It is an editorial which sets forth much more eloquently than did my remarks of yesterday in praise of that letter, an evaluation of the President's message to the American Bar Association.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHALLENGE TO THE BAR

It must be set down as a notable occasion indeed when the President of the United States invites the American Bar Association to scrutinize and criticize the security measures adopted by his own administration. This is precisely what President Truman did in his eloquent letter of Tuesday to the association's criminal law section. In effect, he asked the members of the bar to take up the task which Senator McCarran prevented the Nimitz Commission from performing. The request affords heartening evidence of his own profound concern over striking "the difficult balance between security and individual rights in these trying times." His letter contains, moreover, an admirable restatement of the utility of freedom as an indispensable element of national security.

"Although the Nation has always united against any external peril, blind obedience

to authority has never been characteristic of Americans. Rather, they have been questioners, doubters, experimenters, and very often articulate dissenters. This attitude is perhaps our most valuable national asset. It has promoted our moral and spiritual welfare. It has made possible great material advances. It has forced discussion, examination, and reexamination of policies on every level. The free interchange of opinion and criticism thus made possible is in a very real sense the most important element of national security we possess, for it provides a greater likelihood that we will take the right course than does any system in which policies are determined by a few leaders whom none dares criticize."

Yet this vital element of security is threatened today, in part by legislation, in part by Executive measures which whittle away the procedural right that constitute the substance of American liberty. Members of the bar association, who are in a peculiar sense the trustees of these procedural rights, are strategically situated to weigh the inroads made upon them and to judge whether these genuinely serve the interests of security.

Study of the methods employed in legislative hearings and in the Government loyalty program are especially needed. The President urged the lawyers to make such a study. He urged them also to discharge their traditional function of providing legal defense for those accused of abhorrent political crimes—even if they must risk "the obloquy of the uninformed" in doing so. This is a challenge to the bar—a challenge which its members can ignore only at a peril to the great institutions they serve.

Southern Democratic Leader Urges Dixie Revolt

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. MUNDT. Mr President, for the information of the country and the Congress, I ask to have printed in the Appendix of the Record an interesting newspaper clipping which was mailed to me by a good Democratic friend in Alabama. It reports the observations of a highly respected and influential southern Democratic leader.

There being no objection, the article was ordered to be printed in the Record, as follows:

HARRIS URGES DIXIE BOLT IF TRUMAN RUNS—
COULD VOTE GOP TO PROTECT SOUTH,
AUGUSTAN SAYS

(By Ken Turner)

Former House Speaker Roy V. Harris, of Augusta, Monday virtually called for a Georgia and southern bolt of the Democratic Party if President Truman is renominated for the Presidency in 1952—even if it costs the South valuable congressional chairmanships.

Mr. Harris, a leader in Georgia's Democratic Party, outlined a two-point program designed to stop Truman in 1952.

He said if Mr. Truman is renominated and the platform includes the civil-rights programs "the votes of the people of the South must be denied to the national party."

Two propositions are open, he said. They are:

1. Vote with the Republicans on a trade to protect the South against the civil-rights program.

2. Give the electoral votes of Georgia and other Southern States to somebody besides Mr. Truman, thus setting the stage for throwing the election into Congress.

Mr. Harris said the "latter course of action seems to be more plausible for the Southern States to follow."

Taking note of the fact that Georgia and the South have many important chairmanships in Congress, the Augusta political leader declared "the time has come when the people of the South must quit selling their birthright for a mess of political potage. Heretofore we have been selling out to the northern Democrats for a few political jobs and for committee chairmanships in the Congress. It is time to quit selling out."

Mr. Harris said that the people of Georgia and every other State can control the Democratic Party in their own State.

Address by Hon. Herbert R. O'Connor, of Maryland, Before the American Bar Association

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, September 22, 1951

Mr. KEFAUVER. Mr President, I ask unanimous consent to have printed in the Appendix of the Record the splendid and thoughtful address of the Senator from Maryland [Mr. O'CONNOR] before the American Bar Association in New York on September 19, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

Success stories have always been favored reading by our people. The rise to eminence in the professions, in business, and in Government, when recorded for posterity, has ever been an inspiration to our younger generations. Justifiably, it is a source of pride to citizens on every level.

In yesterday's issue of a leading newspaper in the Nation's Capital there appears a success story which is of particular significance today. The editor's note, prefacing the factual account, will best explain it. The front-page notice on the authority of the editor declares:

"This is the story of a man of importance and influence in Washington. He is a financial success in a multi-million-dollar local business, a contributor to many worthy causes, the employer of hundreds of workers. He is the first name intimate of policemen, lawyers, and leading citizens."

Is it an outstanding public official about whom the daily articles resolve; is it a learned professional man, a captain of industry or finance who has reenacted the thrilling rise to fame and fortune of which the literature of American progress is replete? Perhaps if I read the remainder of the editor's note the matter will become clear. The editor continues:

"His illegal numbers game is patronized daily by tens of thousands. He has been a hidden power and a secret force in this city. Citizens need to know those who, for good or evil, influence their daily lives."

This history of a man who has risen to wealth and power through illegal activities happens to concern a Washingtonian. He could just as well be a resident of your town or city, no matter what section it be. The Senate Special Committee Investigating Organized Crime in Interstate Commerce went

into all sections of the country, into metropolitan areas and into relatively small communities. It visited the East and the South, the North, and the far West. Everywhere it found conditions, and prosperous racketeers and mobsters, that could form the basis for just such an account as is now being published in the Washington newspaper.

One warily approaches the subject whose many facets have been grist in the mill of his listeners in their adult lives. Many of you have seen, in all their alarming detail, the ugly aspects of crime in various communities. However, the even more violent threat to the rights and the safety of our people presented today as the result of the superstructure erected by the crime overlords whose operations extend into virtually every town and hamlet cannot be as well known because of the far-flung areas covered.

Every civilization is confronted by critical problems which threaten its existence. Whether it be the black plague or religious wars of renaissance Europe, or the onslaught of natural forces like the 7-years' drought, something always tends to keep the life of society hanging precariously in the balance. I don't know how long a list would encompass all the giant evils which confront America today, but it would most assuredly include organized crime.

It is for this reason that the symposium on the menace of organized crime is not less important than any subject matter taken up for consideration by members of this great association.

If the challenge of organized crime, with its threat to the security of our people, is to be met successfully in our time, the inspiration and impetus for such solution will rest upon the legal profession of our States and localities.

Not only does lawlessness abound and is it an affront to constituted authority but the more serious threat is to the processes of justice itself which are the target of attack by the public enemies within the gates of our cities and towns. Ours is a government of laws and not a government of men. Therefore, it is cause for deep concern when syndicates of hoodlums and racketeers have hurled defiance at the very portals of the hall of justice.

One of the most disturbing aspects of the committee's probe has been the realization that crime has moved faster than control of crime. Viewed with long perspective, the four reports of our committee are only appendices to Lincoln Steffens' Shame of the Cities of 1904. The connivance of crime and politics which he saw the Senate committee could not fail to observe. The abdication of popular Government to entrenched opponents which he found the committee had exposed to our view.

In peering through the lattice work of crime and politics, we have viewed the widespread deterioration of respect for law and the erosion of Government responsible to the people. The enormity of the crime evil lies precisely in public unawareness that these are the consequences which follow nonenforcement of law.

You know better than others that in the final analysis it is only our respect for law, and for the protection of the rights of individuals of every class, which will maintain the integrity of our Nation and keep us from the degradation and the collapse into which so many once free peoples have fallen.

Sensational events crowd each other so continually on the public scene today that already the findings of the crime committee, sensational as they were, are passing from the minds of our citizens. But the point that representatives of the legal profession might take to heart, is that there actually is a real crime problem in our land. We must face the fact that its tentacles reach into towns and cities and that its corrupting influences know no limitations of office or class.

Because of the pendency of a celebrated trial just beginning here in New York one must refrain from even mentioning the details. But if honest, alert citizens who want to preserve the integrity of their city and State and Nation will take the trouble to interest themselves they will find that there is crime, serious crime, close to home, crime that calls for detection and prevention if we are to leave to our children and to future generations a country of which they can be proud, a law-abiding community in which their persons and their possessions will be safe.

One could not live with this problem for a year and a half without concluding that its solution, in large part, rests in the hands of local law enforcement. The States, the municipalities, and even the smaller units not only have the right but, we say deferentially, they have the responsibility of combating the lawless elements who would make a mockery of the courts and of enforcement agencies.

Nor will it be a solution if only a majority of the States strengthen their protective processes. If weak links in the chain are allowed to exist you can be sure that organized criminals will find them and will act accordingly. Syndicated crime is so resourceful that overnight it can change its basis of operations to an area where it can operate unmolested. So versatile are these public enemies that they can change their methods and move their locations with startling rapidity and with remarkable ingenuity.

Furthermore, they switch from one type of crime to another, according as the public tastes or the people's whim change. During the prohibition period, when bootlegging enabled them to realize almost incredible profits, they centered in that field of activity. In recent years they have concentrated on illegal gambling activities from which their income has been tremendous. Because it was good business for them to do so they have piled their trade where laxity, inefficiency and public indifference allowed them to hold sway. To insure continuation of their operations unmolested they have not hesitated to bribe and to corrupt public officials and have considered such "expenses" as routine and as justifiable. In fact, in their accounts and in their income-tax returns they blandly record such illegal payments. With a frigid sneer at the law and a cold glance at feeble law enforcement they define such bribes as "ice."

Authoritative estimates indicate that \$20,000,000,000 a year are drawn from the American public by organized gangster syndicates. The profits to the hoodlums are fantastic. So enormous are they that the criminals cannot find enough outlets in illegal trade in which to invest. Accordingly they have now infiltrated into legitimate enterprises and have acquired diversified corporate holdings. From this point of vantage they hope through use of gangster tactics where needed to get a strangle hold on industrial and commercial ventures upon which the general public must depend in their regular pursuits.

It can be expected that if exclusive attention is given to suppressing their activities in present-day illegal gambling they will doubtless turn to the handling of narcotic drugs. In the past several months the Senate committee has played its searchlight upon this newest crime problem. Here is crime at its devastating worst. Here is a disease which like a cancerous growth, will spread malignancy throughout the land. It will produce a high death rate to its victims and will bring misery and tragedy to the victim's loved ones.

The sinister aspect of the dope traffic is that a large percentage of addicts are the youth of our day. Teen-agers in increasing numbers are falling prey to the habit. Encouragement is being given them by peddlers who derive lucrative returns from their illicit

trade. And even greater danger looms up as the gangster clan views this newly developed area as fertile growth for its future operations.

While it is true that local law enforcement is the pivotal point for adequate law-enforcement activities an obligation unquestionably rests upon the Federal Government.

The facilities of interstate crime are being used regularly and extensively by criminal syndicates. If the lawless element is resourceful enough to utilize the instrumentalities of commerce then the Federal Government has the obligation of meeting that challenge head on. Neither the founding fathers in drafting our Constitution nor the United States Supreme Court in its interpretations have left the Central Government helpless in dealing with criminals whose operations spread over State lines. In past years the menaces of kidnaping and of traffic in stolen automobiles were met by adequate and constitutional statutes at the Federal level. There is no constitutional reason for a "twilight zone," a jurisdictional haven for big-time criminals who may consider themselves beyond the reach of Federal and State authorities. The power is available to reach them if we will but devise the means.

And that brings me to the third of the powerful allies to whom decent citizens must look for intelligent leadership—the American bar.

In an effort to devise the means by which to thwart the efforts of violators the lawyer is most sorely needed so that the plans may be worked out without impairment to the constitutional rights of individuals and without scrapping those fundamentals of government which have stood the test of time. Now when law enforcement at the local level needs powerful support, the lawyer can best draw the blueprint. Because it has been revealed that no individual State or locality can overpower the widespread crime syndicate, the Federal Government must meet its responsibility. But the lawyer's advice as to how that obligation must be met will be invaluable in the days ahead.

The Congress in this and other investigative proceedings would do well to follow a code of fair conduct. Such a uniform system would maintain the rights of individuals called as witnesses and who should have opportunity to consult and to be advised by lawyers before and during examination. Character assassination in committee hearings should be guarded against and every safeguard erected to preserve the legal rights of the citizen.

The conditions under which congressional hearings are conducted should be carefully studied, while public hearings are of the greatest value in eliciting facts such proceedings should be on a dignified basis. The preservation of a calm, judicial atmosphere, in which individual rights are protected, outweighs many other considerations. Even though a congressional hearing is not a judicial proceeding it is to be hoped that the participants will emulate the example of an orderly judicial trial and that sensationalism or the spectacular will be conspicuous by its absence.

To the great credit of the American Bar Association, let it be said that throughout the Senate crime investigations the standing committee of this association under the able leadership of Robert P. Patterson has been of extreme assistance. Helpful advice and needed support were given generally to the committee's recommendations. Therefore, it is not necessary to tell this association what it should do, but rather to express the hope that it will not lessen its interest or its efforts.

Fortunate also in this discussion today is that the viewpoint of the States should be expressed by a forthright and a sincere advocate of law enforcement and of high standards in official life. The distinguished Gov-

ernor of the State of California long since has shown his awareness of the place of the State in combating the menace of organized crime. He can be expected to continue zealously as this never-ending crusade carries on.

I would be less than frank and would be concealing information if I did not report to fellow members of the Bar Association of the indefatigable efforts of the Senator who conceived the plan for this Nation-wide survey. One of the brightest pages in the Senate's history in recent times will record the high-minded purpose and the unflagging zeal of the man whose efforts have been second to none of our generation in arousing the American public to the dangers of organized crime. I stand in tribute to the Senator from Tennessee, **ESTES KEFAUVER**.

Though our committee has now relinquished its task, we by no means have concluded that the job is finished. Organized crime may always be a disagreeable by-product of our affluent and fluid national life. We may be confronted with this ugly national phenomenon in any community, small or large, which will tolerate its existence. It is a basic social problem extending even beyond the reach of statutory law or administrative enforcement. Controversial questions which are involved in this many-sided problem have professional interest for you. But over and above these considerations there remains a moral challenge which involves definite responsibilities for the entire citizenry.

Emancipation Day Celebration of the McDonald Community League at Mc- Donald, Pa.

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address I delivered at the Emancipation Day celebration of the McDonald Community League, McDonald, Pa., last Saturday, September 22, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, DELIVERED AT THE EMANCIPATION DAY CELEBRATION OF THE McDONALD COMMUNITY LEAGUE, McDONALD, PA., SATURDAY, SEPTEMBER 22, 1951

It is a great honor to join your fine, public-spirited organization in these important exercises.

The historic background of this meeting is most impressive and deeply significant.

For more than 60 years, here in McDonald, you have observed this date as the anniversary of one of the greatest forward steps in the advance of human freedom.

Year after year you have honored the memory of the Great Emancipator, a plain man of the people, who rose from poverty and hardship to a place of glory among the world's immortals.

We meet to commemorate the proclamation issued by President Lincoln on September 22, 1862, from which I now quote:

"I proclaim and declare that on the 1st day of January A D 1863, all persons held as slaves, within any State or designated

part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward and forever free."

Those were dark days of tragedy and crisis. The fate of the Union hung in the balance. The opposing forces were engaged in mortal combat. The tide of war had not yet risen to heights from which victory could be envisioned by the North or the South.

Gettysburg was 9 months away. Appomattox was 3½ years and many bloody battles in the future.

But in the great heart of Abraham Lincoln there was true allegiance to those principles held sacred by the founders of our Republic.

The finger of God beckoned to Abraham Lincoln, calling him to serve as a benefactor of the whole human race.

He gave new life and true meaning to the words that will live forever—that all men are created equal and are endowed by their Creator with the right to life, liberty, and the pursuit of happiness.

The Emancipation Proclamation, which followed in due course on January 1, 1863, struck the chains of bondage from more than 3,000,000 human beings. Two years later the adoption of the thirteenth amendment to the Constitution enabled America to assume its rightful place as the laud of the free for all its people.

Since those memorable days the Negro, in spite of difficulties and handicaps, has achieved greater progress in a shorter span of years than any people in all world history.

Your people have succeeded as educators, lawyers, physicians, and clergymen. You have achieved greatness in science, art, and music. You have won a place of increasing importance in business, insurance, and banking. You are represented by outstanding figures in diplomacy and Government. As craftsmen and industrial workers you have contributed to the productive strength of our country in peace and war.

The Negroes of America have proven their loyalty and patriotism in every war in which our country has been engaged. From the first shots fired in the Revolution to the present conflict in Korea they have given their lives to preserve the ideals of freedom. The loyalty of the Negro has never been questioned.

The great names of Negro achievement are known to all and are honored by every true American—Booker T. Washington, in education; George W. Carver, in science; Ralph J. Bunche, in diplomacy and law, to mention but a few.

But equal in importance, if less known to fame, are thousands of modest, hard-working Negro men and women who are serving their fellow men with outstanding ability and the highest integrity in many fields.

In every city and town, in every community, their example is an inspiration to their fellow citizens, regardless of color, creed or national origin.

We have every right to be proud of the many fine boys and girls who have grown up here in Washington County and have gained success in their chosen business or profession.

I want to tell you about some of them because they reflect great credit upon all the people of southwestern Pennsylvania.

Many of you recall Charles West, who was known as "Pruner" West when he was a football star at W. and J. He is now a prominent physician practicing at Alexandria, Va.

Then we had another star athlete in Washington, Clarence Mansfield, who is now a member of the medical college of the University of Chicago and is one of the outstanding physicians of that city.

George Jefferson, another Washington boy, chose the legal profession as his career and

is now one of the most respected members of the District of Columbia bar.

Fred C. King, who was raised in Burgettstown, is principal of the Davis Street Junior High School in Jacksonville, Fla., one of the largest schools in the South.

Another school principal is a former McDonald boy, Commodore Bennett, now a resident of Manassas, Va.

We are all proud of Miss Violet Banks, of Washington, who is having great success as a concert pianist and vocalist and was formerly a member of the faculty of Morgan College, Baltimore, Md.

A Burgettstown girl, Miss Arline Young, is a distinguished educator. She is a member of the faculty of Texas State University for Negroes and formerly was a teacher at Howard University.

Randal Hooe, whose father was a minister in McDonald, is now a successful preacher in Steubenville, Ohio.

Lorenzo Carter, of McDonald, was a practicing dentist in Charlestown, W. Va., until his untimely death a few years ago.

Sam Harris, another McDonald boy, who recently graduated in chemistry at the University of Pittsburgh, is now engaged in chemical research with the Pittsburgh Coal Co. at Library.

There are many more who could be added to this imposing list. To all of them, whether I have mentioned them or not, I offer my congratulations and best wishes in grateful recognition of the honors they have earned by their own efforts and their service to their fellow citizens.

In these days of unrest and perplexity, when the godless philosophy of communism seeks to gain mastery over the minds of men, we must be vigilant and determined in defense of our sacred ideals.

We must be on guard against those who abuse the privileges of American citizenship.

We must be united in opposition to those who preach intolerance and spread hate and prejudice among our people.

It is difficult to understand why some misguided Americans, white and Negro, have turned their backs on Americanism and have embraced the poisonous teachings of communism.

It is difficult to understand why anyone who has enjoyed the wonderful advantages that America offers can get so far away from decency and self-respect.

Yet we must admit with deep regret that it has happened—and no race in America is without some examples.

We know that communism has poisoned the minds of some men and women who have had the advantage of a college education and were gifted with rare talents that could be used for the benefit of their fellow man.

Such men, white or Negro, should be grateful for the opportunity to help build a greater and happier America.

But instead they are doing all they can to tear down and destroy everything that has helped to create harmonious race relations, mutual respect and sympathetic understanding.

I am glad to say with the greatest pride, that the real leaders of the Negro race have been strong and vigorous in their condemnation of communism and all who have accepted its destructive, Godless philosophy.

In the great American family there are many races and creeds. We have many differences and many problems. But we will make progress so long as we keep in mind the goal toward which we are striving—equal freedom and equal opportunity—working together for the welfare of the Nation and all its people.

We will never reach that goal if we depend upon those who seek to gain political power by false promises.

We will never reach that goal if we depend upon government for security and an easy way of life.

I therefore want to sound a note of warning:

Don't let selfish politicians of any party sell you a bill of goods. If you do, they will get the goods and you will pay the bill for their empty promises.

For too many years the American people have been paying a staggering price because they have been misled into thinking that the Government can make everyone safe, secure, and happy.

Never once in all the history of the world has that promise been fulfilled. In every country where the people abandoned self-reliance and depended upon government, misery and suffering have come upon them.

That is the reason freedom and opportunity have been blotted out in such a large portion of the world today.

In his last public address, 5 days before he fell victim of an assassin's bullet, President Lincoln, the founder of the Republican Party, made this significant statement, and I quote:

"If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all the people some of the time; you can even fool some of the people all the time, but you can't fool all of the people all the time."

The leadership of our Nation today has forfeited the confidence and respect of the American people.

Corruption, communism, and confusion are widespread in your Government. Every day in our newspapers and on the radio new scandals are revealed.

The American people are awake to the danger. They now realize that the glittering promises of something for nothing were false promises. They now realize that they are paying too high a price for government that condones corruption, coddles communism, and creates confusion.

They realize that no government should require a citizen to work one day of every three to pay his tax bill.

The ever increasing tax burden is robbing your children of the educational opportunities enjoyed by the successful men and women I mentioned earlier in my remarks.

When I think about the future of freedom in America I am not worried about conquest by any foreign foe.

I am not worried about Communist aggression against our shores or the danger of atomic attack.

The worst threat to American freedom is the breakdown of the moral and spiritual fabric of our people.

Turning again to the wisdom of Abraham Lincoln, I quote from one of his great speeches which has a warning for the American people today:

"What constitutes the bulwark of our own liberty and independence? It is not our frowning battlements, our bristling sea-coasts, our Army and our Navy. These are not our reliance against tyranny. All of these may be turned against us without making us weaker for the struggle."

"Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men, in all lands everywhere."

"Destroy this spirit and you have planted the seeds of despotism at your own doors. Familiarize yourself with the chains of bondage, and you prepare your limbs to wear them."

"Accustomed to trample on the rights of others, you have lost the genius of your own independence and become the fit subjects of the first cunning tyrant who rises among you."

The fundamental truths of human progress are everlasting and unchanging. They apply equally to all races of mankind. They are firmly established on the Golden Rule,

the Sermon on the Mount, and the teachings of the Holy Bible.

You cannot legislate righteousness, tolerance, or good will into the hearts of men.

Those qualities must be created by a deeper understanding of the rights and privileges of American citizenship as well as its responsibilities. They must be strengthened by adherence to the principles of religion.

There is no liberty where the laws of God are neglected or denied.

As good Americans, we must rededicate ourselves to the principles of individual freedom, equal justice, equal opportunity, good will, tolerance, and the love of God.

Address by Gov. Thomas E. Dewey to the American Bar Association

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address of Gov. Thomas E. Dewey, of New York, delivered at the annual convention of the American Bar Association, at a luncheon meeting of the association section on international and comparative law, and the junior bar conference, at the Waldorf-Astoria Hotel, in New York City, on September 18, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. THOMAS E. DEWEY, DELIVERED AT THE ANNUAL CONVENTION OF THE AMERICAN BAR ASSOCIATION, AT A LUNCHEON MEETING OF THE ASSOCIATION SECTION ON INTERNATIONAL AND COMPARATIVE LAW, AND THE JUNIOR BAR CONFERENCE, IN THE WALDORF-ASTORIA HOTEL, NEW YORK, N. Y., SEPTEMBER 18, 1951

I am happy to welcome the members of the American Bar Association to New York and to be with you at this meeting devoted to the subject of foreign affairs.

The most important thing on earth is to win our struggle against imperialist Communist aggression without total war.

You and I know that America will never launch such a war. We also know that no other nation is in a position to launch it except the Soviet Union.

The danger of total war lies less in calculated Soviet strategy than in the chance that the Kremlin will make a bad guess. In their unremitting assaults on the free world they might attack an area thinking we would not defend it. Then when we sprang to its defense, the Soviet would find they had started a war they did not expect and could not stop.

This can happen wherever there is a power vacuum—wherever there is a country too weak to defend itself and apparently without friends willing and able to defend it. This is exactly what happened in Korea. There is no excuse for this to happen again and I propose to you that we build a strong and total foreign policy in the Pacific before it is too late.

Specifically, I believe it is vital to the defense of the United States and the continued existence of the free world that we start immediately to build a well-rounded and complete Pacific mutual defense alliance.

The defense of Europe is now well on its way. After a political fight that split both parties, we have set our course. While much remains to be done, the world now knows that an attack on Europe would bring an immediate and devastating response. There are a few European vacuums left, a few danger spots where the situation is still unclear, as in Yugoslavia. Nevertheless great progress has been made.

But we cannot fly on one wing or rest our defenses on one flank alone. The Pacific is equally critical.

I am convinced that decisions which may decide our whole future as a Nation will be made in the Pacific in the next few months. The Pacific is the active firing line in the battle against communism. Right now we have a full-scale war in Korea and five Communist-inspired and Communist-led revolutions in the Philippines, in Indonesia, in Malaya, in Indochina, and in Burma. In the last 2 months I have visited the front lines in five of these wars and I assure you that the struggle for freedom is very grim and very real.

As a nation we have made some terrible mistakes in the Pacific but we also still have the most tremendous opportunity we have ever faced. It is hard to speak with restraint on an issue about which I feel so strongly, but in view of the nonpolitical nature of this audience I will do my best.

For 4 years I demanded that our country take the drastic steps necessary to prevent the fall of the Government of China. But we failed to act and tragedy befell the Chinese as the Reds moved in. Then the British made the monumental blunder of recognizing the Mao Tse-tung government. We shall all pay for many years for those blunders but we may still regain much if we move now.

Four years ago I warned, at a meeting in this very hotel, that if we withdrew our troops from Korea we would create a power vacuum and the Communists from North Korea would sweep over the country. The warning was ignored. Our country did withdraw its troops, and the Reds moved in last year.

The worst thing about the Korean blunder was that the Government of the United States, in effect, issued an engraved invitation to Stalin to launch his conquest. It was solemnly announced in Washington that Korea was not within the defense perimeter of the United States. In plain English—or plain Russian—that meant that neither the United States nor the United Nations would defend the 20,000,000 people of the new Korean Republic which we ourselves had created.

Normally Stalin does not need more than one engraved invitation to take a country. He accepted this one and his North Korean puppets moved in last year. I am positive that the most astonished and incredulous man on earth was Mr. Josef Stalin when the United States did a backward somersault, announced that we would defend Korea and moved swiftly and decisively in the United Nations for action by the free nations of the world. That decision was right. It was necessary. I supported it wholeheartedly the day it was made and I still do.

The point is, and it should be made terribly clear, that we should stop issuing engraved invitations for conquest to Stalin. We should create no more power vacuums into which he will inevitably move. We should not ever again, so long as this struggle goes on, endanger any free people by publicly announcing that we will not help them defend themselves.

On the contrary, I propose that instead of improvising our foreign policy in the Pacific from day to day we will develop a new, whole, well-rounded, firm policy so that everyone,

and particularly the Kremlin, will understand what we will defend. Such a policy can prevent wars and it is the only one that will.

For example, everybody knows that we would defend Hawaii and Alaska. I believe the United Nations would join us in that defense. For that reason we know that unless Stalin has decided on world war III he will not drop one bomb on either of those Territories.

Everybody also knows we would defend Guam and Wake Island. We have an enormous and strategically powerful base on the Island of Okinawa and no one is going to attack Okinawa unless he wants to invite total retaliation.

In the same way we have now negotiated mutual defense treaties with Japan, the Philippines, and Australia and New Zealand. Each of these treaties is merely the translation into formal documents of what I am sure is in the hearts of most Americans. Our long relationship with the Philippines and Australia and New Zealand make them almost as close to us as our own territories and people.

The defense of Japan is equally necessary for the simple reason that Japan and Germany are the prime targets of Russian imperialism. If the Soviet could get either one she could gain the balance of industrial power for her side against the free world.

These treaties of mutual defense were necessary and urgent as full notice of our intentions to the world. They are a good beginning. But standing alone, I warn you in all solemnity that they are dangerous, being either too much or too little.

These four countries are widely separated—Japan in the north, the Philippines in the center, Australia and New Zealand in the extreme south. In between these countries are lands of vital importance to their defense. In other words, we are going about this business by bits and pieces and putting ourselves as a nation into a dangerous position.

I believe we must have a total defense in the Pacific or we will wake up some unhappy day finding our defenses back in Hawaii or on the shores of California.

Let's be perfectly frank about it: We Americans do not want to fight any war. In particular, we do not want any war waged on American soil. But if we have to fight, we want to make sure that we have friends all over the world and lots of them. We need friends who are able to fight and friends who are numbered by the hundreds of millions.

Specifically now, what about the Philippines? The island of Formosa is essential to the defense of the Philippines. They suffered major air attacks in the last war from Formosa and that island commands the sea lanes west of the Philippines.

And yet in these troubled times our National Government has been on-again off-again on Formosa four times in 2 years. We need a firm and broadly developed policy concerning Formosa, establishing its permanent position as a part of the free world.

Take Japan: From a military position let's realize that there are Russian divisions 3 miles from the coast of Hokkaido, one of the main four Japanese islands. The Japanese have no army, navy, or air force with which to defend themselves. The defense of Japan is going to be our job for some time to come.

All Japan's overseas possessions are gone. She is reduced to the four main, comparatively barren islands. Her population has increased in the last decade from 70,000,000 to 83,000,000. Coal and iron and salt are essential to Japan. All of these minerals

used to be available to them in large quantities and cheaply from Manchuria.

Today Japan pays \$3 a ton for salt in San Francisco and \$19 a ton to ship it home. Today she pays \$10 a ton for coal in America and \$20 a ton to get it across the Pacific. With little iron ore, Japan is scraping the bottom of the scrap heap.

Despite the most intensive production of food in the world, Japan still has to buy 20 percent of her rice from overseas.

Will Japan be forced into the arms of Red China to get the minerals and food she must have to live? If so, the price tag would include a stiffer political price with every shipload. Concession after concession would force Japan into Soviet control without Stalin ever having to strike a military blow.

There is a free area where Japan can get all her essential minerals and food. It is southeast Asia. There is one of the richest areas in the world, some of it still not fully developed. Burma, Thailand, and Indochina are land rich. They have been able to export large amounts of rice in the past, as did Korea and Formosa under Japanese rule. They should again be able to produce a surplus to exchange for the industrial products of Japan.

If these areas are cut off I do not see how Japan could avoid becoming a poor relation depending on us for her very existence. That is a condition which would be intolerable, both to the Japanese and the American people.

What about Malaya and Indonesia? They are vital to our own defense if for no other reason than that between them they produce 90 percent of the natural rubber and 86 percent of the tin of the entire world. Admittedly we can use synthetics, but only in part. Large amounts of tin and natural rubber are essential to the industry, transport and defense mechanisms of this country and the other free nations.

Then look at Indonesia for just a moment, in human terms. The former Dutch East Indies is a new country, only a year and a half old, the baby among free nations. Yet it has half as many people as the whole United States and in population is the sixth largest nation on earth.

The people of Indonesia are Moslem and they are naturally opposed to communism. They made the great decision at San Francisco and joined with the free world in signing the treaty of peace with Japan. These great and rich islands are almost subcontinents and it is vital that their people remain free.

Southeast Asia is the cornerstone of the defense of the Pacific.

But at this moment there are areas in southeast Asia where a power vacuum exists.

At this moment there are no commitments by the free world as a whole or by the United States, which would defend those critical areas in the event of an all-out Communist attack.

They are doing very well against armed Communist revolutionary forces from within. They are doing it at a terrible price. A hundred thousand British-led troops are fighting the bitterest of jungle warfare against Communist bandits in the jungles of Malaya.

France is spending one-sixth of her total national budget and has more than 120,000 troops in Indochina defending that area from the Communist armies of Ho Chi Minh. If you are one of those who sneeringly say the French won't fight, I invite you to go and visit that grim area where one of the greatest soldiers of our time, General de Latre, changed a defeat to victory by sheer leadership and personal courage last December.

In the Philippines and in Indonesia, with all the problems involved in creating new

governments for great new nations, they are also forced to wage unremitting warfare within their own borders against Communist treason and armed guerrillas.

You have to see those brave and thrilling struggles at first hand to realize the intensity with which these new nations are struggling to maintain their integrity and their liberty. But having seen it, you cannot fail to gain a profound respect for those who are in the front lines of freedom all over the Pacific. They are fighting our common enemy. In every sense of the word they are now our allies. I am personally convinced that they will win their struggles, every one of them—unless they should be overwhelmingly attacked by outside forces.

Are we going to allow that outside attack to occur? That is the simple question upon which the fate of the whole Pacific may turn.

I say the answer is as clear as day. We must make a mutual defense alliance of the Pacific from Japan through southeast Asia on down to Australia and New Zealand. It should be one single treaty, all for one and one for all.

More than 270,000,000 people live in this area. That is almost exactly the same number of people there are in free Europe. It is nearly twice as many as there are in the United States. We will never survive in this world if we are successfully defended on one side and naked on the other. We will never survive in this world if we commit ourselves to defending parts of an area, leaving other equally vital parts open for aggression at Stalin's convenience.

If we do keep this Pacific area free, none of our allies will be forced to trade with Red China on her terms and they are all defensible.

We must draw a line in the Pacific and put it in a treaty for all to see—just as we have done in the Americas and just as we have done in Europe. We must draw that line while we still have brave allies who are not only willing to fight but are actually fighting and winning right now.

I believe that with adequate preparation such a program would be acceptable to the free world. Such a treaty is specifically authorized by the Charter of the United Nations. I believe that with such a program and with a united and firm commitment the Pacific nations will never be invaded and we will not get into world war III by accident or by a miscalculation in the Kremlin.

If we make firm allies in the Pacific as we have in the Atlantic and the Americas, we shall have the majestic power of more than 850,000,000 people armed in the common defense of human liberty.

If the treaty I propose should be successfully negotiated, America would then be part of the most powerful alliance on earth.

We would have not only the industrial power of the world but we would have actually more human beings on our side, tied by treaties of defense than there are in all the miserable slave states under Communist control.

With such tremendous might on the side of freedom, it would be more than any tyrant would ever dare attack. It would be the greatest alliance in history for peace.

I also believe that the cracks in the Communist tyranny would then grow larger and larger and the iron curtain would ultimately crack up.

I realize perfectly well that this treaty is a new concept in American thinking. We have never regarded Burma or Indonesia as a part of the defense of America. I frankly confess that I do not think they so regard themselves. But the ugly nature of Communist aggression is becoming clearer every day to the peoples of the Pacific and I am personally confident of their steadily mount-

ing desire to maintain their position in the free world at all costs.

We have gone so far along the road of collective security that it would be a tragedy to go 80 percent of the way and fall because we neglected to achieve the final and vital 20 percent.

A great deal of hard diplomatic work remains to be done. Surely no goal can ever be so precious as to build a force on the side of freedom so mighty and so united that it can win through this dreadful period without a total war.

I hope our people will demand that our Government proceed at full speed to build such a treaty. It is worthy of our every effort. With the whole-hearted support of the American people it can succeed.

Intercollegiate Football

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the faculty of the College of William and Mary concerning the effects of intercollegiate football on that college. This is a courageous and clear analysis of the effects of the commercialization of intercollegiate athletics by the colleges of the United States, and should receive the prayerful attention of the American people.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A STATEMENT BY THE FACULTY OF THE COLLEGE OF WILLIAM AND MARY

We, the members of the faculty of the College of William and Mary, deeply troubled by the recently disclosed academic irregularities in the physical education and athletic departments of the college and by their consequences, feel it our solemn duty to the students, the alumni, and the citizens of Virginia to declare publicly our convictions about the causes of what has happened and the steps we propose to eliminate these causes as quickly and as completely as we can.

We are agreed that the fundamental cause is an athletic policy which at William and Mary, as at many other American colleges and universities, has proceeded to the point of obscuring and corrupting the real purposes of an institution of higher learning.

For over a decade the College of William and Mary has been laboring under conditions imposed by an increasingly ambitious intercollegiate athletic program. These conditions have been increasingly detrimental to the educational ideals to which the college is dedicated. The insidious influences of the athletic program have eaten at the most vital elements of academic life. If permitted to continue, they must inevitably render the college impotent to perform its educational obligations. The flagrant violations of academic principles during the past 2 years which are now public knowledge can only be regarded as unmistakable symptoms of deep-seated, unhealthy conditions which could if unchecked destroy the very integrity of the college.

The recent revelations clearly demonstrate that certain dishonest academic practices

have been followed by duly appointed members of the athletic and physical education staffs for the purpose of securing and retaining coveted athletes. Many other isolated indications of the serious effects of the athletic program have become too obviously manifest to members of the faculty during the past several years. We do not intend here to present proof of such instances.

More significant and of far greater value, we believe, will be an exposition of the ways in which we have experienced the disastrous effects of the present athletic policy on essential elements of college life at William and Mary.

We have seen an exaggerated athletic program steadily sap the academic standards of the college. William and Mary exists to educate intelligent, informed, and balanced graduates, able to make sound judgments and to discriminate among values, and prepared to follow their various careers as responsible, progressive citizens of their communities. To this end a curriculum has been carefully planned—and is being constantly revised—to provide a thorough course of study in the humanities and the natural and social sciences. Entrance to this program presupposes high standards of admission, and its successful completion demands a high level of achievement. If this educational goal is to be fully attained, it must be the primary purpose of all college activities; all else must be contributory and subservient. Anything short of this goal would be unworthy of the ancient traditions and honorable history of the college.

Steadily and inevitably the intercollegiate athletic program has usurped a dominating position in the college. Instead of a healthy and indispensable extracurricular activity, it has become a commercial enterprise demanding winning teams at any cost, even the cost of dishonest academic practice. It has demanded that admission requirements be lowered, and sometimes dispensed with, so that promising athletes can be given the respectability of college enrollment. Limited scholarship funds which should aid young men and women of intellectual promise and financial need must go to athletes whose sole recommendation for such aid is their athletic prowess. Once on the college rolls, the athletes must somehow be kept there. Their schedules must be arranged without reference to the normal procedure leading to graduation, but rather to enable them to meet the minimum requirements for continuance in college and for eligibility in intercollegiate athletics. Courses most vital to the attainment of the educational ideal of the college are avoided in the search for the easy course. Athletes participating in certain varsity sports are prevented from making a free choice of a course of study open to other students. For example, the regimen of football players makes them unable to enter a program of premedical study. There is pressure, for special consideration for athletes on the score of heavy athletic duty. The tragic consequence is illustrated by the graduation records of the past 9 years: Football players as a group have been only a little more than half as successful as the rest of the student body in completing the requirements for the degree. They have been exploited on the gridiron under the pretense of being educated.

We have seen this athletic program violate the most elementary standards of honesty and right conduct. It has tarnished the bright tradition of the honor system which William and Mary has cherished for generations. The failure of certain individuals in responsible positions to maintain the highest standards of honor has weakened the moral fiber of the college and of its students and alumni. Athletes knew that these were

those in high positions at the college who were committing, or being accessory to, acts of dishonesty. The deception which has been practiced by responsible officials and students participating in athletics was known to many other students who were tragically disillusioned by it. How, they asked, could the college try to maintain a rigid code of honor in certain areas of college life and expect the student honor councils to enforce this code when acts of dishonesty in another area were subjects of frequent discussion within the student body. Honor is indivisible. One set of principles cannot be applied in one relationship and not in another. There is no double standard of honor.

We have seen this athletic program ravage the morale of our student body, including the athletes themselves. Many students feel that subsidized athletes form a special privileged group set apart from their fellows. They see athletes recruited on the basis of financial assistance well beyond the amount available to nonathletes and with little regard for need or scholastic ability. The athletes themselves, victims of a pernicious system, appear to be looked upon on the campus as almost a segregated element. The impression prevails that there is a special set of rules for them—a "double standard" which operates in the areas of admissions, discipline, financial aid, and academic standards. Many students sense that the college has been dishonest in its administration of the athletic program. It is known that the athletic department has violated rules to which the college has publicly subscribed, rules of the Southern Conference regarding the length and nature of off-season practice and the recruiting of players. That these violations have been condoned has caused on the part of many students a loss of confidence in and respect for the college.

Another effect of the athletic program upon student morale springs from the staggering cost of that program. Big-time athletics is an expensive undertaking which demands greater and greater outlay for more and more salaries, for equipment, for additions to the athletic plant. It appears that the necessary money is usually forthcoming. But at the same time it seems that the college is incapable of financing essential improvements which are of greater concern and would be considerably more beneficial to the whole student body. The result is a distortion of values, cynicism, and a feeling of real resentment.

We do not seek to evade our share of responsibility as a faculty for having failed hitherto to halt the insidious growth of these evils. Determined action at an early stage would have prevented or at least diminished much of the harm that has occurred. We have not done successfully that which we ought to have done. Sporadic attempts to investigate the causes and eradicate them have been effectively thwarted by veiled suggestions of intangible and nebulous pressure groups, and by an understandable shrinking from the harmful effects which result from public exposure of the internal difficulties of the college.

Deploping these conditions, we, the undersigned members of the faculty of the College of William and Mary, intend now that the college shall have a sound and healthy program of athletics. The foundation of such a program must rest upon the unequivocal statement of section XIII of the regulations of the Southern Association of Colleges and Secondary Schools: "Faculty control of all phases of intercollegiate athletics is required. The financing of athletics should be a function and responsibility of the institution and under the control of the administration." The principle of faculty control has not

hitherto been practiced. It must be practiced in the future.

The athletic policy we must formulate and the program we must put into effect must be truly extracurricular; it must take its rightful place as a beneficial but distinctly subordinate activity of the college. It must be an activity of the general student body; participants must be attracted, admitted, and governed by the college exactly as are all other students. It must be and remain a program harmonious with the atmosphere, purposes, and ideals of the college. To this goal, and to the proud and honorable traditions of the College of William and Mary, we pledge and dedicate ourselves anew.

To institute the full implications of this policy at the College of William and Mary and to insure strict adherence to its explicit meaning, be it therefore

Resolved—

That the following committees of the faculty, hitherto appointive, be established as elective committees of the faculty, and their specific duties and powers defined in the bylaws of the faculty: (1) A committee on admissions, (2) a committee on athletics, (3) a committee on scholarships and student aid, and (4) a committee on academic status;

That these committees be elected annually by the faculty from its own members;

That these committees be given full authority to determine the policy to be followed in all matters which fall under their jurisdiction;

That each committee be required to make a full annual report at a regular meeting of the faculty of the college; and

That copies of this statement be sent to the board of visitors, alumni, and students of the college, to the Governor of the Commonwealth, and to the public generally.

Charges Against the Reconstruction Finance Corporation

EXTENSION OF REMARKS OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "The RFC: A National Disgrace," which appeared in a recent number of the Idaho Daily Statesman, published in Boise, Idaho.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

THE RFC: A NATIONAL DISGRACE

Under the law of the land, a man is still presumed to be innocent of an offense against society until proved guilty—a point it might be well to reemphasize in this great era of charges and counter-charges, of political jockeying and partisan infighting.

But there is, at the same time, something to be said for taking note of a train of suspicious circumstances, all of which point in the same direction, and all of which add up to something which definitely suggests the far side of the open and above-board.

We were thinking of this in observing the latest round in the continuing investigations into the affairs of the RFC in general, and those of Democratic National Chairman William Boyle in particular.

One fact, in the entire sequence of events, stands out—both with reference to Boyle, and to other instances where RFC loans have been called into question.

That is the curious circumstances that time and again such loan transactions have been plainly colored with the ugly tint of political favoritism—the direct result of purposeful "interest" on the part of highly placed officials of the national administration.

A company wants an RFC loan; on two separate and distinct occasions the RFC examiners report that such a loan would be a poor risk; a couple of the company's officials arrive in Washington and closet themselves with at party bigwig; a discreet telephone call is made, a few days later better than half a million dollars of taxpayer money is tossed to the company in question; a few weeks after that the party official concerned begins to draw large retainer fees for legal services, from the loan recipient.

A large hotel company in Florida is in financial straits; it applies for an RFC loan; a few days later a group of RFC expeditors (E Mer! Young variety) call on the agency directors, a contact in the White House attends a quiet dinner party, a few days later the RFC announces a major loan to the hotel chain in question; shortly after that a director of the RFC accepts hospitality from a vice president of the company; the White House character turns up at a lavish Miami Beach hotel with his entire family, and spends a couple of pleasant weeks in a suite, with everything on the house.

When the President of the United States is informed of this sort of procedure, he angrily denounces "character assassins," and declares that all of his people are "honorable."

Actually, short of mental cases, any honest and law-abiding citizen of this country with an interest in decent government has no great difficulty in seeing through the sham, and in detecting the all-too-familiar stench of political corruption.

The Reconstruction Finance Corporation, which has long outlived any real usefulness, which no longer even presumes to concern itself with its original function of helping small, depression-hit businesses get back on their feet, has in recent years become nothing more than a gigantic boodle operation, where public money has been shoveled here and there for everything from a plush saloon in the Southwest to putting Henry Kaiser in the automobile business.

Congress, which means both Democrats and Republicans, should have the courage and the collective integrity to face up to the facts of this matter once and for all, and put an end to what has become a crying disgrace to the principles of free government.

There is a fine line to be drawn between the openly crooked and the "it's-just-barely-legal."

This line is microscopic in dimension in the case of the long series of outrageous RFC transactions, despite the breast beating and bland assertions of child-like innocence on the part of the opportunistic mob of individuals who have been implicated all along

The New York Times

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. HAYS of Arkansas. Mr. Speaker, among the many tributes to the New York

Times on the occasion of its one hundredth anniversary is an excellent statement in the Christian Science Monitor, which, like the Times, represents American journalism at its best. In an editorial commenting upon the fact that the Times has become one of the world's great newspapers, the Monitor refers favorably to the Times' policies. The concluding comments are as follows:

During the second half of its century, under the guidance of Adolph S. Ochs and his successor, Arthur H. Sulzberger, it has achieved a reputation for objectivity which has won the respect even of those who would like to have seen it lose its heart more readily to the causes and crusades they espoused.

Reason, objectivity, and thoroughness, though not the most existing qualities in the world, are not to be undervalued in our overheated world today. It is good to find the New York Times at the end of its first century standing as a firm bulwark against the divisive, hysterical thinking which is willing to hear the facts on only one side of every question. If it sacrifices catchpenny popularity thereby, it makes up for this by the esteem it was won from the large-minded on both sides and in far places.

There Stands the Farmer

EXTENSION OF REMARKS

OF

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BELCHER. Mr. Speaker, as time goes on I am more convinced that the farmer, by his historic habit of speaking out for truth and voting as he independently pleases, has become an important power in the land. There is considerable evidence, however, that there are strong moves on to channel the farm thinking through Federal agencies rather than through farm organizations. Because I feel so strongly that it is absolutely necessary to the American way of life that the farmer be allowed to remain in his free status, I insert in the RECORD an article entitled "There Stands the Farmer," which appeared in the American Farm Bureau Newsletter on September 17, 1951:

THERE STANDS THE FARMER

It may be said by some that the farmer is selfish, but his actions are more frequently in the public interest than are those of nearly any other group. Perhaps the reason for this is that he is free to give his opinion without any fear of reprisal. It would be a pity if this freedom ever became badly endangered.

So long as the farmer is free from having to go to someone for permission to do things and so long as he can express himself through his own organization, he is going to continue to express his views. But lately there are signs that an attack is quietly being made on these last strongholds of agricultural freedom of thought and action.

As the planners find it more and more to their liking to endow appointees to tell farmers what to do and when, as they make regulations that force farmers to go to them for favors—the favors being permission to do the things they would ordinarily do under a free enterprise. As those things de-

velop more and more farmers will hesitate to speak their minds.

You don't shoot Santa Claus, nor do you kick the teeth in on the guy that gets you materials or permission to build a hen coop. Maybe you know that he is dangerous. Maybe you know that he is a parasite on the body politic, but you get cautious when tomorrow you may have to go to him, cap in your hand and say "please."

Then there is the effort cropping up again to have the channeling of farm thinking through Federal agencies rather than through farm organizations.

We do not want to be obstructive, and when the Government asks us to cooperate on surveys that indicate farm thinking, many of us see no evil. But the evil is there. Out of the cooperation of farmers comes the conclusions that are basic to new legislation. The conclusions can be slanted very easily and sometimes are. Any good or even ordinary disciple of propaganda can write a questionnaire designed to get the kind of an answer wanted. The next step is to publicize them widely and make it tough for anyone who wants to tell Congress different.

We have long contended that it is no job for Federal agencies to tinker with policy. Some disagree. If you want to hand everything over to Uncle, we know of no better way . . . When laws should be changed, let the people change them; not the politically indebted.

So we see in the future two threats to farmer independence, and we don't like what we see. So long as people say what they think, it is still a free country. It becomes less free when they begin to keep quiet out of fear of reprisal . . .

The farmer, by his historic habit of speaking out for truth and voting as he independently pleases, has become a power in the land. The way to lose all power is to let today's trends run their courses. When planned economy rears its socialistic head, let the Nation know it is not unopposed. Let the Nation say: There stands the farmer, battling again for the dignity of the individual. (Massachusetts Farm Bureau publication.)

Pilgrimage of American Churchmen

EXTENSION OF REMARKS

OF

HON. O. K. ARMSTRONG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. ARMSTRONG. Mr. Speaker, during this week the city of Washington will be host to a most unusual but important gathering, the Pilgrimage of American Churchmen. Among the participants in this pilgrimage will be men and women who have distinguished themselves in Christian service.

The purpose of this pilgrimage is to demonstrate to all the world that belief in God and in religious principles has served continuously as the fundamental basis of our American government and our democratic way of life.

Among the notables who have endorsed the pilgrimage and will participate in its activities are President Harry S. Truman, who will deliver the principal address, on Friday evening, September 28, at the National City Christian Church; Andrew H. Phelps, vice president of Westinghouse Electric Corp. and

president of the Association for a United Church in America; Dr. Mordecai W. Johnson, president of Howard University; Dr. Ralph W. Sockman, minister of Christ Church in New York City; Walter Reuther, president of the United Automobile Workers; Dr. Harold Cooke Phillips, minister of the First Baptist Church of Greater Cleveland; the Very Reverend Francis B. Sayre, dean of the National Cathedral, Washington; Dr. Arthur S. Fleming, president of Ohio Wesleyan University; Miss Ruth Custis Kitchen, chairman of the women's department, Philadelphia Council of Churches; Gen. and Mrs. Carl R. Gray, General Gray being Administrator of Veterans' Affairs; and the list could be greatly extended, of men and women prominent in religious leadership in this country.

Mr. Speaker, the men and women who will gather here for the pilgrimage will not come on a casual or routing sight-seeing tour. Their purpose will be for a rededication of the leadership of the Nation to its original intent and responsibilities.

The cooperation of governmental officials with sponsors of the pilgrimage has been spontaneous and generous. They have arranged a series of presentations of carefully chosen exhibits for the occasion. Speakers of national reputation will be present with short addresses at these exhibits. I feel that to participate in the pilgrimage will be an experience of rare value.

Many beautiful buildings in Washington, the possession of all Americans, and the repositories of our priceless heritage of art, music, literature, history, law, and religion, will be visited, with appropriate ceremonies. Among these will be the National Gallery of Art, where on Friday morning there will be a special presentation of religious art, by Dr. Raymond S. Stites, curator in charge of education; the Library of Congress on Friday afternoon, where in the Coolidge Auditorium there will be a discussion of the religious significance of the basic documents of the founding fathers by Dr. Harold F. Carr, minister of Lakewood Methodist Church at Lakewood, Ohio; there will be a worship service late Friday afternoon in historic Christ Church, Alexandria, the church of Washington and Lee.

The address of President Truman, on Friday night, will be of special interest. Dr. J. Warren Hastings, minister of the National City Christian Church, and Dr. Edward Hughes Pruden, minister of the First Baptist Church, will be co-chairmen of the service. The President will speak at 8 p. m. The program will be broadcast over the major networks. Newsreels of the program will be made from the church.

On Saturday morning, Dr. Edward L. R. Elson, minister of the National Presbyterian Church, will address the pilgrimage at 10 a. m., Saturday, September 29, at the Jefferson Memorial. He will speak on the inspirational contributions of Thomas Jefferson. Music will be provided by the 40-voice choir of the National Presbyterian Church, under

the well-known direction of Theodore Schaefer. Dr. Gene Stone, executive secretary of International Christian Endeavor, will be chairman of the meeting. Stanley W. McClure, park historian, will tell of the significance of the memorial.

At noon on Saturday, members of the Pilgrimage will gather on the east steps of the National Capitol, where they will be joined by several Members of the Congress, both from the Senate and the House, for a brief ceremony. This meeting will emphasize the importance of religious ideals in government. It will be covered by the press, radio, and television. The Voice of America will cooperate in carrying our messages of spiritual significance to the ends of the earth.

At 2 p. m., Saturday afternoon, Dr. Theodore Distler, president of the Franklin and Marshall College, will speak at the Lincoln Memorial on The Religious Faith of Abraham Lincoln. The Washington Community Chorus under the able direction of Warner Lawson, of Howard University, will conduct a 100-voice choir. Dr. Mordecai Johnson, president of Howard University, will repeat the Gettysburg Address. Cornelius Heine, park historian, will tell about the memorial. Chairman of this meeting will be Dr. Ernest Bryan, president of International Christian Endeavor.

The chief social event of the pilgrimage will be the dinner in the Hall of Nations, Washington Hotel, 6:30 p. m., Saturday, September 29.

Mr. Speaker, the distinguished church men and women of all faiths who will make up the Pilgrimage wish to demonstrate to all the world that belief in God and our religious principles is the foundation of all our cherished liberties, the basis for our democratic way of life and government. They will be visiting the places in our National Capital which remind them of this great truth.

They will be reminded that Washington was a very eminent churchman, a vestryman in the Episcopal Church; that Thomas Jefferson was a deeply spiritual man, following a gospel drawn from the teachings and ethics of Jesus; that Lincoln was a profound believer in God and a man who turned to God in prayer when the problems of state were extremely serious and grave, worshipping in the New York Avenue Presbyterian Church and called in a bishop of the Methodist Church, Dr. Matthew Simpson, frequently to pray with him; that numerous others of our great statesmen held strong religious convictions and drew inspiration and strength for their tasks from communion with God.

I urge my colleagues in this House to participate in any of the meetings of the Pilgrimage, particularly to be present at the gathering on the Capitol steps at noon on Saturday, and to cooperate with our visitors in every possible way to indicate our belief in and support of those great moral and spiritual values that have made and preserved for us our great Nation.

Let's Launch an American Peace Offensive

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MANSFIELD. Mr. Speaker, Mr. John Cowles, of Look magazine, has just written an article which I think every Member of Congress should read. It is thought provoking, it is newsworthy, and it is important at this critical time in our relations with Asia. While we must continue to rearm, I feel that the suggestions advanced by Mr. Cowles merit the most serious consideration, because peace—not war—is the most significant factor in our time.

Mr. Speaker, under unanimous consent, I am inserting at this point in my remarks Mr. Cowles' article, which appears in the September 25 issue of Look: LET'S LAUNCH AN AMERICAN PEACE OFFENSIVE

(By John Cowles)

Many highly intelligent Europeans and Asians, individuals who loathe Russian totalitarianism and believe completely in the democratic ideal, fear that through ineptness the United States is going to blunder into war with Russia, or that we will become so provoked at Russia's exasperating conduct that we will ourselves precipitate war.

It is difficult for Americans who have not recently talked with political and intellectual leaders in Europe and Asia to realize how widespread this view is. After circling the globe, I am convinced that American foreign policy needs to be clarified and amplified.

Much of the world thinks that the United States has only one idea, that of confining Russian communism by military might. Many Europeans and Asians say we keep pressing for arms and more arms although every armament race in history has resulted in war.

EMPHASIS ON PEACE

Even though we continue arming just as rapidly as we possibly can, we ought to place much more emphasis, I believe, on the kind of a peaceful world that we envisage, the kind of a world that will be possible only if Russian aggression is not permitted to plunge the world into an atomic holocaust.

Through our default we have let the Russians monopolize the subject of peace, and embrace peace for propaganda purposes as if it were their exclusive property.

The failure of the United States to make effective propaganda use of its deep desire for peace has resulted in much of the world suspecting that America has deserted her traditional role as a nonaggressive, peace-loving nation.

If America would only seize the initiative from Russia and conduct an American "peace offensive," we would rob the Russians of their single most powerful propaganda weapon. The whole free world, including America, wants peace. Let us say so, louder and longer than the Kremlin.

DISARMAMENT MUST COME

But peace, to be genuine and long lasting must be accompanied by universal world disarmament.

President Truman, Secretary Acheson, and the American representatives in the United Nations ought, it seems to me, to proclaim at every opportunity that the United States favors universal disarmament under effective international control.

We ought to say that we would stop rearming and would progressively disarm just as rapidly as we had positive and continuing proof that Russia and her satellite nations were also disarming in good faith.

Of course, this would require an elaborate system of international inspection and control, comparable to what the United States proposed several years ago in connection with atomic control, which proposal the Russians rejected.

Probably there is not one chance in a thousand that the Russians would agree to the kind of effective international control which we should, of course, insist upon before we stopped rearming. However, if we kept talking affirmatively of the American desire for disarmament and peace, it would greatly strengthen our position psychologically throughout the world.

THE WRONG KIND OF TALK

We could lose nothing by urging this kind of peace, because it would be peace on our terms. If Russia conceivably should agree to U. N. inspection and control of armaments, then the free world would have the peace it so deeply desires. If Russia refused the American offer, and kept refusing it, as she probably would, then the world would be repeatedly reminded that it is Russia which is the aggressor and warmonger.

Instead of talking peace, many of our American Government officials talk democracy and free elections and civil liberties. Aside from the British Commonwealth and a few countries in northwestern Europe, those concepts have little popular appeal. Most people, especially in the Near East and Asia, have no idea what the words even mean.

We also keep talking about the virtues of private capitalism and free enterprise. We forget that capitalism as practiced in the rest of the world (again excluding in some degree the British Commonwealth and a handful of small countries) has meant the exploitation of the masses by a few rich people. The United States is the only major country where capitalism has functioned in an economically fluid and socially mobile society and where the people generally have benefited from the widespread increase in wealth which capitalism has produced.

A NEW LOOK AT ASIA

We also need to refresh our memories about Asia.

First, most of the people of the world live in Asia, more people than in all the other continents combined.

Second, most Asians can neither read nor write, and live in almost indescribable poverty, barely above the starvation level.

Third, most Asians have colored skins. If most Asians have any impression about white foreigners, it is simply that white foreigners have exploited them in the past and presumably want to in the future.

Fourth, most Asians have determined that hereafter they will govern themselves. They have also decided that henceforth they are going to follow their own ideas of social justice. This means, for example, that they will no longer pay excessive, if any, rent to any landlord.

Our missionaries taught the Asians that their poverty was not a God-given curse which they must passively accept. What is happening throughout Asia today is in a sense a flowering, although not quite in the anticipated form, of the seeds planted by American missionaries during the last half century.

OUR BASIC MISTAKE

Of course, Communist agitators, Kremlin trained in many instances, have exploited the situation for Russia's benefit. Our basic American mistake was that when World War II ended we did not publicly proclaim that our sympathies lay with the Asians, and that the United States was as desirous of

seeing an end to European colonialism and exploitation as were the Asians themselves.

The average Asian has no more comprehension of the ideology of Marxist communism than he has of the Einstein theory. The people's poverty and misery is so deep that they simply have concluded that any change would be for the better. Communists are manipulating the movements in many parts of Asia, but the impulse for revolution springs from the people themselves. Such social revolutions cannot now be suppressed by foreign bayonets.

We have got to rethink our whole policy toward Asia, just as Britain did after Britain finally concluded that she had no alternative but to give India her freedom. Britain then moved promptly and acted gracefully. Today India has more good will toward Britain—her former ruler—than toward the United States.

STRONGHOLD IN INDIA

Today India, with 360,000,000 people, is the last important stronghold of democracy in Asia. We will be making a blunder almost as calamitous as the one we made in China if we don't support the Nehru government in India even though we may be irritated over what we think are inconsistencies or weaknesses in Nehru's attitude.

Recently when Nehru criticized certain clauses in the proposed American peace treaty with Japan, our Government officials unofficially cracked the whip at India and in effect warned that those who were not with us were against us and therefore must be presumed to be in the Russian camp. Such an attitude is utterly foolish.

Our Government officials might also do well to remind themselves that even American foreign policy is sometimes influenced by domestic political pressures. India, too, has its local problems to consider. As one who has talked recently with Nehru and other Indian leaders, I feel certain that Nehru detests Russian totalitarianism. Must Nehru endorse as infallible every position that is taken by the American State Department in order to prove that he is not pro-Communist?

If the United States is so foolish as to undermine Nehru's already weakening regime in India, the government or the chaos that comes after it in the world's second most populous nation may be far less to our liking.

World War II destroyed the balance of power both in Europe and in Asia. In Asia we may in time achieve a new equilibrium if we will support and strengthen India and Pakistan. Pakistan is a highly promising new nation, of great potential importance.

In Europe the only possible way that we can regain an equilibrium is to bring about the economic integration and political unification of France and Western Germany. The accomplishment of that should be given priority over everything else.

Creation of a European army along the lines that General Eisenhower has proposed is of paramount importance in achieving this unification. The Schuman plan for the international control and pooling of coal and steel is also essential, and should be supported in every possible way. While the Schuman plan is a long step in the right direction, it is only the first step. We must, if we want to restore equilibrium to Europe and eliminate the possibility of Russia's overrunning that continent bring about the complete political as well as economic integration of France and Western Germany.

POINT 4 IS A VITAL PROGRAM

Probably the most effective way to help the economically backward nations of Asia is our point 4 program of technical assistance, which shows underdeveloped countries how they can help themselves. With relatively little money, provided it is wisely

spent, we can do a great deal toward strengthening friendship for the United States and increasing the productivity of potential allies.

If we intelligently spend for point 4 technical aid, only a small fraction of the dollars that the administration is apparently planning to spend in Spain, our chances of averting war or of winning it if it comes will be far greater than any possible benefit we might secure from helping Franco.

EUROPEANS SUGGEST MODERATION

Some intelligent Europeans also think that we in the United States are currently planning to spend an excessive proportion of our national income on armament, and are asking the European countries to do likewise. They say that this policy will not only accelerate world-wide inflation but multiply social problems both in Europe and in the United States of America. Some well-informed foreigners believe that the whole world, including the United States, would be better off if we moderated the speed and size of our rearmament program. They suggest that if the United States spends for armament in the next few years the huge amounts now scheduled, America's economy will have been hamstrung by Government controls and made anemic by inflation.

The American people might do well to consider with open minds some of the criticisms that many European and Asian political and intellectual leaders are making of our current policies.

It is possible that all wisdom does not reside in the United States of America.

Show People With a Heart

EXTENSION OF REMARKS

OF

HON. EDWARD BREEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BREEN. Mr. Speaker, on November 8, the doors of Variety Manor for Emotionally Disturbed Children will be opened officially in Dayton, Ohio. This type of hospital is rather new in its field and has facilities for caring for 25 children with emotional disturbances. It is the hope of this hospital to aid these children to become worth-while citizens.

Variety Manor is the main charity project of the Dayton Variety Club. Variety Clubs International with tents in most of the major American cities along with Mexico City, Toronto, London, Tokyo, and Dublin, last year spent a grand total of \$2,600,000 in charity—and practically all of this for handicapped and underprivileged children. Since the first Variety tent was founded in Pittsburgh some 20 years ago, more than \$17,000,000 has been spent by Variety on charity.

I would like to call the attention of this distinguished body to the following article in the Dayton Daily News which gives a poignant story of the humanitarian work carried on by Variety Clubs International:

SHOW PEOPLE WITH A HEART

(By Bernard J. Losh)

Scattered over the United States and Canada, Mexico, and England there are 39 Variety clubs. Each club is known as a

tent. In Dayton the club is known as Tent No. 18.

Membership of the clubs is made up basically of men in some phase of show business but the latitude is wide enough to include figures in sports and members of the press. In addition to "tents" the clubs have another designation, unofficial but singularly expressive, "The Heart of Show Business."

The esteem in which this unofficial name is held because of what is implicit in the words, is illustrated by the Variety club's official insignia. It shows a typical carnival barker, a big man with mustache, silk hat, checkered vest, huge diamond shirt stud and all. Below the figure it says, "My hat represents the dignity of the business. My mustache represents strength. My diamond tells the world that, regardless of conditions, I am doing well. My big hulk of a body is necessary to hold the heart of show business."

There is moreover, a governing philosophy above all other Variety dogma—"The show must go on." In translating that, it means that no showman, actor, or actress is ever stranded or hungry, if there is a Variety tent anywhere within reach. Reducing it to still simpler terms it means that Variety's sympathies, individually and collectively, are always with the under-dog, with the less fortunate, with those who are not getting a fair share from life.

The ultimate reduction of dogmas and creeds and tenets—to help others—has become a fixed purpose so strangely embedded into the very marrow of Variety that it is now as widely known as a charitable organization as it is an association for show people.

In 1933 there was in this city what was known as a Showman's Club of Dayton. On November 12, 1936, the club, with a membership of 21, was presented its charter and inducted into Variety Clubs International.

From that day to this the club has supported all civic charities, given donations regularly to all hospitals, to religious orders regardless of creed or color. Individually and anonymously its members have carried on their own good works, doing such things as buying clothing for underprivileged children, providing roller skates for orphans, setting up a feast for a holiday, giving radios and television sets to veterans in hospitals and one member welcomes orphans into his motion-picture show at any time without charge.

The Dayton tent has only recently decided to assume a major project. It has taken over the historic Canby home, a stone mansion situated between the Dayton Art Institute and the Masonic Temple and is turning it into Variety Manor for Emotionally Disturbed Children.

(This enterprise was started off in usual Variety fashion. Fifteen thousand dollars was needed to get the wheels turning. One member went to the bank, signed a note for \$15,000 and the initial money was at hand. No questions asked.)

Variety Manor will have two purposes, (1) a permanent State receiving hospital for emotionally disturbed children, operated at an annual cost of \$100,000 to be financed by the State, and (2) a child-guidance-center clinic operated at an annual cost of \$50,000, to be paid by the Community Chest. Variety assumed the responsibility for the 10-year lease and upkeep of the buildings and the 2 acres surrounding them and is paying \$15,000 toward a \$33,000 charge for renovating the buildings.

The project has been approved by the Children's Bureau of the Social Security Administration of Washington, D. C., the Division of Mental Hygiene of Ohio, the Division of Children's Services for Ohio, the Montgomery County Medical Society, health councils, children's bureaus, and charitable agencies.

There will be facilities for hospitalizing 25 children at Variety Manor.

The beginning of the first Variety Club or Tent No. 1 is an oft-repeated story. Late in the afternoon of the day before Christmas, 1928, people were pouring out of the Sheridan Square Theater in Pittsburgh.

At exactly 5 o'clock the manager of the house went into the theater nursery. He saw a package on one of the chairs. Stepping closer to examine it he saw it was an abandoned baby. Next to it was another package containing five freshly laundered diapers.

A note pinned to the baby's blanket said "Please take care of my baby. Her name is Catherine. I can no longer take care of her. I have eight others. My husband is out of work. She was born on Thanksgiving Day. I have always heard of the goodness of show business and I pray to God that you will look out for her. A heartbroken mother."

Regarding the circumstance as a happy one rather than as a calamity, the 11 men of Pittsburgh, later to band themselves into the first Variety Club, adopted the child as a living symbol, a reason for their existence as a club. The child was named Catherine Variety Sheridan, was subsequently placed with carefully selected foster parents, given a thorough education by Variety, graduated from college with high honors, and is today an accomplished young lady. All the necessary steps have long ago been taken so that only her foster parents know the full story.

Every one of the 39 tent sponsors, directs and pays for a charitable project of distinctive importance. By way of example, at Cincinnati, Variety has a founding home; at Dallas, Tex., a boys' ranch accommodating 100 underprivileged boys at a time; at Boston, the Children's Cancer Research Foundation where hundreds of children have been successfully treated, free; at Los Angeles, a boys' club that has a huge craft shop, gymnasium, and facilities for outdoor sports; at Miami, the Variety Children's Hospital, called the finest children's hospital in the world; in Mexico, an orphanage, and so it goes.

Each year Variety International makes its Humanitarian Award to the man or woman who, in the majority opinion of a large and impartial committee, gave the most outstanding service to humanity during the preceding year. Included among those honored to date with the humanitarian plaque are Father E. J. Flanagan, Dr. George Washington Carver, Sister Elizabeth Kenny, Cordell Hull, and Gen. Evangeline Cory Booth.

Why do the gentlemen of Variety undertake all this charitable work anonymously? No one ever gets—or expects—any individual recognition. What lauds and encomiums stem from Variety's good works comes to the membership as a whole? What actuates them?

There is perhaps a single activity here at the Dayton tent which may aid in understanding.

On the bar of the Dayton Variety Club, which has its quarters in the Moraine Hotel, there is a gallon glass jar. It seems it is always half filled with money, even though it is emptied every week or so. There is some silver in it—nickels, dimes, quarters, and half dollars—to be sure, but there is a lot of folding money in it, too—bills—the currency of the realm, some fives, tens, and now and then, a twenty.

The jar isn't nailed down or padlocked or glued to the bar. Anybody could pick it up and walk away with it. Nobody ever has.

There's something else unusual about this jar, too. There are no placards or other signs or injunctions soliciting anybody for anything. Yet, standing there, mute and even inconspicuous, it gets a great deal of attention from Variety Club members. No one is applauded if he puts in a \$20 bill. There are no wry or accusing looks if one falls to favor it with any notice at all.

To members of the Dayton Tent, No. 18, the glass jar represents the way to untainted charity. Neither the gift nor the giver is ever profaned by the expectation of public or private thanks. The glass jar is a powerful reminder to Variety members that there is need in the world for their liberality, kindness, their good will, tolerance, and love and pity. The money goes to Variety's heart fund.

That's as close to an answer as anyone will ever get when you put the question "Why Variety?"

On the back of the membership card which every Variety member carries is a two-stanza verse titled "Creed of Variety."

"Good fellowship means when accounting
Man's worth when his busy life ends,
Not by dollars and cents do we judge him
But by number and worth of his friends.

Variety claims you as a brother,
Be loyal through thick and through thin.
When on lists of life's lasting friendships
Be sure to count each member in."

Address of Hon. Harris Ellsworth, of
Oregon

EXTENSION OF REMARKS
OF

HON. LOWELL STOCKMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to have included a very fine speech by Congressman HARRIS ELLSWORTH, which was recorded for use at the Jackson County Republican picnic, July 24, 1951. The greetings brought to my fellow Republicans on this occasion by Mr. ELLSWORTH are very worthy of every thinking person's careful consideration. Not only does my good friend and colleague point out the great difference in achievements of our two foremost political parties, but he conclusively points out how the Republican Party in the present day issues stands for a free representative government with freedom for the individual. It is recommended reading for all of us who are determined to maintain our way of life.

Greetings, fellow Republicans; even though I cannot be with you in person on this occasion, I am very pleased to bring you a recorded word of greeting and a discussion of the issues of the day.

There is a well-known and much-used formula for the preparation of a talk by a Republican to a group of fellow Republicans. The general idea is to condemn everything done by our opposition, the Democrats, and to point with pride at the achievements and policies of our own party. I have a world of ammunition from which I could easily put together a talk along those lines. I could give you facts and figures to prove that the present administration is the most outrageously spend-thrift one in the entire history of our country. I could point out that the civilian functions of our Federal Government now cost more than 30 times the total cost of such services 25 years ago. I think I could

easily prove to you that the present Democratic administration has calmly looked the other way in the presence of more treason, graft and corruption than we have ever seen in high places in this country. I could tell you the story of the administration's diplomatic failure in the Orient, and I could dwell at some length upon the fact that although we have appropriated more than \$100,000,000,000 for the national defense during the past 5 years, we were told at the outbreak of the war in Korea that we were almost without armament.

Then I could with considerable pride point to the efforts of the Republicans in Congress. We have consistently fought for economy in Government and achieved savings running into many billions when we controlled the Congress in 1947 and 1948. That Congress, you will remember, is the only Congress since 1932 which balanced the budget for two successive years.

The Republicans in Congress have done a good job—a provably good job. The Democratic administration, particularly during the years since World War II ended, has done a very bad job—a provably bad job.

Such a discussion would doubtless be of some political value, but that type of story is being told repeatedly and is being unfolded to you as you read and hear the news and comment upon the events of the day. In my opinion, however, it is far more important that we Republicans have a better understanding of the present world conflict and of the issues which now distinguish our two great national political parties. This is no time for mere criticism. We must grapple the basic issues which divide the world and divide our country.

We are living in a time of the greatest human conflict ever seen on this earth. I was about to use the term revolution, but that word does not apply since it means a revolt from something. Today's conflict instead represents the head-on clash between two systems of government.

Throughout all human history, individuals or groups of individuals have sought positions of power over their fellow human beings. Throughout all the ages whenever such power has been achieved, it has been abused, and when unbearably abused, it has been overthrown. There have been oppressors with various titles: kings, emperors, dictators—but the oppressed, usually with great sacrifice and pain, have reasserted their rights and the dignity and freedom of the individual has been restored.

Until our time, supreme power of the few over the many, for example, that of a king over his subjects, has been localized, that is, limited to certain areas. But with the end of World War II, the masters of the Russian people sitting in the Kremlin began to believe that their dream of world conquest and control might in fact be accomplished.

The formula used by the Russian Communist dictator is as old as time. He merely recognizes the fact that the teeming millions of the world have the normal human urge for the improvement of their lot, so the Communist holds out hope to them in the form of a supposedly new political philosophy. He trades heavily upon the term, "the people's government." He trades on the universal dream of something for nothing with the idea of taking from those who have and giving to those who have not. His is a brand of imperialism of dimensions which staggers the imagination. There is, however, nothing new in the Russian dictator's operation except its size. The formula is as old as the earth itself. It enslaves the people by promising them benefits and rules them when they have become slaves.

Right now we say we are fighting communism, but what we really mean is that we are fighting the politically imperialistic effort of the Russian dictator. The propagandized glories of communism only represent the

little understood bait used to lure the people into slavery. Briefly stated, communism is a theory of political and social organization, the essential feature of which is central government control of all human activities, but especially of economic activities.

Socialism is merely communism without the vulgarities of violence, revolution, and blood. It has a softer doctrine, attractive to the intelligentsia because of its idealism, but socialism is essentially the same as communism in its effect so far as the individual is concerned. Socialism represents control of the individual by the State, robbing him of his freedom and his individual dignity, just as communism does.

No matter how beautiful the words and the logic, either a Socialist government or a Communist government is government of the many by a very few with those few possessing supreme power.

On the other hand, however, the one system of government which has actually provided for the people the benefits claimed by the proponents of socialism and communism is a government such as ours which is actually controlled by the people through their freely elected representatives and executives. Contrary to the loss of individual freedom in a Socialist or Communist state, individual freedom and dignity is enhanced in a free, representative government. A weakness of our free system happens to lie in the quality which is its greatest asset—freedom. Unfortunately, a free individual is as free to act foolishly as he is to act wisely. So it is with free governments. The people in a free state are at liberty to vote themselves into bondage. Abraham Lincoln recognized this fact and stated it with great clarity when he said, "If destruction be our lot, we must ourselves be its author and finisher. As a Nation of freemen, we must live through all time or die by suicide."

It seems to me that under the present Truman administration our great free country may in fact be headed for destruction. Many of our most intelligent citizens are now advocating numerous Government actions, which while seeming to be idealistically beneficial for the people are in fact steps toward statism, and if enacted would curtail freedom. The administration would like to place the medical profession of our country under Government control. They want to place the economic life of our country, region by region, under complete Federal control by means of the control and operation of natural resources by means of so-called valley authorities. The administration leans heavily toward the idea of the Government owning the very homes in which we live. It seeks the right to build and operate manufacturing plants. In fact, the tendency toward socialism of the Truman administration is real and unmistakable.

The governments of many of our allies who are supposed to be fighting with us against world conquest by the Kremlin are themselves socialistic. The United Kingdom is frankly so, France is leaning heavily in that direction, and the free system of government as we have known it here does not exist in fact in many of the other countries.

How then can these governments of the so-called free world carry to those hundreds of millions in the perimeter countries, who represent the balance of power in world control, a convincing story in opposition to the religion of communism as promulgated by the Kremlin and its satellites? How can we sell such perimeter countries as Korea, China, Burma, Malaya, the Philippines, India, Iran, Iraq, and other peoples away from the idea of embracing militant communism when we ourselves, as our version of the true and better way of life, offer only a dilettante brand of the same thing; namely, socialism. The world is roughly divided into three population groups with somewhere near equal population in each. The Western World, or the

so-called free world, has nearly 800,000,000 people, the Kremlin controls nearly the same number, and the perimeter, or undetermined countries, nearly as many.

The United States is admittedly the strongest power in the free world. It is the leader. Our philosophy of government and our system of government is admittedly successful. We have something to sell not only to our friends and the neutrals, but ultimately even to our present enemies. We have something to sell, that is, if we maintain our free representative system intact and advance our ideas with vigor and integrity.

The importance of the philosophy of the Republican Party, therefore, becomes startlingly apparent. Our forthright opposition to socialism, our concept of free government under the Constitution, our concept of a free and vigorous economy, our insistence upon the freedom and dignity of the individual, are vital and living things. They represent our political creed—the principles of government for which the Republican Party stands. These principles are exactly opposite to those of socialism or communism. They offer a genuine proven way under which oppression by a dictator and his gang cannot exist. How futile and foolish we must appear to the Communist world and to those areas which are presently the target of aggression by the Communists when we offer as a substitute, and as our way of government, only a less dynamic version of the same thing the Communists are advocating.

The United States must lead the fight against communism by boldly advocating the principles of free representative government with its guaranty of freedom for the individual. The Republican Party stands positively and uncompromisingly for that program. We can, by the triumph of our set of principles, not only prevent our own destruction as a free government, but in so doing we can take a real program and real policies in opposition to communism to the rest of the world. Our failure to promote and win success for these ideals in our own country will not only result in the loss of freedom here, but will inevitably forecast the final world triumph of the schemers in the Kremlin.

The Public Should Know

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BROWNSON. Mr. Speaker, pending before the Committee on Ways and Means are four bills which would remove the secrecy provisions in the public welfare section of the Social Security Act.

There are many reasons why one of these bills should be reported out of committee, for action by the House, and I believe the following editorial from the Washington (D. C.) Sunday Star of September 23, 1951, documents fully the most compelling one.

In these days of ever-increasing governmental costs, I do not believe there is any valid reason why the public should not know how its money is being spent:

THE PUBLIC SHOULD KNOW

A special session of Indiana's Legislature has been called for this week. Its purpose is to find some way out of the predicament in which the State finds itself as a result

of defying the Federal Government's insistence on secrecy as regards the public relief rolls.

When a State accepts funds from the Government, matching on a 50-50 basis its own expenditures for direct relief to the indigent dependent children, unemployables and others, the State must abide by conditions laid down by the Government. One of these conditions is that the State must "provide safeguards which restrict the use or disclosure of information concerning applicants and recipients [of relief] to purposes directly connected with the administration." Last summer Indiana's Legislature amended its own law, eliminating the secrecy provision, and the Federal Security Administration cut off Federal relief grants.

Indiana has taken its case to court. There are legislative proposals in Congress designed to uphold Indiana's stand in the matter and requiring the payment of Federal funds. A number of other States are closely watching the outcome, for there is considerable public sentiment—aroused by a few relief scandals—behind the movement to end the secrecy attaching to relief rolls. The Senate, reflecting this sentiment, has approved one rider on a tax bill by a vote of 38 to 30, which would have the effect of leaving to the States the decision on publicity for relief rolls. The House has not yet acted on this rider, and other bills are pending which may come to a vote.

The secrecy provision is based on the theory that there is some sort of stigma attached to being on the relief rolls. And there is the possibility—though it seems remote—that public access to the names on relief rolls would facilitate their use for purely political purposes. But both of these theories, and others which have been advanced in support of the secrecy requirement, should be challenged. For there is another principle at stake which is more important than any of these suppositions. That is the right of the people to know how relief money is being spent and to whom it is being paid. For it is the people who put up this money. It is their own money. It should be contrary to sound public policy to clothe in secrecy the expenditure of huge sums to public funds, paid out to support citizens.

There have been a number of scandals in connection with public relief, which showed that people were on the rolls who had no legitimate right to be there. But, in general, the absence of scandal has been a noteworthy feature of public relief administration. Perhaps the secrecy has helped to cover up cases of maladministration of relief funds. Be that as it may, we have gone so deeply into the field of public relief, the principle is one that has become so firmly established and the money involved has reached such great proportions, it is high time that the whole matter be re-examined.

The people who are taxed to support public relief have rights that are more persuasive than the theory that to reveal the names of relief beneficiaries is to embarrass them.

No More Fallbrook Water Cases

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. YORTY. Mr. Speaker, I should like to direct attention of the House to the following excellent editorial from

the Los Angeles Times of Friday, September 21, 1951:

NO MORE FALLBROOK WATER CASES

"For no practical reason whatever"—In such condemnatory terms has an aroused congressional committee described the filing of Federal suits aimed at the private water rights of some 14,000 owners in the Fallbrook area.

The strong language used by the committee, headed by Democrat CLAIR ENOLES, is added proof of the indefensible nature of the "confiscation" suits filed by the office of United States Attorney General J. Howard McGrath and exposed by the Times in May.

Strong language, however, is not enough, and the committee knows it.

TWOFOLD PURPOSE

Specific legislation has been introduced in Congress this week to accomplish a twofold purpose—first, to solve the specific problem of division of water in the Santa Margarita River in the Fallbrook region and, second, to prevent a recurrence of such a seizure attempt by power-seeking Federal officials.

The committee's report, following 2 days of hearings at Fallbrook August 13 and 14, severely criticized the effort of the United States Attorney General to seize the water rights under a doctrine of "paramount" and "sovereign" rights.

It declared the local people and the Federal taxpayers have been put to great provocation and expense to serve no useful purpose.

This report and the accompanying effort to pass remedying legislation should convince Attorney General McGrath and his assistants, William A. Veeder and A. DeVitt Vanech, that they made a costly and inexcusable blunder in attempting to grab the water rights of citizens whose titles in many cases went back almost 100 years.

QUESTION TO BE FACED

But, judging from previous defiance and attempted "face saving" they probably will not.

In case the Attorney General, in spite of the overwhelming proof that the confiscation suits are unjustified, fails to take corrective action, a very practical question must be faced.

Will Attorney General McGrath, pending congressional action, continue to serve complaints and summonses on the farmers of the Fallbrook area?

This is vitally important, because it is recognized that it may be virtually impossible to get a congressional enactment on the Fallbrook matter during these final, hectic, rushing days of the congressional session. Such a failure would not denote a lack of interest; it simply may not be possible to comply with all the rules of procedure and get anything done before adjournment.

In the event that Congress cannot act now, the issue would go over to the session opening in January.

But what happens in the meantime?

Every single complaint that is filed means heartache, worry and expense for some family along the Santa Margarita River. The more filings there are, the more worries and expenses there are, too.

It seems almost as ridiculous as the suit itself for the Attorney General to keep process servers hastening around the country serving complaints which certainly are going to be nullified by congressional action.

A GESTURE OF DEFIANCE

It is safe to say "certainly" because every Congressman who has come in contact with the Fallbrook suits and studied them has become aroused against the unprecedented action of McGrath and his aides. When the corrective Fallbrook legislation gets on the floors of the House and the Senate, and is explained, there can be no doubt of its passage.

Hence, any continuation of the serving of complaints will be simply a gesture of defiance and a wanton waste of the taxpayers' money.

The Congressmen most familiar with the situation should exact a promise from Attorney General McGrath to hold in abeyance the filing of further complaints until Congress has expressed its decision in the matter.

Such a course is needed, in addition, because the deadline given defendants in the case for answering the suit is November 1. Unless there is an extension of time or a truce in the serving of complaints, hundreds of persons will be compelled to hire counsel or face forfeiture of their rights to the Federal Government.

Congress needs to get tough about this. The committee itself says 90 percent of the defendants should not under any circumstances be sued and that there is no earthly reason for them, to be named as defendants.

McGrath and his underlings can be made to conform to a reasonable and realistic program. They are, after all, subject to the authority of the representatives of the American people who hired them.

The Fallbrook case already is bad enough. It must not be allowed to get worse.

What the Farm Implement Industry Means to You

EXTENSION OF REMARKS OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. CHIPERFIELD. Mr. Speaker, as a Member of Congress from the Nineteenth Illinois District, I represent both a great agricultural area as well as industrial. It might be said to be the farm-machinery capital of the world. A large proportion of the people in my district are dependent for their livelihood on this vital industry. When it prospers the cities where the plants are located prosper. When they are hurt, their employees suffer.

For example, there is not a citizen in my home town of Canton, Ill., who does not know that when the Canton Works of the International Harvester is running full capacity, Canton prospers. When employees are laid off and the plants shut down, it seriously affects the entire community. The same is true in Rock Island, Moline, and East Moline where International Harvester, John Deere, J. I. Case, and the Minneapolis-Moline farm-equipment plants are located, and other communities similarly situated in my district.

Not only those directly connected with the farm equipment industry are affected, but the consuming public as well. If the plants are not permitted to manufacture the required amount of farm machinery to produce the food and fiber this Nation needs for daily life and for the defense effort, we may be faced with the bitter fact of rationing and its accompanying scarcities we all so sadly remember.

While I fully realize in our mobilization program there is bound to be a shortage of vital steel for civilian industry, certainly when our food and fiber

supply is almost wholly dependent on farm machinery and their accompanying repair parts, in this mechanized age, this important industry should be considered just as an essential part of our defense effort as the manufacture of arms, ammunition, and implements of war.

The farm-machinery industry actually uses only 3.8 percent of the total steel produced. But what is happening to the farm-equipment producers so far as steel allocation is concerned? After a careful analysis of requirements for farm machinery for next year, the Agriculture Department requested 690,000 tons for the last quarter of 1951 but were allotted only 528,000 tons. If that level is continued it means in 1952 they can only produce 65 percent of the farm machinery requirements, if not less.

There is a grave possibility that next years allocations will be even smaller, in spite of the fact, if the food and fiber goals are to be met, according to the recent Nation-wide farm-to-farm survey of the Department, it will require an increase in production of new farm machinery of 115 percent over 1949, and 120 percent over 1949 in the production of repair parts.

What does this mean to the farmers with their sons being drafted and the existent manpower shortage due to labor going into defense plants? Unless they can get the necessary machinery to produce the required food and fiber, they simply will not be able to meet the necessary goals although willing to work longer hours.

What does it mean to the laboring man? If this industry does not receive a sufficient allocation of steel to run full capacity, men and women employed in those plants will have to be laid off.

I have already mentioned what it means to the consumer. The threat of scarcity and its accompanying hoarding and higher prices is hovering in the background, ready to pounce on every citizen of this country. We must not let such a situation develop.

We have been bountifully blessed with good crops in this country for the last few years but some of our reserves are at a dangerously low level. A drought year or two could wipe out these reserves. You cannot gamble with the food and fiber production required for our people here at home and our men abroad. To meet our food and fiber requirements is essential not only for our defense effort but our economy as well.

Congress is well aware of this fact. Both the House and Senate have set up committees to study this problem and I have repeatedly urged that the necessary action be taken. I have also called this problem to the attention of Secretary of Agriculture, Mr. Brannan, Director of the Mobilization Board, Mr. Wilson, as well as National Production Authority officials, all of whom have the authority to determine to whom the steel production should be allocated.

It seems to me that all of us, the consumer, the farmer, the merchant, the manufacturer and the employee, and you my colleagues, should especially urge Secretary Brannan, of the Agriculture

Department, who acts as the claim agent, charged with obtaining sufficient steel for this industry, to immediately recognize the urgency of this problem and take the necessary steps to correct this situation.

You cannot turn on and off production of farm machinery like a water faucet. It requires lead time and planning ahead. It takes from 9 months to a year to get into production and final distribution of many farm equipment items. Moreover, as everyone knows, farming is seasonal, and unless necessary farm machinery is on hand at the time needed, a whole year may be lost.

When an insufficient amount of steel was furnished for farm machinery production in the early 1940's, we all remember the rationing and scarcities that resulted. We did not catch up with the machinery requirements until 1947.

While we may be in fair shape right now, these machines deteriorate and new ones will be required. This is not based on speculation nor to keep an industry in full production, but upon the requirements as established by the Agriculture Department. Our population and food requirements have increased substantially in recent years. The present goal for agriculture production is higher than any production level we have ever required. It is approximately 44 percent higher than the 1935-39 average production level. We should not let history repeat itself and have to bargain under the counter for scarce items, if obtainable at all.

I include, as part of my remarks, a very pertinent editorial from the Moline (Ill.) Daily Dispatch, of September 20, 1951, which throws much light on this subject:

FARM EQUIPMENT PLANTS REFUSED ENOUGH STEEL

There's a controversy raging in Washington over the allocation of steel to the farm implement industry. Washington being a multi-ring circus of controversies, this one has received scant public notice.

But for the people in the Middle West—and particularly in the quad-city area—the issue is of tremendous consequence.

Here's the situation:

The National Production Authority, the ruling body on the distribution of scarce raw materials, is cutting down the allocations of steel to the farm equipment industry. The allocation during the third quarter of this year is 673,000 tons. The allocation during the fourth quarter is 528,000 tons. The reduction amounts to about 50 percent of 1949 allocations.

This is being done despite a recent detailed finding by the Department of Agriculture that "farmers now need 15 percent more new farm machinery than they receive in 1949 and they require 20 percent more repair and replacement parts than were available to them in the same period."

And, in another Department of Agriculture document, there are the following statements:

"The 1951 goal for agricultural production is higher than any production level we have ever achieved. It is 44 percent higher than the 1935-39 average production level and 4 percent above last year's production. The goal was determined by Department of Agriculture specialists after intensive study of civilian, military, and export requirements."

Food and fiber are indispensable to a strong and healthy nation. They are basic

matériel in military preparedness. And farm products are instruments that win friends and promote sound foreign relations.

It is obvious, that is to all but the National Production Authority, that our economy depends upon American agriculture.

This situation doesn't make much sense. One governmental agency makes a case for the expansion of the farm industry as part of defense mobilization, and another agency cuts down the one major raw material, steel, needed for that expansion.

And this is going on at the same time the NPA increased the allotment of steel to the automobile industry from 1,879,000 tons in the third quarter to 3,464,000 tons in the fourth quarter.

Figure that one out, if you can.

The implications of the issue to us locally are obvious. A continuing reduction in steel will mean a corresponding reduction in employment in this area. The old story of no steel, no jobs is well known.

Smaller payrolls mean human inconvenience and suffering. They mean smaller buying volume. And so it goes.

From the facts as we know them, it would seem logical for the people of the Middle West to make their voices heard with the NPA. The allocations are already set for 1951, but allocations for the first quarter of 1952 are not to be set until October 8.

If the arguments by the Department of Agriculture are insufficient to convince the NPA that steel allocations to the farm equipment industry should be increased—not decreased—perhaps the added weight of opinion from the grass roots will help.

This is one issue on which the farmers, labor, and industry should be able to get together. It affects all of their livelihoods.

Aims and Principles of Federation of Americans of Central and East European Descent

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. KEATING. Mr. Speaker, I wish to take this opportunity to call attention to a statement of aims and principles which was issued to govern the activities of the Federation of Americans of Central and East European Descent. This inspiring document sets forth the basis for future action on the part of these 20,000,000 loyal Americans, with emphasis on the expansion of the underground movements behind the iron curtain and a return to the population distribution before Russian conquest in the event these unhappy countries are liberated.

Under leave to extend my remarks, I wish to include this statement:

STATEMENT OF AIMS AND PRINCIPLES OF THE FEDERATION OF AMERICANS OF CENTRAL AND EAST EUROPEAN DESCENT ADOPTED AT THE BOARD OF DIRECTORS' MEETING, AUGUST 17, 1951, WASHINGTON, D. C.

1. To exert every effort to defend the Constitution of the United States of America, preserve and promote our American way of life. To engage and exercise every measure of effort and resource toward the decisive defeat of Russian Communist imperialism

which in its venomous essence poses a mortal threat to the moral and intellectual Christian foundations of western civilization in which is posited our priceless American way of life.

2. To coordinate and implement the common and mutual activities of the numerous member organizations represented herein within the scope of a unified political action oriented toward the systematic realization of this basic objective and the simultaneous world-wide extension of the spiritual and material blessings engendered in our Bill of Rights, the formula of self-determined freedom, and the Atlantic Charter.

3. To serve and assist through such unified political action the appropriate agencies of our Government and various collaborating American anti-Communist organizations in the dissemination of authentic information on Soviet Russian tyranny and atrocity behind the iron curtains of Central Europe and Asia, in the promulgation of necessary steps aimed at the formation of a global network of anti-Communist alliances, notably within the Soviet empire, in the formulation of political objectives adapted to the historic requirements and aspirations of the peoples available as our natural allies, and in the persistent counteraction of sinister Communist and other antidemocratic influence and groups in our domestic environment.

4. To promote the security and welfare of the United States by insisting upon policies which are shaped in terms of a scrupulous and forthright observance of the sacred principles embodied in the aforementioned monuments to the liberal human spirit and which will insure lasting peace to all the nations of the world, including those of Central and Eastern Europe, numbering approximately 150,000,000 people.

5. To urge our Government to seek the restoration of sovereign rights and self-government to the nations which have been forcibly deprived of them and to secure the exercise of the fundamental right of self-determination for those nations which have not in the past been accorded this right, particularly in the countries of Central and Eastern Europe.

6. To impel, on the happy occasion of the liberation of all peoples from the yoke of Soviet Russian imperialism, governmental action to fulfill the guaranty of free and unfettered elections in these countries under the supervision of the United Nations and with strict regard for conditions of population distribution existing prior to the institution of the Russification policy bent on the extinction of the national identities of the respective enslaved countries.

7. Recognizing the twofold need, viz: ridding all countries involved of implanted Soviet influence, together with ultimate solution of territorial boundary disputes, it is urged that strict priority of action be extended to the former consideration.

8. To abet forcefully the realization of the preceding objectives and concomitantly contribute to the prevention of a generally disastrous world war III through the vigorous advancement of psychological warfare, with particular emphasis on substantial improvements in the status and function of the Voice of America, resounding proclamations of American friendship and support of the liberation movements simmering throughout the wide peripheral European and Asiatic area of non-Russian peoples imperialistically subjugated in the Soviet empire, and demands for true representation of these enslaved peoples in the councils of the United Nations.

9. To secure maximum and unstinting aid on the part of our Government for the manifold operations and the potentially unlimited expansion of the underground movements behind the iron curtains of Europe and Asia.

There Are Giants in the Land

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Joseph Alsop from the Washington Post of September 16, 1951:

THERE ARE GIANTS IN THE LAND

(By Joseph Alsop)

A few days ago, the weekly meeting of the Armed Forces Policy Council—the statutory committee of the top men in the defense establishment—seemed to be starting as usual. But when all the Secretaries of Departments and Chiefs of Service Staffs were in their hierarchical places George C. Marshall spoke from the head of the council table.

He was, he said, laying down his heavy burden at long last. He had asked the President to relieve him as early as last March. He had only agreed to stay on until the completion of the Japanese peace treaty, a risky corner to turn. He was glad to go, and glad to pass on his burden to his successor, whom all would warmly support. And so, motioning Robert A. Lovett into the Secretary of Defense's chair, the great old man rose, shook hands with his associates and quietly left the council room and public life.

This quiet departure, so modest yet so deeply moving, affords an excuse for saying something that is not news, yet needs to be said. In these dark times, it is only too easy to notice and to write about only what is depressing and squalid. At home, the fundamental deficiencies of American political life are now under attack, as never before in the lifetimes of any of us, by a shabby crew of adventurers and opportunists. Abroad, dark clouds ring the whole horizon, and at any moment the fearful storm of war may break over the world. In these circumstances, the sane, healthy, and hopeful things sometimes compete too weakly for attention with the lurid, the horrible, and the menacing.

To true up, then, it is good to take the occasion of General Marshall's retirement to celebrate the fine thing, and more particularly the fine men, that American public life has produced in these last years.

In one of his Princeton lectures, George Kennan paid tribute to such giants of our past as John Hay, Elihu Root, and Charles Evans Hughes, as being men who embodied that pattern of integrity of mind and spirit, moderation, and delicacy of character, irreproachable loyalty in personal relations, modesty of person combined with dignity of office, kindness, and generosity to all . . . who were weaker and more dependent, which constitutes the finest (American) contribution to the to the human species and comes close to . . . our national ideal and genius."

Kennan need not have looked backward to find such men. One of them, in a superlative degree, was Marshall himself, the towering soldier, the masterly administrator, the leader of granite character and unimpeachable integrity. If his political judgments were not always wise, the fact may be explained by another passage in Kennan's lecture, where he quotes Gibbon's remark on the great Byzantine general, Belisarius: "His imperfections flowed from the contagion of his times; his virtues were his own."

In the case of Marshall, he had been formed in the rigid antipolitical tradition of the old

Army. What is remarkable about Marshall is not that he was at first somewhat at sea in handling political issues of the war, but that he went on to become a great Secretary of State.

Nor is Marshall alone in belonging to this great American pattern that Kennan has so well described. The Army can also boast of Gen. Dwight D. Eisenhower, a very different man from Marshall, yet a man great enough to lift up the spirits of a continent and promise leadership to a people. And among the civilian administrators, how many there have been in these last years who would be the boast of any country—among the dead, Henry L. Stimson, the dedicated and destroyed James V. Forrestal, and Harry L. Hopkins, to whom history will be more just than his contemporaries, and among the living, such men as Marshall's worthy successor, Robert A. Lovett, John J. McCloy, and W. Averell Harriman, to name only three.

Think also of what these men and others like them, Charles E. Wilson is a new addition to the list—have accomplished in these last years. Think how the menace of Nazi tyranny and Japanese conquest was first hurled back and destroyed. Think how, when the war ended, the new menace of Soviet imperialism, left with no balancing challenge by the collapse of its evil competitors, threatened to flow out over a weakened and enfeebled world. Think how this menace, too, has been confronted, halted, and, we hope, turned back.

Remember that these men did these things, not alone, but as the chosen agents of the American people, with the power of the American people as their strength and their resource. So long as the American people do not change, and so long as the American people can find such agents of its will, what is cheap and squalid at home, what is threatening and dark abroad, will be defeated in the end.

Make Newspapers Pay Their Way

EXTENSION OF REMARKS

OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MURRAY of Tennessee. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include an editorial entitled "Make Newspapers Pay Their Way," published in the Cleveland Press of Cleveland, Ohio, Friday, September 21, 1951:

MAKE NEWSPAPERS PAY THEIR WAY

Postal income is now running more than \$500,000,000 a year behind expenses. The House of Representatives bill raising postal rates will add only about \$120,000,000 to this income—around \$127,000,000 after 2 years.

But right after the House refused to boost postal rates to an adequate level, it voted to hike the pay of postal employees. This is justified but it will add some \$250,000,000 a year to the Post Office budget.

Net result. Annual deficit of around \$650,000,000, instead of \$500,000,000.

It's like the mountain climber who slid back two steps for every one he took upward. He wound up in a hole.

Biggest bone of contention in the postal-rate bill is the charge for second-class mail. That's newspapers and magazines. With them, the postal service has been running up its biggest deficit—more than \$200,000,000 a year.

First-class mail and air mail pay their way, but no other classes. The low rate for newspapers and magazines amounts to a Government subsidy. Most of them complain constantly about Government spending.

Here's a legitimate place to knock off some of that spending.

The Post Office Department asked for an increase of 100 percent in second-class rates. The House committee proposed a 60 percent increase, spread over 3 years. The House cut this to 30 percent.

Even the Senate has dragged its heels on an adequate postal rate program. The Senate bill proposes to add \$100,000,000 to the department's income. But the Senate, too, raises newspaper mailing rates only 30 percent over 3 years, although it proposes to hike magazine rates 60 percent.

Second-class mail, and all other classes of mail, should pay their own freight—and on an even basis for all users.

Some publishers have been lobbying against higher postal rates.

But a lot of papers—including this one, over a long period—want no part of a Government subsidy.

We like the attitude of the publisher of the *Colfax* (La.) *Chronicle*. In reply to invitations to protest higher second-class rates, this publisher wrote: "Ain't gonna do it."

"We don't think everybody's tax money should be used to mail our newspaper," he said.

That goes for this newspaper, too.

West Bitter Haven for Red Refugees

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Michael L. Hoffman, from the New York Times of September 19, 1951:

WEST BITTER HAVEN FOR RED REFUGEES—MANY JAILED LIKE COMMON CRIMINALS AFTER ESCAPE FROM COMMUNIST COUNTRIES—UNITED STATES POLICY IS CONFUSING—TREATMENT DIFFERS ACCORDING TO LOCALITY—LOSS OF USEFUL NEW ELEMENT IS DEPLORED

(By Michael L. Hoffman)

GENEVA, September 13.—If a person has the nerve, stamina, and luck to escape across the Czechoslovakian border into United States occupied Germany, he stands a better than 2-to-1 chance of being jailed promptly like a common criminal.

Along the length of the iron curtain, where it crosses Europe, it is only in the relatively minuscule area of Trieste that United States authorities take direct responsibility for receiving refugees and trying to help them on their often rough introduction to what they have been told is the free west. And in Trieste, whether for lack of funds, space, or outlets, the overwhelming majority of refugees face nothing better than the prospect of long months in a crowded camp from which no one can show them the road to freedom.

Elsewhere, once the refugee has spent a varying length of time in a German or Austrian jail, he must clear himself of the criminal charge of crossing the frontier illegally. If he is lucky, he may be able to communicate with the International Refugee Organization, in which case, if he is luckier still,

he may be found eligible for resettlement overseas.

Then starts the long wait for visas, transport and sponsors in the receiving country. Only a few of the new refugees ever register with the IRO, which is going out of business in a few months.

NOT GETTING MUCH HELP

After many months of pious pronouncements that "no one seeking political asylum is refused protection by the United States," repeated warnings of the dangers inherent in this situation by responsible officials and sincere efforts of United States authorities in Europe to get a sensible policy established, the treatment of the new refugees from communism is confused and contradictory. They are not getting much help.

Theoretically, the United States Government has retained jurisdiction over illegal border-crossers who claim to be political refugees. There are such persons who are criminals by western as well as Communist standards—thieves, murderers, black marketers, and the like. Nobody worries much if these persons are left to the mercies of German or Austrian courts. But some procedure must be in force to weed them out from the genuine political refugees.

Because every person who crosses the frontier of the west clandestinely is a lawbreaker, all who escape get treatment more consistent with the presumption that they are criminals than with the presumption that they are political refugees. Few of them are guilty of anything more than crossing a frontier that, on the Communist side, has become more like the no man's land between two opposing enemy lines than the frontier of a civilized nation supposedly at peace with its neighbors.

The fact that, technically, they are law-breakers has been permitted to dominate the procedure instead of the politically more significant facts that they are invaluable sources of information, bitter enemies of communism and, in most cases, valuable workers, technicians, or farmers who would do credit as immigrants to any western nation.

DIFFERENT PROCEDURES BARED

A recent private survey of the procedure in nine German sections along the frontier revealed that United States officials responsible for the treatment of refugees were following different procedures in each locality. These officials all were under the United States High Commissioner for Germany. Among United States occupied Austria, Germany, and Trieste there never has been any consistency of principle or practice in the treatment of refugees.

In one district, a United States judge was sentencing every illegal border crosser to 15- to 30-day jail terms. He was following the letter of the United States law for the zone, which made border crossing illegal. In another locality, the United States resident officer examined every new arrival, and sent him to the nearest court. Many border-crossers are kept in common jails for several days before trial.

In another locality most of the new refugees are turned over promptly to German authorities despite nominal United States responsibility for such cases. Some of them subsequently get hearings before the United States resident officer, who may release them, set bail for their release, or send them to a German jail to await further processing. Refugees seldom have money for bail.

Amid this confusion of practices, both Army Counter-Intelligence and Military Intelligence Service, separate organizations that often compete or work at cross-purposes, try to get what information they can out of the new arrivals, and sometimes keep them in jail for weeks for questioning. The standards of most of these jails are low. The United States takes no responsibility for the health or care of the new arrivals, who are

crowded in with tramps, prostitutes, and the day's haul of common criminals.

TOTAL INFLUX KNOWN

Nobody knows exactly how many refugees are filtering across the barbed wire and mine-studded frontier of communism, facing the west. Nobody is responsible for finding out. J. Donald Kingsley, Director General of the International Refugee Organization, who consistently has warned Western governments of the existence and seriousness of the escaped-refugee problem, probably is in a good position as anyone to estimate the flow. Mr. Kingsley gives this estimate for the last 4 months.

For Germany, Austria, and Trieste, 1,200 to 1,400 a month; for Greece, 500 a month.

Only a small percentage of the refugees register with IRO, and many never show up at the check points because they know it usually means jail. That the number who are missed in Germany, for instance, is substantial is suggested by the fact that as far west as Belgium, three persons on an average day register with the IRO without having been in contact previously with any official German or Allied body.

Because the treatment they receive seldom encourages them to make themselves known to western authorities, much valuable intelligence data undoubtedly is lost. Those who are arrested, or who present themselves voluntarily, according to responsible United States officials, are easily the best source of information about conditions behind the iron curtain—better than all the United States embassies.

This correspondent has just examined a file of 20 interviews with new arrivals. They contain information ranging from the size and armed strength of the underground army of deserters that is growing in Poland to detailed accounts of the private lives of Rumanian Communist bosses.

From this raw material, not only the Voice of America, but all of the armed services draw much, if not most, of the knowledge needed in the battle to keep resistance to communism alive in the suppressed peoples around Russia's rim.

The files also contain innumerable curious points about life under communism. For instance, gasoline in Rumania is reported to be cheaper than in the United States, while a pound of coffee costs nearly half of the average worker's monthly salary.

However, once the refugee has been tapped for his contribution to the West's knowledge of his homeland, he is told, figuratively and sometimes literally, that the West has no further interest in him. In the last year, the IRO has been authorized to accept the new refugees for resettlement. But the standards for immigrants are severe in all countries. In most, they are set by nationality laws that exclude most central Europeans, or by economic considerations that restrict entry to skilled workers of a few professions.

In the absence of an international resettlement program, the refugees are left stranded—once they get out of jail—in those sections of Western and central Europe that already have too many people, too little work and too many problems.

Plans are under consideration for a large-scale migration program for Western Europe that, by relieving the population pressure, would make absorption of the refugees easier. But these plans do not envisage a direct attack on the refugee problem as such. So far, they have not acquired the substantial financial backing that their implementation would require.

MOST ARE YOUNG MEN

Partly because only the hardy can make it, a large proportion of escaped refugees are young men. The most frequently heard desire expressed by these young persons during the first hours of sojourn in the West is to join the United States Army and fight

Communists anywhere, preferably in the land from which they just came.

The United States Army is authorized to accept 2,500 recruits of non-United States nationality. Apart from the fact that this number is too small to make a dent in the refugee problem, the screening process is long, complicated, and poorly adapted for applicants who can prove virtually nothing about their past—for obvious reasons.

Nearly everyone who has been in touch with the new refugees agrees that a great opportunity is being lost to the West by not making it possible for more of these young men to become respected members of the western armed forces.

Whether one considers the treatment they receive when they first stagger across the frontier, or the problem of their ultimate resettlement, the conclusion is inescapable that, from start to finish, the policy and administrative machinery of the United States Government (and the western governments in general) is hopelessly unadapted to deal with the new escaped refugees from communism.

They are being shoved into the corners and cracks of a policy that is not designed to deal with their problems and into which they stubbornly refuse to fit. After 4 years of experience, the high-level analysis of the problem and the high-level decisions that alone can bring about fundamental changes in the situation still have not been made. Until they are, officials on the spot can do little but temper the harshness of the letter of the law.

Exportation of Sulfur

EXTENSION OF REMARKS OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. JENSEN. Mr. Speaker, the State Department's action to export one-fifth of our sulfur, which is an essential ingredient of fertilizers, jeopardizes the income of American farmers and the food supplies of American housewives.

According to the Department of Agriculture, commercial fertilizers account directly for about 25 percent of our total farm production. This year fertilizer will be 600,000 tons short of farmers' needs because not enough sulfur is available after exports.

Despite this critical need for sulfur in the United States, the State Department has arranged for about a million tons of our sulfur to be exported, and has given the British most of the say on where it will go.

The United States produces a little more than 5,000,000 tons of sulfur a year, which accounts for 90 percent of the world's supply. Other countries can produce their own sulfur, but they do not do it because they can buy it cheaper from us. To satisfy this foreign demand we are exhausting our sulfur supplies. Known deposits of sulfur in this country will be gone in less than 20 years at the present rate of production.

In the face of these facts, our State Department set up the International Materials Conference Committee on Sulfur last March and made a million tons of our sulfur available to it for distribu-

tion in the world markets during a 1-year period. The British Commonwealth has 5 members on the 11-member committee, while the United States has only 1. Norway, the second largest producer of sulfur, did not become a member of the committee because the Norwegians are too smart to let the British get control of their sulfur exports.

Farmers use about 25 percent of the sulfur we produce. Used in fertilizers it greatly increases crop yields. For example, if the million tons of sulfur which the Truman-Acheson crowd is putting under British control were used in fertilizer, it would produce an estimated additional billion pounds of beef, or 4,000,000,000 quarters of milk, or 125,000,000 bushels of corn. It would increase farmers' income by boosting acreage yield and at the same time make more food available to consumers at lower prices.

The administration should withdraw immediately from all of its deals to dispose of sulfur at least until the needs of American farmers are met. It was Mr. Truman, Mr. Acheson, and Mr. Brannan who got us into this sulfur mess, and now it is up to them to get us out of it.

1950 Profit Rates Higher Than 1940's

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article taken from the New York Times for August 13, 1951, entitled "1950 Profit Rates Higher Than 1940's."

1950 PROFIT RATES HIGHER THAN 1940'S—DESPITE GREATER TAX AND COST, ONLY 3 OUT OF 25 INDUSTRIES FAIL TO SHOW INCREASE—ALSO EXCEED 1949 FIGURE—FTC REPORT SHOWS EARNINGS OF LARGER COMPANIES NOW LEADING SMALLER ONES

WASHINGTON, August 12.—Despite higher taxes and costs, profit rates in all but 3 out of 25 major manufacturing industries were substantially higher in 1950 than in the prewar year of 1940, a Federal Trade Commission report to Congress showed today. In all but six industries, 1950 profit rates showed an increase over 1949, too.

The report contains a comparison of the level of profitability of the four largest companies in an industry with the rates of all other companies reported for that industry. During the postwar period, profit rates of the larger concerns (the four largest corporations in each industry) were generally higher than those of the smaller corporations.

The report is the fourth in the Commission's series, each comparing prewar and postwar rates of return, after taxes, for more than 500 corporations in 25 narrowly defined and homogeneous manufacturing industries.

FIFTY PERCENT OF TOTAL ASSETS

The combined assets of the industries covered by the study accounted in 1940 for 50 percent of the total assets of all manufacturing industries.

The three industries which failed to show a higher profit rate in 1950 than in 1940 were cigarettes, cigars, and plug, smoking and chewing tobacco.

Industries which showed the most striking increases in their rates of return from 1940 to 1950 were motor vehicles, from 17.3 to 31.7 percent; matches, 5.3 to 17 percent; industrial chemicals, 14.4 to 23.7 percent; rayon, 8.6 to 17.9 percent; flat glass and glassware, 11.7 to 21.3 percent, and petroleum refining, 6.7 to 14.3 percent.

Other industries showing a higher profit rate in 1950, compared to 1940, were: dairy products, bread, biscuits and crackers, wool carpets and rugs, linoleum and felt base, paper and allied products, soap, cleaning and polishing preparations, tires and inner tubes, abrasives, asbestos and miscellaneous non-metallic mineral products, blast furnaces, steel works and rolling mills, primary smelting and refining nonferrous metals, tin cans and other tinware, engines and turbines, office and store machines and devices, electrical machinery, equipment and supplies, and motor vehicle equipment.

SIX INDUSTRIES DECLINED

The six industries that showed a decline in profits from 1949 to 1950 were dairy products, cigarettes, cigars, plug, smoking and snuff tobacco, and biscuits and crackers.

In the comparison of 1949 and 1950 profit rates, the most striking increases were shown in soap, which rose from 6.6 to 18.2 percent, the exact reverse of its decline from 1948 to 1949; matches, from 6.9 to 17 percent, and tires and tubes, from 9 to 17.1 percent.

In 16 of the industries the large concerns (the four largest in each industry) tended to show a higher profit rate during the 1947-50 period than the smaller corporations in the industry. These are medium-sized and do not include the distinctly smaller-size corporations.

These 16 were: dairy products, biscuits and crackers, cigarettes, cigars, linoleum and felt base, paper and allied products, industrial chemicals, rayon, soap, tires and tubes, flat glass and glassware, tin cans and other tinware, office and store machines and devices, electrical machinery, equipment and supplies, motor vehicles and motor vehicle equipment.

Profit rates during the postwar years tended to be higher in the smaller than in the large corporations in six industries, as follows: bread, wool carpets and rugs, petroleum refining, blast furnaces, steel works and rolling mills, nonferrous metals, engines and turbines.

NO DIFFERENTIATION IN OTHERS

In the remaining industries there was no clear differentiation during the postwar period between profit rates of the large companies and those of the smaller corporations.

Comparing the level of profitability as between the prewar and postwar periods, the report said: "An outstanding characteristic of the industries studied is the continuation into the postwar period of the relationship which existed between the largest and the smaller companies during the prewar period. If the large corporations were more profitable than the smaller ones in the prewar period they continued to be more profitable in the postwar period, and if the reverse was true in the prewar period it continued to be true in the latter period."

In four industries the relationship which existed in the prewar period was reversed in favor of the large corporations. They were dairy products, rayon, office and store machines and devices, motor vehicles and equipment.

There were only two industries, wool carpets and rugs and petroleum refining, in which the smaller corporations were less profitable in the prewar year, but more profitable in the postwar period.

Scot's-Eye View of TVA**EXTENSION OF REMARKS**

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr EVINS. Mr. Speaker, it is ever interesting to see ourselves as others see us, and in this spirit, under unanimous consent, I include in the Appendix of the RECORD an editorial from the September 18, last, issue of the Nashville Tennessean entitled "Scot's-Eye View of TVA."

This article deals with the views of a visitor from Scotland to our great Tennessee Valley region and to the TVA. It is a great tribute to the TVA, but more than that it is a fine tribute to the determination and industry and spirit of the people of our section. We of the Tennessee Valley region are gratified that the virtues which we ourselves take pride in possessing should thus be recognized by a visitor from foreign shores. I highly recommend this article which follows:

SCOT'S-EYE VIEW OF TVA

Lost those of us who live right in the heart of the Tennessee Valley Authority ever forget just how impressive its accomplishments have been. It is always a profitable experience to hear what visitors to the TVA region have to say.

In this respect, one of the most interesting commentaries that has come to our attention recently is an article in the Edinburgh, Scotland, Evening News by Mr William Ballantine, who visited the TVA area in an American tour during the summer.

"Looking back on the days I have spent in Tennessee Valley," says this Scotch newspaperman, "I think I have been more impressed by the spirit that the leaders of the Tennessee Valley Authority have induced among the people of the valley than the actual engineering achievements that lie to their credit. After 18 years farmers, industrialists, work people and journalists speak of these men with something approaching hero worship."

Going back to the time the TVA was set up Mr Ballantine recalls that "people were streaming out of the area in the hundreds in search of work. The small farms were finished. The towns in the valley were fast losing whatever industry they possessed. Throughout America this area was being written off."

Even the establishment of the TVA, he points out, was greeted with doubt and disillusionment. There simply was no confidence that the Federal Government, through this fledgling organization, could do what the people had been unable to do on their own.

But fortunately, Mr Ballantine tells his readers in Scotland, TVA went to work on the sound principle that "if the valley was to be saved, it would have to be saved by the people themselves, using all their experience and knowledge with the new tools which TVA was making available."

The result of all this, as Mr Ballantine interprets it, was that the residents of the TVA region made full use of the new power and advice which was made available, started believing in themselves again, attracted many new industries and brought prosperity back to their fields.

Putting the finishing touches on the picture as he saw it, the Scottish observer concluded with these words:

"It has been a heartening experience to have lived for days with the men of TVA and caught something of their great enthusiasm for the job they are doing, to have met and talked with groups of farmers from one end of the valley to the other, and seen the fine thing that they are bringing to life in a once almost derelict land, and to have caught something of the spirit of the leaders of industry in towns no bigger than Inverness and Oban who are building a new prosperity for themselves."

Applying what he found here to his own country, Mr. Ballantine suggests that the people of the highlands might well take heart from the experience of the people of the Tennessee Valley.

And we—these very people of the Tennessee Valley—might also find new encouragement in this reminder from abroad that the transformation right here in our midst is a source of admiration throughout the world.

Polish Alliance Pledge**EXTENSION OF REMARKS**

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the Times Leader, the Evening News, Wilkes-Barre (Pa.) entitled "Polish Alliance Pledge":

POLISH ALLIANCE PLEDGE

In pledging their lives and assets in defense of the American flag in the event of a Communist onslaught, district 7 of the Polish National Alliance, representing 35,000 Americans of Polish extraction in eastern Pennsylvania, set an excellent example for fellow countrymen:

While members of the alliance are naturally interested in the land of their forefathers, their chief concern is for the preservation of the American way of life. The organization was founded with the idea of making staunch Americans out of Polish immigrants as speedily as possible. With a membership of more than 300,000 and assets in excess of \$60,000,000, it is the largest organization of its kind in the world. Its president is Charles Rozmarek, a Wilkes-Barre native, who maintains headquarters in Chicago.

Affairs of the alliance are now largely in the hands of the second generation. But the determination of the founders to promote United States citizenship, liberty, education, and the public welfare remains. Among other things, the organization maintains a college at Cambridge Springs, Pa.

America owes a great debt to the Polish National Alliance and similar organizations for paying the way for the assimilation of newcomers. Without their programs, the process of Americanizing these elements in the population would take centuries instead of one generation. This is an achievement that is not fully appreciated by the public.

The role of the Polish National Alliance is far more important than the average group because of its size and the influence it wields through the Polish American Congress which turned to the alliance for leadership. The action of district 7 in adopting this resolution by unanimous vote typifies the spirit of loyalty to the ideals of America as well as to the country itself.

No Factual Basis for Removal of Pacific Northwest Aluminum Plants**EXTENSION OF REMARKS**

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. JACKSON of Washington. Mr. Speaker, I am including herewith a letter sent to the Honorable Charles Wilson, Director, Office of Defense Mobilization, today, signed by members of the Pacific Northwest congressional delegation, relative to a proposal to move existing aluminum pot lines from the Northwest to other sections of the United States. The letter explains in detail why the proposal is completely unworkable. Since drafting the letter I have been advised that the Defense Electric Power Administration was never consulted regarding this proposal. I am informed that had they been consulted they would have advised that there is a power shortage generally throughout the United States. In short, that there is no place to move the plants where power would be available in abundance at this time. I am sure that when all the facts are made available to Mr. Wilson this proposal will be abandoned. The letter follows:

SEPTEMBER 23, 1951.

HON. CHARLES E. WILSON,
Director, Office of Defense Mobilization,
Washington, D. C.

DEAR MR. WILSON: We desire to meet with you at the earliest possible time to discuss a matter of utmost importance. Before our meeting we would appreciate your close attention to the contents of this letter.

We are deeply concerned with your suggestion that it may be necessary to move existing aluminum potlines from the Pacific Northwest to other areas. This suggestion has created a great deal of furor and confusion in the Pacific Northwest. The furor results from the possibility of losing an industry important to the economy and the confusion results from lack of knowledge as to the motives behind such a proposal.

While we are confident that your sole desire is to increase production of aluminum and do what is best for the defense effort, you should know that other motives have been ascribed to your proposal. Here are some of them.

This is an attempt—

1. To prevent an independent aluminum producer from coming into the area and becoming a competitor to any one, or all, of the Big Three productions.

2. To prevent one of the present big producers from obtaining a continuous and low-cost source of power for its expansion program.

3. To generate strife between public and private power agencies serving the Northwest area.

4. To retard or halt the further development of hydroelectric power resources in the Pacific Northwest.

5. To create the impression that there is not, and never will be, electric power in the Northwest for further expansion of the aluminum industry.

We have no evidence that these alleged motives are true, and reiterate our belief that you personally are interested in only one objective, namely, to insure maximum production of aluminum and other critical

defense materials. Accordingly, we have analyzed your action on this premise and have come to the strongest conviction that the program implied in your wire to Kaiser & Reynolds would produce a result directly contrary to that you desire.

First, let us assess the argument for leaving in the Northwest all aluminum production facilities now capable of operation and proceeding on the expansion program as scheduled. Then let us evaluate the alternative you have suggested.

In doing this, Northwest possibilities and probabilities must be balanced against: (1) The probability of obtaining an adequate power supply in another section of the country, (2) the costs of moving production facilities to a new location, and (3) the loss of aluminum production during the transition period.

Aluminum plants presently located in the Northwest consist of some 22 potlines with an annual capacity of 386,000 tons, or approximately 50 percent of our national production. In full operation they consume 763,000 kilowatts. Of this 571,000 is firm power; 192,000 interruptible—all covered by contractual arrangements with Bonneville Power Administration. To this date loss of production in the Northwest is far less than has already occurred in the Southeast from the same causes—low water conditions.

Further reductions in the Northwest are entirely conjectural. Stream flows normally decline at the close of the summer runoff period. In that regard this year is no exception. Stream flows usually pick up with the fall rains, beginning September 15 to October 15. Hydrological information from the Northwest indicates water conditions are above critical and in no event will reach the "most critical" state this year.

Whereas it is always prudent to formulate plans for meeting "most adverse conditions," normal rains may make the situation look entirely different within 15 to 30 days. For example, in 1948 it was necessary to interrupt aluminum production for about 30 days under circumstances identical with those now prevailing. In subsequent months, however, there was power available surplus to the demands of the entire grid system.

The odds are 20 to 1 against the Northwest experiencing most adverse conditions this year. Records show that only once in 20 years is a minimum flow to be expected.

Assuming the worst should happen, the Northwest systems in the next 6 months will lack 500,000 kilowatts of meeting their total demand. While a shortage of this magnitude is improbable, plans must be formulated to meet it in the unlikely event it occurs.

Total loads in the region break roughly as follows: Aluminum, 788,000 kilowatts, heavy industry, 800,000 kilowatts, commercial, domestic, and light industry, 2,280,000 kilowatts.

The possibility of effecting reduction in commercial, domestic, and light industry is minor—not more than 100,000 kilowatts. Major portion of the deficit, therefore, must come from aluminum and heavy industry. To take the entire deficit from heavy industry, other than aluminum, however, would have disastrous effects upon employment and the economic life of the Northwest. Hence, aluminum must bear a heavy share of any cuts that prove necessary.

Original assumptions indicated a possible maximum cut of 600,000 kilowatts in Northwest power consumption, of which aluminum might reasonably be expected to bear about half. More recent hydrological information, however, points to a maximum cut of 800,000 kilowatts or about 250,000 kilowatts for aluminum. On this assumption loss of production for the 6-month critical period could amount to 62,500 tons—something less than 10 percent of our national production.

For purposes of comparison, later on, it is desirable to express this loss in terms of pot line capacity. On a 6-month basis—the critical Northwest water period—this is equivalent to the production of about six lines. On the assumption, therefore, that your proposal is to relocate that portion of the Northwest capacity that, under most adverse conditions, could not be operated the year around you would have to dismantle six pot lines and set them up elsewhere.

Against these potential losses of production in the Northwest (62,500 tons, or six pot lines for 6 months in a minimum water year, we can estimate with fair accuracy the losses involved in moving pot lines to other locations. Competent engineers have advised us that the direct dollar cost of moving and setting up a single pot line ready for operation at a new location is approximately four to five million dollars. The time involved in physically moving a pot line is at least 9 months—9 months of lost production equals 27,000 tons of aluminum per pot line moved. Actually it would require nearer 18 months to get a line in operation—judging by present delivery experience on transmission lines and transformation equipment which in the final analysis are controlling factors. Eighteen months of lost production equals 34,000 tons less per pot line moved.

In summary, a pot line left in the Northwest might represent a loss of 11,000 tons of production out of its annual capacity of 22,000 tons; while a moved pot line represents a certain loss of 17,000 tons and a probable loss of 34,000 tons.

As a basis of direct comparison, if six pot lines were inactivated in the Northwest in the winter of 1951-52 we would lose 62,500 tons of production, while six pot lines removed to another location would result in a certain loss of 102,000 tons and a probable loss of 204,000 tons. When we also consider that these six pot lines, if left in the Northwest, would produce some 66,000 tons of aluminum in the summer of 1952, the impracticability of moving them is readily apparent—even without taking into account the twenty-five to thirty million dollars cost of removal and reinstallation, plus the additional cost per ton of the aluminum itself attributable to the difference between Northwest power rates and those obtainable in any other locality.

Further, all information available to us indicates that no supply of power exists anywhere in the United States adequate to support another aluminum plant. A check with the Defense Electric Power Administration has verified this statement. In fact, we are advised that huge shortages already exist in the Southeast and Southwest and that a general shortage throughout the country is in prospect.

That being the case no pot line can be moved without a supplemental source of new power. Presumably such a source would be new steam plants or dams elsewhere in the country, which brings us to our final point.

New electric-energy facilities are under construction in the Northwest which will alleviate this situation within 2 to 3 years—in fact in less time than new facilities could be constructed elsewhere. We refer specifically to Albeni Falls, Hungry Horse, and Cabinet Gorge Dams, which will materially improve the Northwest power situation in 1952 and 1953, and to Detroit, Meridian, and McNary Dams, which will almost entirely relieve it in 1954. Chief Joseph, the Dalles, and Ice Harbor Dams, while not coming into production before 1955, assure that this problem will not again face us. Further, there is now before the Congress a proposal to construct 400,000 kilowatts of steam capacity in the Northwest, which would assure absolute firming of all existing and projected Northwest loads, including aluminum, by 1954.

We do not deny that the Northwest power situation has become critical. In our considered judgment, however, your proposal as reported, is no solution to the problem. On the contrary, it could be very harmful to the national defense, to the Northwest economy, and to the economic future of the Nation.

It seems obvious to us that our solution lies in another direction, namely, active and concerted support of Northwest power facilities already programed. We would appreciate an early opportunity to discuss these matters with you.

Sincerely yours,

HENRY M. JACKSON,
HUGH B. MITCHELL,
MIKE MANSFIELD,
Members of Congress.
WARREN G. MAGNUSON,
JAMES E. MURRAY,
United States Senators.

Korean Ill Wind and the Marines

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article taken from the Christian Science Monitor of August 8, 1951, entitled "Korean Ill Wind and the Marines."

KOREAN ILL WIND AND THE MARINES (By Harlan Trott)

WASHINGTON.—Korea has been the Marine Corps' salvation, as some military experts see it. A year ago, this elite organization was wasting away, methodically being whittled down for the sake of economy. As its size was reduced, its functions were absorbed. Marine aviation was cut to the vanishing point. When the conflict commenced in Korea, the corps was unable to assemble a single, full-strength division and the closest Marine troops to Korea were thousands of miles away.

Today the Marine Corps is a revitalized service, and congressional plans have progressed to the point where at least a 300,000 and perhaps a 400,000-man corps will be allowed under law, including a stronger Marine air arm. Moreover, the outlook is good for including the commandant of the Marine Corps either as a full-fledged member of the Joint Chiefs of Staff or as a consultant to it.

For this improved position, the Marines are thankful and the country is fortunate. In the uncertain, dangerous days ahead, despite the imminent truce in Korea, the need for a stronger, expanded Marine Corps is more evident than ever.

Though it shouldn't have been necessary, the Marines proved their usefulness and value in Korea. In this, the publication of a letter which characterized the Marines as the Navy's police force, played a measurable role. Even such a once-upon-a-time critic of the Marines, General of the Army Douglas MacArthur, became an ardent leatherneck backer. Korea, said General MacArthur to one Marine general, would once and for all solidify the corps' position in the country's military structure. If this prediction proves correct, the country gains in strength and security.

What have the Marines done in Korea to achieve this?

1. The Inchon landing. From a scant 12 months' perspective, this almost impossible feat has gained the reputation of being the outstanding amphibious assault of military history. A month after the Marines landed and captured Seoul, the downfall and destruction of the North Korean Army were complete. Any fair-minded observer who has studied this operation will agree that only the Marines with their background, experience, and day-by-day training could have brought it off. Amphibious warfare is specialized work for which only the Marines and the Navy are prepared.

2. The now-classic Hungnam evacuation, or as the Marines call it, "the attack toward the sea." Outnumbered 10 to 1, isolated for 10 days, the Marine division fought its way out of a Chinese trap to freedom, bringing all of its equipment with it. If any battle proved that the average American can be trained to be a superb soldier, that battle did.

3. The Marines' specialized version of close air support. Flying from two small Navy "jeep" aircraft carriers, the Marines demonstrated techniques of using airplanes for ground fighting which proved far superior to the Air Force system. The Marine aviators were themselves experienced ground fighters, and understood the problems and language of the foot soldier. Secondly, their planes and weapons were designed for the task. Napalm, the jellied gasoline fire bomb, was their specialty and was used with consummate success in Korea.

4. The individual marine. In Korea, he used four weapons almost forgotten in the 1951 fog of atomic clouds and jet smoke: his rifle, his hand grenade, his bayonet—and his intelligence. Well-trained, well-led, well-equipped, the leathernecks' consistently excellent performance in Korea reawakened the American people to the need and usefulness of this elite organization.

We have talked with many marines and naval officers, all of them battle-tested officers. The consensus is that a larger but still volunteer Marine corps, protected by law, with the commandant seated as a consultant to the JCS, is a wise move. Few of them, however, wish to see the corps divorced and given autonomy from the Navy. The corps is inextricably joined with the Navy, and if their unique abilities are to be maintained, it must remain as part of the Navy.

No credence is given to the idea that an expanded corps will constitute a second army. The specialized Marines, say the experts, will be the ever-ready fire brigade ready for instant service anywhere the Navy takes them. If another perimeter war breaks out in Iran or Indochina, Denmark or the Dardanelles, as it did in Korea, at least two divisions of marines will be on the spot and landed to protect American interests until the Army arrives.

Recently military writers have repeated the theme that militarily, Korea has been worth while. In the case of the Marines, this over-glib statement is even more true. There might have been no victory in Korea without the Marines, and there might have been no Marines without Korea.

New Uses for Farm Products

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

given before the Engineering and Human Affairs Conference at the Princeton University Bicentennial Conference, Princeton, N. J., October 2, 1946:

DEVELOPMENT OF NATURAL RESOURCES: THE COMING TECHNOLOGICAL REVOLUTION ON THE LAND

(By H. H. Bennett, Chief, Soil Conservation Service, U. S. Department of Agriculture, Washington, D. C.)

Productive land is unlike any other natural resource. It is characterized by the element of life placed by nature in the thin mantle of fruitful soil occurring over a limited portion of the earth's surface. It is this life-producing quality that makes some lands productive, and it is the absence of this quality that makes some barren.

Productive land is further differentiated from other natural resources in that it must be maintained and used simultaneously, that is, it must be kept intact while in use. All other natural resources, with very few exceptions, must be taken from the earth—separated from it—in order to be used by man. The exceptions are certain forms of wildlife and those natural areas which, because of their esthetic values, are kept in their original state.

Productive land is much more limited than commonly has been supposed. It occurs only on the surface of the earth, and only on part of this surface. It is not permanent. Once the fertile topsoil is washed or blown away, it cannot be restored or replaced in any practical way for generations. And what is left—subsoil—usually is far less productive, or sterile, and less stable. There are no undiscovered reserves of productive land of any substantial area.

We cannot dig deeper into the earth and find new productive soil. We cannot pump it from wells, plant it with seeds, or dig it from mines. We must keep what we have or do without. Assorted residues of sand and gravel left stranded along streamways are of small value.

Productive land is the only natural resource without which we cannot live. We are completely dependent on it for the food we eat, except fish. We also depend on it for a very large share of our clothing and shelter. We cannot get enough to feed ourselves or provide our clothing from the oceans. On any large scale, hydroponics would be utterly impractical. We might conceivably turn sometime to some form of synthetic food, as pills, plus a roughage; but this appears to be a fantastic extreme, still far away, and likely, if it ever comes, it will be decidedly unpopular.

There is no doubt about the need for protecting productive land. Year after year, for generations, man has been steadily engaged in ruining millions and millions of acres of this basic resource. Every hard rain falling on unprotected, cultivated, or overgrazed sloping land washes additional tons of soil downslope, downstream, into the rivers, reservoirs, and oceans. There is no practical way of bringing this back. And every hard wind, blowing across bare, dry soil, whether sloping or level, adds to the damage. Wind lifts the fine soil particles into the air and often develops huge dust storms that destructively scatter the substance of the land. What is left behind, frequently, is infertile, shifting sand that smothers out vegetation on neighboring good land.

When the world was younger and our population much smaller, we could, perhaps, stand such waste, but that time is past. It is not defeatism to say that the world is fast maturing and must assume now a mature responsibility for its resources. It is not limiting the horizons of the future to say that land exploitation must stop. It is simply a matter of common sense and self-preservation. Besides saving soil and water—the two go together—soil conservation results

in increased yields per acre. It is also easier and cheaper to farm on the contour than up and down hill.

Today, throughout our world, there are left only about 4,000,000,000 acres of immediately arable land, the productivity of a great deal of which is only fair to medium. Some of it is poor. Yet we must count on all of it to feed a population reported to be in excess of 2,000,000,000, and still increasing.

The United States is somewhat better off, from the standpoint of productive land, than most nations. Even though we have ruined more good land in less time than any other nation in recorded history, we had the advantage of an unprecedented supply to begin with. Now we have little margin left, but we still have enough productive land if we take care of it. We cannot hope to maintain our present standard of living if we lose must more; eventually, if the losses should continue, the Nation would suffer even more seriously.

There are about 480,000,000 acres of really good, high-class cropland left in the United States. This includes, in addition to that now in crops, about 100,000,000 acres that need drainage, irrigation, clearing, or other improvements. All but about 70,000,000 of these 480,000,000 acres of high-grade land is subject to erosion if it is not protected. We have no reason for complacency.

Our record shows that we have ruined, for further practical cultivation, about one-fifth of our original area of tillable land. A third of what remains has already been badly damaged, another third is highly vulnerable, and the erosion process is still going on.

How did we get into this predicament? Why was this allowed to happen? Why didn't you hear about it sooner? There are a number of reasons, but probably the following are the main ones:

First, we began losing land to erosion when the world was still young. Those were the days when there was always more land—a great deal more—just over the hill or across the ocean. People came to regard land as limitless and inexhaustible. This deceptive idea persisted as time went by, and it was probably not until the United States was settled all the way to the Pacific coast that people began to have any real doubts about the myth of land plenty.

Second, the apparent abundance of good land for so many generations gave rise to a careless and prodigal attitude. There was nothing of any compelling nature to cause a landowner to take care of his land or have concern about maintaining its productivity. New land somewhere could almost always be had.

Third, in modern times, the leaders of thought and nations—and nearly everybody else—too often have had little or no personal knowledge or understanding of the land. They have been trained in law, finance, philosophy, administration, military science, economics, education, or some field other than agriculture, and especially that part of agriculture having to do with maintenance of the base, meaning the land. With few exceptions they have had neither the incentive nor the training to look at the landscape around them and understand what was happening. The ancient and unchallenged myth of land plenty came down to them too, through the ages, and was accepted as truth.

Fourth, too much of the land traditionally has been in the hands of the untutored and the inept. In very recent years and in a very few countries, this situation has been changing, fortunately, for the better. However, over most of the world, land is still being used by men with little specialized or adequate training for the job. Too many land users have operated on a trial-and-error basis and have been influenced predominantly by habits handed down from the past, whether good or bad. Some have placed greater faith in superstition than in science. Under the

names of peasant, farmer, rustic, and country fellow, these individuals have been synonymous, for generations, with all that is naive, uneducated, and backward. Possessed frequently of such virtues as thrift and diligence, they have nevertheless often assumed a scornful attitude toward education and the educated, and too often the farm has been the last resort to which men, unsuccessful in other fields, have turned. In short, the most precious natural resource on earth in too many places has habitually been in the charge of those who have had no greater qualifications for the trusteeship than the coincidence of inheritance or birth on the land.

Fifth, too few farms produced surplus capital for the owner over a period of years. On the contrary, the farm often has been no better than a marginal or subsistence enterprise. Even in the United States the farmer rarely has had the personal resources to undertake research or seek out technological improvements. He has generally been almost wholly dependent on outside help, from Government or private corporation, to provide him with improvements in machinery, materials, and methods.

Sixth, our agricultural scientists failed completely, over bygone years, to recognize land for what it is—an impermanent and complex resource. They considered soil permanent and synonymous with land. As a result of this mistake, both agriculture and the land suffered. Soil is but one part of land. For all practical purposes, land must be regarded in terms of all its component parts of soil, slope, climate, and susceptibility to erosion. The early scientists largely ignored erosion, paid little attention to slope, called the weather inevitable, and took soil samples right and left. In the main, however, agricultural science was not greatly concerned about the land. In large degree it was more interested in the health and breeding of livestock; improvement in strains of grasses, legumes, grains, and fibers; and modernization of machinery and equipment. All of this was beneficial, but it did neglect the capital stock of agriculture and the source of production—the land itself.

Seventh, in agriculture, as in other enterprises, we often wait until we are sick before we call the doctor. There is an element of human nature about this, and it has operated on the land. We did not practice preventive medicine, and now we must try to cure a malady—erosion—that has gotten into our system and weakened us.

So much for history. There is little to be gained by a review of past shortcomings except as it will help us avoid similar pitfalls in the future. Today we are profiting from the lessons of the past. We know now:

1. That productive land is neither limitless nor inexhaustible. On the contrary, we have learned that the area of productive land is steadily shrinking before the onslaught of erosion.

2. That land must be expertly cared for if it is to be maintained in a productive state.

3. That productive land must assume an ever more prominent position in the thinking of the people and their leaders. As the source of food for all people, rural and urban, it must have the regular, intelligent consideration that such indispensable wealth merits.

4. That, since society as a whole depends absolutely on the produce of the land for its present and future existence, society as a whole must share in the responsibility and cost of maintaining land in a productive state. The individual landowner or operator has neither the resources nor the ability to carry the burden alone, and he has control only for a lifetime.

5. That science must inevitably devote an increasing share of its attention to the problems of maintaining the substance and improving the yield of productive land.

6. That action is imperative. Time is running out between the impending pincers of an increasing population and a dwindling area of productive land.

7. That the technological key to future consideration of land development is scientific analysis of each parcel of land of any important extent to determine: (a) the type of production for which it is best suited physically and economically, as between row crops, forage, trees, grain, or wildlife; and (b) the conservation measures, such as terracing, strip cropping, and contouring, necessary to maintain it in a permanently productive state under maximum use.

8. That practical treatment must be based on this analysis—the character of the land and its needs.

Lands vary widely from place to place and even on parts of the same farm or field. Every variation in the combination of soil, slope, climate, and susceptibility to erosion means a variation in the use and treatment necessary to keep the land permanently productive. Thus, engineering measures are used to supplement agronomic and fertility measures wherever necessary, and vice versa, according to need, adaptability, and economic limitations.

This is the basic principle underlying the new land technology developed in the United States during the past 14 years by the Soil Conservation Service (first called Soil Erosion Service). It is being applied to an ever-increasing area of land by American farmers, acting with the assistance of Service technicians. By the middle of 1947 more than 100,000,000 acres in all parts of the United States will be farmed in this modern conservation way; that is, each of the 100,000,000 acres or more will be used according to its individual capabilities and will be treated according to its conservation needs.

In the United States, land technology is spreading through a new democratic device known as the soil-conservation district. The district is a subdivision of State government, brought into being by a process of referendum among the landowners and operators involved. In practical application it is a legal organization of landowners and operators within a designated area for the purpose of developing and carrying forward a mutually desirable program of soil and water conservation. Its principal advantages are in the encouragement of local initiative and in the greater strength that comes with organized numbers farmers and ranchers working together.

In soil-conservation districts the farmers themselves decide what they want to do to improve their land and water resources and how they want to go about doing it. Then they proceed along this course, working together, and utilizing all the available facilities and services they can command. In almost every instance, districts are obtaining technical guidance from the Soil Conservation Service.

On August 15 there were more than 1,670 districts in the United States, voluntarily voted into existence by the farmers themselves. These districts encompassed more than 900,000,000 acres and approximately 4,000,000 farms. Farmers are continuing to organize districts at the rate of approximately 25 per month.

Although democratic soil conservation districts are being employed in the United States to further the application of land technology other nations may choose to utilize other means. A number, however, including the Union of South Africa, Mexico, and parts of Australia, have adopted the soil conservation district method.

In the long run, the overwhelming urge of mankind for survival will dictate that every remaining productive acre be handled in such a way that it will continue to produce indefinitely. In the meantime, other

factors are combining to speed up the application of technology to the land. From the standpoint of the individual and the Nation alike, the development and application of soil and water conservation technology (the tool of soil conservation science), is good business. It results in greater yields and greater returns per acre for the capital and labor expended. Moreover, it maintains or improves the basic strength and self-sufficiency of individual and nation. It probably can prevent at least half the potential famines of the future.

By increasing the per-acre, per-farm, and per-nation supply of food and fiber, conservation technology can provide the basis for an improved standard of living and simultaneously reduce the hunger and discontent among peoples which so frequently leads to discord, dictatorships, and war.

For these and other reasons, the application of land technology is certain to spread around the world, either voluntarily or by decree. By the year 1996 this world journey probably will be well advanced. By that year or before, it will have accomplished changes in agriculture tantamount to a beneficial revolution on the land.

Almost certainly, productive land will have become a major factor in national and international deliberations. In all probability there would have been better international relationships if we had worked together more on ways and means of keeping land productive.

Production in the agricultural areas of the world will be more diversified; there will be pronounced increases in the acreages devoted to livestock and trees.

Agricultural production will be restored or improved in millions of communities throughout the world, solving in large measure some of the most difficult problems of food distribution and human nutrition now confronting mankind.

The nutritive value of food produced on land rich in the constituents of plant nutrition undoubtedly will be greater than that from impoverished land, which has been stripped of its topsoil by erosion, with everything the topsoil contains—available elements of nutrition, both minor and major, all that man puts into the topsoil, and everything else. With so much eroded land around the earth, is there any wonder that malnutrition and famine are so widespread?

Development of land and water resources for agriculture, as by drainage or irrigation, will be governed primarily by factual, technological elements of land use and land maintenance rather than by promotional, exploitive, or political standards.

Also, people will learn that it is easier on machine, horse, and man to farm according to conservation standards than to follow haphazard methods not fitted to the land. Less fuel and time, for example, are required to operate a machine, on the level, on the contour, than up and down slopes, and there is less wear on the machine.

The heavy costs of erosion, now running to approximately \$3,844,000,000 a year in the United States alone, will be sharply cut.

Farming will become an expert profession; the inept and inept will be forced off the land. It is not impossible that the prospective farmer of the future will be required to satisfy society that he is qualified by training and experience to take on the trusteeship of a piece of productive land.

Most important, man will have learned the true value of his most precious natural resource. Tragically, throughout history, the land has been the most neglected.

On this job of safeguarding the land, thousands of farmers, in addition to various local, State, and Federal agencies, are vigorously pushing ahead with the work. Each individual so engaged is a part of the biggest job, I think, in engineering and human affairs ever undertaken anywhere.

William N. Oatis

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a resolution on William N. Oatis, which was adopted by Wilkes-Barre Aerie, No. 352, of the Fraternal Order of Eagles on September 11, 1951.

I further wish to state that a similar resolution was adopted by Hazleton Aerie, No. 193, of the Fraternal Order of Eagles on September 4, 1951.

The resolution follows:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation; and

Whereas Mr Oatis was arrested and held in detention without access to friend, Embassy representative, or trusted legal counsel, and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press, and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of Government, at which often much off-the-record information is discussed. Now, therefore, be it

Resolved, That Wilkes-Barre Aerie No. 353 of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie No. 353 of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet News Agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 11th day of September 1951.

STEVE J. GARDICK,

Attest:

Worthy President,

JOHN T. CORRIGAN,

Secretary.

The Hand of the Truman Administration Is in the Pocket of Every American Taxpayer

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. REED of New York. Mr. Speaker, every month the taxpayers of the United States are having their earnings transferred to foreign nations by the Truman administration. Inflation is on the march—an income tax without exemptions. It is a creeping system of confiscation. Not a sound and logical step has been taken by the Truman administration to stop this menace. All that the administration is doing is to pour gasoline on the fire, and then refuse to use the fire department.

Under leave to extend, I am inserting in the Record Paul O. Peters' article: Expenditures for 2 Months of Fiscal 1952 for Foreign Aid and Mutual Defense Exceed \$710,000,000 With Big Spending Yet To Come:

EXPENDITURES FOR 2 MONTHS OF FISCAL 1952 FOR FOREIGN AID AND MUTUAL DEFENSE EXCEED \$710,000,000 WITH BIG SPENDING YET TO COME

Careful examination of the Daily Treasury Statement for September 17, 1951, shows that expenditures for the international obligations and adventures of the United States for the first 2 months of the fiscal year 1952 were in excess of \$710,000,000. The support of the President's point 4 programs alone cost our taxpayers, as shown by the table following, over \$4,500,000,000.

Expenditures from funds appropriated to the President for international-development expense

[Expenditures July 1, 1951, through Aug. 31, 1951]

Agriculture Department.....	\$389,013.75
Commerce Department.....	142,767.48
Executive Office of the President.....	12,434.10
Federal Security Agency.....	145,999.97
Interior Department.....	209,338.13
Labor Department.....	39,051.15
State Department.....	3,716,401.91
Other departments.....	1,269.24

Total for point 4..... 4,656,275.73

Economic aid to Korea was distributed by several Federal agencies from funds appropriated to the President, as shown by the table following:

Economic aid to Korea

[Expenditures July and August 1951]

Agriculture Department.....	\$264,801.86
Defense Department (Army).....	3,190,258.88
Economic Cooperation Administration.....	93,150.44
General Services Administration.....	178,565.61
State Department.....	299,946.00

Total (net)..... 3,769,591.57

Deduct.

Included in the expenditures for the months of July and August was a disbursement by the State Department of \$2,250,000 as a loan for the construction and furnishing of the United Nations headquarters in New York.

Largest portion of the expenditures for the 2 months were reported for the Economic Cooperation Administration, the amount being \$325,091,515.82. Disbursements for Mutual Defense Assistance accounted for over \$240,000,000.

The complete story of the spending is shown by the table which follows:

Details of Federal expenditures for foreign aid, mutual defense, international development, Korean economic aid, including loans

[July 1 through Aug. 31, 1951]

Project and agency:	Amount expended
International development, point 4.....	\$4,656,275.73
Korean economic aid.....	3,769,591.57
State Department loan to United Nations.....	2,250,000.00
Export-Import Bank loans and guarantees.....	21,719,518.42
Economic Cooperation Act:	
Agriculture Department.....	46,806,640.30
Commerce Department.....	1,562,641.87
Defense Department (Army).....	1,710,014.99
Economic Cooperation Administration.....	325,091,515.82
Federal Security Agency.....	16,365.92
General Services Administration.....	252,177.37
Labor Department.....	94,837.32
Mutual Defense Assistance:	
Agriculture Department.....	866,331.49
Defense Department:	
Office of Secretary.....	106,589.38
Air Force.....	48,328,432.81
Army.....	160,609,873.97
Navy.....	16,796,651.68
Economic Cooperation Administration.....	22,210,429.26
Assistance to Greece and Turkey:	
Agriculture Department.....	23,436.85
Commerce Department.....	769.00
Defense Department:	
Army.....	6,698,266.86
Navy.....	188,340.54
China Aid Act of 1948:	
Agriculture Department.....	1,544,531.70
Commerce Department.....	3,784.81
Army.....	239,777.34
Economic Cooperation Administration.....	3,690,015.75
Federal Security Agency.....	128,228.49
General Services Administration.....	7,393,474.34
State Department.....	364,388.76
Other.....	2,557.14
India Emergency Food Aid: Agriculture Department.....	10,559,799.16
Relief in occupied area of Germany.....	152,259.45
Relief of Palestine refugees.....	2,000,000.00
Yugoslav Emergency Relief Assistance.....	6,972,873.14
Army:	
Agricultural commodities and raw materials.....	2,630,364.96
Government and relief in occupied areas.....	13,607,911.89

PAUL O. PETERS.

Central Valley Project**EXTENSION OF REMARKS**

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. ENGLE. Mr. Speaker, a special Subcommittee on Irrigation and Reclamation participated recently in the Central Valley project celebration in California. The purpose of these water festivals was to call attention to the first complete and integrated operation of the vast Central Valley project, constructed by the United States Bureau of Reclamation, which extends a distance of nearly 500 miles in the very heart of the great State of California.

As our subcommittee visited various communities, we were impressed with the lack of water supplies even though this great project will bring tremendous benefit to the thirsty lands of the Sacramento and San Joaquin Valleys. Again and again farmers and businessmen told us that the program of water development is several years behind schedule and that additional projects are needed to meet the growing demand for water and power in California.

In view of our findings, I am pleased to include the following editorial from the Redding Record-Searchlight of August 21 entitled "Never Big Enough," which stresses the need for additional water projects in California and quotes from an address given at Bakersfield by the Honorable Michael W. Straus, Commissioner of the Bureau of Reclamation. The editorial is as follows:

NEVER BIG ENOUGH

California is such a fabulous State that even the giddiest forecasts of big things to come turn out to be underestimates.

Our Central Valley project, which seemed to be such a tremendous undertaking when they started work at Shasta Dam in 1938, is now in operation, and the State has grown so much meanwhile that the CVP won't come anywhere near meeting the needs. Indeed, Congressman CLAIR ENGLE contends the State has been dishing out water which it had already committed to the project, with the result that there is not enough water available in the CVP to take care of present commitments. If that's so—and it certainly seems to be—it will be necessary to get more water right away from the Trinity, the American or some other stream.

Reclamation Commissioner Michael W. Straus discussed this point in a speech at Bakersfield as the 10-day CVP water celebration came to a close. Said the Commissioner:

"We are always planning and building the biggest this or that and a lot of people are always telling us we are crazy and wasting the public's money, and building white elephants much too big, and that they'll never be used. Then later Reclamation always finds out that it was wrong and its critics were wrong and we built the works too small to meet the needs.

"When Hoover Dam was built millions of people said it was too big. Since then we've added Parker Dam and Davis Dam below Hoover on the Colorado and haven't come near catching up with the water and power demands of southern California or Arizona; so soon we'll have to build Bridge Canyon Dam on the Colorado above Hoover.

"On the Columbia River we switched from a low dam to the high dam at Grand Coulee—the biggest concrete structure ever built by man—without even a pause in construction. They're now short of power and water up there and half a dozen great dams are rising on the Columbia River system above and below Coulee.

"Right in northern California for your project we added a million acre-feet of storage behind Shasta Dam, to a chorus of catcalls. Then we insisted that the size of Folsom Reservoir on the American River—now under construction by the able Army engineers, and the next storage to be added to the Central Valley project—be tripled, and it has been. And that's not enough.

"Some day perhaps we'll all learn not to be so impressed by our own works and our own superlatives that we become timid and sell this country and our future short. And those are a few of the reasons both your Federal Government and your Governor are now in agreement that we cannot rest until every drop of water now wasting from California's Central Valley to the sea is dammed up, conserved, and put to work to meet some of California's requirements."

Plight of Our Indian Tribes**EXTENSION OF REMARKS**

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, I wish to take this means of complimenting the junior Senator from Nevada, Hon. GEORGE W. MALONE, upon his comprehensive and informative statement on Saturday last concerning the pitiful plight of most of our Indian tribes. Senator MALONE's statement was made in connection with the introduction of a bill by himself, calling for orderly and systematic abolition of what he terms "a system outmoded by more than 100 years."

Specifically, Senator MALONE would free the Indian tribes from bureaucratic rule by the Department of the Interior's Bureau of Indian Affairs, and would grant to the Indians equal opportunities with American citizens of other nationalities.

Senator MALONE believes, and rightly so, that the Indians should be given the opportunity to manage their own affairs, on an equal basis with other Americans. He points out that the original idea was that Federal control of the Indians' affairs was to be a diminishing thing; but, rather, more and more restrictions, regulations and outright control have been exercised through the years. Rather than "work itself out of a job," Senator MALONE explains, the Bureau of Indian Affairs has asked for increasingly greater appropriations through the years to administer wider and wider powers over the Indians in their role of wards of the Federal Government.

I was particularly interested in the section of Senator MALONE's statement dealing with the Wind River Reservation in my own State of Wyoming. It so happens that I was one of a four-member special subcommittee who visit-

ed the Arapaho Ranch on that reservation just a few weeks ago, during the recent recess of the House, to hear testimony on charges of mismanagement leveled at the ranch manager by a former employee. I do not intend to discuss that testimony in detail here and at this time. But I do wish to point out that this hearing underscored the lack of control exercised by the Arapaho Indians in the management of their own affairs. Directly or indirectly, the Bureau of Indian Affairs holds the whip hand in the management and operation of the Arapaho Ranch, and the Indians themselves not only have no control of the ranch management, but indeed very few Indians even are employed on the ranch, none in key positions.

Witnesses for the ranch management testified that Indians had not been given key positions because none could be found who were capable of filling such positions. But there was no evidence presented which showed that any concerted effort has been, or is being, made to train Indians for those posts. Just how can the Indians be expected to become capable if they are offered no opportunity and given no incentive to learn?

It is my belief, shared by Senator MALONE, that the Indians given equal opportunity, are capable of managing their own affairs with a minimum of assistance. If a real effort were made to help the Indians help themselves, it would be a surprisingly short time before those people could take their proper place in American affairs. Rather, they have been kept in a subservient position, blocks have been thrown in way of their advancement.

The Indian should be given the opportunity to increase his earning power, and to enjoy the fruits thereof. He should be afforded the opportunity to better himself in his own way and to the best of his ability.

The original purpose of Federal control over Indian affairs should be followed, as a diminishing thing. Instead, in recent years, most efforts have been exerted with a view to perpetuation of ward status of the American Indian.

I commend to the attention of my colleagues in the House the statement of Senator MALONE, which starts on page 11911 of the CONGRESSIONAL RECORD for Saturday, September 22, 1951.

**A Government Must Be Above Suspicion
To Be Trusted****EXTENSION OF REMARKS**

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial entitled "We Need Another Theodore Roosevelt to Clean House in Washington," as appearing on September 14,

1951, in the San Rafael Independent-Journal, published at San Rafael, Calif.

Nearly every day, now, we pick up a newspaper or magazine and read of another Government employee or person in high political circles being charged with misconduct in connection with official duties.

Because the charges have been made does not necessarily mean they are true. However, an investigation naturally results, and the publicity surrounding the charges has a demoralizing effect upon the general public.

One scandal after another concerning the integrity of high officials can only lead to mistrust and suspicion. If our people cannot have complete confidence in their leaders, our country can suffer irreparable harm.

It would appear that we need men of the caliber of Theodore Roosevelt and Calvin Coolidge who enforced the laws to their fullest extent, removing those persons from public office who did not fully live up to the trust placed in them by the people.

I believe the editorial referred to above is very appropriate in this regard, and is indicative of the thinking of the public wherein unqualified persons holding high positions in Government are concerned. It is as follows:

WE NEED ANOTHER THEODORE ROOSEVELT TO CLEAN HOUSE IN WASHINGTON

We are reminded that on this day, September 14, 1901, Theodore Roosevelt took the oath of office as President of the United States.

We only wish that there was another T. R. on the horizon, but we'll come to that later.

The feeling of the country was indeed mixed when "The Big Stick" took office. The majority of the people had high hopes of some needed reforms.

But party bigwigs, while pretending to cheer with the people, actually were nursing dark fears. Suppose the pugnacious charger of San Juan Hill kept all his campaign promises? One of them in particular kept them awake at nights. Even caused some of his behind-the-scenes supporters to wake up screaming.

Theodore Roosevelt had promised to appoint only men who were qualified for their jobs and who were unassailably honest. Not in the loose term politicians have applied for ages—the ability to stay on the fresh-air side of jails. But honest in the strictest sense of the word. As a candidate stumping throughout the country, T. R. had bore down on the old-fashioned meaning of honesty with all his Rooseveltian weight, which was considerable.

Most of the party leaders wanted Government to continue by crony, by party hackism and by favoritism.

Every ward heeler, every national chairman of the party, every State and National leader, every Senator secretly hoped that T. R. would make an exception in his case when he threatened to replace every hack with a qualified public servant.

Even a Supreme Court justice entertained this illusion when he went to see T. R. about his son.

"Prove his fitness for the job," T. R. was heard to bellow.

A Senator wanted to retain one of his friends in office, a reliable person at campaign time but not so reliable at other times. The Senator even buttressed his request with a signed resignation from the doubtful one.

When T. R. saw the resignation, he said, "Splendid," and called for his secretary.

"Wire him immediately that I accept his resignation."

The great editorial voice of that era—William Allen White, of the *Emporia Gazette*—recorded for history the effects of this new and refreshing policy. He wrote:

"The turning down of crooked men by the President, even in Kansas, has done wonders to brace up the moral tone of the State. It makes clean politics everywhere. There is no doubt that in the purchase of good influence, President Roosevelt's new rule has been an admirable investment."

And then Allen added, "There is no doubt that the country has not had in a generation such a moral uplift as it is having under the administration of President Roosevelt. And all because of one simple rule he has made in appointing men to office—that they must be morally clean before the recommendation of any Senator or Congressman can secure their appointment."

Would that we could editorially point with cheer in this year of our Lord 1951, to a new resolve in the White House to appoint only qualified men. Honest men. And a resolve to clean house of incumbents who were neither honest nor qualified. What an exodus from Washington, D. C., there would be of conniving, grasping, petty ward heelers and baggy-bottomed politicians from Missouri.

As we said at the start, we recall Theodore Roosevelt's inaugural on September 14, 1901, with a great deal of wishfulness.

Stockpiling Cotton

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. SMITH of Mississippi. Mr. Speaker, if any portion of our 1951 cotton crop is to be stockpiled by the Munitions Board, as has been urged in many quarters, it should be stockpiled solely because reserves of quality cotton are necessary to meet our defense needs of the future.

As evidence of the quality of the current crop, I submit two statements given to me last week. The first is based on tests at the United States Government laboratory at Stoneville, Miss., and by two reputable private testing firms. The second statement is in the form of a letter from Mr. W. M. Garrard, Sr., general manager of the Staple Cotton Cooperative Association of Greenwood, Miss., the largest cotton cooperative in the country. Mr. Garrard is widely recognized as one of the Nation's outstanding authorities on the grade, staple, and quality of cotton.

The statements follow:

SEPTEMBER 21, 1951.

Based on fiber and spinning tests made by the United States Government and private laboratories, the 1951 cotton crop harvested thus far is of the highest quality in many years from several standpoints. With few exceptions, tests made by United States Government laboratories on cottons from widely scattered points where harvesting is well under way, indicate that the fiber-breaking strength is from 6,000 to 12,000 pounds per square inch higher than last year. Uni-

formity and fineness have also been more desirable and much improved over last year. The number of neps is also much lower than usually expected. The exceptions are on those samples from known extreme drought areas of low production.

The two private laboratories contacted on this matter confirmed the above findings. These two laboratories normally test thousands of samples from all over the belt for both the trade and many spinning mills. Reports to date indicate that the 1951 crop is the best recorded, from a fiber-property standpoint, since the newer methods of testing have been used. Results indicate that breaking strength over the belt is averaging about 7,000 pounds per square inch over the 1950 crop.

(Source: United States Testing Co., Memphis, Tenn.; Barrow-Agee Laboratory, Inc., Memphis, Tenn.; U. S. Government Laboratory, Stoneville, Miss.)

STAPLE COTTON COOPERATIVE ASSOCIATION,

Greenwood, Miss., September 19, 1951.

HON. FRANK E. SMITH,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Briefly stating my observations on stockpiling for the Armed Forces, let me say that the official record developed at the Government's Stoneville laboratory indicates the breaking strength on Mississippi Delta cotton this year gives an average of 85,458 pounds per square inch. This average was obtained by testing samples that were sent to Stoneville from 48 various sections of the Mississippi Delta.

The laboratory also reported splendid uniformity in fiber and a Micronaire average of 4.4 for fineness. The nep count was not determined, as there are no facilities at Stoneville for obtaining nep count. This high breaking strength, uniformity, and fineness, as well as the fact that the lint is much freer from neps than usual, indicates the current crop is the finest quality crop that has been grown in this section in the past 10 years.

Furthermore, all the tests that have been made that we have received or heard of indicate the quality of the crop in the Cotton Belt is practically equal to the quality or spinning value of the Mississippi Delta cotton.

Government specifications for both yarn and cloth, as well as other fabrics used by the Government, are extremely exacting, so much so that the growth in many years is unsuitable for Government cotton material, due to the exacting requirements of Government orders.

Last year our Delta crop, as well as the crop from other sections, was definitely deficient in spinning value and would not have met Government Armed Forces specifications.

The staple on the cotton throughout the entire belt is a trifle shorter in length than normal, due to the extremely hot weather during the late summer. However, Government orders do not usually require cotton any longer in staple than is being produced this year, and as the quality of the crop is so superior to the crops normally grown, it becomes an ideal crop for stockpiling.

The cotton that is stockpiled may not be used for several years. It is a well-known fact that cotton does not deteriorate in the bale where it is properly warehoused, so if this crop is stockpiled by the Government, the Government can be assured of having a quality of cotton that will be suitable in every way to be used on Government contracts for cotton material.

There is a surplus of cotton this year. There may not be a surplus next year or the

following year, and there is certainly no way of ascertaining the quality of future crops, but this year when there is a surplus and when the quality is superior, it does seem an ideal time for the Armed Forces to stockpile a certain portion of their future needs of cotton.

Yours very truly,

W. M. GARRARD,
General Manager.

Letter of Hon. Guy George Gabrielson

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. REECE of Tennessee. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of a letter which Chairman Guy George Gabrielson, of the Republican National Committee, sent to Senator CLYDE R. HOEY, chairman of the Senate committee investigating RFC matters.

It will be noted that, immediately upon being informed that his name had been mentioned in connection with RFC matters, he wired the chairman of the committee asking permission to appear and testify under oath. Mr. Gabrielson also came to Washington the same evening his name was mentioned in the Senate so that he would be available to testify the next day. Upon being notified by Senator HOEY that he could not be heard immediately, Mr. Gabrielson sent the following letter setting forth pertinent information on the subject, which I feel should be made available to all readers of the RECORD:

DEAR SENATOR HOEY: I regret that your subcommittee is unable to hear me today. Since delay would only accentuate the rumors and innuendo concerning my business relations with the Reconstruction Finance Corporation, I am submitting the basic facts to the subcommittee in this letter, which I am also releasing to the press. I again request the privilege of appearing under oath at the subcommittee's earliest convenience to answer all questions, and appreciate your assurance that the opportunity will be forthcoming.

The rumors and innuendo are unfounded. I am convinced they have been spread deliberately to confuse the public in the hope of protecting crooks within and without the Truman administration. Because I am chairman of the Republican National Committee, those circulating these rumors and innuendo would blacken a reputation for morality and integrity built up over 60 years. They stop at nothing in their frantic efforts to protect their corrupt hides from the political and legal repercussions of their wrongdoing.

This campaign of blackguarding—and the timing is important—was launched in a libelous attack under congressional immunity 3 days after I made a political address at Elgin, Illinois, discussing the shocking moral climate of the Truman administration and urging voters to turn the rascals out.

Shortly thereafter, on last March 27, I released to the press a six-page letter addressed to all Republican leaders detailing the facts surrounding an \$18,500,000 loan to

Carthage Hydrocol, Inc., of which I am president and general counsel. I recapitulated these facts as follows.

"The RFC loans to Carthage Hydrocol were all granted before I became chairman of the Republican National Committee. The first loan was granted before I became the company's president. In connection with the loan my part and the part of my firm was in assisting in the preparation of the loan application and in discussing the application with the staff of RFC. Neither influence nor pressure were used in obtaining the loans. The compensation I have received was solely for legitimate services as legal counsel and president. In no manner, directly or indirectly, have I received a fee or any other compensation for securing the RFC loan. I have no financial interest in the company. I am proud to be its president and to participate in the development of a new industry with tremendous potentials to our national defense and the utilization of a natural resource."

The March 27 letter also explained prophetically that I was giving all the facts because "this is not the first time, nor will it be the last as long as I am in politics, that it will be used as the basis for an attempted smear."

Those who would destroy my reputation to save themselves were unable to challenge these facts, so the attack shifted. Now they insinuate that because I am the unpaid chairman of the Republican national committee, it is improper for me to carry out my duties as president of a huge new industry, for which I am paid a salary of \$15,000 a year and a retainer of \$10,000 a year to my law firm—both approved by the RFC.

Had I desired to shirk my responsibilities to stockholders who have now invested nearly \$29,000,000 in this company, and to the taxpayers whose Government loaned an additional \$18,500,00 which must be repaid before the stockholders start getting their money back, it would have been easy to do so.

I could have followed the all-too-customary practice of retaining a former administration official, or a friend or law partner of an administration official, to represent Carthage Hydrocol in discussions with the company's banker—the RFC. The testimony before your subcommittee indicates that this might have been to the company's advantage.

But I am proud to say that neither my stockholders nor myself desired influence or advantage. We wanted the continuing problems which arise between banker (the RFC) and debtor (Carthage Hydrocol) settled solely on the basis of merit. It was obvious that merit alone would be the criterion when, in addition to being the Carthage Hydrocol president, I was also active in Republican politics and eventually became Republican national chairman.

It was also my duty, to the best of my ability, to do everything within my power to preserve the security of this Government loan in conducting the affairs of the company. I have been its president for 5 years, and have an intimate knowledge of its problems and potentials.

Of course I have discussed the affairs of the company with RFC officials since becoming Republican chairman. The RFC properly maintains a continuing check on the activities of the companies it helps to finance. The approval of RFC must be obtained for many steps in the operation of the business, routine and otherwise. A total of 30 resolutions and letters of amendment involving Carthage Hydrocol have been issued since the loans were granted, 10 of them since I became Republican chairman.

When the RFC was administered by a board, members were given various loans to police. Mr. Harvey Gunderson was assigned to Carthage Hydrocol, and on at least two occasions I discussed with him and his tech-

nical staff the progress of construction, details of financing, and other matters in which the RFC had a proper interest. I did this not as a Republican chairman, but as the president of a business entrusted with large sums of private as well as government capital. It was my duty to do all in my power to make these investments secure.

I have called on Mr. W. Stuart Symington twice since he became RFC Administrator. My purpose was to request him to order a thorough check of all RFC files relating to Carthage Hydrocol. I asked that if he found anything improper, to say so publicly, and if he did not, to also say so publicly. I still hope that he will do so, and if he does not, I hope that your subcommittee will ask him to do so.

On one of these calls, during a discussion of additional funds to be supplied by stockholders, I told him that the executive committee of Carthage Hydrocol might apply for a 1-year postponement in the start of repayments on the principal of the RFC loans. Interest payments have been met and will be met when due. The purpose of our application for deferment of the principal repayments conformed to the spirit of the loan application. We have encountered mechanical failures in operation of the plant, and we desired to conserve its working capital to protect the soundness of the Government's investment. Mr. Symington indicated he favored a different approach, and if that is decision, our stockholders will see that the repayments are made as scheduled. But even should this application be granted, it doesn't represent any compromise or reduction in either interest or the loan principal. No request has been made, nor will be made, for an increase in the loan.

Now how absurd can blackguarding get? As the chairman of a party out of power since 1933, I certainly had no voice in naming the RFC Board or its present Administrator. The Republican National Committee isn't consulted on appointments to office in this administration. Nobody in the administration owes me anything, except understandable resentment that my party and I are doing our utmost to expose the graft and corruption, and the moral and ethical decline shown to exist by the already established record.

Can this subcommittee, or anyone else, explain how I could be expected to exert influence or receive a favor? Am I to be tarred with the stick of opprobrium properly applied to those in high public or political office who are in a position to render favors, and who accept huge fees for those favors?

I submit that partisan politics exceeds its bounds when it attempts to destroy integrity and reputation without justification. For this reason, I renew my request for the earliest possible hearing by this subcommittee, and I submit that after hearing all the facts, the subcommittee has a nonpartisan obligation to tell the people the truth.

Sincerely yours,

GUY GEORGE GABRIELSON

Code of Ethics for Political Campaigns

EXTENSION OF REMARKS OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. DEANE. Mr. Speaker, on September 13 to 15, 1951, the North Carolina Young Democratic Clubs held their annual convention at Carolina Beach, N. C. Among the resolutions adopted was a report from the State YDC committee on

political ethics. This report resulted in the adoption of the following resolution on a code of ethics for political campaigns, which, under unanimous consent, I place in the Appendix of the CONGRESSIONAL RECORD:

"Be it resolved, That the members of the North Carolina Young Democratic Clubs accept a code of ethics for political campaigns as a standard and guide for their own individual conduct during campaigns; and be it further

"Resolved, That a code of ethics for political campaigns be recommended to the public as a guide and standard for proper political conduct."

The committee submits the following:

"A CODE OF ETHICS FOR POLITICAL CAMPAIGNS"

"This code of political conduct is submitted to the stewardship of the newspapers and radio stations of North Carolina, to be used periodically as an influence on public opinion in the maintenance of proper and ethical conduct by those campaigning for public office.

"Elections must be conducted with the view of obtaining honest and able officers to exercise the will and serve the good of the democracy, and this cannot be achieved if campaigns are to degenerate to name calling, character assassination, and deliberate distortion of fact. A fair and honest presentation of the issues should be more important to every candidate than the winning of public office.

"It is hoped that the responsible leadership of all parties will insist on adherence to this code, and that the press and radio will bring to the attention of the public this code at the beginning of all political campaigns, during the course of campaigns when violations occur, and on the eve of every election.

"No code of conduct or set of rules for human behavior can be all inclusive, nor does this code of ethics particularize all political behavior which is unethical. This code is prepared as a permanent reminder to candidates and to the voting public that honor and fairness in the method of obtaining public office are essential to the fulfillment of our democratic institutions, and that an unprincipled, dishonest, or unethical campaigner is unfit for public office.

"I

"It shall be deemed unethical to use, or allow to be used, written or verbal, any statements or material against an opponent consisting of falsehoods, half-truths, misleading statements designed to imply rather than inform, composite and misleading pictures, or distortions of fact in any manner or degree. If any charge against an opponent's character or motives must be made, it should be direct, specific, and open, by the candidate in person.

"II

"It shall be deemed unethical to use, or allow to be used, back-street tactics, or gossip, rumor, or whispering campaigns which suggest anything detrimental about an opponent, or the opponent's connections or associations. The only ethical conduct for a candidate, faced with such improper conduct on the part of any of his supporters, or anybody acting in his support, shall be to (1) openly disassociate himself and discredit the rumor and the tactics, or (2) openly and directly make the charges or statements being circulated by such improper tactics.

"III

"A candidate is responsible for all campaign literature or advertisements published in his behalf, and it shall be deemed unethical for advertisements or campaign literature to be issued except over the name of the candidate, the name of one of his campaign managers, or a committee appointed by him for such purpose.

"IV

"It shall be deemed unethical to make any appeal, of any nature, in any degree, to racial, religious, or other prejudices. It shall be deemed unethical to stir up fear and distrust between the races, or to inject in any manner or degree the question of race relations since a discussion of race relations during a political campaign can serve no good purpose. An appeal to prejudice is not an appeal to reason, is deliberately a design to mislead and confuse, and is directly contrary to the standards set by the great leaders of North Carolina since the turn of the century.

"This is not to be interpreted as a denial of the right to discuss direct political issues which might involve race relations, and if any such issues are involved, in order to avoid the dangerous possibility of having prejudice inundate reason, it shall be deemed unethical to inject the issue other than as follows: The candidate shall publish his official statement, regarding such issue, consisting of (1) a clear, concise, open, specific charge as to any position he feels his opponent or opponents might have toward the issue pertaining to race relations; and (2) a clear, concise, open, specific statement of his own position. This will enable the voting public to have a full and fair picture of the issues involved, while avoiding the injection of appeals to prejudice by whispers, innuendo, half-truths, and falsehoods.

"V

"Elections must not be bought and sold, and any attempt to purchase influence or votes is unethical. Specifically the practice of paying any sum for votes, or any sum to any person for influence, is unethical. It shall be considered unethical to continue the practice of paying ward workers to transport voters beyond the actual cost of such transportation. The putting out of sums of money in every ward or precinct is expensive and enforces an evasion and violation of the statutes regulating campaign expenditures. It places premium on money rather than the issues and the ability and character of the candidates. It should be stopped, and it shall be deemed unethical for a candidate, or the supporter of any candidate, to expend, or allow to be expended, money in such a manner.

"VI

"Finally, no code of conduct is obligatory, and none has been universally adopted. A code of ethics is a guide for those who desire to conduct themselves properly. This code of ethics is a spotlight for the public in illuminating improper and unethical political conduct, and a simple reminder to all that principles of religion, honest common decency, and fair play should govern political campaigns."

The Death of Heroes

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the New Leader of September 10, 1951, entitled "The Death of Heroes":

THE DEATH OF HEROES

(The Secret Army, by Bor-Komarowski, reviewed by Stephen Naft, former member of

the Polish Socialist Party, author of Questions for Communists.)

In this story of the life and death of the Polish "underground" army, its supreme commander, General Bor-Komarowski, tells of the heroic deeds of the army formed after the total destruction of Poland's regular forces in 1939.

Composed of untrained civilians, old men, women, and schoolboys, formed with an initial capital of \$3,600, with no arms, no arsenals, no munition factories, the Polish Home Army finally reached 380,000 fighters. They obtained their arms by attacking, with home-made bombs, isolated Nazi army and police outposts; during the Nazi occupation, they succeeded in derailing 700 trains, damaging 6,930 locomotives, 19,000 railway carriages, and 4,326 trucks, sabotaging 4,700 airplanes, blowing up 38 bridges, and executing 5,733 Nazis, most of whom had been previously condemned to death in secret session by the Polish underground for atrocities committed against Polish civilians. This in addition to 25,000 casualties inflicted on the enemy in open combat while losing only 15,000 men.

But of still greater significance is the attitude of the Kremlin and the Polish Communists toward the Polish people fighting for its freedom against the common enemy after 1941. The Polish Communists made no move against the Nazis while they were Stalin's allies, but joined the fight—in small, separate armed groups—when Russia was attacked. On July 29, 1944, when the Red army stood across the river before Warsaw, the Kremlin appealed to the Poles to rise against the Nazis. The appeals were printed in leaflets dropped from Soviet airplanes and worded very emphatically: "Poles, the time of liberation is at hand. Poles to arms."

Every Polish homestead must become a stronghold in the struggle against the invader. There is not a moment to lose." Convinced that the Soviet army would come to their assistance against the incomparably better armed Nazis, the Poles were soon bitterly disillusioned. While Nazi tanks and airplanes gradually destroyed the city in 63 days of fighting, the Red army calmly observed the extermination from across the river without moving a finger. They even refused to let British and American planes, ready to aid the Poles, land on territory occupied by the Red army. Stalin, bent on the destruction of Poland, was pleased to have the Nazis do the dirty work of physical extermination, and when the fighting Poles' munitions ran out, the Bolsheviks denounced them as adventurers and provocateurs.

After the defeat of the Nazis in the west and the occupation of Warsaw by the Red army, Stalin was proclaimed the liberator of Warsaw and Poland, and Nazi terror was followed by Communist terror. Thousands of the surviving prominent Poles, potential leaders of a future resurrected Poland, professors, scientists, doctors, lawyers, former government officials and administrators, and officers simply disappeared—spurious verschwinden—never to be heard of again.

Neckyoke Jones Says

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a Neckyoke Jones Says column published in the

Sheridan (Wyo.) Press on September 12, 1951:

NECKYOKE JONES SAYS

"Did you seen where Hightail Harry Truman sez the good ol' U. S. is simply rollin' in wealth?" I requires of Greesewood. "I seen that," he refines, "but that ain't the way I hearn it. Accordin' to a hull passel of fellers who kinda knows the score—some of the things which Harry thinks is assets is about like havin' a second mortgage on a band of antelope. The figgers show that what Harry is blowin' make FDR's spendin' look like little casino. Harry's steamboat is costin' taxpayers over quarter of a millyun a year—which makes livin' a life on the briney-o kinda expensive. There is talk of a lot more taxes—and ifen things is so rosey for wyo do they figger on boostin' the ante? The govmint is borryin' more money—why? Ol' Seniter bird of Verginney—who is a Demmycrat has called the turn on spendin'. Seniter Joe O My Honey of Wyomin' says the govmint has got to quit spendin' extravagant like—but O My Honey allus votes for the full amount of every thing Hightail asts for. It ain't hard to unnersstand now how come a neetle store in Independence, Mizsourey, went busted." Greesewood is a reglier fyncianler. Hoplin' you are the same, I am,

Yure fren,

NECKYOKE JONES.

The Greenwood Plan

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an editorial from the Indianola (Miss.) Enterprise, the Nation's newest daily newspaper.

The people of Indianola, Miss., have enthusiastically joined in the Greenwood plan, originated in Greenwood, S. C., and described to the House a few weeks ago by our colleague, Hon. W. J. BRYAN DORN.

The editorial follows:

JOIN THE BATTLE AGAINST WORLD COMMUNISM

This is an invitation to every American to join in the battle against world communism. To give local citizens this opportunity the chamber of commerce has organized a Greenwood plan committee with John Henry Price, Jr., chairman, Mrs. Norma Lewis, W. W. Gresham, Chick Hosch, and Jim Billings. This committee has been set up to stimulate thinking and solicit ideas on how best to pierce the iron curtain and promote world freedom and peace. For clarity in our strategy, we must be clear in our own thinking on the subject. We must learn to draw a sharp line between the dictatorships and the peoples being dictated to. Every time we assail the Russians or the Poles or the Hungarians when we mean their masters, we are playing into the Kremlin's hands. It was primarily the German failure to make such a differentiation that drove the Russians, as the war progressed, to rally around the regime they hated. "If Russian people had a voice in the government of Russia," President Truman said recently, "I am sure we would have no trouble in getting along with them." And last year Governor Dewey in one of his campaign speeches declared: "The people of the United States have no quarrel with the people of the So-

viet Union. * * * We know they are not the authors of the Kremlin's aggressive ambitions. They're its victims." Russia, like the small nations under its heel, is in effect an occupied country. Democratic statesmen should grasp this central fact—and let the oppressed peoples know that they have grasped it. From this time forward they must speak loudly and clearly to the masses in Communist areas over the heads of their governments. They must use every occasion to assert—

That they do not blame the Russian people for the peace-wrecking tactics of the Kremlin clique;

That credit for Russia's war record belongs to its population, not to Stalin nor his gang.

That our concern for human rights does not stop short at the iron curtain but embraces the Soviet masses;

That we share the aspirations of the Russian people for freedom and are eager to help them earn it.

That we seek the friendship of the Russian people.

Thus, taking a leaf from the Bolshevik book, we shall begin to forge a united front with these people for peace and democracy.

The United Nations and other international bodies providing resonant sounding boards for reaching world opinion. The Communists are past masters in exploiting such opportunities, and we have given them little if any competition. But once we shed our inhibitions, we can beat them at their own game.

We must find the means and the wisdom to carry to Stalin's victims the truth that we seek, not enmity and war but friendship and peace; that we have no purpose beyond their liberation.

Write down your ideas for broadcast behind the iron curtain. Any personal incidents that prove the American way of life, and hand them to any one of the committee members.

There will be international prizes offered for the best ideas. All entry must be into the chamber of commerce office by October 12.

The Military Boot on the Other Foot

EXTENSION OF REMARKS OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, at a time when House and Senate conferees are meeting to try to iron out differences in the huge appropriation bill for the National Military Establishment, the following editorial from the Wisconsin State Journal, the leading newspaper of Wisconsin's capital city, is most pertinent and timely.

So far as I have been able to find out, Defense Department officials did not present any new or sensational information to the Senate committee to justify a \$5,000,000,000 increase. It is time the scare technique in appropriations is brought to a halt.

The editorial follows:

THE MILITARY BOOT ON THE OTHER FOOT

Democratic Senator O'MAHONEY, of Wyoming, is using an old Truman administration trick when he charges that anyone who debates or questions the \$61,000,000,000 military budget is playing into the hands of the Communist enemy.

That gag is covered with moss.

It works like this:

Mr. Truman or one of his bureau chiefs makes a request for a huge sum of money. With the request go dire warnings that something horrible will happen unless every single penny is quickly and meekly appropriated by Congress.

Never—no matter how fantastic the financial demand—must there be a question. Vote all the money, or Russia will attack, or prices will rise, or we'll nosedive into an economic depression.

Congress—notably Democratic Senator PAUL DOUGLAS, of Illinois—fought nobly this week in an attempt to make reasonable economies in the military budget.

DOUGLAS raised the question of whether administrative officers should receive flight pay. He suggested that military-travel allowances should be no more than the money actually spent. He thought that \$2,900,000,000 was quite a bit for expediting production.

These are reasonable observations, but the Truman administration spokesman, Senator O'MAHONEY, used the same old technique of trying to frighten fellow Congressmen into giving the administration its way. Senator O'MAHONEY says he wants to avoid substituting our judgment for that of the trained military experts.

It's a funny business. In the MacArthur case, the Truman administration belloyed that civilian control of the Military Establishment was absolutely vital. But when the Military Establishment wants money, a civilian Congress is ordered to appropriate the cash without question.

Dark Clouds Over Fair Macedonia

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BOW. Mr. Speaker, early this month approximately 1,500 Americans of Macedonian descent from the United States and Canada attended a meeting at Columbus, Ohio, which saw that group calling for a free Macedonia under the protectorate of the United Nations.

Mr. Metody Chanoff, of Canton, Ohio, was reelected president of the central committee of the Macedonian Political Organization. This six-man committee is made up of American Macedonians from Missouri, Michigan, Indiana, and Canada.

On September 2, 1951, an address was delivered to the meeting by Dr. F. K. Kruger, of Valparaiso University. I ask leave, Mr. Speaker, to include in my remarks the address by Dr. Kruger.

DARK CLOUDS OVER FAIR MACEDONIA

(Address given by Dr. F. K. Kruger, of Valparaiso University, Valparaiso, Ind., at the thirtieth annual convention of the Macedonian Political Organization of the United States and Canada, on September 2, 1951, in Columbus, Ohio.)

Once again you have invited me to address your annual convention as a guest speaker, and I want to assure you that I appreciate the honor which you have conferred upon me.

Many years have passed since I was with you at a similar occasion, and the face of the world has changed considerably—unfortunately not for the better. Today that part of the world which is still free and that

which is enchained against its will are faced with a terrible menace, more frightening than any one of us has experienced in his lifetime. There exists an old Latin phrase which, with reference to the spiritual aspirations of mankind, says: "Ex oriente lux—i. e., out of the east comes light." But today we are compelled to say, "Out of the east comes darkness." You know, of course, that I refer to the terror of communism. It makes little difference in principle whether this dark cloud, the harbinger of terrifying thunder and devastating lightning, which threatens to engulf not only central and Western Europe, but eventually the whole world, hangs over Russia and her satellites or over a country which calls itself Yugoslavia, but which should properly be designated Greater Serbia. The man who for the time being rules that unhappy land, namely Tito, has again and again after his break with his former master, Stalin, avowed that he has remained a true Communist who is determined in the long run to carry out the program of communism among all the people who are in his power. This is one very good reason why American citizens of Macedonian birth or descent, who love the country of their adoption and the principles for which it stands, a country where thousands of them with their children have found a haven of refuge from the tyranny of past and present Serbian overlords—this, I say, is a strong reason why they oppose Tito's rule and ardently wish and hope to see their folks across the ocean released from his yoke.

I know that in spite of alluring invitations to join Stalin's or Tito's wonderful communism, they have, with the exception of a negligible few deluded or ambitious persons, from the very beginning steadfastly rejected Stalin's ideology and held to the American and Canadian, that is, the western way of life, the life of freemen.

Communism is absolutely and without the slightest reservation rejected and attacked by your Macedonian organization in this our country, and your organization is the true representative body of the spirit of Macedonian patriots in their homeland. You know who the so-called leaders of Communist Macedonia of today are. Did you find their names recorded in the past struggle for the freedom of your people? No, they were foreigners to the liberation movement of your countrymen, of whom many sacrificed their possessions and their very lives for the noble cause of freedom and justice. The rulers of the communistic regime in Macedonia are Macedonians only by accident of birth, but in their hearts they are self-seeking tools of the communistic dictators in Belgrade, educated and trained in either Belgrade or Moscow. Most of them have only recently arrived on the stage of Macedonia by the grace of the little Caesar in Belgrade, their words are prompted by him, and the strings of the actions of those puppets are manipulated by him.

We know what the so-called paradise of the Communists is. The majority of the Americans and Canadians of Macedonian descent are religious people. They believe that Christianity is and should be a vital part of our civilization. But what do the Communists think of religion? It can be summarized in the sentence coined by Karl Marx, the Allah of communism, repeated by Lenin, his prophet, and subscribed to by Tito, the ardent disciple of Marx and Lenin, "Religion," so Marx exclaimed, "is opium for the people." Lenin said in 1905: "Our program necessarily includes the propaganda of atheism." And in 1909 Lenin wrote as follows, "Marx said 'religion is opium for the people'—and this postulate is the cornerstone of the whole philosophy of Marxism with regard to religion." Finally, the program of the Communist International, adopted at the sixth world congress of communism stated: "One of the most im-

portant tasks of the cultural revolution affecting the wide masses is the task of systematically combating religion—the opium of the people." How then, I ask, can any Christian subscribe to Tito's rule?

Another reason for the rejection of Tito's dictatorial rule over Macedonia is his treatment of the agrarian question. Macedonia is a land inhabited for the most part by peasants. About 80 percent of its population is engaged in agriculture or the raising of cattle. In spite of the desire of the Communist government in Belgrade to industrialize that part of Macedonia which is under its rule and in spite of all the special privileges granted to industry at the expense of agriculture, such industrialization has not proceeded far, even though there has been some increase in the tobacco manufacturing and the antimony, chrome, and quartz mining of the Skopje region. The fate of the small self-reliant farmers of Macedonia under Tito's communistic regime is not much different from that of the peasantry in Russia and its satellite states. The peasants are cajoled and pushed hard and relentlessly to make impossibly large contributions to the Belgrade government in order to support industry and for the purpose of forcing them to abandon their small private landholdings and to become dependent farm laborers on the collectivized state farms, where they are exploited by the Communist functionaries.

An American correspondent of the New York Herald Tribune sent a wireless report of the condition of the Macedonian peasants to his newspaper which was printed by that paper in its issue of May 29, 1951. We quote from his report made after investigations on the spot "Many peasants in Yugoslavia," so the report reads, "are in a bitter mood over the Communist collective farms set up extensively in this region. In Strumica peasants who had been in collectives for 5 years laughed at the idea they had joined voluntarily. Some stated they wanted to quit their collective but could not. They left reporters suddenly when militiamen appeared in the distance. A down-and-out peasant said, 'We pray day and night that this will be over. We work like horses, and they give us nothing. What should we live for? We should throw ourselves into the Vardar River'."

Two reports to the New York Times of July 26 and 28 by its correspondent in Belgrade, Mr. M. S. Handler, confirm the situation as reported by his colleague of the Herald Tribune. Tito's government is alarmed over the movement of the peasants to leave the collective farms, especially in Croatia and Macedonia. Mr. Handler says in his cautiously worded cablegram from Belgrade: "The Yugoslav Communist Party believes, as all other Communist Parties, that a Socialist state must be based upon the alliance of peasants and workers, and this can be achieved only through socialized agriculture and nationalized industry. Therefore the party feels that any trend among the peasants to abandon collective farming can be regarded only as a direct attack upon the Socialist economic system and a danger that must be combated."

There is in Macedonia the same story as in the Russian-ruled eastern part of Germany, Poland, Hungary, Bulgaria, and Rumania. The peasant of Eastern Europe has his roots in the soil which he and his ancestors have tilled for generations. He is proud of the small property of land which he owns and which he desires to pass on to his children.

Tito's statement that he intends to leave the peasants in possession of their farms if they so desire is a deliberate lie. Under existing circumstances he might feel it wise to go slower than some other Communist countries, but let nobody be deceived; as an avowed Communist he will eventually col-

lectivize all farms and reduce the free peasants to unhappy slave laborers on the land of their forefathers.

Furthermore, Tito is obviously a supernaturalistic Communist. In this respect he is in no way different from the Karageorgevich kings of old Serbia and their "black hand." Tito's ambition is the same as was theirs, viz, to keep the Croats, Slovenians, and Macedonians under his iron rule against their will. He wants to assimilate them by force and alienate them from their chosen way of life and their cherished traditions; he wants to make them subservient to the foreign as well as the domestic policy of Serbia; he denies the non-Serbian people in his state the right of self-determination, a right which our glorious American Declaration of Independence terms a natural and inalienable right of all human beings. I am sure that the Macedonian Organization of the United States and Canada is perfectly willing to abide by the majority decision of the Macedonian people themselves, provided it is expressed through a truly free popular election, or in other words by such a procedure as is customary in our own United States.

We have the assurance of our United States State Department that the present support of the Tito government will be extended to it only as long it is willing to oppose the mutual enemy, the Russia of the Communist Kremlin. The United States is not inclined to repeat its previous mistake and to replace uncle Joe by cousin Tito. In an official bulletin, called Aid to Yugoslavia and issued in November 1950, our United States Department of State, while explaining at length its aid to Tito, says definitely and clearly: "Since Yugoslavia announced in 1948 that it would no longer submit to domination by the Kremlin, the United States has been extending limited economic assistance. This does not mean that the United States approves or endorses the internal policies of the Yugoslav Government."

The American and Canadian citizens of Macedonian descent, as stated previously, are no less determined opponents of the communistic rule of the Kremlin than Tito. They even trump his card. For they are opposed to any kind of communism, including Tito's. And with great satisfaction they have taken notice of the official and explicit announcement of our United States Department of State that our Government does not approve or endorse the internal policies of the Belgrade regime.

On February 11, 1951, some 200 representative exiles from 10 countries of Communist Europe, including refugees from Yugoslavia, issued a declaration of liberation, signed at Independence Hall in Philadelphia. This document is an echo of the American Declaration of Independence. It demands the restoration of man's natural rights to the people of Eastern Europe and their liberation from foreign rule. It goes on to say that "the peoples of Central and Eastern Europe are firmly resolved, upon their liberation, to join the community of free nations and to establish government of the people, by the people and for the people."

I have the assurance of your leaders, my Macedonian fellow-American citizens, that for the well-being of your relatives and brothers-in-blood across the ocean, your organization subscribes to these aims, viz, to the establishment of a free and autonomous Macedonian state, which would arrange its domestic affairs according to democratic principles and which desires to live in peace with all its neighbors. An autonomous Macedonia would welcome to become a part of a Balkan confederation and of any honest and effective world organization for the peaceful development of mankind. For this goal, I understand, you are determined to work, as you have worked in the past, with all legal means at your disposal.

Let us hope that the day will not be far that many of you, now assembled in the capital of the State of Ohio, will witness the unveiling of a statute of liberty in the capital of a free and independent state of Macedonia.

Left-Wing Unmorality

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. SHEEHAN. Mr. Speaker, liberalism in its original concept was felt to be a movement which would benefit the people as a whole. Liberalism during the last 20 years in the United States has developed into a left-wing liberalism which is causing the original concepts of liberalism to fall into disrepute.

Liberalism was originally sold to the people of America as a panacea which would benefit the underprivileged of the country, and we have forgotten an accepted truth which the experience of the ages has proven, that the people are most in danger when the means of injuring their rights are in the possession of those of whom they entertain the least suspicion.

The new mode of left-wing liberalism espoused by the Democratic Party is bringing on despotism. In the words of Alexander Hamilton in the Federalist Papers, America must remember "that a more dangerous ambition more often lurks behind the specious mark of zeal for the rights of the people than under the forbidding appearance of zeal for the firmness and efficiency of government. History will teach us that the former has been found a much more certain road to the introduction of despotism than the latter, and that of those men who have overturned the liberties of republics, the greatest number have begun their career by paying an obsequious court to the people; commencing demagogues and ending tyrants."

David Lawrence, in his editorial of September 28 in U. S. News & World Report, entitled "Left-Wing Unmorality," has brought back to our present generation the importance of the advice of our founding fathers. Mr. Lawrence's editorial appears below:

LEFT-WING UNMORALITY

(By David Lawrence)

Time was when only the conservatives—the right-wing groups—were supposed to be guilty of using public funds and public authority as a means of exploiting the people. Special privilege, monopoly, graft in high places were the poisons against which liberalism and progressivism were recommended as a healthy antidote.

But now materialism has become bipartisan.

The left wing has been revealed to be composed largely of selfish, greedy groups with a lust for permanent power. For 20 years these groups have masqueraded under such alluring labels as the "New Deal" and the "Fair Deal." But they have been unmasked now as controlled by just another set of unscrupulous politicians who use public funds

for political propaganda and for vote-getting and feed their henchmen at the trough of taxpayers' money. The worthy achievements of liberalism have been sullied by a record of shocking indifference to graft and to the conduct of public business on a basis of favoritism.

The American people as they read almost daily the disclosures in Congress are indignant at the lack of morality shown by the party in power.

Left wingism started out years ago as the virtuous defender of human rights and liberties. It has become in America, in Britain, in Australia, and New Zealand a crass materialism which buys large blocs of votes in the electorate through special privileges extended to pressure groups and really ignores the long-range or over-all interest of the people.

"Left wingism" is now in the most dangerous stage of its evolution. It is impatient with the slow workings of democracy. It fails to understand that the science of good government is basically the art of adjusting majority and minority views with a tolerant rather than an intolerant attitude toward the minority.

"Left wingism" has arrived at the coercionist stage. It wants to limit free speech and abolish congressional immunity from libel because it really can't tolerate opposition criticism and what the great liberal, Justice Oliver Wendell Holmes once called "freedom of the thought we hate."

The President of the United States only last week intimated in a public speech that all publications which distribute to their subscribers by second class mail are disqualified from publishing editorial comments opposing the rates charged by his administration and disqualified also from criticizing any of his policies involving grants of taxpayer's money.

Left-wingism has eaten away from the operations of Government all semblance of true liberalism. President Truman still rants about his interest in the people but he has failed to clean out the corruption in his administration now disclosed to view by Congress.

Unlike President Coolidge, Republican, who appointed bipartisan attorneys of great prestige and gave them the green light to prosecute relentlessly the Teapot Dome scandals, Mr. Truman calls the recent revelations about his administration just a smear and misrepresentation. His spokesmen point to Republican scandals of the past as if this justifies what the Democrats are doing now. At his press conference last week Mr. Truman actually condoned the use of political influence by would-be borrowers of Government funds and said he saw nothing wrong in the flow of introductions to RFC officials given such borrowers by the chairman of the Democratic National Committee and his corps of assistants and volunteer workers. He never made a graver mistake. For these are the insidious devices of machine politics. The appointees owe their jobs in many instances to recommendations by the Democratic national committeemen.

There is no evil so readily understood or so quickly repudiated by the American electorate than unmorality in public office. It was a Democratic President—Grover Cleveland—who proclaimed that public office is a public trust.

It looks, too, as if the Nation also has been to some extent infected by the end-justifies-the-means doctrine of the left wing. Cadets cheat at West Point and immediately there arises a wave of condemnation of the method of conducting the examinations or of the severity of the penalty. What kind of an America is this which makes excuses for dishonesty and rationalizes unmorality as natural behavior? With what kind of an opiate has left-wingism drugged us in the name of liberalism?

May America awake from its recent orgy in so-called liberalism. But let it not then permit the same sort of materialists to take over the Republican Party.

Let America insist instead that there be nominated on both tickets for President in 1952 two leaders—honest men, moral men—who really believe that public office is a public trust. We should elect as President a man who is ready to make every sacrifice to keep his administration clean by his devotion to a truly American ideal—old-fashioned honesty, old-fashioned decency, and old-fashioned morality.

Man and the Land

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the annual meeting of the Kansas Crop Improvement Association at Manhattan, Kans., on February 2, 1950:

I am glad to be back out here in the heart of the Nation's bread basket and to have this opportunity of meeting with the Kansas Crop Improvement Association.

The plowing up of much of the virgin land of Kansas is still recent enough to be remembered by many. Production of wheat to help feed the allied armies of two world wars has effectively demonstrated the capacity of Kansas land to fill the breach in time of critical national need.

This Kansas land must be kept in good condition. It is basic to our welfare; it cannot be spared.

But drought and dust storms have shown us how nature can strike back when man takes the welfare of the land too much for granted and fails to protect it. So do gullies and stiff clay stripped of its topsoil.

If we are to have the production we want when we need it, and if we are to avoid dust storms and gullies and dwindling yields on erosion-denuded slopes, we must look closely to the future and the kind of relationship that will have to be maintained between man and the land. Nationally and world-wide, conservation of the land from now on is one of the really urgent, basic problems of our time—probably the most urgent. We who are living today and the next few generations to follow must learn the science of soil conservation and get the habit of practicing it as a technique essential to our continuing welfare. We must conserve our remaining supply of productive land while we use it. People are fast making up their minds to this. A few scattered obstructionists, for some strange purpose, are still delaying progress as well as their scheming permits. But their numbers are thinning.

It is not going to be enough to merely safeguard the land for the next 10 years or the next 100 years; we must safeguard it—conserve it—permanently. The alternative will be a falling standard of living, a declining civilization, hunger, famine, and international misunderstanding.

LESSONS FROM ABOARD

This lesson is brought home forcefully to anyone trained to observe such matters if he travels to some of the other countries of the world. There he will find it written on

much of the eroded land, and etched in the worried faces of people struggling to produce their food and other soil-derived necessities I have seen these things in different parts of the world. Last fall, I spent some time studying erosion conditions and soil and water conservation methods in southern France, Italy, and north Africa. I made the trip primarily in the hope of finding something that might be helpful in our own national program of soil conservation, feeling that we must not overlook anything of importance. I found very little, however, that we can make any use of under present conditions.

Over there, I observed the length that people will go in order to get a living from some of the world's oldest lands still in agricultural use, including costly and back-breaking measures for holding soil—such as the building of stone walls to support strips of steep land. We saw much wonderful work in parts of Italy and France, notably staircase benches supported by well-constructed rock walls, filled in behind with soil brought in by the basketful. The Italians—and French, too—are exceedingly skillful in the use of rock, not only in the construction of walls but for building structures for torrent control in the mountains.

The work required in establishing some of this bench type of agriculture, translated into our American labor costs, probably would amount in many instances to \$15,000 or \$20,000 an acre. Such an outlay on farm land clearly is out of the question for us, now or at any time we can foresee, even in the most eroded parts of the country. As a matter of fact, we are not in need of this type of conservation at this stage of our development, except in occasional special cases.

In Italy, along the roads we traveled, every available patch of land—practically every square foot—is in use. From the beaches of the Adriatic and the Mediterranean on up to the crests of the Apennines and the Alps, thousands of little patches are cultivated on slopes so dizzy steep I wouldn't venture into them. Practically every slope where man can hang on is in cultivation of some kind. Some of you—born and reared in Kansas—would be startled at the tedious and back-breaking effort which more often than not must go into any kind of agricultural production.

In the forested areas, when trees are cut, the leaves of oaks and some of the other trees are saved for stock feed, and the twigs, along with the weeds of the fields, are scrupulously saved and bundled for fuel. When you talk to an Italian about the cost of such operations, the reply is likely to be something like this: "Why consider the cost of food when to have it means life and not to have it means death?" Although we have not yet reached anything like that degree of land scarcity in this country, we still have to consider carefully the cost of our conservation work on the land. And we must, also, consider the greater cost—in dollars and human effort—if for any reason we should be so short-sighted as to postpone or upset in any way our going program of soil and water conservation, or to weaken or emasculate it with substitutes and magical remedies for speed or any other imagined advantage.

But in Italy where there is no rock, there are no rock walls—and for this reason most of the sloping land is without adequate protection. There is very little contouring, no strip cropping—not much in the way of modern soil and water conservation. Consequently, there is a great deal of subsoil farming, and erosion goes on eating into the very base of the nation's life.

WHAT MODERN SOIL CONSERVATION IS

The term "conservation" has become a very popular word in our vocabulary during the past few years. In fact, it has become so popular that it is used rather loosely by some. Thus, some farmers may think they

are practicing "soil conservation" when they build a few terraces, construct a fish pond, pile rubbish in a gully and forget it, let a wheat field lie fallow for a season, or fertilize their land for this year's crop and forget it next year. These are only beginnings. True conservation must be total conservation, so far as the land is concerned. Soil conservation is not a job that you can do today and forget tomorrow; it must be maintained. It is not a job that you can do in one field and not do in the next field, when there is any natural relationship with respect to runoff from the adjoining areas. So, what is done at one place over the entire farm is done with the view that it may beneficially affect other parts of the farm or other farms downstream.

At this point I think it would be a good idea to explain what we mean when we talk about modern soil conservation, which is spreading across the Nation with such steady and remarkable progress.

Modern soil conservation is based on sound land use and treatment of land with all the proven appropriate measures that are needed to keep it permanently productive while in use. It means terracing land that needs terracing, it means contouring, strip-cropping, and stubble-mulching the land as needed, along with supporting practices of crop rotations, cover and green manure crops, etc., wherever needed. It means gully control, stabilizing water outlets, building farm ponds, locating farm roads and fences as nearly on the contour as may be feasible, planting steep, erodible land to grass or trees, development of good pastures, and devoting good management to them after they are developed.

Modern soil conservation, moreover, consists of doing these and still other necessary things. Where land is too wet, modern soil conservation calls for drainage; if it is too dry, it calls for irrigation; if it is subject to wind erosion, it calls for wind-stripping, tree-planting, and stubble-mulch farming. If plant nutrients, lime, and the humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter; if water-soluble salts have accumulated in toxic quantities, it calls for drainage and leaching out of the salts by flooding. And modern soil conservation calls, also, for the use of the best of most adaptable varieties of crops as well as the most efficient and adaptable tools available to farmers.

And, of course, an indispensable part of modern soil conservation is a supporting program of research, such as will provide for the welfare of the land at all times the advantages that progressive science can contribute. Also, a continuing, vigorous program of soil conservation education must be made a part of our teaching from kindergarten on through college. Moreover, modern soil conservations calls for the maintenance of all effective work which is put on the land. These painstakingly and scientifically planned and applied conservation measures are not just for a single year or cropping season. Like savings bonds or savings deposits in the bank, they increase in value and return on the original investment as the years go on.

ONLY ONE WAY TO DO THE JOB

In short, there is only one formula for doing the soil and water conservation job properly—scientifically. That formula consists of treating the different kinds of land on a farm according to their individual needs, and using each kind according to its capability for continued safe and economical production. This is nature's way. And it is the way the farmers of Kansas and the Nation are going about getting the conservation job done through their farmer-voted and farmer-managed soil conservation districts, set up under State enabling law. It is through these democratic units of State government, assisted by technicians of the

Soil Conservation Service and other agencies at the districts' request, that the big soil and water conservation job on the farm lands of the Nation is being done in an effective and lasting manner never before accomplished anywhere so far as I have been able to discover by critical examination of the situation in various countries and by examination of the literature of the world.

A PROGRAM OF CONSERVATION ACTION

To complete the soil- and water-conservation job in time—bringing conservation treatment at the earliest practicable date to every acre of land still needing this protection and improvement—calls for a program of positive action. It is a program in which groups such as your Kansas Crop Improvement Association have a natural interest. It includes, among other points:

1. Completion of the national land capability inventory at the earliest date facilities will permit—by 1956, if possible. This scientific, acre-by-acre inventory of all the land on every farm of the Nation is the foundation on which rests effective and lasting soil conservation. It is the basis of sound farm planning which, in turn, is the guiding blueprint for sound soil and water conservation.

2. Completion of the organization of the Nation's agricultural lands into soil-conservation districts, and strengthening district responsibility and work. This calls for establishing as a recognized agricultural goal in the United States a scientifically developed soil-conservation district plan applied by a conservation farmer to every farm and ranch in the Nation at minimum public cost.

3. Active participation by all interested rural and urban groups—professional, business, and patriotic—in achieving nation-wide conservation.

4. Making a real conservationist of every farmer and rancher—the kind who understands what he is doing and how conservation benefits himself and his children's children.

Soil conservation, as nearly a million farmers are now practicing it, is using and protecting each acre of land in such a way that it will produce maximum amounts of needed products of good quality while retaining or increasing its productive capacity. With our growing population and continuing erosion on untreated land, we should not be satisfied with anything less than this. We do not need to accept less, because we now know how to treat the land so that it will do this for us. And as our population continues to grow, I think we shall not be able to afford less.

WHAT CONSERVATION FARMING CAN DO

Using the land according to its capability means—when we have the capability information for the land—that the least productive and more hazardous croplands are the first that could (and should) be retired from cultivation or the first to be placed in lengthened rotations, if a downward adjustment in the acreage of certain crops seemed desirable. It would mean, too, that land not suitable for cultivation could, without any guessing, be retired from cultivation altogether, and turned to grass that would produce meat and improve the soil at the same time. Some land would go to trees for needed wood products or merchantable timber. Greater yields per acre—and, therefore, more profitable yields—can be obtained from the most productive land at less, or at no greater, cost for seed, fertilizer, labor, machinery, and management. To state this efficiency of conservation farming another way, the same amount of seed, fertilizer, machinery, and management will produce a better return from the most productive land (that is, land of capability classes I and II) than from less productive land (classes III and IV, principally).

This is not theory or guesswork; rather, it is a statement of facts proved by the multiple experiences of conservation farmers reported from Kansas and every other part of the country. Moreover, conservation farming almost invariably calls for diversification of crops, often including more land in grass and trees. In this way the economic stability of the farm business is improved and the farmer is in a better position to operate successfully in a period of hazardous markets. All of these things tend to emphasize the fact that soil conservation, as we practice it in the United States, is important during periods of declining markets and hazardous prices as well as during periods of expanding markets and rising prices.

GRASS IN CONSERVATION FARMING

As you know, the Department of Agriculture in laying special emphasis just now on grass and legume crops in its efforts to encourage production better geared to current needs. These protective crops, of course, have had a fundamental place in the soil and water conservation program ever since the Soil Conservation Service began working nearly 20 years ago as the Soil Erosion Service—and in the work of the erosion-control experiment stations before that. I am sure that you members of the Crop Improvement Association need no sales talk from me on the importance and general desirability of more grass in our agriculture, but perhaps this is a good time to summarize the situation briefly with respect to this important element of conservation.

People sometimes ask me, "Why do we need grass?" And I tell them, "Well, I, for one, like to eat T-bone steaks, but it takes grass to make good T-bones; and besides that, grass protects the land from erosion, improves the soil, saves water, reduces floods, and cuts down on costly reservoir siltation."

More meat, milk, and butter are needed by many thousands. In order to produce enough of these basic, nutritious foods, we need more grass and legumes over much of the country. Grass is needed, first, to protect the surface of the land against rainwash and wind. Its roots improve the structure of the soil, and, what is very important, grass in the rotations is much better than straight grain or row crop farming. Land recently in grass or legumes will usually resist both blowing and washing much better than land deficient in organic matter. Moreover, such land stores up rainfall better than hard-used soil deficient in organic matter and is easier to plow. And, too, grass is profitable over the years, for livestock or cash seed production.

GRASS SEED NEEDS

Right now, as you know, we are short on some important grass seed. Take bromegrass, for example: Only about half as much of this seed was produced in 1949 as the 1943-47 average. A little more crested wheatgrass seed was harvested in 1949 than in 1948, but that was only a little more than a third of the 1943-47 production. The need now is for much more of these seeds. And so it is with buffalo grass, big and little bluestem slender wheatgrass, Sutter's grass, and others. Our reports from soil conservation districts show that virtually every farmer who has gone out and collected seed has disposed of it at a nice profit to neighboring farmers or to seedsmen.

In this activity seed of many native grasses, never harvested before, have gone into the trade, developing new markets while improving the agriculture of the country.

One of the main problems on which the Soil Conservation Service has concentrated its efforts during the past year or more is increasing the quality and quantity of grass and legume seed production in soil conservation districts. During the years immediately ahead, there are indications that a good many farmers are likely to make ad-

justments in their cropping programs, probably such as would increase the acreage in grasses, legumes, and grass-legume mixtures, and decrease the acreage of crops that may be in surplus supply. It now appears that this could be the greatest shift in the use of the Nation's farm land since the beginning of World War II. The Soil Conservation Service, as a part of its cooperative work with soil conservation districts, is endeavoring to give the fullest assistance possible to farmers in the districts—and to all others concerned—in order to make the safest and most desirable shifts in land use.

Man and the Land

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the annual meeting of the Kansas Crop Improvement Association at Manhattan, Kans., on February 2, 1950:

In its soil-conservation nurseries, together with its field collections, the Soil Conservation Service has produced and distributed 13,000,000 pounds of grass and legume seed, consisting largely of little-used seed (little used until the Service got in to the field) and seed of native grasses domesticated through the activities of the Service. By encouraging farmers and contractors, the Service collected last year 1,851,000 pounds of native grass seed. Moreover, as the result of its efforts in spreading the use of various kinds of grasses and legumes in soil-conservation districts, the Service was responsible directly and indirectly for production, in 1949, of 198,587,000 pounds of such seed—or enough to seed 9,272,000 acres.

AN EXAMPLE FROM KANSAS

To illustrate, when a complete conservation plan was worked out for the 640-acre farm of Mr. George L. Whitcomb near Cedar Point, Kans., in the Chase County soil-conservation district, it was decided that 100 acres of the farm would be more profitable in grass than in cultivated crops. The 100 acres included partly eroded, sloping land and partly flat bottomland subject to frequent flooding. In 1949 bromegrass seeded on 90 acres produced 39,400 pounds of seed valued at about \$10,000. Mr. Whitcomb reported, and intermediate wheatgrass on the other 10 acres of the 100 acres produced more than 1,500 pounds of seed. In addition, he averaged 7 tons of grass silage to the acre last year on land used for that purpose, and reported 7 months of pasturage from this combination of grasses.

Everybody stands to gain through more of this kind of conservation farming. And this is the kind of well-balanced, diversified conservation farming that is spreading across the farm and ranch lands of Kansas and the rest of the country with remarkable speed. Even the most optimistic of those of us who pioneered in the soil conservation field could not have foreseen what has come to pass here at the turn of the half-century.

EFFICIENT CONSERVATION THROUGH FARMERS' DISTRICTS

I think it has been amply demonstrated now that the most efficient way of carrying on the soil and water conservation job, in

Kansas or anywhere else in the country, is through the splendid working together—the group action—of farmers in soil conservation districts. It seems to be agreed more and more among agricultural and other leaders that the effectiveness of the districts in advancing the Nation's conservation job has come about, as much as anything, because they are in an ideal position for the landholders to work together and take advantage of counsel and assistance from one another, as well as from other local, State, Federal, and private sources, such as those represented by your own Crop Improvement Association. It would be difficult to overemphasize the importance of the effective work and leadership of the more than 10,000 soil-conservation district supervisors who are serving your own and other communities throughout the country unselfishly, without pay, and without obligation to anybody but the farmers in the districts. If you are not already acquainted with the district supervisors in your locality, then I urge you by all means to get to know them.

These districts represent, I am convinced, the greatest land movement of all history. Virtually all of the Soil Conservation Service's technical and certain other assistance, including that in flood control, is made available to farmers through their soil-conservation districts, of which there now are nearly 2,200 distributed throughout all the States, Territories, and insular possessions. They already include—since the first district came into existence as recently as 1937—more than three-fourths of the Nation's farms and three-fourths of its farm land.

Kansas, I am happy to remind you, is close to the top of the list from the standpoint of soil conservation district organization, with 96.7 percent of the State's total area within the boundaries of 101 districts as of January 16, 1950.

Farmers in soil-conservation districts are working together as farmers never worked before. They are, in numerous instances, lending one another machinery and seed. They are planning together; sometimes they make contributions to improve local road conditions, etc. This helps speed up the work—get more acres planned and treated.

NEIGHBORS WORKING TOGETHER

Another important way for speeding up soil conservation is the use of natural neighbor groups in planning and applying conservation practices. Soil conservation districts and technicians of the Soil Conservation Service have, for several years, been placing emphasis on the use of the natural neighbor group to gain a better understanding, acceptance, and adoption of the conservation way of farming. Past experience indicates that the natural neighbor group approach is the best method to develop conservation farmers—farmers who understand why they should farm the conservation way, who do farm that way, and who will continue to farm that way. It is one of the best methods for moving ahead soundly and surely.

In nearly all areas we are finding groups of farmers who, because of their neighborliness, work together neighborly and naturally. These groups are often relatively small—often not more than 8, 10, or 20, altogether. Sometimes the members of a group are more or less unaware of the neighborliness enjoyed in their mode of living. They work together in ways that they themselves do not always clearly recognize. And they have their leaders—leaders who are neither appointed nor elected. These are simply locally outstanding men who have won the confidence of their neighbors and to whom their neighbors turn for help and advice. Some of these leaders appear to be unconscious of their leadership, they seldom speak of themselves in any sense of leadership.

In varying degree a variety of neighborly interests bind such groups together. Sometimes church interests serve as the catalytic agent, or the school, or other kinds of meetings or common associations. Neighborhood needs, especially in the form of emergencies, often bring the groups closer together. But they are natural neighbor groups, nonetheless, not large artificial groups, as the farmers of a township. And they are not community groups, such as communities bound together by geographic ties or other associations well understood by everybody.

They will work together on any common problem, because they either are used to working together or can easily be induced to work together. And an important feature about them is that they can be located. Their members and leaders can be identified, but it takes both experience and training either to recognize them or to locate their leaders.

These natural neighbor groups offer an ideal means for planning and carrying out a soil-conservation program. Such groups have demonstrated innumerable times that they will work together effectively and take joint action in the furtherance of soil and water conservation. At this time the Soil Conservation Service is cooperating with about 30,000 of these groups in the soil-conservation districts of the Nation. Not only do such groups help to speed up the conservation program, they assure more permanency to the conservation work applied to the farms of the members. They cooperate and advise each other on maintenance as well as in the application of conservation farming methods.

FARMERS ARE ASKING FOR MORE HELP

When we started out on an action plan for soil conservation in 1933 it often was difficult to get some farmers to cooperate. They wanted to wait to see how soil conservation worked out on some other farmer's place or were just "not interested" at the time. Sometimes our field technicians, desiring to see work moving along in all localities, talked many times with some farmers and ranchers without results. There has been a change. On file with the soil-conservation districts of Kansas there were, as of June 30, 1949, 7,116 requests for the technicians of the Soil Conservation Service to help the farmers prepare conservation farm plans over and above what our conservationists were able to prepare. In the country as a whole the backlog of requests for plans exceeded 200,000 at that time.

It is better to have plenty of requests for plans, of course, but it is not too good for a farmer to have to wait too long on the technicians.

The total number of requests the districts have received for farm conservation plans in the State amounts of 34,400, covering 7,740,000 acres. As of June 30, 1949, 3,106,000 acres of the planned area in soil-conservation districts had been treated.

SOME SOIL-CONSERVATION ACCOMPLISHMENTS

Soil conservation district organization, of course, is not an end within itself. A district program that exists only on paper isn't worth the paper it is written on, neither is a farm plan for soil conservation, where its provisions are not applied to the land. Complete, final figures were not yet available when I left Washington, but preliminary estimates were that up to January 1, 1950, farmers and technicians of the Soil Conservation Service, working together out on the land throughout the country, in soil-conservation districts alone, had prepared cooperatively some 800,000 complete soil-conservation plans. These plans covered by that date, as estimated, 220,000,000 acres, and 114 million acres had been treated with needed conservation measures.

By last July 1 (the beginning of the present fiscal year, and the latest date for which

these figures are available), detailed soil conservation surveys adequate for farm planning had been made of 304,000,000 acres, and reconnaissance surveys helpful in farm planning had been made of an additional 177,000,000 acres. These figures do not include the additional millions of acres which had been surveyed, planned, and treated through other programs in which the Soil Conservation Service has participated.

NOW WE ARE MOVING AHEAD FASTER

We have been moving forward in this vital task of soil and water conservation at a quickening pace, and there is no good reason at all why we cannot continue to do so, depending on the availability of technical and other manpower, machinery, and materials—and good, persistent cooperation from every person and organization capable of doing anything worth while in aid of this basic program. This is what I mean: In the fiscal year 1941, we surveyed, planned, and applied to the land about 1 percent of the total remaining soil conservation job. In the 1949 fiscal year, the rate of progress had more than trebled—about 3½ percent of the remaining job was completed. Today, about 19 percent of the job has been finished for the country as a whole; and we are exerting every effort to add enough farm plans for soil conservation by the end of this fiscal year, or July 1, 1950, to bring the amount completed close to 25 percent.

So, we feel very confident that by putting our shoulders to the wheel, all of us working together—really working together with confidence in one another and in the best spirit of cooperation—the basic conservation measures could, with adequate facilities, be applied to our lands needing treatment within 20 years. After that, of course, continuing maintenance would be necessary, along with any worthwhile improvements in conservation methods and devices that may come from research. This last stage—the maintenance and improvement stage—will be a smaller task from the standpoint of technical, educational, financial, and other assistance to farmers. Over the country as a whole, the soil conservation districts already are way out in front in providing themselves with machinery, seed, and other materials for going ahead with the job.

In the fiscal year 1949, to illustrate, more than 16,000 private contractors were engaged in soil and water conservation work in soil conservation districts over the country. About 95 percent of all the equipment used in the districts was owned and operated by contractors.

SOIL-CONSERVATION CREDIT

There also is the matter of credit and financing soil-conservation work in those cases where it may be needed. Private as well as public lending institutions are demonstrating more and more their interest in the fact that conservation treatment of the land should not have to be held up for want of a little credit to tide the landowner over the initial stage of applying his conservation measures, whether they be the building of structures or the installation of any needed practices.

Already, progress is being made in this field, and the promise is good for further expansion of credit to conservation farmers.

THE PROFITABLENESS OF SOIL CONSERVATION

In a sample inventory taken by the Soil Conservation Service to show 1945 income from conservation-treated farms as compared to similar farms on which much less conservation work had been done, 1,872 representative farmers and ranchers reported. In the western dry-farm grouping of Kansas, Washington, and Idaho, the conservation-treated farms showed an average increase in direct returns from conservation farming over those from the nonconserva-

tion farms of \$6.22 an acre. Based on reports from district farmers all over the country, it has been estimated that in 1948, for instance, the Federal Government retrieved the entire amount spent by the Soil Conservation Service and, in addition, made a 77 percent profit in increased income taxes paid on increased returns as a result of farmers' applying effective soil-conservation measures to their lands. The estimated gain included increased revenue derived by retailers, processors, and distributors who profited directly from handling the increased production.

SOME EROSION AND LAND-MANAGEMENT FACTS

With such inviting financial incentives alone to soil conservation, there certainly is no good excuse for us to delay, as a Nation, State, or community, in finishing the job of safeguarding our productive land just as fast as we have the time and facilities to do so. After allowing about half of our original supply of productive land in the United States to be damaged severely by soil erosion, waterlogging, and accumulation of alkali—many millions of acres of it so severely as not to be capable of further economic cultivation in the immediate future, we have approximately 460,000,000 acres of good cropland left. About 70,000,000 acres of this 460,000,000 acres must be cleared, drained, irrigated, or otherwise improved before it can be tilled and planted to grain or intertilled crops. And around 70,000,000 acres of the land currently in cultivation is too steep, too shallow, or too erodible for further cultivation. All but about 80,000,000 to 100,000,000 acres of it is subject to severe erosion if it is not safeguarded in time. And we still are losing around 500,000 acres of our productive land each year through the ravages of soil erosion.

We have enough good, productive land left in this country to meet our foreseeable needs if we safeguard it and use it right, but only if we do that. We have, on the one hand, a limited, decreasing supply of good land and, on the other, a rapidly increasing population (now at around the 150,000,000 mark in the United States and estimated at around two and a quarter billion in the world). So, whatever anybody may tell you, the significance of our shifting land-population-food-production equation over the long run cannot be ignored. You can't take the mathematics out of this direct relationship between man and the land.

And I should like, also, to emphasize as strongly as I can, regardless of anybody's claims to the contrary, that we still haven't learned how to build new topsoil, or even a reasonable substitute for it, on any substantial scale, within any brief time.

TEAMWORK WILL GET THE JOB DONE

To finish the soil and water conservation job in time is going to take continued teamwork, the kind of coordinated soil conservation effort that is now getting under way in Kansas and all over the country; while, as never before, an almost endless list of interests in our society and economy are contributing importantly to its advancement. This list includes, besides the landholders themselves, bankers, merchants, millers, and manufacturers; contractors and machinery dealers; nurserymen and seedmen; press, radio, and motion picture theater owners; teachers, ministers, lawyers, and doctors; garden and other women's clubs; 4-H Clubs, Vocational Agriculture, Future Farmers; veterans' organizations and sportsmen's groups; chambers of commerce and other civic organizations; railroads and other big industrial interests; farm organizations, State departments of agriculture, State colleges and universities and experiment stations, State game and fish commissions, and many more.

All of these and other interests, public and private, have recognized the importance of

conserving and productively using our irreplaceable, life-sustaining land—along with grass, timber, and wildlife—and they are devoting their time and money to encouraging this action. Together, we are meeting the land's challenge to man who lives by its bounty.

Soil Conservation in Our World Economy

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the University of Cincinnati Evening College, Cincinnati, Ohio, on February 1, 1950:

Soil conservation, scientifically applied to the land, according to modern standards, is the great need and hope of our civilization. Even though there has been phenomenal advancement in invention, manufacturing, mining, transportation, and other industrial activities in recent years, the world is still basically dependent on agriculture. And a prosperous and lasting agriculture utterly depends on an adequate supply of productive land, properly used and so protected that it will remain permanently productive. Without this foundation there can be no assurance either of economic stability or social progress—and no guaranty of adequate nutrition, prosperity, or peace anywhere on earth. But as long as there is enough good land and an adequate supply of water to make the land productive, people thereby have the means to overcome these deficiencies. Without such resources, real and lasting progress is unlikely or impossible.

Soil conservation, then, is mandatory everywhere if our civilization is to avoid a tragic decline, economically and culturally. We must conserve our remaining supply of productive land while we use it. It will not be enough if we merely safeguard the land for the next 10 years or the next 100 years, or if we do only a half-way or incomplete job. We tried the incomplete method for about a hundred years in the Southeastern States. The job was not done properly. Using an incomplete, unscientific, single-practice method—principally terracing—much more harm than good was done, because of the physical facts involved.

LESSONS FROM THE PAST

I have never been able to understand just why our historians have told us so little about the disaster that befell so much of the land of some of the older countries of the world.

Pliny, who died in A. D. 79, advised farmers tending hillside fields to run their furrows across the slope and to provide channels to draw off the water into drains. Seventeen hundred years later, Thomas Jefferson was recommending horizontal cultivation to his fellow Virginia farmers in the New World, then being brought under the plow.² Over much of Asia and Africa, and in parts of Europe and America, too, there are people living today in poverty and bare existence on

lands that once supported much larger numbers.

The significance of scientifically applied soil conservation, as is being done here in the United States, is brought home forcefully to anyone who has the opportunity to visit other parts of the world and observe the condition of the land and the methods of farming still prevailing in great areas. There one can see, as I have seen, the bitter lessons of history written on the eroded countryside and etched in the worried faces of people struggling to produce their food. I spent a short time last year, for example, studying erosion conditions and soil and water conservation methods in southern France, Italy, and North Africa.

Over there I observed the lengths that people go in order to get a living from some of the world's oldest lands still in agricultural use. I was impressed with the costly and back-breaking measures employed in building on precipitous slopes stone walls to support little slivers of land for crop production. I made this trip primarily in the hope of finding something that might be helpful in our own national program of soil conservation, feeling that we must not overlook anything of importance. I found very little, however, that we can make any use of under present conditions.

I saw much wonderful work in parts of Italy and France, notably the staircase benches supported by well constructed rock walls, tediously filled in behind with soil brought in by the basketful. The Italians, and French, too, are exceedingly skillful in the use of rock, not only in the construction of soil-holding walls but for building structures for torrent control in the mountains. But the work required in establishing some of this bench type of agriculture, translated into our American labor costs, probably would amount in many instances to \$15,000 or \$20,000 an acre. Such an outlay on farm land clearly is out of the question for us, now or at any time we can foresee, even in the most eroded parts of the country. As a matter of fact, we are not in need of this type of conservation at this stage of our development, except in occasional very special cases.

In Italy, along the roads we traveled, every available patch of land—practically every square foot—is in use. From the beaches of the Adriatic and the Mediterranean on up to the crests of the Apennines and the Alps, thousands of little patches are cultivated on slopes so dizzy steep I wouldn't venture into them. Practically every slope where man can hang on is in cultivation of some kind.

And, in the forested areas, when trees are cut the leaves of oaks and some of the other trees are commonly saved for stock feed, and the twigs, along with the weeds of the fields, are scrupulously saved and bundled for fuel. When you talk to an Italian about the cost of such operations, the reply is likely to be something like this: "Why consider the cost of food when to have it means life and not to have it is death?"

Certainly, food is man's first basic need, as it is of all animal and plant life. Clothing and shelter are man's secondary necessities, in degree conditioned by climate and custom. Everything else which he uses may be considered to be dispensable, actually, because it is primarily for his convenience or enjoyment. Without food, however, man starves. And all of his food, except a small amount from the sea, comes from one source, and from one source only. That is from productive land. So does the principal part of his clothing and shelter, all his wood, cotton, wool, leather, vegetable oils, and the others. Clearly, then, the one indispensable resource on which mankind depends for existence and survival is productive land, along with the water that makes it produce these foods and other essentials.

LAND ALSO MAJOR SOURCE OF ORIGINAL WEALTH

Over and above that elementary role which it plays in human affairs, the land is the source of a very large share of our original wealth. Manufacturers and industrialists, bankers, lawyers, doctors, teachers, writers, and the rest of us—in Cincinnati, Washington, or elsewhere—are directly affected by what happens to the source of that land-wealth. We are affected as consumers of the things that are produced from the land, and we are affected in our income. It would be most convenient for the rest of us if we could pass all the responsibility for care of the land to the farmer, but clearly we cannot do that.

A suit of clothes or a cake of soap is manufactured in Cincinnati, but the wool or the animal fat or vegetable oil which goes into the finished products was produced by the land on an Idaho sheep ranch or a farm in Ohio, North Carolina, or somewhere else. Many people, beginning with the farmer or rancher himself—are dependent wholly or partially for their income—their living—on the processes involved in getting that bar of soap or suit of clothes into your home or mine. There are railroad men, truckers, and water carriers, millers and weavers, advertising men, stenographers, bankers, package manufacturers, salesmen, wholesalers, retailers, and many more. These producers, processors, and distributors are in turn, buyers of goods and services on their own account. They patronize doctors, dentists, lawyers, barbers, and beauty parlors, they go to the movies, ball games, and shows. They buy homes, radios and television sets, automobile tires, shoes, newspapers, and electric light bulbs. They hunt and fish, play golf, and take pictures. Their taxes help to build roads and bridges, hospitals and battleships.

Back of all this economic chain is productive land. People finally are coming to understand that the poorest farmer usually can produce, even between gullies, at least some food for himself and his family. But it is when he isn't able to produce enough in addition to take care of a number of city families that the rest of us begin to suffer. And fertile soil that sluices off to the oceans down the Ohio and the Mississippi Rivers no longer can provide goods or wealth to load boats and trains in Cincinnati or New Orleans, or bring business to the markets of these and other cities.

SOIL CONSERVATION PROMOTES OUR WHOLE ECONOMY

Modern soil conservation, then, does much more than safeguard land. It leads to increased and lasting productivity of the land and thereby promotes the whole economy and common welfare wherever it is practiced. Probably most regions of the world can be improved in some degree by safeguarding the land and increasing its productivity through soil and water conservation and land use.

Before we consider the growing interest in soil conservation, I think I should explain the meaning of modern soil conservation now spreading across the Nation.

MODERN SOIL CONSERVATION DEFINED

Modern soil conservation is based on sound land use and treatment of land with all the proven appropriate measures that are needed to keep it permanently productive while in use. It means terracing land that needs terracing; and contouring, strip cropping, and stubble mulching the land as needed, along with supporting practices of crop rotations, cover and green manure crops, etc., wherever needed. It means gully control, stabilizing water outlets, building farm ponds, locating farm roads and fences as nearly on the contour as practicable, planting steep, erodible land to grass or trees, development of good pastures, and devoting

¹ Pliny, Natural History, XVIII, 49.

² Bennett, H. H., Thomas Jefferson, Soil Conservationist. U. S. Department of Agriculture, miscellaneous publication No. 548, 1944.

good management to them after they have been developed.

Modern soil conservation, moreover, consists of doing these and still other necessary things. Where land is too wet, modern soil conservation calls for drainage, if it is too dry, it calls for irrigation, if it is subject to wind erosion, it calls for wind stripping, tree planting, and stubble-mulch farming. If plant nutrients, lime, and the humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter, if water-soluble salts have accumulated in toxic quantities, as in parts of the West, it calls for drainage and leaching out of the salts by flooding. And modern soil conservation calls also for the use of the best of the most adaptable varieties of crops as well as the most efficient tools available to farmers.

SOIL-CONSERVATION RESEARCH AND EDUCATION IMPORTANT

And, of course, an indispensable part of modern soil conservation is a supporting program of research, such as will provide for the welfare of the land at all times the advantages that progressive science can contribute. Also a continuing, vigorous program of soil-conservation education must be made a part of our teaching from kindergarten through college. Moreover, modern soil conservation calls for the maintenance of all effective work which is put on the land. These measures are not just for a single year or cropping season. Like savings deposits in the bank or savings bonds, they increase in value and return on the original investment as the years go on.

In short, there is only one correct formula for doing the soil- and water-conservation job. That formula consists of treating the different kinds of land on a farm according to their individual need or condition, and using each kind according to its capability for continued safe and economical production. This way accords with the methods of nature, just as do other physical facts, such as the fact that water will not run up hill. And it is the way the farmers of the Nation are going about getting the conservation job done on the only basis having any chance for permanency.

It is being done through farmer-voted and farmer-manager soil-conservation districts, set up under State enabling law for such purposes as doing the job faster, with the best chance for maintenance. It is through their democratic units of State government, assisted by technicians of the Soil Conservation Service brought in at the districts' request, that so much of the big soil- and water-conservation job on the farmlands of the country is being effectively done.

HOW PERMANENT SOIL CONSERVATION IS PUT ON THE LAND

Perhaps I should explain briefly, also, how soil conservation is applied to the land. When the Soil Conservation Service is requested, through established procedures and channels, to assist a soil-conservation district, our technicians work on those farms whose operators' applications for district assistance have been approved by the district's elected farmer supervisors, or directors. First, a land-capability survey is made of the farm, resulting in a map which shows—field by field and acre by acre—the condition of the land and its capability for production, whether for row crops like corn, pasture, timber, or wildlife. Thus capability classes I, II, and III are good cropland, classes V and VI are suited for pasture or timber, and so on through the eight classes.

Then the technician and the farmer together go out on the land and develop a soil-conservation plan cooperatively, acre by acre, for the entire farm. It is of the utmost importance that the technician get out on the land with the farmer, so that the job can be done properly (it cannot be done in an office or through the use of printed directions),

This farm-operating blueprint, while aimed first at the maximum protection of the land, takes into full account such economic needs of the farmer as the income he must have to support his family and operate at a profit, his market situation, and so on. The plan specifies the best use to be made of each part of the farm, year by year; the crop rotations; the building of needed ponds or terraces; the development of good pastures, the planting of trees for windbreaks or woodlots; and other things.

Some of the conservation measures are the kind that the farmer can put into practice himself, with little further technical assistance; but, generally, the complete plan of coordinated conservation practices is by necessity sufficiently complex as to require expert technical help in putting them on the land. These include measures in agronomy, engineering, forestry, biology, hydrology, and others. Patently, no ordinary farmer busy with his own vocation of growing crops or raising livestock can also be a skilled engineer, forester, and several other experts rolled into one—any more than he can be his own doctor, dentist, or lawyer. Soil Conservation Service technicians, then, assist the farmer with the technical job of putting his conservation measures properly into effect. The farmer provides all the materials and labor, and likewise maintains his structures and practices once they have been installed on the land.

ECONOMY AND EFFICIENCY OF CONSERVATION FARMING

Soil conservation, as nearly a million farmers (and a rapidly increasing number of farmers) now practice it, is nothing less than using and treating each acre of land in such a way that it will produce maximum amounts of products of good quality while maintaining or increasing its productive capacity. With our growing population and continuing erosion on untreated land, we should not be satisfied with anything less than this. We do not need to accept less, because we now know how to treat the land so that it will do this for us. And, as our population continues to grow, I think we shall not be able to afford less.

Soil Conservation in Our World Economy

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the University of Cincinnati Evening College, Cincinnati, Ohio, on February 1, 1950:

Using the land according to its capability is the very basis of sound and lasting soil conservation. The Soil Conservation Service is making the essential conservation surveys as fast as its facilities permit, and is the only agency prepared to make them. The Service technicians are recruited from civil-service lists. They are mostly graduates of agricultural colleges and are required to have a year's training under our experienced technicians before being put in charge of technical work.

In this way, and only in this way, can we ever achieve permanent soil-conservation work.

Greater yields can be obtained from the most productive acres at less, or at no great-

er, cost for seed, fertilizer, labor, machinery, and management. To state this efficiency of conservation farming another way, the same amount of seed, fertilizer, machinery, and management will produce a better return from the most productive land—that is, land of capability classes I and II—than from less productive land—classes III and IV, principally.

There is no theory or guesswork in this; it is a statement of fact proved by the multiple experiences of conservation farmers reported from Ohio and every other part of the country. Moreover, conservation farming on the basis of complete conservation farm work plans developed by farmers and technicians almost invariably calls for diversification of crops, often including more land in grass and trees—and more meat, milk, and butter on the table. In this way, the economic stability of the farm business is improved, and the farmer is in a better position to operate successfully in a period of hazardous domestic or world markets. All of these things tend to emphasize the fact that soil conservation, as we practice it, is important during periods of declining markets and hazardous prices as well as during periods of expanding markets and rising prices.

THE NATIONAL ECONOMY IS STRENGTHENED

Anything which helps the individuals of a country in any substantial number also helps the country as a whole. This certainly can be said of the kind of soil conservation farming I have been talking about, because, as we have seen, it supports the economic stability of the farm enterprise, has invariably proved to be profitable to the farmer, his community, and to the Government; and contributes greatly to maintaining a high standard of living—nutritionally and otherwise—in addition to providing a long list of public benefits such as reducing flood damages and preventing siltation of reservoirs, streams, and harbors.

We must keep our armed services and national defense machinery strongly built up, certainly; but we dare not neglect our domestic economy, either. We do, after all, have to pay for ships and atom bombs; and we can do this only by having an efficient economy in agriculture as well as in industry and trade. And there can be, of course, no efficient agriculture without, as already pointed out, a base of good land.

POPULATION AND INDUSTRIAL PRESSURES ON THE LAND

Constantly increasing population and a still shrinking supply of productive land will eventually make greater efficiency in food production more and more imperative. In addition, we appear to be moving with increasing speed along lines of development which promise much toward the substitution of organic materials, like organic plastics, for metals and other inorganic raw materials in industry. That, of course, would mean additional pressure on the same land which has to produce our food and other essentials. These needs already are exerting themselves on the world's limited supply of productive land and will continue to do so with such force as to challenge our utmost technological capacity. Every passing year demonstrates the growing importance of this relationship.

The productive land out of which these materials are produced is limited, just as definitely as are the supplies of minerals which we dig out of the ground. And we cannot stockpile soil as we can tin, tungsten, lead, and zinc. Nor can we replace it, or even rebuild a reasonable substitute for it. All of us decry the extravagance with which we have used some of our mineral resources; yet, even to this day, there are far too many otherwise well-informed and sound thinking people who are utterly complacent about the way we have exploited our soil resource. Moreover, they are unmind-

ful of or ignore the further important fact that the cost of production per acre on land that continues to be exploited and eroded goes up while, on substantial areas, the yield per acre goes down. This does not mean famine, but it does mean expense and higher costs for food and other essentials produced by the land.

SOME MISCONCEPTIONS TO AVOID

Certain misconceptions about soil conservation still seem to confuse the thinking of some otherwise well-informed people. We need to be on guard against such misinformation. Some of these misconceptions, or loose assertions, briefly stated, are—

1. That soil conservation is of secondary importance, has already been taken care of, or can be postponed.

2. That there are short cuts to conservation, that farmers can do all the necessary conservation work without technical assistance, or that farm plans are too technical for farmers.

3. That soil conservation costs more than it is worth.

4. That we have all the good land we need, and that soil erosion is an inevitable part of nature's scheme.

All that one needs to do to clear one's thinking with respect to these notions is to look about the country or talk with farmers who are carrying on modern soil conservation. It is easy to see in most parts of the world complete refutation of such specious reasoning in the eroded and unproductive countryside.

As for soil conservation farm plans being too technical, that is sheer nonsense on a par with saying a farm tractor is too complicated for a farmer. It amounts to "talking down" to the farmer.

UNITED STATES IS WORLD'S SOIL CONSERVATION LEADER

The United States which, paradoxically, was wasting its heritage of productive soil, before the beginning of scientific soil conservation, faster than any other country we know anything about, has become the world's leader in soil and water conservation. Beginning with the 10 soil erosion experiment stations authorized by Congress in 1929, we have progressed through a period of conservation demonstration work on actual farms and watersheds (starting in the Soil Erosion Service in 1933) to the point today where the farmers of the Nation are fast shouldering the major responsibility for the conservation program. This is being done through soil conservation districts, which the farmers themselves organize under State legislation passed by all 48 States, the territories of Alaska and Hawaii, and our insular possessions of Puerto Rico and the Virgin Islands. These farmer-voted and farmer-managed districts already number nearly 2,200, include more than three-fourths of the Nation's farms and a total of 1,200,000,000 acres. Ohio is in the forefront among the States, with 78 soil conservation districts covering more than 85 percent of the State by January 1, this year.

These districts represent, I am convinced, the greatest land movement in all history. They are democratic units of State government, responsible only to the residents of the district who elect from among themselves their own officers, usually called supervisors. Not only are these districts voluntarily and enthusiastically going ahead with the conservation job with all the dispatch that available technical and other facilities will permit, but they likewise are helping very greatly to strengthen the concept of local responsibility. They are essentially group-action devices through which strong local leadership develops. They draw together, as at the hub of a wheel, the services and facilities of cooperating governmental and private interests alike, local, State, and Na-

tional. And the soil conservation districts also are responsible for such tangible results as the creation of new markets for manufacturers of equipment and tools, nurseries, seed producers, and others.

SOME SOIL-CONSERVATION ACCOMPLISHMENTS

The Soil Conservation Service makes virtually all of its technical and certain other assistance, including that in flood control, available to farmers through their soil-conservation districts. Preliminary estimates show that up to January 1, 1950, approximately 800,000 complete soil-conservation plans had been prepared in districts alone. These plans covered an estimated 220,000,000 acres and an estimated 114,000,000 acres had been treated with needed conservation measures by that time, in the districts.

These figures do not include other millions of acres surveyed, planned, and treated through other programs in which the Soil Conservation Service has assisted. And up to the start of the current fiscal year (July 1, 1949) detailed soil-conservation surveys adequate for farm planning had been made on 304,000,000 acres, and reconnaissance surveys helpful in farm planning had been made of another 177,000,000 acres.

OTHER COUNTRIES DRAW ON OUR METHODS

The foregoing brief summary of our national soil-conservation program gives you an idea why it is that so many countries are looking to us here in the United States for soil and water conservation leadership. During the last few years, 159 agriculturalists had been sent here by other countries to spend a year in training under Soil Conservation direction, and 377 other representatives from various countries had come for varying lengths of time for training or study. These agriculturalists came from 82 countries all together. And 48 of these countries are now doing work of some kind in soil conservation. Some countries have soil-conservation services and soil-conservation districts.

The need now is for a greater action over wider and wider areas in more and more nations. This will require decisions by the leaders of nations, who somehow must be helped to understand that soil and water conservation invariably is economically and socially advantageous.

THE COST OF EROSION

The estimated cost of erosion in the United States even today—after all the progress that's been made in combating it—is much more than a billion dollars a year. The cost for the world as a whole has never been calculated, or even estimated. That is the cost of such items alone as direct losses to farmers, increased flood damage, silting of reservoirs, rivers, harbors, and drainage ditches, and damage to highways and railways. Add to these items such other costs as reduced trade and tax revenues from depleted agricultural lands, and you have an ever clearer conception of what soil erosion does to undermine national and world economy and welfare. Even more important, I think—and this is what has been so generally overlooked—the cost of soil lost cannot be estimated fully on any money basis. You must add to the money loss the value of food as it affects life and civilization. Estimates are difficult to make—they have to do not only with the cost of controlling erosion but with the cost of not controlling it.

OUR CHALLENGE TO SPREAD CONSERVATION UNDERSTANDING

It is my hope and expectation now, after a lifetime of effort in this direction, that our leaders will see to it that the program of soil conservation which I have described and which is moving ahead with a remarkable degree of effectiveness, as a sound investment and boon to the welfare and security of our own and other nations, is safeguarded and continued. We are faced with the im-

portant educational-technological task of spreading the understanding of this vital matter more widely and rapidly. It is a challenge to all of us. Everyone has a proper part he can play.

On this job there is every reason why everybody—every agency, State and Federal, every business and professional man and woman, and all the farmers—should be working earnestly together, and no single reason why they should not. It's going to take all of us, doing the very best we know how, to get this big job done on time. We must arrange our affairs to help one another, not to waste our efforts through duplication. There is no point in wasting time over agency prerogatives, for there is no time to waste. We will all gain by pulling together as a team in a friendly, cooperative way, with confidence in one another, helping one another—getting ahead with the job.

Water Conservation at Its Best

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. JOHNSON. Mr. Speaker, several weeks ago I had the pleasure of visiting the office of the Modesto irrigation district. While there I was given a pamphlet which contains a brief story of the district. The legal foundation for the organization of irrigation districts in California is found in the Wright Act, which was passed in 1887. The author of the act, Hon. C. C. Wright, was then representing Stanislaus County in the assembly, and the Wright Act is the bible of the irrigation districts. The district came into being on July 23, 1887.

The first water storage was in La-Grange Dam. This dam was built in 1893 at a cost of \$543,000. The dams mentioned in this statement were built and are jointly owned by the Turlock irrigation district and the Modesto irrigation district. The Turlock district is now serving 181,000 acres and the Modesto irrigation district is serving 81,203 acres. In 1923 the districts completed the construction of Don Pedro Dam. This is a large dam, having the storage capacity of 290,000 acre-feet. Of course, much more water passes through this dam for irrigation and hydroelectric development than the mere capacity of the dam. During the summer months when irrigation is at its peak this dam is receiving water from the melting snows of the high Sierras, to replenish what is taken out.

On looking at the financial statement of this district, one gets a feeling of pride to realize what the farmers who own this district have done. For instance, on December 31, 1926, Modesto district had an outstanding bonded debt of \$4,593,000. On December 31, 1950, the outstanding bonded debt was \$495,000. Also, the tax rate in 1924 was \$6.40 per \$100 valuation. The rate in 1950 was \$1.50. This is particularly eloquent in view of the fact that these irrigation districts, in developing this project, have no write-offs. They cannot

write anything off for flood control, salinity control, or recreation, or any of the things that are written off in the dams that are constructed by the Department of Interior. They must pay the full amount of the cost.

Many persons in the Middle West and East do not quite understand this irrigation development or how it is being carried out. All this has been done by the farmers who own the district. They first had a meeting to determine whether they wished to organize the district. Then they held a meeting to determine where they could find a source of water. Then they considered the cost. In other words, they built the district from the ground up and every step in the proceedings was developed and paid for by themselves, including the expert advice and guidance which they received from hydraulic engineers, financial experts, and others. No Government agent or agency told them what to do or how or when to do it. The farmers did everything themselves. They considered the need for water, the benefits they might obtain from irrigation, the cost of the proposed project and their ability to pay. The results show that they were on solid ground before they took each step. The financial statement shows that the men who conceived, built, and operated this district exercised sound-business judgment, which is eloquently reflected in the financial condition of the Modesto irrigation district.

This district is typical of many others in California which have been organized under the Wright Act and developed along the same lines as the Modesto irrigation district has been developed. I have not the financial statement of the Turlock irrigation district, which is a joint owner of the dams which the MID gets its water, but I am confident that it would indicate almost an identical state of prosperity and financial stability.

Know Your Waterways—No Drama

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the Record, I wish to include an article recently published in the Washington Post by the Marine News of New York, as follows:

Know Your Waterways—No Drama

Harbor and channel improvements suffer from lack of drama. As most of the work is beneath the surface, it is not visible nor in the public eye. A towering building pierces the sky. A majestic bridge stretches across a great river. A mammoth dam holds back a sea of dangerous or useful water. Such structures are seen, pictured, and talked about. On the contrary, an important channel or harbor improvement can be completed with the surface of the water appearing as it always did. Only those intimately con-

nected with the project know what was done. Only a few know about its benefits; the public is almost entirely ignorant of them. Thus it is, that useful harbors and channels are developed with great benefits to the people and largely without their knowledge. As a consequence, such improvements lack the public support that their worth entitles them to.

Harbor and channel improvements made so far have helped to make America great and strong. Continuing development will help carry the Nation on to further greatness and strength.

"American Jews Have a Right To Be Proud of the Way in Which They Have Helped Build America"—Hon. Oscar R. Ewing

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 20, 1951

Mr. KLEIN. Mr. Speaker, under leave it gives me pleasure to insert as a part of my remarks a stirring address delivered by the Honorable Oscar R. Ewing, of New York, Administrator of the great and far-flung Federal Security Administration, on Sunday, September 16, 1951, at the dedication of the Temple Israel Center of White Plains, at White Plains, N. Y.:

I am deeply honored—as a neighbor who lives just across the line from you, in Riverdale—to take part in these happy ceremonies of dedication. Your congregation has a long and honorable history in White Plains; for more than a generation you have maintained a house of worship, of learning, and of service to the community. Your president is an old and good friend of mine, and I congratulate you on having placed your temporal affairs in the hands of a distinguished citizen, Henry Rapaport.

In some other lands, it might seem strange for the dedication ceremonies of a Jewish temple to be addressed by a man of another faith. In our land, the custom is so common that it hardly attracts attention. It testifies to the strength of our religious feelings—of your feelings toward Judaism and of mine toward Christianity. We have come to recognize that Jews and Christians have a common heritage, a common spiritual tradition, a common devotion to ethical principles of truth and justice and peace. We have learned to understand that the troubles, the injustices, even the persecutions, of the past can be dead and buried if we approach one another with clean hearts and clean hands—if we judge one another for ourselves and not in the light of prejudice and bigotry—if we recognize the worth, the dignity, and the importance of the individual human being in the eyes of God and man.

This we see as the very essence of our faith, and we know that it is also the essence of our democratic heritage. For Americans are both a religious and a democratic people. We have learned the great secret of freedom—that freedom of worship is the touchstone of all our liberties.

ALL ARE VICTIMS OF PERSECUTION

We have seen this truth demonstrated, to our horror, by those who are the enemies of freedom: we witnessed the destruction of religious liberty in Germany under Hitler.

For the Nazi destruction of so many millions of Jews was accompanied, let us not forget, by a simultaneous persecution of those Christians whose untrammeled love of God, whose insistence on the brotherhood of man, made them also the victims of the Hitler terror. And today we see the other face of totalitarianism, the Soviet Union, trample upon the religious convictions of Jews and Christians alike.

We know now, better than ever before in all our history, that democracy is the great protector of religious freedom. But we also know that religion itself provides the spiritual force of our democracy. We prove our faith in God, which is religion, by showing our faith in man, which is democracy. Our Constitution, our Bill of Rights, the words we live by, the great men we revere, the historic deeds of which we are proud—all these bear witness to the spiritual force of our democracy. From those first stirring words of our Declaration of Independence—"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights . . ."—through the deeply moving simplicity of Lincoln at Gettysburg—"that this Nation, under God, shall have a new birth of freedom"—right down to the words with which we express ourselves today, there has been this constant reiteration of the deep faith on which our Republic is built. We have no State religion, and we would not want one. But we have the abiding, the universal, the essential spirit of religion, and without this we know we would be lost.

DEMONSTRATION OF PATRIOTISM

So today Americans render a truly patriotic service to their country when they foster the religious spirit. Today you are dedicating the Temple Israel Center of White Plains, which will house your Jewish religious school, your Jewish community center, and your synagogue. This is not only a translation into steel and stone of your ancient and venerable Judaic faith. It is also a tangible demonstration of your American patriotism, your fulfillment of civic responsibility, the evidence for all the world to see of your faith in yourselves and in your future as a vital part of the American democracy.

American Jews have a right to be proud of the way in which they have helped build America. You and your forebears have fused the living strength of Jewish culture into the new American civilization that has made of a thousand cultures something new under the sun. Jewish contributions to this American civilization have been varied. But I believe that, when we look back over the history of our Nation, we come to the inevitable conclusion that the greatest of all Jewish contributions has been the Jewish sense of civic responsibility, expressed through philanthropy and communal activity. American Jews have set an example for all their fellow-citizens in the multiplicity and simple humanity of the communal tasks which they have undertaken and carried through so successfully.

In a time of trouble like our own all humanity carries a heavy burden. Where there is injustice, where there is inequality, where there is discrimination, where there is dictatorship, where people live in fear and hunger, there is a weight upon the conscience of every person on earth. To us as Americans, who have been thrust into the leadership of the free world, this burden has become very real, and we have, I think, written a brand-new chapter in history in these last few years, as we have conceived and brought forth our breath-taking programs to bring a greater measure of well-being and safety to other peoples. The Marshall plan, the point 4 program, and all of the other activities which Americans have initiated, will be

recorded in history as the first tangible steps, on a gigantic scale, which any nation ever took to help other nations get back on their own feet—not by the temporary palliative of immediate relief, but by the hard-boiled, realistic business of helping people raise more food, build more shelter, and establish a going economy. That we have benefited because of this should not make us ashamed. We are the more free when other people are free; does this reflect on our own desire for freedom? We are the more prosperous when other people are prosperous; does this reflect on our own desire for prosperity? Of course not.

WE ACCEPT OUR RESPONSIBILITIES

There is no doubt that the need for making ourselves strong, combined with the need for making the free world more secure economically, has placed a heavy burden on the American citizen. His taxes have gone up, and, in our defense effort, he is compelled to forego a few of the luxuries to which he had become accustomed. It stands to the credit of our Nation that, amid all the political controversies and arguments of these times, there is virtually no serious complaint about these burdens which we have democratically assumed. We have accepted the responsibilities of our citizenship and the responsibilities of our world leadership.

On top of this common responsibility, however, American Jews have carried a double—a triple—burden. In these terrible years that came as an aftermath of the Hitler horror, they eagerly assumed the task of helping to rescue hundreds of thousands of their brethren who somehow managed to survive. Governments, especially our own Government, did part of this job; but no government could match the voluntary outpouring of money and work that came from American Jews in this work of rescue. At the same time, they have helped to build a new state along the shores of the Mediterranean, a valiant new sister republic, a thriving democracy, a land of hope and promise, where unfortunate people could begin their lives anew. I have been to Israel myself, and I have seen with my own eyes the miracle—not of rebirth—but rather of birth itself. And, as I traveled through the cities and the fertile valleys, across the barren hills and desert sands, I felt that one of the warmest satisfactions of all was this: That this was made possible because my own fellow citizens help these people begin their lives anew.

DEDICATED TO THE LOVE OF GOD

Yet the greatest tribute I can pay to you is to recognize that, even as you have devoted yourselves to this work of philanthropy and humanity, you have not let your own spiritual needs languish. You are not the less American because you have taken an interest in other people on the other side of the world. Indeed, you are the more American for it. And you have continued to maintain and build up your own institutions here in your own America.

This beautiful building stands in mute testimony of your deep roots in American soil. It is the expression of both your Judaism and your Americanism. It is—with all the churches and synagogues of our land—the symbol of our humble faith in God and of our proud respect for our fellow men.

The members of this congregation need no words of advice from me. They have wrought better than any man could direct. They have dreamed, and worked, and planned, and now they have fulfilled their dream. Let us therefore simply say, as we celebrate the completion of Temple Israel's Center, that we dedicate this structure—you and I, Jew and Christian—to the brotherhood of man, to the arts of peace, to the achievement of ever greater freedom, and above all to the love of God.

De Gasperi's Visit Points Up Need To Help Italy

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Friday, September 14, 1951

Mr. CELLER. Mr. Speaker, Premier Alcide de Gasperi of Italy, now honoring us with his presence, brings plenty of his troubles to Washington, and he has a right to ask us for help in their solution.

In spite of \$2,500,000,000 in American aid during and since the war, Italy is still in difficulties, politically and economically. Principally she has too many people and too few jobs. We must help de Gasperi to find homes outside of Italy for surplus Italians. We could easily, without any skin off our backs, increase the present pitifully small Italian immigration quota and take in at least 50,000 more Italians, say for a period of 5 years at the rate of 10,000 a year. Nationals of Italian origin have served us well as immigrants. Their brain and brawn have helped build up our economy. Our example would be followed by others—Australia, Canada, New Zealand, Latin American countries and South Africa—all of whom need the skilled and unskilled labor that Italy can supply. Italy just cannot with safety hold its 46,000,000 people. Outlets must be found. Postwar Italy lost, in addition to its empire, the Dodecanese Isles, Trieste, and Venezia Giulia. Some substitute lands must be found to which Italians can emigrate, otherwise Italy will burst at the seams.

I hope de Gasperi will get from our procurement agencies defense contracts for Italian factories. To the extent that American defense dollars can be spent abroad Italy should get her fair share. That would mean more jobs for idle hands.

The United States has championed de Gasperi, therefore we cannot let him go back to Italy empty handed. Both Communists and Fascists would make political mincemeat of him should we fail to give him definite aid.

Above all, the peace treaty needs to be modified. It is imperative that de Gasperi bring home definite pledges in this regard. With a new peace treaty along the softer lines of the one given Japan, Premier de Gasperi could go home in triumph. Removal of treaty limits on military strength would enable him to put many of the jobless into the armed forces.

The problem of Trieste is another important sore spot. I hope de Gasperi can persuade our State Department to take the initiative in urging Tito and Yugoslavia to reach an amicable understanding with Italy on Trieste. Rome is ready and willing to meet with Belgrade anytime, anywhere. I do not believe our State Department should longer content itself by merely endorsing once more the Three Power—United States, Great Britain, France—Declaration of March 1948 favoring the return

of the whole Free Territory to Italy. We should urgently request Tito to see the light and urge him, especially in view of our aid to him, to cede Trieste completely back to Italy.

As a signatory of the North Atlantic Treaty, Italy is expected to collaborate in the defense of Europe. She cannot successfully do so unless the disturbances among her people concerning Trieste are quieted.

Italy's task at such defense is impaired by peace treaty clauses which limit numerically her Armed Forces, which prohibit submarine and speedy craft construction, which prevent coastal fortifications and preclude scientific research on military matters and drastically limits the size of her air force.

These prohibitive clauses should be amended, and reparations particularly to Russia and her satellites ought to be stricken from the peace treaty.

Flood Control Is Sound Investment

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Monday, September 24, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following timely editorial from the Kansas City Star, issue of August 8, 1951:

START FLOOD CONTROL NOW

This Congress can restore hope to the flooded thousands and flooded industries by a full-scale start on flood control. It can act on the whole program in Kansas and Missouri—do everything that can be done this year—and still the cost will be small. All the money that could be spent intelligently this year would probably be little more than the cost of the 1951 flood to Manhattan, Kans., alone.

There is real hope of action in the interest shown by Congress. Within the last week the members of the key House Subcommittee on Flood Control and other members of the Public Works Committee came out to see for themselves. We have had other visits by influential Senators and House Members. Most Members of Congress from both Kansas and Missouri are genuinely aroused. If there is to be any action this is the time.

Except for a very few projects, we are starting from general paper plans that haven't even been authorized by Congress. The desperate need of the flooded valleys is definite action on flood control which means both reservoirs and levees. Recently the people who wait for action have heard a lot of theoretical argument over labels for the plan. Some call for Pick-Sloan, some for MVA, and some for the Hoover report.

The only plans that are anywhere near the action stage are those that have been drawn for specific locations. Roll them together and give the plan a new label, if you like. We would be glad to settle for the name of "emergency flood-control program" or anything else. We can argue later about labels or methods of administration.

Here are the things that can be done this year:

At this end of Kansas the two projects that have been authorized and studied are the Tuttle Creek Dam on the Blue River

and the Toronto Dam on the Neosho. Farther west several dams planned by the Bureau of Reclamation have been authorized. So have floodway plans for Wichita and Hutchinson. All these could get underway this year. The preliminary work that can be done the first year is comparatively inexpensive.

The greater number of proposed dams affecting the flooded areas of Kansas and Missouri have never been authorized. This Congress can start action by authorizing all of them and appropriating the money for the detail engineering studies. At best none of these would be ready to use any construction money until next year.

Probably the experience of this biggest flood will show the need for additions of some dams that don't even exist on paper. Some of the smaller rivers have caused damage on a scale to justify major protection. There should be an over-all study for future guidance.

The rivers of this area—the Kaw system, the Marais des Cygnes-Osage and the Arkansas system—have served an ultimatum with the demonstrated power of their floods. The cost of reasonable protection is only a fraction of the price of the damage in one terrible year. And these building costs could not reach their peak for several years.

This part of the United States looks to Congress for the kind of action that says it shall not happen again.

Unwarranted Attacks on the Corps of Army Engineers and the Tennessee-Tombigbee Inland Waterway

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. RANKIN. Mr. Speaker, the so-called investigation of the Corps of Army Engineers, Civil Works program, and the report issued on September 18 by a subcommittee on appropriations, condemning the proposed Tennessee-Tombigbee inland waterway, constitutes one of the greatest farces in the history of Congress.

It seems to be a part of the program to discredit and destroy the Corps of Army Engineers, one of the finest and most reliable agencies of this Government.

It was just a camouflaged repetition of the attacks made on this project by the railroad lobbyists who are opposed to all waterways development. Never have I seen so many false, misleading statements made in an investigation before a congressional committee.

These railroad lobbyists who seem to be back of, if not conducting, this investigation, have viciously opposed this project from the beginning. One of the reasons for their opposition was the fact that it would tend to get rid of the one-way freight rate with which the people in every State south of the Ohio River and west of the Mississippi have been robbed and plundered for more than 50 years.

It was finally brought out that such a regulation was in violation of the Constitution and unjustified from every stand-

point. The result was that the Interstate Commerce Commission in its recent order wiped out this unlawful, discriminatory, dishonest, one-way freight rate. Therefore, from that standpoint, we have won a great victory in this fight.

But this report attempts to prevent the Army engineers from proceeding with the planning, as well as with the construction, of this vital missing link in our national defense program.

This hearing is so full of fakery and misinformation that I am surprised that any Member of Congress would sign a report based on such misrepresentations.

This project is vitally necessary to our national security, as well as to our internal transportation system; and it is going to be completed, regardless of this organized opposition of selfish interests.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Ike Writes Sweetland on Oregon Primary

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. ANGELL. Mr. Speaker, due to the fact that Gen. Dwight D. Eisenhower is so frequently spoken of by both major parties as a potential presidential candidate in the 1952 elections, I am including as part of these remarks a timely news item from the Oregonian of September 18, 1951, reporting on a letter addressed by the general to Monroe Sweetland, Democratic national committeeman. The item follows:

IKE WRITES SWEETLAND ON OREGON PRIMARY

Monroe Sweetland, Democratic national committeeman for Oregon, confirmed Monday night that he has exchanged personal letters with Gen. Dwight D. Eisenhower concerning the Oregon preferential primary situation.

General Eisenhower, supreme commander of the allied European defense organization, is regarded with high favor by some Oregon Republicans and Democrats as a presidential candidate in the preferential primary next May.

One group of Democrats, sparked by State Senator Tom Mahoney has filed a 1,000-name petition to establish the general's candidacy.

SWEETLAND WRITES GENERAL

A group of Republicans, led by State Representative Mark Hatfield, Salem, has collected a similar number of names, but has held off filing the petition until the legal air concerning a man running on both tickets has cleared.

Eisenhower, who is not a registered member of either party, has taken no part in either drive.

His two-page letter to Sweetland was marked "Personal and confidential." It was in reply to a letter from Sweetland.

Sweetland issued, when queried, the following statement about the letter:

"It is correct that I have received from General Eisenhower a discussion of the Oregon preferential primary situation. His letter, dated September 5, is personal and confidential, and I am bound neither to release it nor discuss the detail of its contents.

"All I can say about it is that his letter displays again his high devotion to the Na-

tion's interests and to the best in the Nation's military tradition in his refusal to admit, or imply, or to leave open to interpretation, any partisan political loyalty because it might interfere with the job which the country has assigned him.

"The most important position in the American Government today, second only to the Commander in Chief, is that of General Eisenhower in organizing the bulwark against communism in Western Europe."

UNSCRUPULOUS ACTS HIT

"Those who, for reasons of personal political ambition, or hostility to the President, try to traffic here in the prestige of General Eisenhower do so in utter disregard of the Nation's interests.

"Unfortunately, the peculiarities of Oregon's election law lend themselves to these unscrupulous activities, promoted many months before filing time, and carried on without the slightest sanction from the conscientious supreme commander of SHAPE."

Cooperation for Flood Control

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following timely editorial from the Kansas City Times, issue of August 9, 1951, calling attention to the need for common action in preventing floods:

UNITING AGAINST FLOODS

From the devastation of flood the people of this area are rising with a greater show of unity than we have ever seen before. Of course they still hold their own ideas on methods behind the labels of MVA or Pick-Sloan. A large share of the farmers put first emphasis on a bigger soil conservation program that includes many little retention dams on the creeks. Others directly exposed in the city or farm areas of the valleys are likely to think first of big dams.

Whatever the approach or belief in theory the main goal is the same. It is a goal of a better and more prosperous country with its flood waters harnessed to become the servant instead of the enemy of man. And right now the call is for action.

This week the Missouri Farmers Association threw its powerful influence on the side of action and thereby set an example for unity. As the representative of thousands of farmers the association has put its emphasis on stepped-up soil conservation with direct flood control starting from the small creeks. For flood-control management it takes the MVA approach. But it is also calling for a quick start on dams and levees that are far enough along in the planning stage to be started soon. A similar approach has been taken by Howard A. Cowden, president of the Consumers Cooperative Association. "Floods call for common action," he said in a signed editorial in the association's publication.

In Missouri the CIO holds firm to its stand for an MVA but it has gone on record for action on the dams and levees that can be started or authorized now. It reserves its right to work for its own views on administration while the construction is under way.

These organizations are setting the pattern of unity for a flood-control program—one that can start now with an excellent chance of winning the race with the next big flood.

Between the sincere soil conservation and big dam advocates the principal argument is on emphasis. The future of this part of the country calls for both. We must do everything possible to control the floods all the way from the little creeks to the big reservoirs. And we must save the land. As the MFA resolution pointed out this flood's devastation to the land may be more costly in the long run, than the damage to all other property. Once washed away the land is gone.

The Department of Agriculture's soil conservation and retention dam program has been accepted and supported in the Missouri Basin but it still waits on action by Congress. It goes hand-in-hand with the plan for reservoirs and levees. Speaking before the MFA convention Secretary Charles F. Brannan gave an excellent outline of the possibilities in stepped-up soil conservation.

When the structures of flood control are rising in the valleys the management problem can be solved along practical lines. The first point of the MFA advocates is management here in the basin and that isn't particularly controversial. The Pick-Sloan supporters have recognized the fact that a completed flood-control system serving various purposes will require management on the ground. They think in the general direction of a legalized interagency committee with power to act. We see nothing here that can't be handled by a reasonable spirit of compromise and common sense. As the program moves along practical consideration will probably influence the final decisions.

In the meantime the believers in flood control and soil conservation are rallying for a program starting where it can start this year. That is the powerful basis for unity and out of unity should come action. Straight ahead lies the goal of subdued flood waters turned to the service of man.

Tidewater Channel Hearing

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit an editorial from the New Orleans Times-Picayune, of date September 17, 1951, as follows:

TIDEWATER CHANNEL HEARING

Efforts to obtain congressional authorization of the tidewater-to-Gulf channel will be resumed at Washington Tuesday, so that plans and specifications costing not more than \$1,000,000 can be prepared. The first move must be made before a House public works subcommittee, and a battery of New Orleans civic and agency officials will be on hand to testify concerning the benefits of the project for wartime shipping, its savings in time and cost, and its importance to peacetime prosperity for the Mississippi Valley.

The channel has received, several years since, the endorsements of all Federal officials and agencies entrusted with powers of investigation and recommendation and has received Presidential approval. It has received repeated endorsements from the National Rivers and Harbors Congress, and has been approved by the Mississippi Valley Flood Control Association, Mississippi River Commission, and similar bodies. Nothing

more can be done on preliminaries, and on vast preparatory work of a local nature, until a congressional commitment is forthcoming. Hopes along that line were disappointed last year.

The project appears eminently to meet the test of "works indispensable or incident to the war effort." The sum necessary for blueprinting, surveying, etc., will be reduced in proportion to the economic practices that should be inherent in all governmental activities. We hope sincerely that this beginning will be made possible, pending further decision on the vital question of actual construction.

Protection of Individual Rights and Government Security in Times of Stress

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the American Bar Association, Waldorf Astoria Hotel, New York City, Tuesday, September 18, 1951:

This opportunity to address the members of the American Bar Association on the topic of Protection of Individual Rights and Government Security in Times of Stress is, by way of understatement, a most welcome one. I firmly believe that our greatest—and I emphasize, greatest—internal danger is that of the paralysis of fear gripping this country. The split personality we present is hardly conducive to any feeling of national dignity. On the one hand we make a great to-do of the strength of our democratic institutions, of our foundation of government by law, of the development of our industrial, social, and economic power under those principles, and on the other hand, internally, we cringe, not before the thought of the impact of an atom bomb, but before the thought of the impact of ideas. Courage to travel to the moon, yes—as we seem to be doing—but courage in the market place of ideas, no. We are surrounded by distrust—distrust of ourselves, distrust of our Bill of Rights, distrust of law. In this distrust of the law to protect us internally, we fashion more laws which, in turn, we again distrust, and so on, and so on. That is why I welcome this opportunity to talk to you as lawyers, and that is why I am so pleased to participate in this morning's session.

The American Bar Association has recognized the crucial nature of this problem and must be aware, as so many of us are, that, unless we address ourselves to the examination of the topic before us, we shall witness the tragic demoralization of the democratic process. I congratulate the American Bar Association for this movement in the direction of coming to grips with the problem of internal security and individual rights at this time in our Nation's history.

Lawyers, more than any single group of men, understand the nature of the complexity of this problem before us. Reasonableness as a concept in law, and hence in society, needs the protection of the lawyer to defend it from being swept away. I have talked with many of my constituents—student, worker, businessman, housewife—and many of them are afraid; afraid, not of any spy lurking under a bed, or in a closet, or in the guise of an instructor (they do not feel that the Communist ideology is a passionate-eyed brunette whose charms are irre-

sistible), but they are afraid of being accused of heresy should they depart from the expression of any but the most orthodox of opinions. In short, they are afraid to speak their mind.

One of the most vital functions of the lawyer today is to dissipate that climate. That climate is being thickened by a basic misunderstanding of the nature of our laws, a basic misunderstanding of the purpose of the Bill of Rights, and a confusion in the minds of both our legislators and a portion of the people whom they represent in the meaning of law itself.

For example, we have bills before the Committee on the Judiciary which call for the removal of all statutes of limitation on the commencement of prosecutions for offenses arising from espionage. What is proposed is to reduce the individual to helplessness before the powerful arm of the State.

We have bills requiring the Attorney General to compile and maintain a list of subversive organizations, which list can be compiled without hearings by fiat, merely on the individual definition of an officer in the employ of the State.

We have bills providing that peacetime espionage be punished by death.

We have bills prohibiting justices of the United States from testifying as to the character or reputation of any person or on matters of opinion—all this despite the common-law right to the defense of good character and despite the sixth amendment guaranteeing a defendant compulsory process of witnesses at a fair trial.

We have bills providing that advocating, merely advocating, the overthrow of the Government by force or violence shall be a capital offense at all times.

I quote a paragraph from one of these bills.

"Whoever, with intent to cause the overthrow or destruction of any such government, prints, publishes, edits, issues, circulates, sells, distributes, or publicly displays any written or printed matter advocating, advising, or teaching the duty, necessity, desirability, or propriety of overthrowing or destroying any government in the United States by force or violence, or attempts to do so * * * shall be punished by death."

We have a bill redefining "treason" to include "the weakening of the Government of the United States, whether or not by force or violence," with the usual penalty for treasonable acts—death.

We have bills curtailing the right to bail, a bill to provide a bail of a million dollars for each day a convicted Communist wishes to remain free pending appeal, and a bill to revoke the citizenship of anyone refusing to testify as to his possible subversive activities.

Pardon me, Uncle Sam; your contradiction is showing.

In the name of containing totalitarianism, we keep increasing the cult of state and keep advocating the granting of more and more power to the state and stripping the individual of more and more of his rights, bitterly fought for over the centuries. After all, what is totalitarianism but the cult of state? As has been said, "We have enjoyed so much freedom for so long that we are perhaps in danger of forgetting how much blood it cost to establish the Bill of Rights."

I do not contend that there is no need for internal security, no need for us to be watchful against acts of espionage and subversion, but I do contend that when it is fear, rather than caution, that dictates our legislation, then that is a subversion of a much more dangerous kind.

There was so much talk a little while ago—much of it, unfortunately, politically insincere—that the United States was a haven for subversives and saboteurs, that no law exists to meet the need for internal protection. I therefore ordered prepared a committee print which I have with me now and which is a

compilation of all the provisions of the Federal statutes relating to the internal security of the United States. It contains, not only United States laws relating to subversive activities generally, but also such provisions as appear in the appropriation acts, the Federal loyalty program, the Security program, and the Internal Security Act of 1950, especially applicable to Federal employees. The compilation contains 75 closely type-written pages of protective statutes. Had any of the politicians to whom I made reference earlier taken a bit of trouble or time to examine this compilation, fewer headlines would have been printed on the laxity of our internal security laws.

In times of stress, it must be admitted that the balance is very difficult to strike. Where does the necessary protection for the state stop, and where do the individual rights begin? What are the real risks, and which are the ghosts? Where does the advocacy or the conspiracy to advocate subversive activities against the Government merge into the overt act? What is sadly lacking is a definition of terms. The lawyer has the duty and the responsibility and the challenge to fashion them.

Justice Black stated in his dissenting opinion in the case of *Dennis v. The United States*:

"There is hope, however, that in calmer time, when present pressures, passions and fears subside, this or some later Court will restore the first amendment liberties to the high preferred place where they belong in a free society."

Let us take that statement in conjunction with an earlier one made by Mr. Justice Brandeis in *Whitney v. California*:

"Fear of serious injury alone cannot justify suppression of free speech and assembly. Men feared witches and burnt women. It is the function of speech to free men from the bondage of irrational fears."

We find ourselves faced with the question, Do we remove the armor of the Bill of Rights at the time when the fighting is heaviest? Does not the individual need the guaranteed constitutional rights at the time when they are most threatened? Is not that the very purpose for their inclusion in the Constitution?

If the test of reasonableness were applied, we could perhaps strike the balance between Government and the individual in times of stress. Let this test be applied to the proceedings in Congress as well. I have introduced two bills which bear directly on the protection of individuals against the tyranny of government, and yes, carelessness of those representing government. One of them is H. R. 3440, providing that no Senator or Representative shall be immune from civil liability for any defamatory statement inserted by him in the CONGRESSIONAL RECORD when such statement was not actually made in the Chamber of the Senate or the House of Representatives.

While the Constitution holds that "for any speech or debate in either House, they shall not be questioned in any other place," I do not believe that it is so absolute a privilege that it should extend to words inserted in the CONGRESSIONAL RECORD either by revision of remarks or by extension when they are not actually spoken in either Chamber.

Eminent constitutional authorities have held that no man ought to have a right to defame others under color of performance of the duties of his office. Irresponsible charges made in the privacy of a congressional office and attached to a statement made on the floor carry with them congressional immunity. The abuse of this immunity has resulted in unwarranted attacks on the reputation of citizens and has, in addition, undermined public confidence in the legislative body. It has nurtured the

growth of fear and suspicion. Too frequently defamatory speeches have been made outside the Capitol and subsequently inserted into the CONGRESSIONAL RECORD. Assuredly, such insertion should not accord any protection against a suit for libel or slander.

In these days of rapid news dissemination—the newspaper, television, and the radio—the individual can be and has been publicly defamed even before an opportunity for denial is accorded him.

Statements written in an office, but not actually stated on the floor or in committee, do not face the challenge of rebuttal on the floor. It is my firm conviction that such statements so inserted in the RECORD should not be accorded the same privilege of immunity.

While it is true that, broadly speaking, congressional immunity is necessary for the independence of the legislative body, so that its Members may be free to pursue their legislative duties, I can see no interference with the proper discharge of such duties if the cloak of immunity is lifted from words not actually spoken on the floor of the House or Senate or in committee.

I believe strongly that the provision I have offered is a completely necessary safeguard against abuse without removing the benefits which have and do flow from the constitutional provision granting general immunity.

The other bill I introduced is House Resolution 221, which, if enacted, would authorize the Committee on the Judiciary to conduct studies and investigations with the view of drafting a code of procedure for the conduct of hearings and examination of witnesses before committees of the House of Representatives.

I believe that the irresponsible conduct of some investigations in the House and in the Senate have injured the fabric of our law and have in very many instances added to the stress of the times, permitting emotionalism to take the place of logic and loose generalizations, the place of facts. The rights of witnesses, in some instances, have been jeopardized because of the absence of properly defined rules of procedure. With the televising of congressional hearings, many legal aspects of the rights of witnesses present themselves. The question of what constitutes a committee quorum has not been resolved. The right to counsel has not been firmly established. What does and does not constitute contempt of Congress has not been concluded.

Congressional hearings are essential to the proper functioning of the Congress. There should be, however, most particularly now, no confusion or doubt as to the proper procedure to be followed.

Every problem I have touched on is within the particular and special province of the lawyer. We must look to the lawyer because of his practice and precision in the uses of evidence, in his familiarity with prosecution and defense and his familiarity with the diverse strains of our culture. In short, his background, his special training and experience equip him to recognize the fundamental nature of the problem before us.

The dangers of subversion and sabotage are well known and are advertised, but the dangers in combating these dangers in an atmosphere of fear, suspicion, and hate are not so well known. To court popularity, many resort to the enlargement of our fear of internal security. But I, wherever I can, like to quote from a letter to the House Un-American Activities Committee written by Zechariah Chafee, Jr., professor of the Harvard University Law School, in a discussion of the Mundt-Nixon Act:

"How many Communists are there in the United States? The United Press said 70,000 in 1947, out of a total population of 143,382,000; and Mr. J. Edgar Hoover recently gave a lower figure of 60,000 Communists.

Thus Communists form one-twentieth of 1 percent of all the people in our country. The odds are 1,999 to 1 in favor of free institutions. Suppose a football stadium holding 40,000 people. The chances are that 20 of them would be Communists and 39,980 would not. Remember, too, that it is not a question of 20 dynamiters or 20 men with concealed weapons, for then they could be arrested at once under the ordinary criminal laws. Just 20 unarmed persons who have not violated any existing Federal or State law or conspired to violate any existing laws. But they have learned bad ideas about politics from foreigners and foreign books, they are thinking bad thoughts about these bad ideas, they are telling them to each other and to any outsiders who are willing to listen. And hence we are told that without this new sedition law we are helpless to prevent them from harming the other 99.95 percent of us, who have on our side only the city and State police, almost every newspaper and school teacher and professor and preacher, the Federal Bureau of Investigation, the Army, the Air Force, and the Navy, never forgetting the marines.

"Shades of Valley Forge and Iwo Jima. If we no longer want to be the land of the free at least let us be the home of the brave."

What we need so crucially now is a healthy skepticism, which the lawyer can bring, definition, which the lawyer can fashion, precision, which the lawyer can use; reasonableness, which the lawyer understands, so that neighbor can talk freely to neighbor and a friend remain a friend, even though he may approve of the entry of Communist China into the United Nations or even though he may approve cease fire at the thirty-eighth parallel, and where one is presumed to be a loyal, patriotic American citizen without first having to publicly announce that he is not a Communist and to point to his proof—the loyalty oath he signed.

Parchments and Principles

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very inspiring article that was written by our Senate Chaplain, entitled "Parchments and Principles," published yesterday in the Washington Star. I am sure that Members of the Senate will receive the same spiritual uplift from this article that we receive each day as we listen to the inspiring prayers of Chaplain Harris.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARCHMENTS AND PRINCIPLES

(By Frederick Brown Harris, pastor, Foundry Methodist Church; Chaplain, U S Senate)

Preserving precious documents which guarantee the people's liberties is one of the sacred tasks of the Nation. Of course, such holy archives must be kept from the implous hands of vandals and of avowed enemies of the state. It was well, when the Redcoats threatened America's newly founded Capital on the Potomac, that the cher-

ished Declaration and Constitution were hidden for a while in an idle grist mill across the river and later concealed farther south in old Virginia. Even during World War II these priceless documents were buried in a Kentucky vault. But a greater danger than destruction or mutilation by violence and malice always has put in jeopardy these revered emblems which a nation of freemen has regarded with a reverential awe almost akin to that which the ancient Hebrews had for the Ark of the Covenant.

An increasing peril has been that deterioration would dim them beyond recognition. The "powers of the air" were against them. Signs of inner decay have been manifest for many years. Disturbing fear has haunted the minds of the keepers of the shrine that time's remorseless impartiality in turning all things to dust finally would accomplish gradually and silently what no visible force could do. For, heedless of the impressive exhibit set up in the marble-columned Library of Congress, insidious battalions of disintegration were carrying out their destructive mission. Then, more than a decade ago, after a scientific survey a strategy of protection was adopted by ingenious patriots. Now it is assured, so far as human eyes can peer down the vista of the coming years, that the generations following still may view the original documents which are the charters of their freedom. As the Librarian of Congress declares:

"Every resource of science and technology has been applied in the effort to make these precious documents as permanently secure as the principles they proclaim."

It was fitting, indeed, that in the presence of a great throng the Declaration and the Constitution in their new containers, immersed in helium gas for a new lease of earthly immortality, should be sealed with pomp and ceremony as the eyes of the Republic were upon those hallowed scrolls. While the President of the United States and the Chief Justice of the United States, and distinguished representatives of the Congress lent their voices and hands to the ritual of the occasion it could be said, even as was declared when the documents first were placed in that setting more than a quarter of a century ago: "The impression upon the audience proved the emotional potency of documents with a great tradition."

But surely no thoughtful American could witness this moving pageant of patriotism without thinking of the deeper problem of preserving also the principles which make the parchments the hope of any future worth having, for us and all humanity. The battle for the parchments has been won; the battle for the principles is on as never before in all history. In the onslaught of atheistic materialism we face today a diabolical conspiracy against all that these documents symbolize. They are our banners in this titanic struggle between light and darkness; they speak of the mandates, not of an all-powerful state but, of "the laws of nature and of nature's God."

As today America marshals her moral and material might against all that the madmen of the Kremlin plot against the dignity of man, what better battle cry could be found than the closing sentence of the Declaration: "With a firm reliance on the protection of divine providence"? Back of both the Declaration and the Constitution, sanctified by daily prayer during the debates in which they were wrought out, is the voice of George Washington, as he cried out in those days of decision: "Let us raise a standard. * * * The event is in the hand of God!"

Recently, a radio commentator said: "The Constitution is the source of our freedom." That is a misleading statement. The Soviet constitution promises as much as our own; but in all its fair promises it ignores and even denies the author of liberty.

As we seal for a new tenure of permanence the two documents we need to remember, lest we forget, that our right to life, to liberty, and to the pursuit of happiness comes not from government but from God. That is the reason, and the only reason, why no government has the right to take those rights from the people. The Declaration trumpets, "Men are endowed by their Creator with certain unalienable rights." It is God who assures them. A just government simply secures them. That is the meaning of the flag which flies above the Stars and Stripes on all naval ships during divine services. It is out of the sense of God that we get a sense of the worth of man.

While we are rightly always pointing out that those who kneel around the cradle of our Republic passionately believed in the separation of church and state, let us remember that they did not believe in the separation of religion and state. That is different. Because we do not recognize the difference, we are tragically strangling our educational system by leaving out the fundamental meaning of life itself—God. America is doomed on all counts unless, to use Lincoln's great phrase, it goes forward "under God." The only possibility for democracy is Deity.

Alas, that secularism, which is a lack of faith in spiritual verities, in this decisive day is draining the moral strength of the Nation. Everything that makes America invincible in the global struggle now raging is rooted in God and comes from God. We have preserved the parchments which declare that. We must preserve the principles or for us the handwriting will be upon the wall: "Thou art weighed in the balances and found wanting. Thy kingdom is divided and given to another."

We have stopped the decay of the parchments. We must stop the decay of the principles, or the parchments will outlast the Republic.

Iowa Farmers Repudiate Bureaucratic Schemes Hatched up in the Department of Agriculture

REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. JENSEN. Mr. Speaker, it is my desire to read into the RECORD the minutes of a farm meeting held in Mills County, Iowa, in my district. They are as follows:

MILLS COUNTY, IOWA, FARM FAMILY POLICY REVIEW REPORT

The mobilization committee, including J. F. Wearin (chairman), Ray W. Jones, B. F. Buffington, and Richard S. Goos, met and reviewed the family farm program as suggested by the United States Department of Agriculture.

The committee unanimously agreed that a deadline of September 15, 1951, to have the county report finished and into the State office did not give enough time to do a thorough job on a survey of this kind.

A preliminary meeting was called for August 14, 1951, at the soil conservation office. The purpose was to invite various leaders over the county to attend and voice their opinion as to how the county-wide meeting should be conducted. Those invited were the following: J. F. Wearin, Mills

County PMA chairman; Paul Carlson, Production Credit Association; B. F. Buffington, Mills County PMA vice chairman; Richard S. Goos, county extension director, Ray W. Jones, SCS unit conservationist; D. N. McGrew, SCS district commissioner; J. F. Wearin, Jr., SCS district commissioner; C. K. Stewart, FHA representative; Fay McManigal, farm bureau president, Ned Turner, farm bureau officer; Ed Hopp, farm bureau officer; Gordon Steiner, farm bureau officer; Ormand Schoening, farm bureau officer; Ira Turner, Methodist Church layman; Myron Jones, Mills County PMA committeeman; Lee Honeyman, GI instructor; Lucille Stubbs, extension home economist; Mrs. Dewey Deitchler, farm bureau women leader, Mrs. Charles Wilson, Jr., farm bureau women leader; Mrs. David Angus, farm bureau women leader; Mrs. Edgar Jackson, farm bureau women leader; F. A. Wortman, newspaperman; William Brown, newspaperman; Wayne Bennett, Iowa Power & Light Co.; Horace Greenwood, lumberman; C. Rollin Buffington, farmer; William Rathke, district Rotary president; Carl Z. Lincoln, farmer; Richard W. Green, farmer; Deun McLain, farmer; Patrick Martin, Catholic layman; Edwin Leu, Lutheran layman, Ruel Harman, farmer, Leonard Duval, farmer.

This group drew up some points they thought should be considered and elected a committee to prepare those resolutions for the county-wide meeting. The committee named included: Edwin Leu, chairman; Fay McManigal, D. N. McGrew; Myron Jones; and Lee Honeyman.

Edwin Leu is president of the Mills County Fair Board, active in farm bureau and extension work, and is a leader in his community.

Fay McManigal is farm bureau president, has served on several farm bureau State committees, does an excellent job of soil-conservation farming, and is in the PMA program.

D. N. McGrew is a SCS district commissioner, past farm bureau president, active in PMA work, and is one of the most efficient farmers in the county.

Myron Jones is a PMA township committeeman, past farm bureau vice president, former vocational agriculture instructor, SCS cooperator, and very active in church and community affairs.

Lee Honeyman is a GI instructor and farmer. He is on the extension program planning committee, has been on several different farm bureau county committees, and cooperates with the SCS and PMA programs.

These men met and drew up the resolutions included in this report.

Minutes of the county-wide meeting are included in this report.

MILLS COUNTY MOBILIZATION COMMITTEE OPEN MEETING, AUGUST 30, 1951

The meeting was called to order by B. F. Buffington, acting chairman of the mobilization committee, in the Community Building at 8 p. m. on August 30, 1951.

Present: Mobilization committee members: B. F. Buffington, Ray W. Jones, Richard S. Goos, farmers' resolutions committee, Edwin Leu, Lee Honeyman, Myron Jones, Fay McManigal; many other leaders over the county.

Mr. Buffington introduced Edwin Leu, chairman of the resolutions committee that had been appointed at the meeting on August 14 to study the questionnaire sent out by the USDA and to draw up a set of resolutions pertinent to the questions asked. Mimeographed copies of the resolutions suggested were given out for consideration by those attending. Mr. Leu suggested that each be considered and adopted or rejected individually, explaining that these resolutions were the result of, and based on, the arguments presented at the meeting August 14. He asked that they be considered on a national

basis instead of a few individual cases, or as they affected local conditions. He pointed out that the entire booklet Mr. Brannan sent out was outlined as a family farm program and that the resolutions presented were pointed toward that aim. He also told those in attendance that if they cared to add anything to the resolutions, or change them in any way, that it was their privilege, adding, "This is still a democracy, and we hope to keep it that way." He then presented Resolution 1 for consideration:

Resolution 1 Reduce duplications between agencies at county, State, and National levels

Mr. Leu explained that the committee had found the programs of various departments were overlapping considerably, and yet each was asking for additional funds to enlarge their programs. He called upon Ray Jones to cite instances of this overlapping.

Mr. Jones cited the Market News Service for one. At present it is handled through the FMA, the BAE, and the Market News agencies. Mr. Leu commented that the office of information was requesting press service also, which would be another duplication. Mr. Jones stated that the farmers definitely wanted market news, but could see no necessity of having several agencies dispensing it.

Mr. Leu called attention to the duplication of loan agencies, stating that it seemed unnecessary to have both the Farm Credit and the FHA in the banking business for farmers, and that it was logical that these agencies could be combined, resulting in more efficiency and economy of operation.

Mr. Jones noted, also, that three departments were requesting funds for research farms, and stated expansion of research farms seemed unnecessary, and questioned the advisability of three different agencies pursuing research along the same lines. He also stated that much of the research done by these farms is at present done as well by individual farmers, without subsidy, and with the advice and technical help of the existing agencies in the county, such as Soil Conservation and Extension Service. With information available from these sources, he felt that pilot farms were not needed. However, if they were needed at all, it did not seem that they were needed by three different agencies. It appeared that all were shooting at the same goal, and foolishly spending money in duplicate efforts.

Mr. Leu stated "These are but four instances of overlapping, but it is hard for us, in such a short time, to find all the overlapping in this 122-page report. Since obviously the USDA themselves don't seem to know where they are overlapping, it is difficult for us to point out all the overlapping instances in one evening."

Mr. Leu then asked if anyone wished further discussion on the first resolution, and if not, moved that the resolution be adopted, suggesting that the instances cited be attached to the resolution as explanation of its purpose. Myron Jones seconded the motion. Motion carried, with no dissenting vote. Explanation to be attached to resolution.

Re Overlapping: (1) BAE, FMA, Market News, (2) Farm Credit and FHA finance agencies, (3) Research farms requested by three agencies, (4) Office of Information request press service, now supplied by FMA.

Mr. Leu then presented Resolution 2 for consideration.

"Resolution 2 We favor expansion or limitation of agencies as called for from the grass roots by congressional action."

Mr. Leu explained that the arguments that let up to this resolution were along these lines: "Should various members of agencies, or departments, go ahead and ask for the expansion or limitation, or should certain individuals, or should changes be made through Congress? In other words, should the Government agencies expand from within

in at the discretion of those in charge, or should the changes be requested by the people of the Nation, and decided upon by Congress? It appears that politics are involved, and they have a tendency to expand from within, constantly adding people to the payroll without proper authorization." Comments followed:

Fay McManigal, "I think limitation and expansion of agencies is not the problem in our county that it is in most places. At any rate, the expansion that seems to be desired on a State and national level has not been sought in this county."

Dick Goos "Our Constitution was drawn up with the provision that Congress should make the policies, and that agencies should administer them. It seems clear that agencies were not intended to make policies."

Myron Jones "I note that, on page 9 of the condensed report, this is said, 'More direct service could be provided if additional administrative funds were authorized for expanding the use of township committeemen. They could assist individual farmers to develop their own conservation progress, and encourage nonparticipating farmers to carry out conservation measures.' I don't think the committeemen themselves desire this expansion. They do not have the time, in the first place, to give this individual help, and are not qualified and equipped to do so. The Soil Conservation Service is equipped and qualified to give this assistance and it should be left for them to take care of."

Edwin Leu "The question seems to be this: Should expansion come from a need that arises, or should some politician decide it should be that way? Some of these agencies were born during a war period, or other period of crisis, and continue to be carried forward, and expanded, because they create jobs, far beyond their period of usefulness."

Dick Goos "Mr. Burdick made a pertinent statement the other day. He said 'Government agencies are like 'old soldiers, they never die.' However, neither do they fade away."

Edwin Leu "Does Resolution 2 need to be changed in any way, or thrown out completely? You know this is still a free country. If you want to say 'No,' go ahead. We would like to have a good argument here. How do you feel about it, Mr. Greenwood? Does it hit the nail on the head?"

Mr. Greenwood "I think you are definitely on the right track, and I am heartily in favor of it."

Mr. Leu "In other words, we are in favor of expansion only as the need for it is expressed at home by the people and not as coming from Washington."

Mr. Leu then moved that Resolution 2 be adopted, suggested that explanatory notes be added to this resolution, also. Mr. Greenwood seconded the motion. Motion carried, with no dissenting vote. Explanatory material added to Resolution 2—Expansion or limitation of agencies: (1) Research necessary, but duplication of effort not, (2) page 9 on consolidated report regarding extra funds for FMA local committees.

Mr. Leu then presented Resolution 3.

"Resolution 3 We believe that the role of members of the Department of Agriculture should be limited to giving requested assistance, and that policy making for the Department should be initiated by farmer demand."

Myron Jones referred to page 10 of the condensed report and Ray Jones to page 45 of the original USDA report for instances. Comments followed.

Edwin Leu "The committee felt that members of various agencies should be limited to assistance requested, and that the policy within the agency should be made by the farmers themselves, through their authorized representatives, Congress. We refer specifically to the Brannan plan as a plan that did not originate from the

farmers, but was thought up in Washington."

Fay McManigal: "When we decided to put this in here, we did not know of any farmers who had got together and asked for the Brannan plan, and did not know anything about it until it came out in the newspapers, as given out by Washington. We did not feel it should be initiated except by demand from the farmers. I think this resolution has a place here, and even Mr. Brannan himself will understand it, if he reads it."

Edwin Leu: "A hint to the wise should be sufficient."

Fay McManigal: "I talked to a man this week who said that Brannan himself admitted that he had not read the 122-page report."

Myron Jones: "It is a matter of record that he was not even in the country when it was released."

B. F. Buffington "I move that Resolution 3 be adopted as it stands, with explanatory references attached."

The motion was seconded by McManigal. Motion carried. No dissenting vote.

Explanatory references to be attached to Resolution 3—Re Policy by members of department: (1) Consolidated 4 and 8 because of similarity (2) page 10—Brannan plan.

Mr. Leu then presented Resolution 4.

"Resolution 4 We are not in favor of pilot or demonstrational farms as requested by the Department."

Comments followed.

Edwin Leu "We have something on this in Resolution 1. However, to make it specific, we have made this resolution more to the point. These pilot farms were to be in connection with four different projects: Soil areas, farm housing, testing experimental results, and soil-conservation research."

"The committee feels if the idea is good, it will be adopted by private owners, and will secure the assistance or develop it under some supervision that already is available, such as SCS or Extension, and will serve the same purpose as a pilot farm in the area. If it's a good idea, and he gets rich, all the neighbors will follow him. If it isn't, they won't. Pilot farms in connection with farm housing tend to deal with establishing a uniform standard of living. Mr. Jones, will you elaborate on the resolution?"

Myron Jones "The committee looked up these requests for pilot farms and felt after studying the question, that the pilot farms were not necessary."

Ray Jones "The point of the pilot farm is to make, in each area, a model farm, with all of the buildings perfectly set up, and scaled to the operation of the farm, etc. Now you know, and I know, that they are very nice, but why are they justified? Such a small percent of the farmers have the economic resources to remodel their farms to conform. Information is available through the Extension Service to give assistance to farmers interested in remodeling. There is plenty of technical information available and practical assistance to fit the individual problem, that these pilot farms serve no purpose, except that they are nice to look at. Few farmers can use any of them. There may be places in the United States where these things are necessary, but, thank God, that is not in this part of the country."

Fay McManigal: "You know they would have 25 laborers, 10 supervisors, and Lord only knows how many at a State level. This is a perfect example of the motive involved. If they could get these pilot farms wherever they want them, they could just about take care of everybody with a job."

Ray Jones: "Perhaps they have value, but what value?"

Edwin Leu: "It doesn't look like we are doing any arguing. Surely someone wants to present some different views."

Mr. Greenwood: "Farmers call my attention to the things they are interested in, that they see in the information now available."

Ray Jones: "Loads of information is now available for the asking; more than any farmer can use."

Fay McManigal: "I asked for information at the Iowa State College about building a machine shed. They asked me what I wanted to put in, and the approximate size of the machinery, and figured it all out for me. The lumber companies will do the same thing, and are glad to. It just looks like a way to give somebody a job."

Mr. Leu then moved that resolution 4 be adopted. Motion seconded by Art Goehring. Motion carried, with no dissenting vote.

Edwin Leu: "I guess we're ready to take up resolution 2. (Somebody hold McManigal.) On second thought, I'll call on McManigal to open this discussion."

"Resolution 5: We believe that the relationship between Extension Service and the sponsoring agency under strict divided finances results in a better educational program than complete severance of the two organizations."

Fay McManigal: "I get accused of a lot of things, and I would certainly like to have anyone who doesn't agree with me, speak up, but first I would like to ask a question: 'Why was this put in the form at all?'"

Edwin Leu: "As I understand it, Extension can be handled by any farm organization in the area. Up to a year ago, the county appropriation was handled through the Farm Bureau. However, in this county, I know the Farm Bureau and the Extension parted relationship in finances then, to the extent of having separate bank accounts. Mr. Goos, perhaps you can clarify this somewhat."

Dick Goos: "This was to avoid criticism that Farm Bureau was spending tax money which was not true. This year, it has gone a step further, and with this new bill where most counties get \$5,000 county appropriation instead of \$3,000, it is necessary to put the money we get from the county in one bank account, and the money from the Farm Bureau in another. In our county this year, Farm Bureau will contribute \$2,985 to the extension program. These bank accounts are carried this way to get away from any criticism, as to the use of the county funds."

Fay McManigal: "Our State has an outstanding record for Extension Service with this relationship existing. The program has gone forward, salaries increased, personnel added, through the years, but this is the first time there has ever been an increase in the county appropriation. The farmers, through Farm Bureau, have footed the bill for this expansion all the time, so I still want to know why this was included in this form."

Dick Goos: "Our governing body, the Farm Bureau board of directors, is locally controlled. Our salaries are set by them."

Fay McManigal: "The cost of the extension program has far exceeded the appropriation by the State and the county, and we have had to take up the slack out of Farm Bureau dues. Here we get criticized for taking money, when in reality we are giving it."

Dick Goos: "Local people have control over the salaries and the program. They decide what the program will be, and it works very effectively."

Fay McManigal (reading from p. 27 of full report): "Extension Service should be free from any operating relationship in any State and county with any general farm organization to assure that it is recognized as a public educational agency available to and operating in the interests of all farmers on an equal basis." Now, in other words, they infer if you don't belong to farm bureau, you are not entitled to extension service, and I defy anybody to show me where they have ever been denied any extension service because they are not farm bureau members. In fact, we went around to every township in

the county holding township meetings last year, and at those meetings stressed that everyone was perfectly welcome to avail himself of the extension services. In fact, we urged them to come in and use them. We felt if they come often enough, those who were not members might eventually feel we had something on our side of the house too. It looks to me like it would be very convenient for the USDA to get rid of farm organizations if it were possible for them to do so."

Leo Honeyman: "The reason this resolution was put in here this way was: 'We believe we are better serviced in the relationship with the farm bureau as it is. We believe these objectives would be more apt to be reached under the present relationship than under the alternative they recommend. They emphasize local participation and leadership, and we think the recommendation to divorce farm bureau and extension would work against those objectives'"

Fay McManigal: "I don't think either is perfect, but getting better all the time. If the USDA doubles this kind of stuff (indicating the report) next year, we will need to double farm bureau membership. They don't state where they will get the money to carry the program. They would have to raise more taxes to replace the approximate \$3,000 allotment from farm bureau to the program."

Edwin Leu: "Any more remarks concerning this resolution?"

Myron Jones: "I make a motion we continue to operate as we are, and add to the resolution that it is a saving to the county as it is."

B. F. Buffington: "I am not so sure the farm bureau should have to pay for the extension program. Perhaps the tax basis is fairer. Since the program is available to everyone, why should Farm Bureau members have to pay for the program?"

Fay McManigal: "I think the fact that it is operated under local control makes for more efficient management."

Lee Honeyman: "I suggest you add to the resolution 'makes for better financial efficiency due to local control.'"

Edwin Leu: "I move that resolution 5 be adopted, with this addition"

Motion was seconded by Fay McManigal. Motion carried with no dissenting vote. Resolution now stands: "We believe the relationship between extension service and the sponsoring agency under strictly divided finances results in a better educational program than complete severance of the two organizations, and makes for better financial efficiency due to local control."

Edwin Leu: "What? No dissenting votes? This is heaven. There hasn't been an argument tonight."

Edwin Leu then presented Resolution 6.

"Resolution 6: We disapprove of the Department of Agriculture conducting research on personal problems such as establishing standards of living for the farm family."

Comments followed:

Edwin Leu: "Is anyone in the house able to define the living standard for any farm family? Would you be satisfied to use the standard of living of a family in the Ozarks as your own, or would you prefer to adopt the standard of living of some wealthy banker in the east? Do you think it is possible for anyone in the Department of Agriculture to set out any standard of living we can all live by?"

Ray Jones: "Information along this line is available to all through the extension department. What more do we need? Isn't that right, Miss Stubbs?"

Miss Stubbs: "Yes, the information is available to those who desire it, and we are glad to help anyone who wants assistance, but you can't go into someone's home and say, 'Here, you must live like this.'"

Ray Jones: "Every individual selects his own living conditions, and must have the de-

sire to raise his standard of living, before he will do it. If he has the desire, he will raise it, and the information to help him do so is available if he desires it."

June Fickel: "It is not a lack of wanting to raise one's standard of living. It is just an economical impossibility to do so. Many people have the desire to raise their standard of living but it is just not possible. They haven't the money to do it."

Myron Jones: "How would establishment of this agency by USDA help to do so?"

June Fickel: "It wouldn't."

Lee Honeyman: "All this smacks of regulating the size of the farm, and promoting what they call family farms. However, there would be considerable disagreement about what the size of a family farm should be, and who could decide what it should be. We are not in favor of any activity on their part to promote family farms. If this idea were carried far enough, they could work to the decided disadvantage of any farm in any sector, and I don't think it is anything for the Government to determine."

Edwin Leu: "Can anyone here decide how large a family farm should be, or how to determine the living standard for a farm family?"

Ray Jones (reading from report): "It is the philosophy of the credit agencies of the Department of Agriculture that the living of the farm family has the first claim on farm income. That is, loans must be repaid from income over and above that necessary for the family to live. But what is the essential content or minimum standard of living that American farm families ought to have? Does it include an automobile, recreation, and so forth?"

Edwin Leu: "No one in this group seems to think they can define a standard of living for the Government to go by. We all feel a better standard of living should be promoted, but feel that is more or less overstepping into private territory. A person should have the personal freedom to determine his own standard of living."

B. F. Buffington: "The standard of living would depend on the size of the family, and that would be a little hard to limit."

Edwin Leu: "I think determining the size of the family would be stepping into private territory."

B. F. Buffington: "The question is still pertinent—if you limit the size of farms. Obviously, a large family would have to have a large farm, and a small family could not operate a large farm efficiently. Of course, they could with hired help, but that would be getting away from the idea of the family farm. You just can't say what size a farm should be and have it practical for all families. You just can't shove them around. Or, I guess you can. They do it in Russia. They did it in Germany."

Allen Wortman: "You might suggest a note be issued to Mr. Brannan to get in touch with Mrs. Sanger to help him set the standard size of the family, and they be made to conform with the size of the farm, to maintain the desired standard of living."

Edwin Leu then made a motion that resolution 6 be adopted. Seconded by Honeyman. Motion carried, no dissenting vote.

Edwin Leu: "Now are there any more resolutions to be put before the house? There may be other things we need to take action on. I wouldn't want to be quoted as an authority on what all we should take up."

Myron Jones: "At our PMA committee meeting we had representatives of SCS which was very agreeable to PMA. I understand they set up standards for ACP payments and check the work. I wonder if it would eliminate duplication if some of that was put in SCS."

B. F. Buffington: "In this country, the SCS has gone out and checked the practices we would pay on. We pay on their recommendation. Of course that has worked very much to the benefit and assistance of PMA."

PMA was not qualified technically and had not the time to check these practices. SCS could probably handle these payments just as well. They could probably handle the corn the same as PMA. I think the technical part of the conservation service should be done by SCS. However, in all counties, it is not as smooth as it is here."

Ray Jones: "All agencies here agree upon practices. However, in some counties they don't agree. On some things, in some counties there is not an accepted specification for ACP payments and consequently there is a terrific amount of confusion. In our particular county there is no disagreement. In some counties a man may lay out terraces according to the advice of the SCS but the PMA man who checks it says 'I don't like terraces that shape. They must be this shape before I will approve payment on them.' In those counties they can't get together on anything."

Ray McManigal: "What will the result of meetings like this be in such counties?"

Ray Jones: "Out of eight counties I have talked to, only three have been able to get enough people together to even discuss this thing."

Ray McManigal: "What will happen when the results of these counties' attempts to answer these questions are turned in?"

Ray Jones: "Who knows?"

Ray McManigal: "I think it's wonderful we get along like this in this county, but are we going to bury our heads in the sand because we are so happy about the situation in our county?"

B. F. Buffington offered a resolution for consideration as follows: "We approve a reduction in appropriation of funds for the agencies under USDA rather than an enlargement of their operation."

Edwin Leu recommended this be called Resolution 7, and put to a vote. Buffington moved it be adopted. Seconded by Goehring. Motion carried, no dissenting votes.

Honeyman asked if this could be too much of a blanket resolution and if it was desirable to cut appropriations of all agencies.

Edwin Leu: "In other words, are we slighting our own agencies? Any comments?"

B. F. Buffington: "Of course we are, but some of our payments on practices are ridiculous. Part of our PMA program at the present time is very open to criticism, because we are making payments on a basis that is not desirable and not necessary, and in some cases not beneficial. There was a time when they helped, but they are no longer needed."

Art Goehring moved that the resolutions be sent to our State and National Representatives and Senators. Seconded by Greenwood. Motion carried.

Edwin Leu: "Any other matters before the house?" I believe we accomplished some of the aims brought forth at the first meeting. It was felt that discussing what should be brought up at this meeting would take up the entire evening, unless a committee was appointed to study the more salient points, and draw up some resolutions regarding same. Whether they will accomplish anything in the end or not, I don't know. They will probably do as they please, anyhow. If there is no more business, a motion to adjourn is now in order."

It was moved by Jack McGinnis to adjourn. Seconded by Ray Jones. Motion carried.

RESOLUTIONS

No. 1: Reduce duplications between agencies at County, State, and national levels.

Reference:

1. BAE, PMA, Market News.
2. Farm credit and FIA finance agencies.
3. Research farms requested by three departments.

4. Office of Information request press service, now supplied by PMA.

No. 2: We favor expansion or limitation of agencies as called for from the grass roots by congressional action.

Reference:

1. Research necessary.

2. Page 9 of consolidated extra funds for PMA local committee.

No. 3: We believe that the role of members of the Department of Agriculture should be limited to giving requested assistance, and that policy-making for the Department should be initiated by farmer demand.

Reference:

1. Consolidated 4 and 8 because of similarity.

2. Page 10, Brannan plan.

No. 7: We approve a reduction in appropriation of funds for the agencies under USDA rather than an enlargement of their operation.

Litigation Between Arizona and California To Determine Their Respective Rights to Benefits of the Colorado River

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MURDOCK. Mr. Speaker, much of the present controversy between Arizona and California over the waters of the lower Colorado River involves legal questions which I as a nonlawyer am not well qualified to discuss, but on consultation with eminent lawyers some facts have been impressed upon my mind which I must indicate. At the present point all seem agreed that a final determination of water rights by the Supreme Court of the United States is not only desirable but necessary. Some Members of Congress now studying the legal aspects of the question have said that they feel that Arizona now has a justiciable issue which would enable her to take the matter to the high Court for adjudication and a definitive judgment as to her right to use water out of the Colorado River. Arizona lawyers deny that such a justiciable issue is present in the absence of an authorization by Congress. For that reason, I am urging legislation which will give us an authorization sufficient for the Supreme Court to take jurisdiction and render Arizona a decision as to her rights.

I have repeatedly said to my committee, "I am extremely anxious for the Su-

preme Court to tell Arizona how much water she has yet coming to her out of the main stream of the Colorado River and to tell California how much water she has coming to her out of the main stream of the Colorado River, under existing law." By existing law I mean the Colorado River Compact of 1922, the Boulder Canyon Project Act of 1928, the California Self-Limitation Act of 1929, the Mexican Water Treaty of 1945, and all other relevant acts, statutes, and contracts.

It is my understanding that the Supreme Court of the United States has original jurisdiction over controversies between States, and that that constitutional grant of power cannot be modified by congressional act. It is my further understanding that the Supreme Court has declared that it will not render advisory opinions or declaratory judgments between States. Such being the case, I cannot see my wish accomplished to have the high Court tell Arizona how much water she is entitled to use under existing law out of the main stream of the Colorado River, unless and until a case is maintained in the Supreme Court over which the Court will take jurisdiction and render a judgment. It is the purpose of the modified form of the act, S. 75, which I am proposing, to create the justiciable issue so that respective water rights may be determined.

Not being a lawyer, I have consulted the many eminent attorneys who have appeared as witnesses in this long controversy before the various committees. In the Eightieth Congress, before Subcommittee No. 4 of the Judiciary Committee of the House, considering House Joint Resolution 225, and others, the Colorado River Basin States Committee, all eminent western water authorities and many of them outstanding lawyers, gave testimony and filed a brief. The members of the Colorado River Basin States Committee are listed on page 287 in the hearings, serial No. 23, of the Eightieth Congress. That committee is composed of two representatives of each of the five States of Arizona, Colorado, New Mexico, Utah, and Wyoming. All of the members of that committee and their lawyers are agreed that there is not now for either California or Arizona a justiciable issue within the jurisdiction of the Supreme Court.

Arizona has twice brought suit, *Arizona v. California* (283 U. S. 423 and 298 U. S. 558). In each case, the Supreme Court dismissed the complaint and in each case one of the grounds was that Arizona had no authorized project, and hence there could be no threat of injury based upon an inchoate claim to water which has not been and might never be appropriated or put to use, and since the Court could not in an interstate suit render a declaratory judgment or advisory opinion, it had no jurisdiction.

In other words, it would not decree a water right for an unauthorized project although there were involved engineering designs, canal lines, and lands to be irrigated in each case.

So that if there is any thought that Arizona could establish her right with-

out an authorization, it is clearly erroneous.

As was well stated by Senator JOSEPH C. O'MAHONEY, of Wyoming, on the floor of the Senate in the Eighty-first Congress, February 21, 1950:

The Supreme Court has clearly announced in case after case that a controversy is not a mere request for a judicial opinion as to the effect of any law or of any compact. A controversy is something very much more definite and complete.

In the case of *Missouri v. The United States* (200 U. S., 496), at page 521, it was clearly held that the Court will not grant relief against a State unless the complaining State shows an existing or presently pressing injury of serious magnitude.

Again, in the case of *Alabama v. Arizona* (291 U. S., 286) the Supreme Court said:

"The Court will not grant relief against something feared as liable to occur at some future time. This Court may not be called upon to give advisory opinions or to pronounce declaratory judgment * * * Its jurisdiction in respect of controversies between States will not be exerted in the absence of absolute necessity."

In the New River case, *United States v. Appalachian Electric Power Company* (311 U. S., 337), it was held:

"To predetermine, even in the limited field of water power, the rights of different sovereignties, pregnant with future controversies, is beyond the judicial function."

It seemed clear, Mr. President, to the members of the committee that the Constitution of the United States has been correctly interpreted by the Supreme Court and that there was no possibility of obtaining an adjudication of the basic controversy between California and Arizona except by the authorization of the project. When that authorization is made and not till then, Mr. President, there will be a controversy within the meaning of the Constitution which the Supreme Court can adjudicate. The Congress cannot solve this problem; it cannot repeal the interstate compact which it has approved. The compact stands. The road to unity, the road to the settlement of the controversy, is the road which is provided in this bill by which authority to make the United States a party is granted, for lack of which the Supreme Court once declined to pass upon the case and by the authorization of the project which creates a constitutional controversy. By this bill, Mr. President, we provide that the compact may be construed by the Supreme Court.

Senator O'MAHONEY also very correctly stated:

DECLARATORY JUDGMENT NOT POSSIBLE

Mr. O'MAHONEY Mr. President, there is one decision of the Supreme Court which, it seems to me, is particularly pertinent. The suggestion was made that a declaratory judgment under a recent statute might be made by the Supreme Court. That precise point was raised in the case of the United States against West Virginia, which is reported at Two Hundred and Ninety-fifth United States Reports, page 463. In that case the Supreme Court dismissed a bill brought by the United States Government to enjoin West Virginia and certain corporate defendants to which the State had issued permits from constructing a hydroelectric dam in a river alleged to be navigable and for a declaratory judgment that the rights of the United States in the stream were paramount. The holdings of the Court were to be found on page 473 of the report.

I read:

"There is presented here, as respects the State, no case of an actual or threatened interference with the authority of the United States. Until the right asserted is threatened with invasion by acts of the State, which serve both to define the controversy

and to establish its existence in the judicial sense, there is no question presented which is justiciable by a Federal court."

With respect to the power of the court to render a declaratory judgment, the Supreme Court said, at page 475, volume 395, United States Reports:

"No effort is made by the Government to sustain the bill under the Declaratory Judgment Act of June 14, 1934 (ch. 512, 48 Stat. 955). It is enough that that act is applicable only in cases of actual controversy. It does not purport to alter the character of the controversies which are the subject of judicial power under the Constitution."

Mr. President, it is utterly impossible, in my judgment, and in the judgment of the committee to expect a declaratory judgment. I may say that the distinguished and able Senator from Colorado [Mr. MILLIKIN], who is a member of the Committee on Interior and Insular Affairs, shares that opinion, as is evidenced by the fact that the amendment, in the form of sections 12 and 13 of the bill, was worked out and presented to the committee by the distinguished Senator from Colorado and by the chairman of the committee. The outstanding qualifications of the Senator from Colorado as a lawyer are recognized by all.

So, Mr. President, by providing for the authorization of this project, the committee seeks to bring about the conditions which will in turn create a justiciable controversy which the Supreme Court can settle. Then we shall understand, clearly and definitely, and with authority, what the respective rights of California and Arizona are to this water.

As my committee has previously so well stated, this controversy has held up the development of the entire Colorado River Basin for many years. Today between nine and ten million acre-feet of water are wasting to the sea. In Arizona and in southern California an acre-foot of water is conservatively estimated to produce \$40 in gross crop value annually. Certainly all irrigation waters used consumptively in Arizona during the last 10 years have averaged more than \$40 per acre-foot of water used in gross crop value. Will the American people permit thousands of rich acres in this land of sunshine to remain desert or return to the desert while such a volume of life-giving water wastes to the sea? In the legislation that I propose I am not asking that any appropriation be authorized at this time, nor at any time until after the Court has established Arizona's water rights in that river and the feasibility of the diversion established at such later date. I cannot too strongly urge Congress to move now that his controversy on which so many thousands of peoples today and millions in the future depend be quickly decided.

Construction of Connecting Water Link Between Tennessee and Tombigbee Rivers Should Start Now

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include a statement by me before the Senate Committee on Appropriations on September 19, 1951, in behalf of an appropriation with which to begin construction of the Tennessee-Tombigbee waterway:

Mr. Chairman, for the past 144 years the question of the construction of a link connecting the Tennessee and Tombigbee Rivers has been before the public. Even before that, the Tombigbee River was used as an avenue of commerce by citizens of the United States beginning in 1802. And, even before that date, it was used by the Spanish and Indians.

In the year 1807 a proposal was made by one James Lyon, a candidate for Congress from the State of Tennessee, that the Tennessee River be linked with the Tombigbee River by a canal. He proposed that this canal be built from Bear Creek, a tributary of the Tennessee, which rises in the southeastern part of Franklin County, Ala., to the Tombigbee River.

This proposal in its various forms was before the Congress for many years, but the reports of the engineers all indicated that it was not feasible to construct this connecting link by way of Bear Creek.

When Pickwick Dam was built in the late thirties, the water on the Tennessee River was raised above the dam, by more than 50 feet, and when that was done the United States engineers found that it was feasible to construct this connecting link, not by way of Bear Creek, or by way of the upper reaches of the Warrior River, both of which proposals were before the Congress at that time, but by way of Yellow Creek.

The members of the committee have just heard General Clorpening say that the construction of this canal is recommended by the Corps of Engineers.

I would like to point out to you, Mr. Chairman, and to the able members of this committee, that the insistence for the construction of this canal in the early days was primarily on the part of people living in middle Tennessee and north Alabama, who desired a connection with the then thriving city of Mobile on the Gulf of Mexico.

The desirability of such connection is even greater today than it was in those early days, because in the meantime, the great Tennessee River has been improved for navigation, flood control, and power development, and in the meantime, as we all know, one of the great pillars of our national defense has been constructed at Oak Ridge, Tenn. I refer, of course, to our Atomic Energy Plant at Oak Ridge. Also, to the north and west, there is now under construction near Paducah, Ky., another atomic energy plant. The great aluminum plant of Reynolds Aluminum Co. was constructed in 1940 at Listerhill, near Sheffield, Ala. Many other industries have come to this area of north Alabama and Tennessee. The only connection they have with the Gulf is that down the Tennessee and Ohio Rivers to Cairo, Ill., thence down to the Mississippi to New Orleans.

As the gentleman from Mississippi [Mr. RANKIN] has so well and forcefully pointed out, the construction of this canal between the Tombigbee and Tennessee would cut the water distance between Oak Ridge and the Gulf of Mexico at Mobile, Ala., by more than 800 miles.

I hope that I have not given the impression that I regard the Tombigbee Canal as a matter of local interest, because it is not. It is a matter of the greatest national interest and it is truly the missing link in our inland waterway system. Its construction will allow the transfer of water-borne traffic from one major city to another of this country, with unbelievable ease and I believe it is from the standpoint of geography one of the most unusual projects in this country or in the world.

Since I have been in Congress, I have actively supported every effort that has been made to get this waterway under construction. It is my pleasure here today to join my efforts with those of the Senior Senator from Alabama, the Honorable LISTER HILL, and with the efforts of the gentleman from Mississippi [Mr. RANKIN] who has for years advocated the building of this waterway. Also present here today, is the gentleman from Alabama [Mr. JONES] who has during the time I have been in Congress, ably and actively advocated and espoused the building of this waterway, realizing the great advantages that will accrue to this Nation and to his section of Alabama by the construction of this waterway. I want to associate myself with the remarks which he has just made in this connection. Also, the gentleman from Alabama [Mr. BATTLE] the gentlemen from Tennessee [Mr. FRAZIER and Mr. SUTTON] have appeared here.

This is one of those fortunate projects that will have an immense value to the national defense and at the same time an equal value to our domestic economy.

The value of this project to my congressional district has a double aspect in that the Tombigbee itself flows through Pickens County in the Seventh Congressional District of Alabama, and the largest tributary of the Tombigbee, the Warrior River, which has its headwaters in Cullman and Blount Counties in the seventh district and which is navigable with a 9-foot channel to Coyle, in my home county of Walker, joins the Tombigbee at Demopolis, Ala. On the Warrior River are located the greatest coal and iron deposits of the southeast.

I also want to thank your committee for its kindness in allowing the work on the great dam at Demopolis, Ala., to go forward. This dam is of great significance to the improvement both of the Warrior and Tombigbee Rivers, as it will improve navigation on both rivers by eliminating three or four dams now across the Tombigbee and Warrior, and the new dam will have a lock of the size equipped to handle the large barge cargoes that move over our modern waterways.

Message to the People of Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Cardinal Spellman's radio message to the people of Poland broadcast by Voice of America, which appeared in the Polish American Journal on September 1, 1951:

CARDINAL SPELLMAN'S RADIO MESSAGE TO THE PEOPLE OF POLAND BROADCAST BY VOICE OF AMERICA

With "mourning Poland" the free world mourns the death of His Eminence Adam Cardinal Sapieha, archbishop of Cracow, His Eminence Francis Cardinal Spellman, archbishop of New York, said in a broadcast beamed to that country by the Voice of America.

His Eminence paid tribute to the late cardinal's extensive works of mercy through the formation of Caritas, which has now been taken over by the Communist regime.

Cardinal Spellman's address follows:

"But a few days ago the citizens of the United States received from Cracow the sad news that the shepherd of that ancient Polish diocese had at last laid down his pastoral staff

which he had used for more than a quarter of a century to guide with love and zeal and courage, with charity and justice the lambs who had been entrusted to him by Christ, the Supreme Shepherd of our souls. Adam Stefan Cardinal Sapieha had closed his eyes in death. After 84 years of consecrated life, spent for his God whom he served with unselfish devotion, and for his Poland which he loved with passionate dedication, the venerable prelate brought to an end one of the most distinguished careers in contemporary ecclesiastical annals.

"One can well understand why the 23,000,000 Catholics of Poland are overwhelmed with grief in this hour when God has called from their midst the familiar and beloved figure of their father, of their leader, of the friend of their poor and of their suffering, of the fearless defender of their God-given rights and liberties. And yet, it is not only the citizens of Poland who today are in mourning for Cardinal Sapieha but God fearing and freedom-loving men and women all over the world who realize that in death there has been silenced a voice which dared to cry out in the wilderness of confusion and in the dark hours of a double enslavement, the warning of his Master, 'render to Caesar the things that are Caesar's, and to God, the things that are God's'.

"Like his holy predecessor in the See of Cracow, St. Stanislaus Szczepanowski, who was martyred at the altar by a tyrannical king because he proclaimed the laws of God's morality, your beloved archbishop, Cardinal Sapieha, never ceased to declare the rights of God and to defend the rights of the little people of Poland against the aggressor and the usurper whether he came from the West or the East. You, the faithful of Cracow, you the people of all Poland beheld your great deceased archbishop as he had the dauntless courage to resist the Nazi invaders who sought to treat you as an inferior race and to destroy the century-old and glorious traditions of Poland. But very few in the entire expanse of Poland could equal or approximate the patriotism, the love of Poland of this aged prelate who now has his eyes on a Poland which once more drags the chains of bondage. No one, and most certainly not those more recently come into your midst when the horrors of war and pestilence are a matter of the past, no one can begin to match his works of mercy on behalf of the hungry, the thirsty, the naked, the homeless, the disease ridden, the widowed and the orphan. To serve God's poor and afflicted this tireless man of God organized and built that great vehicle of God's mercy known as Caritas. From one end of Poland to the other, Caritas became the symbol of divine compassion for the multitudes of uprooted humanity. It was the manifestation of God's everlasting love in action among the masses. Through it the bishops and priests, religious and lay of Poland collaborated in a great crusade of sacrifice to help all the suffering inhabitants of Poland without regard for ethnic origin or religious persuasion. It was sufficient to know that they were hungry, thirsty, sick or homeless. And, my dear Polish brethren, it was the great privilege of us Catholic Americans to cooperate with Cardinal Sapieha and Caritas in those frightful days with our gifts of money, food, clothing, and medicine.

"Incredible though it may seem, because of these works of mercy performed for you, my brethren of Poland, Caritas and Cardinal Sapieha and the legions of those who worked with him in this great enterprise, were branded 'enemies of the people' and one of the first steps taken by the real enemies of the Polish people was the liquidation of Caritas. Now this dastardly maneuver saddened the heart of your dead Cardinal—not merely because Caritas was suppressed but because his great heart and his generous hand and his brother bishops of Poland were prevented from distributing bread to those

who were famished and clothes to those who were in rags and medicine to those who were fever ridden.

"While the soul of the great Sapieha was torn asunder by the spectacle of the physical needs of his cherished flock, it was even more tortured—aye, almost paralyzed by the spiritual dangers which were, and still are being systematically elaborated with almost diabolical ingenuity to stamp out in the hearts of Poles, especially of the innocent children and youth, belief in God Himself, and to tear away from the chair of Peter, the center of Christian unity, the noble church of Poland which for centuries has been the eastern bastion of the Catholic, Apostolic Roman Church. Cardinal Sapieha, who a half-century ago lived in Rome in close proximity to blessed Pius X, beheld similar movements at that period in other parts of the world. He had the inestimable privilege of understanding and imbibing the spirit of that blessed pontiff who was saddened at the assaults made in his day on the citadel of faith. With the experience of years, Cardinal Sapieha learned that the church is an old anvil which has worn out many a hammer. From Peter's tomb to the ancient See of Cracow he brought these convictions, deeply rooted in faith and fashioned after the heroic example of blessed Pius. No wonder that he was so courageous and fearless in facing the church's enemies—but likewise, it is no wonder that he feared the sly, surreptitious introduction of synthetic, State-controlled movements masquerading as religion in the guise of schism. He knew that the so-called national church with its specious allurements of freedom, is ultimately and inevitably the instrument of the vilest type of enslavement, the slavery of the spirit to autocratic political commissars. The unity of doctrine and discipline and worship was always uppermost in his thoughts and prayers. Time and again he cried out so wisely to his priests and people: 'Remember that you will never build a better Poland by betraying God.' And time and again he implored Poland to recall its glorious, unflinching devotion of a thousand years to the Vicar of Christ, the successor of Peter the Fisherman, for whom in ages past its bishops, priests, and laity had suffered confiscation and proscription and exile—the loss of material goods—and even life itself. But they never betrayed Peter.

"In these days, with mourning Poland, the free world too will mourn as the last remains of Cardinal Sapieha, a champion of freedom, are interred on the Wawel near the bones of Tadeusz Kosciuszko, the great Polish patriot who came to these United States in our hour of national need and helped us by his military genius to win our freedom and independence. Sapieha, great son of the church and of Poland, will be borne to his tomb near the sepulchre of Poland's poet of freedom, Adam Mickiewicz, who envisioned Poland crucified as Christ was crucified, for being the standard bearer of faith and idealism. And while the clergy and faithful will chant their hymns of requiem about the grave of their fearless cardinal-archbishop, the voice of another Polish poet, Krasinski, will sing and will resound mysteriously and reassuringly to your Poland again crucified but destined once more to rise, the verses of his immortal poem, Dawn-Przedswit:

"And I heard a voice that called in the eternal sky:

As to the world I gave a Son,
So to it Poland, thee I give,
My only Son He was—and shall be,
But in thee, my purpose for Him lives.
Be thou then the Truth, as He is, everywhere
Thee I make my daughter!
When thou didst descend into the grave
Thou wert, like Him, a part of mankind,
Thy name is: All Humanity!

"Fear not, my brethren of Poland. The night may be long but the dawn with its

message of victory must come. As Poland in the darkness climbs again the steep road of her Calvary she becomes, in this mysterious era of iniquity, once more the symbol of all humanity. Keep burning the lamp of faith. Remain loyal to your bishops, the successors of the apostles all of whom were martyrs. Show love and reverence to your priests in this hour of their tribulation. Suffering and imprisonment and exile and martyrdom are no new experiences for the bishops and priests of Poland. Anyone who knows Polish history knows that to be true. And anyone who has ever been behind the barbed wire of a concentration camp needs no further proof of this assertion. The bishops of Poland with God's unfailing help will carry on from the point where Cardinal Sapieha was stopped by death. They will continue in his name to remind you in your hours of trial and temptation, 'You will never build a better Poland by betraying God.'"

What Reservists Can Expect

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 24, 1951

Mr. THYE. Mr. President, in common with all other Members of Congress, I have been deeply and seriously concerned over the mounting evidence of inequity and injustice suffered by reservists, particularly inactive and volunteer reservists, in the handling of our manpower needs by the Armed Services since the Korean outbreak.

A very great obligation rests upon us here in Congress to get to the bottom of the matter, and to make certain that the Department of Defense and the various Services correct these adverse conditions.

There is a great deal of confusion and uncertainty as to what is in store for the reservists. The United States News and World Report, in its September 28 issue, undertook to outline what reservists can expect, barring all-out war. It is an interesting summary, even if the picture is not wholly reassuring. Eight complaints of reservists, listed at the end of the article are identical with the complaints which I have in my files in hundreds of letters from men recalled to active duty.

I ask unanimous consent that the article be reprinted in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

WHAT RESERVISTS CAN EXPECT—FOR MOST: 17-24 MONTHS, IF IN; NO CALLS, IF OUT

Serious concern about what the future holds for them is being felt once more by 2,500,000 reservists and their families.

Men in Reserves still are being called by all of the armed services. Widespread hope, built up, that veterans might be released after a year of active duty is fading. Hardships, big and small, are being undergone by many. A feeling that reservists are discriminated against appears to be spreading. Congress, trying to offer some relief, is up against a need for more and more experienced men in the Armed Forces, and by specialized needs of each service.

What reservists are concerned about most at this time is shown in the chart covering gripes in hundreds of actual letters from reservists in recent weeks. Underlying them all is a feeling of uncertainty about just what is in store next for those in service and those at home.

Yet, there are certain basic points that the individual can be sure of in policy decisions now reached by Congress and the armed services.

Men now in uniform, for example, can count on this much:

Organized reservists and men from the National Guard are going to be retained on active duty for 24 months. That applies to officers and enlisted men alike. There is one exception—Air Force men in units recalled prior to June 19, 1951, will be released after 21 months of service.

Most men with Organized Reserve status went on active duty between October 1950 and April 1951. They will be coming home between October 1952 and April 1953, if in the Army or Navy; between July 1952 and January 1953, if in the Air Force. Some Air Force units that were recalled after June 19, 1951, will serve the full 24 months.

Inactive and volunteer reservists, those who were not drawing drill pay for Reserve training when they were recalled to duty, must be released after they have served 17 months, provided they served 12 months in World War II. Most of them served from 2 to 5 years in the last war. The attempt to cut their current service to 12 months by law appears to be blocked.

In this group most men went on active duty between August 1950 and February 1951. They must be released during the period from January to September 1952. Actually, nearly all enlisted men will be released a few months ahead of time. The Army promises to get home by Christmas 1951, most of its men who saw service last winter in Korea. Officers, by contrast, will be held usually for the full 17 months, probably getting home in the eighteenth month after they were recalled.

Reservists at home, not yet called, face widely varying chances of being taken. Their chances depend most on what service they belong to and what military skills they possess. Age, rank, number of children, jobs, and physical condition have a bearing, too, but are less important if a man happens to be the kind of specialist that the Armed Forces need at the moment.

In general, it is true that most World War II officers who are not active members of Reserve units can relax a bit, if they have not been tapped so far. Yet not one of the services is willing to give up its hold over these men. It will be at least 6 months or a year before any wholesale resignations of commissions are permitted, for example. At present, all World War II commissions are still outstanding, fully effective for recall purposes.

In more detail, the outlook is this:

The Air Force has 220,000 officers and 70,000 enlisted men still left in its Volunteer Reserve. This group includes all the World War II officers who accepted AAF Reserve commissions in 1945 and 1946. About 21,000 of these officers—more than 1 out of 10—are likely to be picked for active duty in the year that ends next June 30. They can be held for 17 months under present law.

That is the estimate made by an Air Force general before the Senate Appropriations Committee recently. If the air arm gets its wish to expand, however, it may need a larger number of World War II officers from this group by mid-1952.

Enlisted men in the Volunteer Air Reserve who are veterans of World War II are not going to be recalled against their will, according to present AF plans. This promise could be broken with any big expansion, but this appears unlikely because AF training of new enlisted specialists is rising fast.

The Navy, meanwhile, has 140,000 officers and 475,000 enlisted men in its Volunteer Reserve, subject to call.

Enlisted men of this group who are not veterans of World War II probably will be called in eventually. There are more than 100,000 of these. Veterans of World War II, however, will not be called after next January 1. Between now and then, some veteran petty officers will go back on active duty.

Officers in the Volunteer Reserve are not being called in any great numbers, but the Navy refuses to agree not to recall any such officers in the future. Several thousand, out of a pool of more than 140,000, probably face recall in the year ahead. But more than 100,000 Navy officers, once members of the Volunteer Reserve, are going to inactive service and, barring big war, will not be called.

In the Navy's Organized Reserve, the few remaining officers are still being recalled on a fairly definite basis. Some enlisted men, too, will continue to be called up from this group, although the Navy has cleaned out virtually all enlisted men from its original pre-Korea Organized Reserve.

The Army, at the same time, plans to limit its recalls largely to members of its Volunteer Reserve. There are about 84,000 officers and 43,000 enlisted men in this group. Veterans among the enlisted men are promised they will not be called up for the present limited war. Of the officers, estimates range from 3,000 to 9,000 to be called by mid-1952. But the Army is not making any promises on the number of officers to be required.

Men in the Organized Reserve Corps of the Army are in a different situation. There are 75,000 officers and 130,000 enlisted men here who attend drills, draw pay, and are required to report for at least 15 days of field training each year. Army policy has been to call to active duty as few of these Reserve units as possible. The ORC, in the Army's view, represents a last-resort emergency force that must be ready to defend the United States itself and act as the nucleus for a fast-expanding Army if big war comes. That is why only a few in these units have been recalled, while inactive reservists, getting no drill pay or training, were being ordered to Korea.

This policy of the Army has been less understood and more criticized than almost any other policy involved in the Reserve recall program. There is no official hint of any change in the policy as yet. But the possibility remains that next spring, as the need for replacements rises, the Army may turn to this group of organized reservists for men to replace the flood of trained men returning home.

The future, to sum it up, holds continued uncertainty for reservists and their families. If all goes well and no big war occurs, most of the officers and enlisted men of World War II who have not been recalled are going to be left at home. Men most likely to be called are those in the Navy's Organized Reserve, and the pilots, navigators, bombardiers, and radar technicians in the Air Force's Volunteer Reserve. Once in, their tours of duty are likely to be 17 months.

National Guard men are in a similar position. Most will stay at home, but some are certain to be called—the Army just ordered up two more guard divisions and plans to recall another in the months ahead.

That is how the Reserve program looks now. It has changed many times in the past, and will change again if any big break comes in the war.

NEW GRIPES OF RESERVISTS

1. Men drawing drill pay in the Army's Organized Reserve stay at home while unpaid volunteer and inactive reservists are called up instead.

2. National Guard men, who joined so they could serve with their friends from home,

and guard units now being "cannibalized" to get replacements for Korea.

3 Navy regulars get the shore billets and school assignments in the United States, while reservists get sea duty and Korea.

4 Reserve officers, in case after case, find themselves recalled to do jobs that "any intelligent high-school graduate could do without trying."

5 Many reservists are not serving at the specialties for which they were recalled, after sacrificing jobs and family life to perform those specialties.

6 Regulars are getting temporary promotions to higher ranks while reservists are ordered to active duty at their old wartime grades despite 6 years of Reserve duty.

7 Draft calls were low all summer—but there had been no let-up in the recall of reservists who have already fought in one war.

8 Reserve enlistments are being extended for a year. The Government, after "breaking its contract with reservists," is treating them as draftees.

The Menace of Organized Crime

EXTENSION OF REMARKS OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, September 25, 1951

Mr. O'CONOR. Mr. President, it was my privilege recently to participate in a symposium before the American Bar Association at its annual meeting in New York to discuss the menace of organized crime.

The distinguished former chairman of the committee, the Senator from Tennessee [Mr. KEFAUVER], who conceived and directed the activities of the crime committee throughout most of its existence, delivered an impressive address on that occasion. His observations are worthy of the utmost consideration of all citizens everywhere.

I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During recent years, the principal attention of the American people, lawyers, and Government officials has been given to subjects other than to the increase in the strength of organized crime. The growth of crime, the new aspect it has taken, its economic impact, and the fact that it has been increasing its political influence have not until recently been considered as it should have. This is due partly to the fact that during the last 12 or 13 years our attention has been given mostly to preparing for war, fighting and winning the war, and thereafter we have been deeply involved as the leader of the free nations in a conflict with an even more sinister kind of totalitarianism.

We have recently found that during these days of preparation and waging of war that because of controls, scarcity of materials, large amounts of money in circulation, and public apathy, a condition was ripe for the criminal element to amass large fortunes and infiltrate into legitimate businesses and to enhance their influence in politics. J. Edgar Hoover, some time ago in a statement before our committee, pointed out that we were in a state of moral depression and

the extent of organized crime in the United States was a national disgrace.

I shall not relate in detail the findings of our Senate Crime Committee. This has been touched upon by the very able recent chairman of the committee, Senator HERBERT O'CONOR, and, of course, you are intimately familiar with the picture. Suffice to say, we found organized criminal gangs firmly entrenched in large cities; that they operate on a syndicated basis in many regions; that the gangs are interlocked by close personal relationships between the leaders; and by interlocking ownership of operations. The sinister economic and moral influence of these gangs has reached alarming proportions. Their influence in politics at all levels and the extent of their infiltration into legitimate businesses are greater than any of us dreamed. That is the picture.

Much has been done to remedy the situation in the last 2 years but the big part of the job remains to be done. Let it be said in the beginning that this is not a partisan matter in any sense of the word. Criminals have no political philosophy other than the protection of their operations. It is often found that they work both sides of the street. We all recognize the duty of joining together without regard for politics in eliminating the influence of the criminal whether he be found in a Democratic or Republican jurisdiction.

I appreciate the fact that today I am talking to the people who more than anyone else can do something about this problem. The lawyers of America are the leaders of public opinion. You are the political leaders. Lawyers constitute the majority of the membership of Federal and State legislatures. And, of course, as prosecutors and judges, lawyers have exclusive jurisdiction.

I shall always have a soft spot in my heart for this association because you have to a considerable extent spearheaded this fight against organized crime. The most encouraging event which occurred during my tenure as the chairman of the Senate committee was the creation of the association's Commission of Organized Crime, of which Judge Robert P. Patterson is chairman. Judge Patterson and Judge Morris Ploscowe, the executive director of the commission, and everyone of the other distinguished lawyers and judges who constitute its membership have been of tremendous help to the Senate committee. We have operated on the basis that we were partners in this effort. During the time when I was chairman of the committee, we had several meetings. We considered jointly the recommendations for Federal legislation and the suggestions for State action. Then at a recent meeting in Chicago, one of the members of the committee's staff had the opportunity of sitting down with the members of Judge Patterson's commission and of discussing in detail the entire legislative program of the Senate committee. The suggestions we received at these various meetings were of great benefit to the Senate committee in arriving at its conclusions regarding the bills to be introduced and pressed for enactment in Congress. To be able to draw upon the wealth of experience and ability represented by Judge Patterson's commission in connection with all aspects of our work was of immeasurable value to all of us.

During the course of the crime committee's work, one basic fact presented itself in bold relief, namely, the fact that the enforcement of criminal law is primarily a State and local responsibility. Even when channels of interstate communications and commerce are used, these activities are in a large measure a violation of local criminal statutes. It would be impossible and indeed quite unwise for the Federal Government to undertake to enforce laws against the usual

kind of vice, gambling, and corruption that we found in so many places. The Federal Government can never be a satisfactory substitute for local self-government in the enforcement field. Moreover, the Federal Government can do little to assist local citizens in the removal of local officials who do business with the gangsters. And there is little the Federal Government can do to correct the diffusion of responsibility and buck passing which takes place between independent law-enforcement agencies operating in the same county or area.

However, the Federal Government must—and I think it is now—assist in providing the leadership and guidance in the struggle against organized crime. It must continue to do this because the criminal gangs are well entrenched and have Nation-wide ramifications. It must continue to work for better cooperation between Federal and local officials in dealing with these problems. It is the responsibility of the Federal Government to see that the channels of interstate commerce are not used to facilitate the operations of organized criminal groups. It is, of course, up to the Federal Government to see that gangsters and racketeers are stripped of as much of their ill-gotten gains as possible through vigorous enforcement of the income-tax laws.

There are many things that can be done by the Federal Government which will break up the power of large interstate syndicates and tend to reduce crime to purely a local basis. The committee has in its third interim report made 22 recommendations for action at the Federal level. These include sizeable special racket squads in the Bureau of Internal Revenue and in the Department of Justice. The Department of Justice has had a small racket squad functioning since 1947. It has now been enlarged.

The committee also acclaimed Attorney General McGrath's proposal of having a special grand jury deal with organized criminal conditions in each judicial district each year.

The committee recommended that the Treasury Department establish a special frauds squad to deal with the income-tax obligations of organized racketeers and gangsters and that it maintain on a current and continuing basis a list of known gangsters and racketeers, and that proceedings leading to their prosecution be streamlined and speeded up. The committee is happy to report that the Treasury Department has complied wholeheartedly in these recommendations.

Several recommendations were made for tightening up the tax laws so as to secure fuller reports of transactions by racketeers and also to prevent them from deducting certain losses and expenses as operating items. The committee found that many racketeers kept only scant books or no records at all and that they frequently charged off as operating expenses such items as protection. In Florida, it was called "ice," in California, "juice." The committee's recommendation would require the keeping of daily records and it would put teeth in the present code provision requiring the keeping of records. The committee also recommended that those making profits from illegal transactions in excess of \$25,000 per year be required to file a net-worth statement. This would be a great help to the Internal Revenue agents in preparing net-worth cases.

There are also recommendations to prevent the mails and other communications facilities from being used to further illegal transactions. To get the gangsters out of the liquor business, the committee asks that wholesale licenses be renewable every 2 years. The committee recommended that moral fitness be one of the elements considered by the Interstate Commerce Commission in applications for certificates of

convenience and necessity. This is aimed at keeping the racketeering element out of the transportation business. The committee recommended that laws to facilitate the deportation of criminals and other undesirable aliens be tightened. Many of our leading hoodlums are not natives of this country and should be deported.

The committee found that light or suspended sentences were being dealt out too frequently against vicious narcotic peddlers and recommended that penalties for violations be increased. The committee recommended that the statute passed in the Eighty-first Congress prohibiting the interstate shipment of slot machines should be extended to include other types of devices which are susceptible to ganster control, such as punchboards, roulette wheels, etc.

The committee also found that it was quite apparent that the agencies needed more personnel and, in some cases, salaries are not sufficient.

A great deal of attention by the committee in its investigations was given to the wire-service operation which is indispensable in big time book-making operations.

A bookmaker, whether operating in the rear of a cigar store in Atlantic City or in a wide-open "horse room" in Scranton, Pa., or in Brooklyn, must have prompt horse-racing information. He must know the exact odds on all horses at every race track and such other information as may be of interest to bettors. When a race is over, he must know which horses won. Without this news he cannot operate.

Our investigations revealed that Continental Press, Inc., which is controlled to some extent at least by remnants of the old Capone mob in Chicago holds a virtual strangle hold over the entire system of racing news distribution in the United States. Its system of operations is carefully designed to have a facade of legality, each detail worked out in a manner that creates an impression of innocence. But as soon as we dug under the surface, we found that there is a hidden interrelation among the various segments of the system that is equivalent to monopolistic control.

On the surface, Continental does not sell news to bookmakers. It deals only with distributors who purport to be independent of Continental. Each distributor is a separate corporation with its stock owned by individuals who pretend to have no connection with Continental. The news is obtained by Continental either from the tracks or from a distributor who obtains it from the tracks. The men who actually obtain the news ordinarily do so surreptitiously through ingenious signal systems set up at the tracks. They are mysterious characters acting in a capacity which we lawyers refer to as independent contractors. Their employers claim not to know them personally and cannot tell you where they are. All the employer knows is that the news comes in by telephone and the news-gatherers are paid by check sent to general delivery or similar addresses.

The news is circulated through the system over telegraph wires leased from Western Union.

The distributor pays Continental for the news at a rate fixed arbitrarily by Continental. Apparently, each distributor pays on a different basis and none has much to say about the amount due from it. At the end of each year, all of the distributors' profits are paid over to Continental as supplemental rent. So far as we could ascertain the stockholders never receive dividends. During the famine period recently created by the heat of our committee, the distributors have stopped paying rent because they could not afford it. Continental has never attempted to collect the arrears.

The individual bookmakers obtain the news over the telephone from the distribu-

tor under a convenient arrangement whereby the bookmaker does not need to reveal his identity. He merely gives his code number and he pays his rent in cash over the counter each week. The amount he pays is what the traffic will bear.

The system is essentially one in which everyone pretends not to know who anyone else is or what he is doing, but a share of each bookmaker's profits is smoothly siphoned off and fed along over the lines to the coffers of Continental Press, Inc. It is like a huge octopus extending its tentacles into nearly every nook and cranny in the United States. No one can make book without its news and it charges what it wants.

The reason I have described this news system in detail is to show you one way in which organized crime has established nation-wide control over one racket through the use of interstate facilities and channels.

As it would be difficult for local governments to cope with a problem of this nature, we have felt that Congress should enact a bill which strikes at the problem directly by prohibiting the transmission of such news by anyone not found to be of proper character and where the major part of their business is in furtherance of illegal transactions as is the case of Continental Press.

The Committee, under the able chairmanship of Senator O'Connor, of Maryland, held extensive hearings which showed further the necessity of the enactment of the legislation recommended in the third interim report of the committee. The committee, under Senator O'Connor's chairmanship, showed that the pattern of criminal operations in the larger cities applied with equal force in smaller cities and even in rural communities. In the committee's final report, Senator O'Connor, on behalf of the committee, made 12 additional recommendations.

The problem of narcotics was gone into extensively in the hearings conducted by Senator O'Connor and many of these recommendations deal with methods of handling the narcotics' problem. They include stiffening of the sentence of narcotic violators; increasing the staff of the Narcotics Bureau; promoting narcotics education; increasing the facilities for the treatment of narcotic victims, requiring notice to seaman's and longshoremen's union of narcotics convictions; canceling sailing papers of narcotics violators; and urging our representatives in the United Nations to work toward the adoption of measures that will prohibit the growing of opium poppy plants in any country in the world.

The final report of the committee recommends having special squads trained to deal with narcotic violations.

Also, the final report took cognizance of the good work of the Attorney General's Crime Conference of February 1950, and urged that it be made an annual affair.

Early in its investigations, the Senate committee was greatly impressed with the necessity of better cooperation, liaison, and exchange of information between the Federal and local enforcement agencies. The Senate committee was called upon from time to time for suggestions as to how best to set up local crime commissions; how information can be secured from the 26 various Federal investigative groups and many inquiries came in regarding the new techniques of criminals. So, the committee in its third interim report recommended the establishment of a Federal Crime Commission. It was envisioned that the Federal Crime Commission would hold hearings in various parts of the country but would not have subpoena power. Subpoena power would be exercised when necessary by the proper congressional committee. The Federal Crime Commission would make a continuing study and surveillance of operations of interstate crime organ-

izations. It would make reports to appropriate committees of Congress. It would correlate information of value from the 24 Federal investigative agencies and would advise local enforcement officers of information other than that which was strictly classified. We envisioned that it would maintain files and records as a national clearinghouse of information respecting criminal activities in interstate commerce, and that it would be in a position to make suggestions designed to expedite, facilitate, and encourage better and more intensive law enforcement at all levels of government. The Commission was to be composed of three outstanding citizens, who were not otherwise employees of the Federal Government.

The Departments of Justice and Treasury opposed the creation of this commission on the ground that it might lead to the establishment of a so-called national-type police force and the formation of this commission has met with substantial opposition in the Congress.

This recommendation is, of course, not intended to infringe upon the authority and jurisdiction of the FBI or of any other Federal agencies and every Senator on the committee would stand up and fight to the last breath any suggestion that we create anything suggestive of an American Gestapo. We hope that the commission such as I have described may eventually be approved by Congress but, knowing that this enactment will be delayed, the committee in its final report made an alternative suggestion which seems to us to be free of the objections which have been raised against the Federal Crime Commission.

Our second proposal is for the organization of a privately constituted National Crime Coordinating Council in the form described in the committee's final report.

In a number of cities throughout the country there are crime commissions whose function is to serve as watchdogs over law-enforcement conditions. They are privately financed and staffed by skilled investigators, frequently with FBI training. They have no official powers but they perform an effective function, sometimes by cooperating with enforcement officers and other times reporting to the community any evidence of laxity. In other words, it is to keep the searchlight on.

The local crime commission movement is something that should be encouraged so that every community that has a serious crime condition will have one. Our plan is to establish a privately operated national organization which will promote the creation of local crime commissions and at the same time serve as a coordinating body and information clearinghouse among the local commissions.

In order to guarantee that the National Crime Coordinating Council will not "die aborning" we have proposed that Congress make a grant to it of \$100,000 to start it off. Thereafter, we contemplate that it will be financed by a private fund or foundation. With a view to giving it national prestige, we have proposed that its chief executive officer be appointed by the President of the United States from a panel of five nominated by the council itself.

The members of the council would be representative of the local private crime commissions throughout the country with the present commissions acting as the charter members. The mechanics of drafting the charter and setting the wheels in motion would be handled by the Attorney General of the United States. Once the council is rolling, it would be on its own.

I think it will be impossible to overstate the importance of having an organization of this character to maintain a public awareness of the existence of organized crime. It is imperative that a system like this be

worked out for full cooperation of enforcement officers at all levels of government in the fight against the cartel of crime. This council on a voluntary basis could do most of the things we envisioned for the Federal Crime Commission. We are most hopeful that the members of the bar will support us in this objective.

Bills have been filed to carry out the Federal legislative program recommended by the committee. The Departments of Justice and Treasury have put into operation the recommendations as to them. For this, we applaud them highly.

The bills in Congress are in committee and it will take time for the program to be enacted.

Reference has previously been made to the proposal for amendments to the Internal Revenue Code so as to see that racketeers keep books and are prevented from defrauding the Government. These proposals have been presented to the Finance Committee of the Senate. We are, however, not satisfied with the approach to this problem made by the House Ways and Means Committee and the Finance Committee. I personally think it would be a great mistake to adopt the idea presented in the current tax bill. The plan of the Ways and Means and Finance Committees, as set forth in the tax bill, is to require the payment of an excise tax by gamblers and bookies and then to tax them 10 percent of their winnings. Some supporters of the bill contend that the requirement of an excise tax would enable local law enforcements to spot bookies and gamblers and prosecute them under local laws. Other exponents of the bill apparently think that gambling would still flourish under this system because they anticipate that approximately \$400,000,000 annually would be brought in by taxes. Since it is a tax bill, I assume that revenue agents would be more interested in collecting the tax rather than eliminating the gamblers.

This program would be a tragic error for the reasons that in the eyes of the public, including the gamblers and the local law-enforcement officer, it would be a quasi legalization of their illegal operations. It would add immeasurably to the burden of local law-enforcement officers at a time when they need our cooperation and assistance. It would be a partial sanction by the Federal Government of gambling at a time when there is a wholesome and moral awakening to the evils of this vice. It would give the Internal Revenue Agency an impossible task of keeping up with the operations of each professional gambler, and it would thereby tend to transfer responsibility for policing gambling operations from local to Federal authority, and this would, of course, tend to break down our system of local law enforcement. Further, I think it dangerous philosophy to have to rely upon taxing illegal operations to provide revenue for the Federal Government.

Our investigation showed that wherever gambling was eliminated, legitimate business was greatly increased. Money spent at the gambling table went for food, clothes, and things that were worthwhile. If we get behind our program of dealing with gamblers, requiring them to keep books, not allowing improper charge-offs, and encouraging local law-enforcement, gambling will continue to be reduced more and more, and the result will be that more money will find its way into legitimate channels of commerce where it will be reflected in taxes to the Federal and to local Governments. No good can come from the approach of the House Ways and Means and Senate Finance Committees. I shall offer an amendment to substantiate our program for this quasi legalization.

The suggestions for local legislation and law enforcements have been dealt with by Judge Patterson and others on this program. But I must add that we of the committee were especially impressed with the necessity for uniform State laws, the necessity for eliminating overlapping jurisdiction and diffusion of responsibility between local enforcement officers. We are impressed with the progress that has been made and with law enforcements at recent State legislative sessions. We are impressed with the good accomplished by State conferences called by States' attorneys general and by the work of the States' attorney general associations, and other groups.

The lawyers of America must carry the chief burden in this great effort. The lawyers not only have the main responsibility of seeing that proper legislation is passed, seeing that the laws are enforced, but also of molding public opinion so that conditions which cause crime and steer the lives of young people into careers of crime are remedied. These include, of course, recreational facilities, educational opportunities, proper juvenile court techniques, elimination of slums, and modern laws dealing with juvenile offenders. Also, it falls directly upon the lawyers the duty of better policing your own ranks, to ferret out the lawyers who are doing business with the gamblers and the racketeers. It is, of course, an honorable thing to see to it that any alleged law violator is given his constitutional rights and is represented by a competent attorney. But we found that an integral part of most of the crime syndicates is the syndicated lawyer. In many cases, the lawyer is a part of the illegal operations. In some cases, he counsels with the criminals as to how they can violate the law and get away with it. In other cases, the syndicate or its head, employs the lawyer on a retainer basis to represent all of his employees in any criminal proceedings in which they may become involved. These are, of course, flagrant violations of the code of ethics. Some few of these lawyers have been called before the grievance committee and have been disbarred and prosecuted, but the majority of them are continuing to operate just as they have done for years. If you want the chapter and page of their operations, you will find it in hearings of our committee.

There is a big job for all of us to do at every level of government. It will take time and continuing public interest. Woodrow Wilson once said, "The American people can cope with any problem when they know the facts." I believe the American people now have the facts, and having the facts we will continue to see affirmative action taken against the lawless element of the country at the Federal level, at the State level, and at the local level.

It is imperative that we and the Government work with your lawyers and cooperate in this cause. It deserves and must have our best thought and our most diligent effort. I have confidence that in the lawyers of America this responsibility is placed in good hands.

Loyalty, Security, and Freedom

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered

over WMEX, Boston, Mass., on Monday, September 24, 1951:

We are spending a lot of money to raise and equip armed forces that will protect us from attack by a certain nation. We hope and believe that this strength will discourage aggression against the United States or any other country.

This a defense in terms of physical power.

The potential enemy, however, has developed methods of attacking us from within. His agents and their fellow travelers are constantly working to undermine our free American institutions and supplant them by a dictatorship controlled from abroad.

We are sufficiently familiar with the steps being taken to guard us against a military attack. But what is being done to protect us from subversive activities here, inside the United States?

This is a difficult problem. If we are too easy about it, dismissing it as an idle threat, we invite conquest. If, on the other hand, we adopt suppressive measures, we shall turn this Nation into a garrison state in which liberty will be smothered.

From the founding of this Nation the American people have been devoted to freedom. We have been equally jealous of our national security. Although peace-loving because we are learning to solve our problems without resort to violence, we have never hesitated to defend our country from the danger of domination by outside forces. Until recently, it was possible to safeguard both freedom and security without many serious conflicts. But this has changed since World War II, as the true character of the international Communist movement has been revealed to the American people. Public opinion has swung from the admission of a Trojan-horse problem, to increasing recognition of a clear and present danger.

Without freedom, the America that we have known and cherished, cannot exist, for freedom is an absolute essential to the American way of life. But, without security, there can be no freedom. If security must come first, freedom may suffer. If freedom is given top priority, it may be used by our enemies to destroy us.

Our own Bill of Rights assigns obligations for every liberty that is granted. How the two can work together is our problem.

The Communist movement is a threat to our national security for the following reasons: (1) The Communist Party is not an ordinary American political party, but is a closely disciplined organization with a rigid doctrine; (2) it is founded upon and strictly follows the teachings of Marx, Engels, Lenin, and Stalin; (3) it stands for the overthrow of our system in favor of a socialistic form of government bossed by the Communist Party with no criticism tolerated; (4) the American Communists admit that they follow the Russian and World Communist program in almost every detail; (5) the Communist Party admits of no possible compromise, stating that all must bend the knee to it; (6) in countries now dominated by the Communists, justice has disappeared.

The Communists have been trying to smuggle their members and their dupes into the agencies of the United States Government. The Federal loyalty program is designed to protect Federal departments and bureaus from such infiltration. How to maintain the constitutional rights of Government employees while detecting and firing the few who are disloyal is a baffling question. Any Federal employee who gives confidential information to foreign powers, can be punished under existing legislation. But what of the employee who does his job in such a way as to favor the interests of a foreign power? The only practical solution is to have discreet and fair men in charge of Federal personnel who will steer clear of carelessness or persecution. The

overwhelming majority of our civil servants are loyal and intelligent. The few who are accused of violating security, should be given a full hearing with the right to counsel, and other constitutional safeguards.

The Communists at large pose a much greater problem.

Congress in recent years has passed a number of statutes aimed at subversive activities. The Foreign Agents Registration Act of 1938, and the Vothris Act of 1940, require the registration of individuals and organizations acting as agents of foreign powers. The Alien Registration Act of 1940 forbids any activity designed to bring about the forcible overthrow of our Government. But these have not been effective in dealing with the secret methods of the Communist Party.

You and I are not concerned about political and economic programs that are discussed in the open. Ideas can be fought with ideas. Not so conspiracies. They demand legislation. Investigations by the Un-American Activities Committee of the United States House of Representatives over a period of many years, have shown that we must have laws to bar Communists from employment in defense plants, prevent disclosure of confidential information to Communists, deny them passport privileges, register their action and front groups, compel the labeling of their propaganda as Communist and to deprive their organizations of tax benefits that are accorded to charitable institutions, etc.

The Internal Security Act of 1950 was passed by the Congress over the President's veto. Perhaps the law needs some changes, as experience may reveal, but the need for some such legislation is beyond question.

By way of meeting the problem in another manner, the President issued an Executive order on January 23, 1951, establishing a Commission on Internal Security and Individual Rights.

As the President said in part and I quote: "The Commission will undoubtedly wish to focus its primary attention on Federal laws and procedures. But I do not believe the Commission should limit itself to reviewing Government actions. Instead, I hope it will consider afresh, in all its present day ramifications, the recurrent question of how a free people protect their society from subversive attack without at the same time destroying their own liberties."

"We in the United States have a special responsibility for leadership in these critical times, when free men the world over are strongly resisting the challenge of the Communist drive for world domination. We must guard our freedom well, guard it from armed assault, guard it from subversive infiltration, guard it from internal suppression and the deadly imposition of conformity. For the shining freedom we have enjoyed in this country has been the shining goal for millions in other lands, and the results of freedom in this country have been the shattering reply to the false claims of Communist imperialism." End of quote.

Most people think of the FBI as the principal factor in protecting the American people against the operations of enemy agents. In this respect I think it well to mention a few of the answers given by J. Edgar Hoover, concerning the activities of the Bureau which he has directed for so long and with such excellent results.

What is the chief job facing the FBI today?

The FBI's main job is to give the American people maximum protection against violations of Federal laws and subversive agents.

Whom does the FBI investigate? On what basis does it determine who shall be investigated? Is a letter of accusation enough to cause an investigation? Is the accuser investigated, too?

The FBI investigates only those complaints or accusations, which, if true, would constitute a Federal violation coming under its primary jurisdiction, or matters assigned to it by a higher authority. There must be a factual basis for the investigation or else a directive from some higher authority. A letter, even if anonymous, receives consideration if it contains information, which, if true, would come within FBI jurisdiction. The facts in each case determine how much confidence should be placed in the person making the accusation.

The FBI is interested in actions, not thoughts, in deeds, not beliefs, what a man does, not what he thinks. Every charge that the FBI has invaded the realm of thought is investigated; so far, not one has proved true.

The FBI is responsible to the President, through the Attorney General and the Budget Bureau which checks fiscal operations. It is responsible to the Congress and each year must justify its activities before appropriations committees.

What answer do you make to the charge that the FBI has too much power in our democracy; that recent developments, in which innocent persons have been accused on the basis of FBI information, are dangerous to civil liberty?

The FBI is an investigative body operating within the law; it does not prosecute criminals or even recommend prosecution. The executive, legislative, and judicial branches watch its activities carefully, as do the American people through an alert and free press. An FBI report, like a reporter's notebook, contains information of all kinds, and it is unfortunate that some of this raw material is occasionally translated into sensational headlines by the newspapers. But the record of the FBI based upon the merit and personal integrity of its agents, is well known. It is the servant, not the master, of the people.

But the FBI cannot do the job alone.

The newspapers and all other media of communication must keep us fully informed on all phases of current issues without revealing top military secrets to the enemy.

We must remind ourselves over and over again that the life we live in the United States and which we prize so highly is founded on freedom with responsibility.

We do not expect and do not want the Government to be the absolute guardian of our liberties, for that would be shirking our personal obligation to make democracy work.

We must be clear-headed about the whole problem.

We must know what communism is and what disguises it assumes before we can expose it. But this does not give us the right to call a man a Communist simply because he believes in equal rights or public housing or otherwise expresses an opinion different from our own.

We are still a growing Nation and we should uphold the Jeffersonian view of American history. "Rebellion, dissent, and experimentation."

For instance, we are entitled to know what textbooks are being used in our schools, but how can we tell the teacher, a specialist in education, what texts ought to be used? We are apt to think that the words "to teach" mean to indoctrinate with the teacher's views. But the professional definition is "to encourage students to think, to ponder, to investigate, to weigh arguments pro and con." Otherwise, how can the youth in our schools and colleges, or ourselves for that matter, learn and correct some of the weaknesses in our own system which are apparent to others? How can we know the true nature of our enemy's strengths as well as his failings?

We must not be afraid.

Intelligent and balanced protective measures are necessary.

Loyalty, security, and freedom will best be served if we follow the middle road which avoids dangerous indifference to the left of us and the equally dangerous hysteria to the right of us.

We like to speak of our confidence in the powers of truth to win acceptance in the market place of public opinion. We firmly believe in free speech. The decision we make must be on the advice of our own people, not on the disguised counsel of the few in our midst who are working for a foreign power.

The job of keeping our Nation free and secure, is based to a large degree on the application of our own common sense.

Thank you for listening.

Unanswered Letter

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. REECE of Tennessee. Mr. Speaker, I am disturbed at the pressure which is being put on the Congress to increase our foreign aid.

At the recent NATO Conference at Ottawa, it was disclosed that our European allies claimed that their economy will not stand their share of the European defense program. A committee was appointed to find a burden-sharing formula which would enable our allies to meet defense needs.

Mr. Speaker, I want to stress the fact that overburdened American taxpayers are also vitally concerned with our Government's lavish spending. This year we are moving deeply into deficit spending.

It was with the idea of protecting our people from undue waste and expenditure that I wrote the following letter, dated September 14, to Secretary of Defense Lovett. Here appears the entire letter:

SEPTEMBER 14, 1951.

Mr. ROBERT A. LOVETT,
Secretary of Defense,
The Pentagon, Washington, D. C.

DEAR MR. SECRETARY: As a member of the Foreign Affairs Committee of the House, my apprehension concerning certain features of the mutual-defense program impels me to write you about matters which have come to my attention.

Recently, I was advised that the construction of communication roads for the NATO in Europe are being undertaken, or considered, which will cost American taxpayers in the neighborhood of half a billion dollars.

The French Government, I understand, contemplates levying a 20-percent tax on the cost of this construction which leads from Atlantic port cities to forward areas. Is this report in substance true, Mr. Secretary? If so, why are we paying taxes for supply roads which we build for France and for the defense of the French?

If my information is reliable, the reaction on the American people would be extremely adverse to our entire defense program.

Another matter is shaking the faith of the people in the mutual-defense-aid program. When the Atlantic Pact was being proposed, Secretary of State Acheson was

asked the question, Does the treaty call for American troops to be called in Europe in time of peace? The answer was an unequivocal "No." The people will remember this clear and unevasive reply and cannot see how it could have been given in good faith.

The Secretary's misstatement of fact aroused the American people to suspect that the true program for troops to Europe had not yet been disclosed.

Just how many divisions, Mr. Secretary, are contemplated for Europe? It now appears that the First Armored Division has been earmarked for Europe. Is this in addition to the six combat divisions now in Europe, or earmarked for Europe? If the First Armored Division is to be the seventh American division in Europe, have the Joint Chiefs of Staff certified that its dispatch to Europe is essential as is required by Senate Resolution 99? If so, could a copy of the certification be made available to me?

These two matters are disturbing, and I am hoping that you will clarify them and place the situation in a more favorable light.

Believe me, our people are watching the flow of troops to Europe, determined that it must be held to the minimum requirement and that the NATO nations themselves must do their full part toward the defense of Europe, keeping in mind that none of the Western European nations are spending as much as 10 percent of their national income for defense, whereas we are spending, or authorizing the spending, of about 30 percent of our national income for defense, and this despite the fact the production of the NATO nations is now 142 percent of what it was in 1938, before the war.

With high esteem
Sincerely yours,

CARROLL REECE.

Since sending this letter, no reply whatsoever has been received from the Department of Defense. I was wondering, however, if the administration intends to pay the 20-percent-construction tax on half a billion dollar program to France as one of the means of increasing our foreign aid. And if the administration does pay the 20-percent tax—\$100,000,000—do they intend to let the American people in on the deal?

Mr. Speaker, it has been predicted on the floor of the Senate that within the next 3 years our European allies will call upon us for some \$45,000,000,000 in addition to our own military contribution. I might add that our aid to Europe this year is equal to the entire defense budget of all our European allies. For our own military preparations in the fiscal year 1952, \$67,000,000,000 has already been appropriated. Our national debt of \$257,000,000,000 is twice the national debt of all European powers combined, not including Russia. Our Federal budget carries a \$100,000,000,000 appropriation this fiscal year, which is some \$40,000,000,000 more than the administration calculates it can collect in taxes. The States and various local levels of governments have budgets aggregating eighteen billions. This means government is eating up more than one-third of our national income. Our economy is being dangerously exhausted. If our economy is destroyed the last bulwark of free government everywhere will be destroyed. We are standing in the twilight zone of disaster. We must carefully chart our course.

I think it is time the American people put a stop to the administration's deficit spending program.

How Much Will Little Dams Hold?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. SCHWABE. Mr. Speaker, the recent devastating floods in the Kansas City area and in northeastern Oklahoma have caused the people of this country and particularly us in the great middle Southwest, to be more concerned than ever before as to the best manner in which to prevent future occurrences of this unprecedented disaster.

Too many people have concerned themselves with what they term "flood control." It is my sincere belief that we should be more interested in flood prevention than in flood-control programs. There is an old saying that an ounce of prevention is worth a pound of cure. I believe that a good flood-prevention program is worth eminently more than a more extensive flood-control program, and certainly should be preferred to an extravagant and lavish expenditure of public funds to indemnify losses sustained from floods. In the long run, I think it can be demonstrated that flood prevention is the cheapest method and by far the best for our people and their protection.

Mr. Elmer T. Peterson, in a recent article in the Daily Oklahoma, published at Oklahoma City, Okla., August 22, 1951, under the title "How Much Will Little Dams Hold?" gives some most interesting revelations and results of a study he has made of the situation. I commend it to all who would be interested in protecting our economy by flood prevention.

Mr. Peterson's article follows:

HOW MUCH WILL LITTLE DAMS HOLD?

(By Elmer T. Peterson)

This desk has received an unusually heavy mail during the past 2 or 3 weeks. Most of it concerns the problem of flood control, which has gotten to be one of the hottest subjects in this part of the country, due to the recent floods in Kansas and previous inundations in Oklahoma.

It is hoped, therefore, you will be patient if this column seems to devote unusual space to the subject of floods and erosion. Experience shows when floods quit coming the people tend to forget about them almost completely, so if anything is to be said it has to be said before the subject gets cold.

In the recent Kansas City flood conference those who ridicule the agricultural flood-control program, as being successfully worked out in the Washita Valley, put all their emphasis on this point.

"The soil-conservation program is fine, and we are for it, but it can't take the place of the big dams. The reason is that you have to have reservoirs to impound the runoff water, and, of course, the big dams are the only thing that will do that."

The only trouble with this argument is that it is 100 percent wrong.

Those who use this argument just don't know what they are talking about.

If impoundment of runoff water is the one big thing, as the big dam promoters loudly declaim, the little detention dams of the USDA agricultural flood-control program beat the big dams at their own game.

A typical little detention dam in the Mill Creek portion of the Washita Valley project is engineered to impound 5.22 inches of runoff. But the Denison Dam could not impound more than 1.31 inches of runoff if its own watershed were visited by a heavy rain. This calculation is made from the specifications of the Army engineers as to their own structure.

The bigger the dam the less likely it is to hold the runoff of its own respective watershed in proportion to area. So the figures indicate.

Even when we get into the smaller watersheds the USDA program is superior.

The Army and USDA engineers were asked to make estimates and specifications on their own respective methods of controlling floods on the little Washita—a creek that flows into the big Washita, near Chickasha. Here are the respective figures:

	Army	USDA
Number of reservoirs	1	34
Drainage area, square miles	195	190
Flood storage, square feet	52,000	50,100
Recreation, permanent pool, acres	1,950	2,100
Flood pool, acres	3,650	5,100
Bottoms, inundated, acres	11,850	11,600
Bottoms protected, acres	3,371	8,000
Cost, proposed plans, completed	\$6,000,000	\$1,983,000

The Army plan would use rich, productive bottom land while the USDA plan would use waste land.

If you were to be offered an automobile by Mr. A at a given price, and Mr. B would offer a much better car for less than one-third the price, which would you buy?

This question is sometimes asked:

"A few of the men in the United States Soil Conservation Service are still saying 'There ought to be big dams, too.' How do you account for that?"

This is the deepest mystery of all. They have in their own records the indisputable proof that the little-dam program is far better than the big-dam program, in every way. Why don't they use their own facts and figures and make an aggressive fight for what they know is best?

Is it because they are all in one big family at Washington and have to go along and appease the big-dam promoters? Do they feel helpless in the drift of events? The writer's experience is that they are fine, capable, efficient men, earnestly devoted to their cause. They would not do such a thing unless the pressure were too great to withstand.

The actual performance of the little dams, plus surface treatment, is such as to clinch the argument. And now it is becoming increasingly plain the big dams, by backwater sedimentation, actually do great harm and suits are being brought because of this fact. One cannot endorse the big dams without likewise endorsing the bad effects of them. If you will examine the Washita River between its mouth and Chickasha, you will see what has happened since the big dam was built.

Reservist Resents Calling for Police Action

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following letter which appeared in a readers' column of the Buffalo (N. Y.) Evening News. It

deals with the recalling of reservists, and I feel it is worthy of the attention of this body.

RESERVIST RESENTS CALLING FOR POLICE ACTION

The Naval Reserve program as it stands today is in a dire need of reorganization and at this very moment, Government officials are investigating and planning a Reserve program, which in all respects closely parallels the one recently misused. We neither condemn nor condone the Navy's call-up policy. We realize the Reserve program is a necessary part of the present defense set-up. However, we do not sanction flagrant violation of a man's freedom by a group of Washington politicians.

The majority of reservists presently on active duty have been called involuntarily recalled and are veterans of World War II. They joined the Reserves with the understanding they would be called in event of an all-out war. If the action in Korea has been labeled a police action, and it has by the President, then why were these men called to active duty?

Why were reservists called who were struggling with new families, who were in vital defense positions and were attending accredited colleges? When we left our homes and colleges we were laughed at, and it was reiterated over and over again: "Sucker, I'm glad I didn't join the Reserves." Our only sin was that in event of all-out war we wanted to be the first to return to the defense of our country.

We offer the suggestion that to heal the wound of bitterness that these veterans be discharged as soon as practicable. We cannot understand why we are required to serve 17 months on active duty when there are younger men being deferred at home for going to school or being married with no children. A mistake has been made but let's not bury it or give it the old Washington white-wash, because it's tattle-tale gray with somebody's blunder.

CHARLIE,
Inactive Reserve.

Samuel Williston

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of September 24, 1951:

"SAMMY" WILLISTON

This is by way of a birthday greeting to a fine fellow who might think he's out of circulation, but isn't. He is Samuel Williston, fondly called "Sammy" by thousands of former Harvard law students. He is 80 years old today.

Although he was learned in the law, the author of textbooks on certain branches of law, like sales and contracts, which have become standard works, it was not for this that he was beloved by his many students.

He was an excellent teacher, and one of the main reasons he could be that, was that he also was a fine human being who exuded friendship and humor. Some people say he was the greatest teacher Harvard Law School ever had. At any rate, it seems to have been the consensus that no class with "Sammy"

was ever dull. Rather, they were remembered as thoroughly enjoyable.

So it is a sincerely happy birthday wish for "Sammy" not only from the Herald, but from thousands of former students as well.

National Commander Ewing W. Mays, of the Disabled American Veterans, of Little Rock, Ark.

EXTENSION OF REMARKS OF

HON. JOHN A. MCGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MCGUIRE. Mr. Speaker, under leave to extend my remarks, I should like to include in the CONGRESSIONAL RECORD a letter received by me from an active veteran constituent in my district in which he requests that I bring to the attention of the Members of Congress from Arkansas the outstanding work being done on a national level by their native son, National Commander Ewing W. Mays, of the Disabled American Veterans, of Little Rock, Ark.

I think the matter is worthy of the attention of every Member of Congress and for that reason I am having it included in the RECORD:

DISABLED AMERICAN VETERANS,
New Haven, Conn., September 20, 1951.
Hon JOHN A MCGUIRE,
United States Representative,
Washington, D. C.

DEAR JOHN: As our Representative in Congress, we want you to personally contact every Member of Congress from the State of Arkansas and tell them that we in New Haven DAV Chapter No 31, located in the largest city in your district, are proud of their native son, Ewing W Mays, national commander of the Disabled American Veterans, who visited us here at New Haven, Conn. on September 16 and 17.

Ewing Mays, as you know, is an Arkansas amputee veteran who lost both of his legs in combat in Italy in World War II when he was struck by a 210 millimeter shell. He was elected national commander of the Disabled American Veterans at the national convention which concluded in Milwaukee on August 19.

Making his first official visit to the East since his election, he spent 4 days in Connecticut, two being in the Third Congressional District which you so ably represent.

With his slow Arkansas drawl, his hearty laugh, and his obvious overcoming of major physical handicaps, this 31-year-old World War II veteran won the heart of everyone with whom he came in contact.

Pleading for more membership in the DAV, and greater interest and activity by the existing membership, National Commander Mays alerted us to the efforts constantly being made to have Congress remove, by legislative enactment, many benefits presently enjoyed by disabled veterans which are legitimately a cost of war just as much as firearms and ammunition.

His visit was certainly an inspiration to all who met him and Arkansas can justly be proud of its native son so, in our behalf, please let your colleagues in Congress from Arkansas know our thoughts relative to Ewing W Mays, that seriously disabled veteran who has rehabilitated himself and is

now going about the country as national commander of the Disabled American Veterans inspiring, aiding and assisting his less fortunate comrades, and while doing so, is bringing fame and credit to his native State of Arkansas.

Sincerely yours,
RUSSELL E. SULLIVAN,
Past Commander.

Monopoly Breeds Communism—State- ment by C. Wilson Harder

EXTENSION OF REMARKS OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by C. Wilson Harder, president, National Federation of Independent Business, Inc.:

MONOPOLY BREEDS COMMUNISM

It is important for every American citizen to know that today powerful influences, inside and outside of Government, are using strong pressure to break down our antitrust laws. These are the Sherman Act, Clayton Act, and Robinson-Patman Act.

Possibly many who are scuttling these important laws fail to realize that every nation that has gone communistic did not have antitrust laws. Furthermore, those nations legalized monopolies and cartels.

When the people in those nations rebelled against this concentration of economic power in the hands of a few, the result was either communism or its half-brother, socialism.

In the United States, the press, the pulpit, the businessman and the politician cannot say too much in opposition to communism. Our Armed Forces are today killing Communists. This slaughter is, however, not solving our problem. It is like cutting off the leaves of poison ivy and not killing the roots. We must dig deep to root out the real cause of communism.

To determine this cause let's look at the histories of other nations.

Russia was the first nation to go communistic, but for generations the individual Russians had little opportunity to engage in free enterprise. Court nobles not only owned the land he tilled, but also prevented individual enterprise from developing the great mineral and forest reserves of the country. In despair, Russians turned to communism.

In Germany it was the Krupp, Thyssens, and a few others, operating monopolies and international cartels, interlocked with monopolies in other nations, who brought about a half century of unrest among the German people and disturbed the peace of the world. The German people even resorted to accepting an Austrian paperhanger, by the name of Hitler, to take over. Because of the power granted Hitler by the German people, German monopolists invited Hitler to save their skins, yet they eventually lost control.

Italy went through misery under Mussolini who was put into power by the Italian monopolists. Spain is in the same throes of misery today.

Millions of Chinese are Communists today, yet they never read Marx or Lenin. Most of them are unable to read. They rebelled against a system of strict monopoly control of land and business, with a great amount

of their business monopolies interlocked with foreign monopolies. Russia encouraged the thought that the Chinese could be nothing more than slaves under such control, thus they accepted Stalin's dictates.

For generations the entire Japanese economy was controlled by 11 Zaibatsu families who put into power the warlord Tojo. Under the direction of Gen. Douglas MacArthur, a magnificent job was accomplished in breaking the stranglehold of that monopoly. Since his removal Japanese monopolists, aided by American monopolists, are moving into positions of power again. It is very possible that a continuation of this trend will drive the Japanese people, in despair, to communism.

England has gone down the road to socialism, the halfway house to communism. This was due to a legalized monopoly system that permitted the nation's resources to be controlled by a few. Today many of their industries have been transferred into a government monopoly as a substitute for private monopoly. Monopolistic tactics employed against the colonies of Great Britain have caused a great divorcement of them from the mother country.

In 1943, after a trip to England, Senator WILLIAM BENTON from Connecticut, reported on a luncheon he attended. Present was Lord McGowen, Chairman of the Imperial Chemical Co., Ltd., one of the world's big monopolies, and who sits on the Board of one of the largest concerns in the United States. Lord McGowen stated "I see no hope for collaboration between the Americans and British unless the United States repeals their Sherman Antitrust Act. Can we in England look forward to that?"

Thirty years ago, Lenin stated that victory for communism in the United States would come from within. He noted with emphasis that the greatest obstacle in the path of communism was the number of small businesses existing at the time.

The truth is that Lenin was more prophetic than we should care to admit. We are in danger—from within—of going down the road to communism. But first let's see what we have.

The American independent business way of life is a pattern whereby all citizens have a right, through ingenuity and ambition to go into the market place and win a business and permit fair competition as the guiding factor to control prices and create the necessary employment that is needed for citizens of our Nation to have jobs. As a result of this system, our people have achieved the most widespread and fairest sharing in the material benefits of business of any people any time, and they are as free as ever were the citizens of any land.

But what is happening?

Hundreds of millions of dollars are spent yearly attempting to educate the American people that monopoly control means greater purchasing power and lower prices for consumers—that it means more of the good things of material life and more assured freedom for everyone.

Instead of seven restaurants in a community, the monopolists claim, one restaurant is more efficient and economical. Yet these monopolists do not say how the people who are thrown out of jobs by the change from seven outlets to one will earn money to patronize the restaurant, or how industries who supplied the seven outlets will continue to be able to exist.

These monopolists do not tell the people, perhaps because they do not realize that, if their argument is sound, then it is but one little, logical step to the claims of communism—that the state take over the one restaurant, eliminate the profits, and sells at even lower prices.

This trend away from our free, competitive enterprise system and toward monopoly, has gone far.

Today because of the concentration of our economic power in the hands of a few, we are finding ourselves in the plight of being dependent upon Government for subsidy. We depend upon employment created by having a defense program, also by the tremendous give-away programs to other nations. Without them our unemployment rolls would skyrocket.

In order to promote the fiction of continued prosperity in an age of growing monopoly, we are wasting the assets inherited from our founding forefathers. Such assets were created upon a system of freedom in the market place. That we are in a ticklish position is not denied. We cannot go along the same path we are traveling without falling into the pit of communism. We cannot reverse our trend immediately without creating a potentially very damaging upheaval.

The real danger today is that, while we are wasting these assets, Government is not putting forth the effort to enforce, broaden, and strengthen our antitrust laws, in order to bring about security for small business, the farmer, labor.

Today we find the large majority of our defense contracts going to less than 50 concerns in our Nation, with only crumbs peddled out in the way of subcontracts. In addition, with the prime contractor making a profit off the subcontractor.

In our so-called give-away programs, we find the major portion of the products and materials channeled through the same concerns in our Nation and we find the shipments going to monopolistic set-ups in foreign nations, with little benefits directly derived by the citizens of those nations. This condition, naturally, not only makes the citizens of foreign nations easy marks for communism but at the same time discourage them about the United States, and, by promoting higher taxes here, makes our own Nation just so much easier for communism.

As we have pointed out, our one hope is the preservation, strengthening, and enforcement of the antitrust laws, which some are trying to scuttle. Why? Because these laws not only guarantee our economic freedom, but they work to provide each last citizen his fair share of a constantly expanding production.

But Government has been lax in its duty on these laws. One example is that Government today is spending approximately \$60,000,000,000 to defend the Nation against armed Communist aggression. More billions are being spent to arm the free nations. The Department of Justice is spending many millions to weed out communistic subversives in our country. Yet at the same time, less than \$10,000,000 is asked to enforce the Nation's antitrust laws. And the money appropriated is not always spent efficiently, even though it is nowhere near the amount needed to do a good job.

It is the solemn duty of Congress, elected by the people to see that all Government agencies properly carry out such duties. Yet it is in Congress and important Government agencies that we find much support for movements to scuttle these laws. It is in Congress we find calls to modernize the laws, by people who would be the first to say that we should not modernize the Ten Commandments, that we must enforce them.

All is not, however, hopeless. To the credit of those in Government, they have recently established a Small Defense Plants Administration to assist in making corrections. Legislation has been introduced in Congress to forbid shipments under the Marshall plan, to nations permitting monopoly control of such products. To date this legislation has not been enacted into law. However, such action does indicate a need for such corrections and it shows that some outside of Government are attempting to make correction.

If this hopeful trend is not strengthened, and we are forced into a clash of arms with Russia, undoubtedly the battle would end with Old Glory flying over the Kremlin, but that would not in any way end communism. The monopolists would then be in control of our country, and shortly we would find rebellion among our people that would result in Government ownership. Our system of free enterprise would be lost forever. It would have fallen to communism or a similar system by some other name.

The United States today stands alone in the whole wide world with antitrust laws to protect and promote the American business system that has proven beyond doubt that it is far superior to that of any other business system known to history. These laws are our greatest fortress. However they are not being enforced and strengthened.

Consequently, we are in grave danger, because of our negligence, of communism slipping through the back door. We are also in the same danger as many of the formerly free peoples of the world who, discouraged under monopoly business systems, traded what remained of their God-given birthright of free will for a mess of pottage.

Today in America is found the strange paradox of certain people actively engaged in cultivating communism. They are not only the poor maniacs that parade on May Day with clenched fists and carrying red cards. Those doing the most in preparing the seedbed for the harvest of communism are found holding office in government, finance, and industry.

More potential communism is spawned within the walnut-paneled luxury of offices where monopoly procedure and protection is devised than in a grubby cell headquarters in the skid-row section of some city.

Whether these people are activated by malicious greed, by fear, or stupidity, it makes little difference. They are as much assassins of the American system as a Bolshevik.

It is a matter of history that Benedict Arnold was a very charming and polished gentleman. No one, more than 175 years later, knows exactly the reasons for his treachery or how he justified his actions to himself. But he, as modern Benedict Arnolds are doing today, escaped the consequences of his crime. Today, the infamous spirit of Benedict Arnold again stalks the land when unfair methods are exercised to drive independent business out of the market place, discourage ownership of small farms, or deprive labor the right to work.

Our antitrust laws are the only real fortress the world has against communism. They are the real weapons of democracy and those who seek to destroy them deserve no more consideration from their fellow citizens than any other wartime saboteur. Great influence cannot be permitted to be used as a shield against punishment for great evil.

Naturally, it must always be recognized there is no crime in bigness. Every business has a right to grow—but definitely not through the cannibalism of monopoly. The time for action is now. The Nation's main streets have too long suffered from the greed of a few outside of Government, plus the indifference and negligence of many in Government with regard to enforcing our antitrust laws.

This situation is the same as if your local authorities permitted known bandits to freely roam over Main Street.

Unless a show-down and exposure is immediate, the generation of Americans now developing may very easily be forced into the slavery of industry, agriculture, or labor monopolies, solely because there will be no opportunities left for the starting of any venture on Main Street or the continuation of existing independent enterprise. Thus we will continue to move toward the state of communism.

Is Our Aid-for-Dependent-Children Program Developing Into Reverse Sociology

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. SCHWABE. Mr. Speaker, the September 8, 1951, issue of the Saturday Evening Post contains a challenging article entitled "The Relief Chiselers Are Stealing Us Blind," by Paul Molloy.

Mr. Molloy has conducted an extensive research in the field and from numerous sources he has gained information Nation-wide relative to the manner in which the vast sums appropriated by Congress as aid for dependent children, have been distributed and the abuses that have followed in the wake of the operation of the program.

I am informed that, as a result of these abuses, the number of dependent children on relief rolls has increased from approximately 600,000 in 1941 to approximately 1,600,000 in 1951. It is also my information that approximately one-third of the total amount appropriated by Congress for the current fiscal year will go to the chiselers, those taking unfair advantage of the present law. This means that approximately \$117,000,000 of this year's appropriation will go to the chiselers, those who are defrauding the American taxpayers.

These startling facts and the many other equally glaring revelations in Mr. Molloy's article should challenge the attention of every Member of Congress and cause us to seek a remedy. The corruption that has developed simply must be stopped.

Mr. Molloy's article in the September 8 issue of the Saturday Evening Post has created so much interest, that the Saturday Evening Post of that date was again on sale on all newsstands in Oklahoma beside the issue of September 15. I understand that this is perhaps unprecedented.

In the Molloy article, it is stated that—

A similar situation exists in several other States, although Oklahoma presently has the unenviable distinction of having more children on relief rolls than any other State. More than 55,000 children are receiving aid each month; this represents about 8 percent of all children in the State, and is more than twice the national average. The per capita public-welfare bill in Oklahoma is the second highest in the Nation, only Colorado spends more per inhabitant than does this oil-rich section of the Southwest. During the last fiscal year it cost each Oklahoman \$33.12 to maintain public-assistance expenditures, and out of every welfare dollar spent, 18 cents went toward ADC.

Oklahoma is not proud of this record and I am sure that no other State is proud of the tremendous sums of money that are being spent as aid for dependent children insofar as it goes to the cheats and chiselers. Oklahoma wants to take the lead in attempting to eradicate the evils and abuses which have crept into

the administration of this program and particularly to eliminate those who take unfair advantage of the humanitarian desires of the good people of this country to aid and assist dependent children. I hope Oklahoma will be the first to relieve the taxpayers of the leeches who are now preying upon the public in this fashion.

I also call attention to an editorial which appeared in the Tulsa Tribune of September 5, 1951, entitled "The Widening Rat Hole." Mr. Jenkin Lloyd Jones, editor of the Tulsa Tribune has referred to the articles above-mentioned in a letter to me. The Tulsa Tribune has led a fight for many years to eliminate chiselers who are living off the aid for dependent children. In his letter to me of September 5, 1951, Mr. Jones states:

At a time when Congress is trying to find every possible means of squeezing unprecedented taxes out of the people, I believe that a Federal policy that penalizes States for revealing relief rolls and rewards States for hiding them is plainly asinine. We are already seeing the results.

But this is a little worse than simple Government waste. This is reverse sociology. This is the cultivation of the weeds at the expense of the wheat, the encouragement of great propagation of the unfit.

I think it is time Congress met this issue squarely. I can't recall an instance in human history where a political system purged itself of evil while it prevented the people from seeing what was going on.

Following these observations of mine, you will find the Tulsa Tribune editorial to which I have just referred.

The Saturday Evening Post article mentions different remedies of the evil which have been suggested and there may be others equally or more appropriate. But we must find the proper remedy and apply it before these abuses are allowed to continue much longer. Everyone is interested in the humanitarian phase of this problem. We are all interested in these unfortunate children. Yet I ask, is our aid to dependent children program developing into reverse sociology?

The Tulsa Tribune editorial follows:

THE WIDENING RAT HOLE

The eyes of the United States are on Tulsa and Oklahoma today. We are proud that Tribune reporter Paul Molloy has an article in the Saturday Evening Post, which went on sale this morning. It is entitled "The Relief Chiselers Are Stealing Us Blind." It summarizes information Molloy obtained last winter in a series of articles for the Tribune on the aid-to-dependent-children racketeers in Tulsa and other Oklahoma cities.
